(a.) *History* (i.) *Engineering trades.* (*a.*) (*i.*) The Steam Engineers' Society was established in the year 1824. Membership is open to the same trades as that of the Amalgamated Society of Engineers, except that men connected with the machinery used in textile factories are not admitted. The society has 6,000 members and ninety-seven branches, ninety-four of which are in the United Kingdom, one in New York, one at Montreal in Canada, and one at Brisbane in Australia (1). In March, 1831, the Society of the Associated Iron Moulders of Scotland was established. This association includes 6,300 members out of the 11,000 ironmoulders eligible for membership in Scotland. Membership is open only to ironmoulders proper, that is, marine or engineering moulders, moulders of what are called "light rain water" and ornamented goods, and pipe moulders. The society is confined to Scotland, but it has effected an arrangement with the corresponding English Society of Ironmoulders, whereby members of each are recognised in the other country (2). In 1851, the Amalgamated Society of Engineers was formed by an amalgamation of the local organisations in existence at the time. In 1886, it had 33,007 members; in 1876, 44,578; in 1890, 67,923 and on May 1st 1891, as many as 72,006, of whom 66,761 were resident in the United Kingdom, 57,912 in England and Wales, 6,461 in Scotland, and 2,388 in Ireland. The remainder were living abroad, viz., 2,148 in Canada and the United States, 3,052 in the British colonies outside America, 19 in France and 26 in Spain. It was stated that the foreign members were for the most part British emigrants or visitors. Natives are, however, admitted to the society, and have in some cases joined its ranks. The society has 369 branches in England and Wales, 51 in Scotland, 15 in Ireland, 40 in America, 38 in the British colonies outside America, one in France and one in Spain, making a total of 515 branches. There are 24 branches in the Manchester district only, and 23 in the town of Manchester itself (3). Smiths, ship-smiths, angle-iron smiths, fitters, turners, roll-turners, pattern-makers, millwrights, mechanical draughtsmen, planers, borers, slotters and other machinemen, brassfinishers and coppersmiths, electrical engineers, machine joiners, die-sinkers, press tool makers, and stampers or drop-hammer forgers in the engineering and kindred trades are eligible for membership (4). In most of the districts to which the Amalgamated Society of Engineers extends, joint committees have been formed of representatives of the kindred societies in order to secure united action in dealing with the employers. Since the society was first established, it has paid 569,269*l.* for superannuation, 759,028*l.* for sick, 56,081*l.* for accident, 233,609*l.* for funeral, and 1,585,239*l.* for donation benefits. Besides these sums paid out of the ordinary subscriptions, a contingent and a benevolent fund have been created by special levies. The former is to provide an extra 5*s.* donation benefit to members out of work through strikes, and the latter to make an additional allowance to members who have been out of work for a specially long time or are in any way in peculiarly distressed circumstances. Further sums have also been raised by special levy to support members involved in protracted disputes and in most cases so as to give some allowance to those persons engaged in them, who are not members of the society. The sum hitherto spent in benevolent grants is 75,285*l.*, and in contingent and other strike benefits 101,489*l.* The total expenditure of the society since its formation has amounted in all to 3,379,930*l.* (5). The Associated Blacksmiths' Society was established in 1857. Its membership of of 2,440 workmen includes nearly all

[§ 148 (a.) (i.)]

the engine, shipping, jobbing and angle-iron smiths in the districts to which it extends. These include the principal industrial centres of Scotland; Whitehaven, Barrow-in-Furness and Newcastle-on-Tyne in England; and Belfast and Londonderry in Ireland (1). In 1872, the United Patternmakers' Association was formed. The membership of this society, which amounts to 2,400, is exclusively confined to patternmakers. It has 54 branches in the various engineering centres of the United Kingdom (2).

Iron and steel trades.

(*ii.*) Passing to the Iron and Steel (miscellaneous) trades, the British Steel Smelters' Amalgamated Association was stated to have been formed in January 1886. The society extends over five districts, the West of Scotland, the North-East Coast of England, the North-West Coast of England, the Midlands, and South Wales. Mr. Lougher, a member of the Executive Council of the association, stated that when the society was originally introduced into Wales in 1887, "it fell back for a short time and then was resuscitated again," (3) and has now grown so large that it includes amongst its members all the smelters and Siemen's plant men in the district. During the year 1891, Mr. Hodgson stated that the association had paid 4,154*l.* in "idle" benefit, 250*l.* in funeral benefit, and 1,450*l.* in strike pay. Mr. Lougher claimed that the Union in South Wales had brought the men into "closer fellowship" and made them more willing to help one another in their work; had protected the men against incompetent managers, and had, to a very great extent, stopped the "under-gaffers" and under-managers from "bullying" their subordinates and "from using abusive and foul language." (4). The National Association of Blastfurnacemen, established in 1887, embraces the following pig-iron making districts, viz., Cleveland, Durham, Cumberland, North Lancashire, Nottinghamshire, Shropshire, Lincolnshire and Scotland. In Scotland rather less than 1,000 out of the 1,500 blast-furnacemen employed, and in the Cumberland and North Lancashire district, 2,500 out of 3,000 are members of the association. The total membership in all the federated districts amounts to about 8,000 (5). The Associated Iron and Steel Workers of Great Britain represents that branch of the iron and steel industry which is concerned with the conversion of pig-iron into manufactured commodities, such as rails, plates, bars, &c. The organisation of the Iron and Steel Workers was stated by Mr. Trow to have been in existence since 1877, though it was not established in its present form till 1887. In fact, it may, he added, be regarded as the "continuation of" another society which has existed since 1862. The Associated Iron and Steel Workers' Society, in its present form, embraces the iron-making districts of South Yorkshire, East Lancashire, North and South Staffordshire, East Worcestershire, West Cumberland, and the North of England. It was stated that its membership, amounting to 9,500 or 10,000, probably does not include so much as one-fourth of the persons employed, owing to the number of sectional unions that exist in connection with the trade (6). There is, however, Mr. Trow asserted, no important district devoted to the manufacture of iron to which the society does not extend. In 1887, the Associated Society of the Millmen of Scotland was established. It represents the finishing department of the steel trade, that is, that branch of the industry which is concerned with the process from the ingot to the finished rail or angle bar. The Society extends over the West of Scotland and the South of Lancashire, including Wigan and Bolton. Mr. Cronin, general secretary of the society, stated that at one time it had as many as 3,500 members, but they have lately deserted it under the erroneous impression that its officials are "not sufficiently stiff in maintaining their interests" on the Board of Conciliation. Consequently the society only retains 2,000 members "in full compliance" with its rules, out of 5,000 or 6,000 persons employed in the district and eligible for membership (7). The South Wales Iron and Steel Workers' and Mechanics' Association has been established since the year 1890. It extends over the Blaenavon, the Ebbw Vale, the Tredegar, the Rhymney, the Dowlais, and the Cyfartha Works, and includes all the men employed in connection with iron and steel manufacturing in these districts. Thus, the society embraces blast-furnacemen, Bessemer workmen, millmen, forgemen, mechanics, smiths, engine drivers, pattern makers, and others (8).

"When they run a certain length in arrears," Mr. Cronin stated, "we cut them off; hence I have sent up the number of 2,000." (8) Digest, Vol. II., p. 48.

[§ 148 (a.) (iii.)]

(iii.) General metal trades.

(*iii.*) According to the evidence given concerning the associations of the employed in connection with the general metal trades, the earliest of which mention is made is the United Journeymen Brassfounders' Association. This was stated to have been in continuous existence ever since its establishment in 1866. It consists of thirteen associated societies, two of which are in Scotland, one in Ireland and the remainder in England. Mr. Caldwell stated that, at the time he was, giving evidence before the Commission, there were 2 293 subscribing members. The trades eligible for membership of the association in question are "the moulders" and the "finishers," the latter including brass turners and fitters. These trades, Mr. Caldwell added, are also admitted to membership of the Birmingham Brass Workers' Society, the London Amalgamated Brass Makers' Society, the London Scientific Instrument Makers' Society, the London Brass Moulders' Society, and the London United Brass Finishers' Society. Most members of the trade are unionists (1). In March 1889, the National Amalgamated Lock and Key Smiths' Society was established. It is said to have since been "gaining in strength ever day." Its members are not confined to any particular districts but are chiefly to be found in Wolverhampton and Willenhall. 1,800 out of 2,000 persons engaged in the industry live in the district of Wolverhampton and they all belong either to the society in question or to the Midland Counties Trades' Federation. In the district of Willenhall, more than 1,000 out of 1,400 or 1,500 workers are on the books of the society. It was stated by Messrs. Day and Martin that although "hundreds of disputed questions" had arisen during the last two years, the society had never yet consented to a reduction in wages (2). It was stated by Mr. Fretwell, secretary of the Spring-knife Cutlers' Society that, for a number of years, the spring-knife cutlery trade of Sheffield had been one of the worst paid in that town. The men therefore engaged in it formed a union in the year 1889, in order to make an effort to obtain better remuneration for their labour (3). The dates of formation of the Silver Plate Protection Society and of the Britannia Metal Smiths' Union are not given either in the oral or written evidence. Membership of the societies is confined to inhabitants of the town of Sheffield, where from 2,600 to 2,800 persons are employed in the silver plate, and from 700 to 800 in the Britannia Metal trades. The Britannia Metal Smiths' Union, Mr. Hobson stated, embraces more than 90 per cent. of the persons employed in the industry, and the combined membership of the two unions includes about 1,000 adult male workers. Both the unions in question are, generally speaking, recognised by the employers, but "hatred" to the principle of combination "is deep-rooted in the hearts of bad employers," who, Mr. Hobson asserted, at times make "a determined stroke at these combinations," and impoverish the union by dismissing perhaps 30 or 40 of their men and throwing them on its funds (4). The nail makers of Dudley, it was stated, were attempting to form a union in May 1892, and the employers were trying to help them to raise the necessary funds. At that time, however, its financial position was very weak, inasmuch as the workpeople cannot afford to pay a higher subscription than 2*d.* or 3*d.* a week, which is scarcely enough to cover the cost of collection (5). The nail makers of Bromsgrove in March 1892, had also just established a union of which 1,200 out of the 1,500 workers engaged in the industry had become members. Previously, a union had been formed in 1875, but it collapsed in consequence of the exhaustion of its funds, due to the expenditure of 14,000*l.* in a 20 weeks' strike against a reduction in wages. A union was again established to "work" the 1891-92 strike, but Mr. Powell stated that it did not survive the termination of hostilities (6). The Spike Nailmakers' Association was broken up in 1890, after existing for three years. The absence of organisation at the present time was asserted to be due, not to the hostility of employers so much as to the lack of common sense on the part of the workpeople themselves (7). The National Amalgamation of Chainmakers' and Chainstrikers' Associations extends over a large portion of South Staffordshire, East Worcestershire, Pontypridd, Newcastle, and Gateshead-on-Tyne (8). Very few of the persons employed in workshops are now members of the union. Some of them were members at one time, but, even then, they used to take work far below trade union wages till they were found out by the union officials (9).

[§ 148 (b.)]

(b.) Form of government.

(b.) The supreme government of these societies is vested either in a conference, a meeting of delegates, or a general meeting of all members of the association. Ordinary business is conducted by a Committee, Council, Executive Council, Managing Committee or Committee of Management. The principal officers are a president or chairman, general secretary, treasurer or "money steward," trustees and auditors. Certain societies have also one or more vice-presidents, and an assistant secretary. The number of trustees varies from three to seven, and there are usually two auditors. In the Steam Engine Makers' Society there is also a referee to whom complaints against the secretary or other officers are addressed. The officers of some societies receive considerable payment for their services. The Executive, or the association as a whole, has power in some cases to appoint one or more sub-Committees or sub-Councils to transact certain business. Thus, according to the rules of the Loyal Free Industrious Society of Wheelwrights and Blacksmiths, a sub-committee of three members is selected by co-option from the Executive Council, to whom the secretary may apply in cases of emergency. The local Executive Council of the Amalgamated Society of Engineers may be divided into sub-committees, and the Executive Council of the Brass Finishers' Society in the West of Scotland may appoint five of its number to form an Organising Committee. Meetings of the Executive are held every week, fortnight, month or quarter, "when it thinks fit," or "at times specified by the president." Provision is generally made for calling special executive meetings when necessary, either on the request of the officers, a certain number of the members of the Executive or the ordinary members of the association. General meetings of all the members are held, generally speaking, annually, but in some societies they take place every half year, quarter, three weeks, month, fortnight, or even week. In some of the larger societies, conferences or delegate meetings are held at intervals in place of a general meeting ; and in a few, conferences are held in addition to the general or delegate meeting. Thus, the National Union of Stove Grate Workers has a monthly delegate meeting and an annual conference. The National Amalgamated Society of Brass Workers, Birmingham, holds delegate meetings monthly or oftener, in addition to an annual conference. The United Journeymen Brassfounders' Association holds a conference once in every five years, but has no other general or delegate meeting. In addition to the ordinary delegate or general meetings, it is laid down in the rules of most of these societies that special meetings of this nature may be summoned on the request of the Executive, or of a certain proportion of the members, or of the branches. Generally speaking, the questions under discussion are decided by a majority of votes, and a simple majority is frequently sufficient. In some societies, however, questions of importance can only be decided by a specified majority, *e.g.* two-thirds or three-fourths of the members present. In some societies, delegates have the right to an "accumulative" vote, that is a vote for each specified number of members or fractional part thereof. Thus, in the National Association of Blastfurnacemen each delegate has a vote for every hundred or part of a hundred members in the lodge he represents. In the National Federation of Enginemen's Protective Associations, the delegate of each district has the accumulative vote on questions which have been previously considered by the districts, and one vote on other questions. In the Durham County Colliery Enginemen's Mutual Aid Association each delegate has one vote for every ten members he represents. In the larger societies the branches or lodges frequently are, or may be, grouped into districts, and these districts have a special government. The number of branches which go to constitute a district varies in the different societies, but the grouping of the branches and the extent of the district are generally said to be decided by the Executive Council. The government of the districts or branches is very similar to the central government, and is usually vested in a Council or Committee with its own officers. The approval of the Central Executive must be obtained for the appointment of officers and the establishment of branch bye-laws. In many societies members may appeal from the decision of the branch executive to a branch general meeting, from this to the district executive or general meeting, and from the district to the central Executive. There is a further appeal in some cases to a general or delegate meeting, the decision of which is final. In some societies there are special committees or officers appointed to hear appeals, or to arbitrate in case of disputes between members of the association, or between members and officers. Thus, the Friendly Society of Ironfounders has an Appeal Committee of thirteen members, which hears appeals made from the decision of the Executive Committee. The rules of the Associated Iron Moulders of Scotland provide that any district dissatisfied with the decision of the Executive Council may appeal to an Arbitration Committee, consisting of two representatives from each side, who elect an independent umpire. Members of the Scottish Tinplate and Sheet Metal Workers' Friendly and Protective Society, Glasgow, "may appeal to the Committee, and thence to a general meeting, whose decision is final, unless reference be made to arbitration, when each party must choose an arbitrator, and the arbitrators an umpire, whose decision is final, if the arbitrators do not agree." Generally speaking, it is provided that new rules may be added, or existing rules altered or rescinded, only by a general meeting or conference of the society. In the majority of cases, a certain length of notice of the proposed alterations must have been given before they can be discussed. The most usual mode of procedure is for the members or branch proposing the alterations to send notice thereof to the general secretary, who must announce the proposal on the circular summoning the next general meeting. A special meeting is called in some societies to consider the alterations, in others they may be discussed at ordinary, general, or representative meetings. In the rules of the United Journeymen Brassfounders' Association of Great Britain and Ireland it is laid down that "motions for rescinding, amending or adding to the rules must be voted on at two monthly meetings before they can come into force." A simple majority of votes usually decides questions of alterations in rules, but in some societies, as in the File Forgers' and Strikers' Mutual Aid Society, a three-fourths majority must vote for them. It may be noted that the rules of the St. Helen's Association of Colliery Enginemen are binding for a period of three years, "when the members shall decide if a revision shall take place, and, if so, by what method or system ; and the Revising Committee shall carry the wishes of the majority into effect." The general statement comprised in the above summary draws attention to the similarity in the constitution and government, the benefits and the objects, of the societies in question, and at the same time necessarily loses sight of the contrast between the elaborate nature of the rules in some of the larger and the simplicity in some of the smaller societies. This may be brought out by a comparison between the rules laid down concerning the constitution and government of the Amalgamated Society of Engineers, on the one hand, and those of the File Forgers' and Strikers' Mutual Aid Society, Sheffield, on the other. The government of the former society is vested in an Executive Council, the members of which are elected by the electoral districts into which the society is divided. The officers consist of a chairman, a general secretary, and two assistant secretaries. There are also five trustees and two auditors. Delegate meetings are held at certain dates fixed by the association. In case of emergency, the rules provide that the Executive Council can take the votes of the members as to the advisability of holding a special delegate meeting. For the government of the colonial districts, there are American-Canadian and Australian Councils. Districts that contain more than one branch are governed by a committee, elected so as to represent each branch as far as possible. Where there is only one branch, the branch committee acts as the district committee. The committees may appoint sub-committees from their own body when necessary. The United Kingdom is divided into six districts, in each of which an organising delegate is located in such town as may be decided upon by the Executive Council. Branches of the society are governed by a committee. Branch officers include a president, vice-president, secretary, assistant secretary, treasurer and two auditors. Branches meet fortnightly and quarterly meetings are also held. The president, secretary or committee may call a special meeting of the branch when necessary. Members may appeal against any decision of the branch committee to a summoned meeting of the branch, thence to the Executive Council, and finally to the delegate meeting. With regard to any alterations in the rules of the association, it is laid down that each branch must appoint a committee at least nine months before the delegate meeting to consider a revision of the rules. Each branch secretary must send in proposed alterations to the general secretary six months before the delegate meeting, and the general secretary must send a notice to each branch at least eight weeks before the meeting. Any rule may then be

[§ 148 (b.)]

[§ 148 (b.)] altered or rescinded, and new rules may be made by the delegate meeting, but benefits may not be abrogated without the consent of three-fourths of the members who record their vote (1). In contrast to the above, the government of the File Forgers' and Strikers' Mutual Aid Society, Sheffield, is vested in an Executive which consists of the secretary and three committee-men. The senior committee-man acts as chairman of all committees. No other regulations are given with regard to the government of this society other than that no new rule may be added or existing rule amended or rescinded, unless with the consent of three-fourths of the members present at a general meeting specially called for that purpose (2).

(c) *Entrance fees and contributions.*

(*c.*) The entrance fees in the different associations under consideration vary from 2*d.* to 4*d.* "to cover the cost of rules and card of membership" in the Chatham Smiths' Association, to from 10*s.* to 3*l.* 10*s.* according to age in the Amalgamated Society of Engineers. In many societies the amount of the entrance fee varies according to the age at entrance; and in some societies, as for example in the Associated Blacksmiths' Society of Scotland, members pay higher or lower entrance fees according to the benefits which they wish to receive. The rates of contributions vary in the different societies from 1*d.*, a quarter in the National Federation of Enginemen's Protective Associations, to not less than 1*s.* 3*d.* a week in the Associated Iron Moulders of Scotland. In addition to the regular subscriptions, most of the societies provide for calls or levies to be made upon the members at certain intervals or under certain conditions. Contributions are paid weekly, fortnightly, monthly, or even quarterly. Members in arrears for a certain specified period are suspended from all or certain benefits of the society until all arrears have been paid up and the member has been "clear upon the books" for a certain length of time. Members in arrears for longer than another specified period are, generally speaking, excluded from the society. [§ 148 (c)]

(*d.*) *Benefits.*

(*d.*) The various benefits granted by the association include accident, dispute, distress, emigration, funeral, out-of-work, sick, superannuation, and travelling benefits. 297 benefit funds are connected with the associations under consideration. These are divided among the different trades and the various classes of benefits according to the numbers shown in the following table. The benefits granted by the central association of larger societies, which are usually mentioned also in the rules of the branches, have been counted, as in the Introduction to the Rules of Associations of Employed, once only, and such local benefits alone have been counted as are given in addition to or instead of those allowed by the central rules.

TABLE of Benefits granted by Associations of Employed in Iron and Steel, Engineering and General Metal Trades.

	Iron and Steel Trades.	Engineering Trades.	General Metal Trades.	Totals.
Number of associations	11	33	32	76
Dispute benefit	10	27	20	57
Funeral benefit	6	24	23	53
Out-of-work benefit	5	21	24	50
Sick benefit	1	20	16	37
Superannuation benefit	3	11	13	27
Accident benefit	4	15	6	25
Travelling benefit	3	9	11	23
Emigration benefit	1	2	10	13
Distress benefit	2	8	2	12
TOTALS	35	137	125	297

It appears from the above table that dispute, funeral and out-of-work benefits occur most frequently, and it may be noted that, in the general metal trades, funeral and out-of-work benefits are granted more often than any other. These benefits are only given in accordance with certain conditions laid down in the rules. Dispute benefits usually take the form of a weekly allowance, either for a specified number of weeks or until the dispute is over or the member has found work elsewhere. The amount of the allowance is sometimes stated in the rules and sometimes left to the discretion of the Council or Executive. In certain societies the amount varies according as the member is married or single. "Victimised" or "sacrificed" members, that is, persons discharged on account of their connection with the society, occasionally receive the same payment as members on strike, and sometimes a higher rate of allowance. In the United Pattern Makers' Association "victimised" members receive the average wages of the trade, or locality, or the amount of their wages at the time of dismissal. According to the rules of the United Journeymen Brassfounders' Association of Great Britain and Ireland, "victimised" members receive the wages they earned before being discharged. Some societies grant legal assistance to members who are obliged to prosecute employers for sufficient cause, or who have to defend themselves against an unjust prosecution. Thus, members of the Marine Engineers' Union (United Kingdom) may claim assistance "in all cases of loss, adversity or oppression, arising from the association or not" and "legal assistance is provided where the interests of engineers, as a class, are concerned." According to the rules of the Durham County Colliery Enginemen's Mutual Aid Association, legal expenses may be paid for members who are prosecuted on account of accidents for which they are not responsible. After dispute benefit, funeral benefit is of most frequent occurrence. In some societies a fixed amount is payable on the death of any member. In some, for example in the Manchester branch of the United Journeymen Brassfounders' Association of Great Britain and Ireland, the amount of the benefit varies with the length of period of membership of the deceased. In others, the amount is raised by means of a special levy. The majority of the societies also make provision for a grant on the death of a member's wife and of children below a certain age. In the Dundee Branch of the United Journeymen Brass Founders' Association of Great Britain and Ireland, 3*l.* is paid on the death of a member's wife, 1*l.* on the death of a member's child under fourteen years of age, and 2*l.* on the death of a single member's parent. Out-of-work benefit is generally granted in the form of a weekly allowance for a fixed number of weeks, then at a lower rate for a second specified period and so on, either until the member has obtained work or has received the full amount of benefit to which he is entitled. In many societies, the amount thus given varies either with the length of membership, or with the scale of contributions paid by the member in receipt of such benefit. Sick benefit is generally paid on the same principle as accident and out-of-work benefits, that is, a weekly allowance is made for a certain period, or until the member is able to resume work. In some cases, the length of time during which the benefit is paid is left to the discretion of the Central Executive or branch committee. These benefits are only granted in accordance with certain conditions laid down in the rules. Superannuation benefit is usually granted only to members above a certain age, which varies from 50 to 60, and who have belonged to the society for a specified number of years. The scale of benefits sometimes depends upon the length of membership. Thus, in the Manchester Brass Founders' Association of Great Britain and Ireland, the following grants are made in the form of superannuation allowances to members aged 50 and incapable of work:—

After 20 years' membership, 5*s.* a week.
" 24 " " 6*s.* "
" 28 " " 7*s.* "
" 32 " " 8*s.* "
" 35 " " 9*s.* "

Members who receive superannuation benefit are often precluded from working at their own trade, but are at liberty to earn what they can at other occupations. A member of the Bury Branch of the United Journeymen Brass Founders' Association of Great Britain and Ireland is not "considered superannuated if he can earn 16*s.* a week at any light employment." Accident benefit

(1) Appendix I. to Tabulated Rules, No. 1. (2) Tabulated Rules, No. 22.

[§ 148 (d.)] usually takes the form of a definite weekly allowance payable for a certain number of weeks and then of a smaller sum either for another specified period or until recovery. With regard to the travelling benefit, unemployed members who wish to travel in search of work usually receive a "travelling card" from the secretary of their society, on which is stated the sum which they are entitled to receive at any branch where they may call. With the exception of distress benefit, which is granted by twelve of the societies under consideration, emigration benefit is granted by a smaller number of societies than any other. Generally speaking, it is given to members who are entitled to ordinary dispute or "victimised" benefit, and often is, in fact, dispute benefit paid in advance to members who wish to go abroad. In many cases the amount of the benefit varies according to the time during which the member has belonged to the society. A grant of money is sometimes made out of the distress benefit fund to relieve members under any special circumstances of need, or to widows of members. Several societies also grant compensation out of such a fund to members who have suffered the loss of their tools, and provision is sometimes made for the payment of the contributions of members who are ill, or out of work, in order that they may not be obliged to incur loss of membership. Thus, the contributions of members of the British United Hammermen and Forge Furnacemen's Society, Northumberland, "when sick, lame or out of employment," are paid out of this fund. Similarly, the rules of the National Amalgamated Iron and Tin Plate Workers, Braziers, Mounting Forgers, &c., Trade, and Friendly Society, assists "deserving members, not entitled to benefit, by paying their contributions."

(e.) *Dispute regulations.*

(e.) In case of a dispute with an employer, the rules, generally speaking, provide that the members concerned must lay their case at once either before the secretary or other officers of their branch or before the general secretary or Executive Committee. These officials must investigate the matter and endeavour to effect an amicable settlement, whenever it is possible. If they are unable to do so, a branch meeting must be summoned to consider the case, and if it is considered of sufficient importance, information must be sent to the general secretary, who must lay the matter before the Central Executive. It is sometimes further laid down in the rules of the societies that this body must appoint a deputation to inquire into the cause of the dispute, and to interview the employer in order to arrange the matter peaceably, if possible. It may be noted that the rules of the United Enginekeepers' Mutual Protective Association of Scotland stipulate that "the association shall in no case be connected with any strike or struggle, unless such could not reasonably and honourably be prevented." In the Associated Blacksmiths' Society, "in case of oppression, the members concerned must, in the first place, respectfully solicit their employer for relief." In the rules of several societies it is required that, at some stage of the dispute, the branch or Central Executive shall offer to submit the matter to arbitration or conciliation. In many cases, the settlement of disputes by these methods is strongly recommended, and the officers and members are urged to adopt them, whenever possible. Regulations are in some cases given with regard to Joint Committees or Boards of Arbitration and Conciliation permanently established in connection with the societies in question. It is provided in the rules of almost all the associations that strikes may not be undertaken, nor individual members leave their employment, without the sanction of the Executive. Some societies further provide that the consent of a specified majority of all the members voting by ballot, or of the members present at a general or delegate meeting, must be obtained before a general cessation of work may take place. Sometimes certain other conditions are imposed under which alone a strike may be sanctioned. Thus, the Liverpool and District Hammermen's Society directs that in a dispute care shall be taken not to withdraw more members than the funds of the society can support. As a rule, members or branches that persist in a strike without the sanction of the Central Executive, receive no encouragement or support of any kind from the society, and in some cases members who leave their employment, or who persuade others to do so, are punished in accordance with the rules. Thus, any branch of the National Steelworkers' Association which ceases work without the consent of the Executive Council, forfeits all claim on the association. When, however, the cessation of work has been entered upon with the sanction of the society, penalties are imposed on any member who takes the place of the men on strike, or in any way "accommodates" an employer concerned in the dispute. A strike Committee is frequently appointed from the men on strike to report on the progress of the dispute to the Executive, but the conduct and settlement are, as a rule, in the hands of the Central Executive.

[§ 148 (f.)] (f.) The greater number of the societies in question have rules with regard to the behaviour of members towards their employers. In some societies members are forbidden to boast of their independence towards their employers or foremen on account of their membership of the society; in others, any breach of contract or act of dishonesty towards an employer is expressly forbidden. The London branch of the United Journeymen Brassfounders' Association lays down that "no apprentice shall be encouraged to leave his employer, or act contrary to the terms of his indenture, by reason of joining the society." The regulations with regard to the behaviour of members towards non-unionists generally lay down that a member who obtains or endeavours to obtain work for a non-unionist, whilst any suitable unionist is unemployed, is subject to certain penalties; the London branch of the United Journeymen Brassfounders' Association imposes a fine upon any member who employs non-unionists when he is obliged to engage extra labour for work which he has undertaken. The members of some associations are forbidden to teach the trade to non-unionists, or to help them in their work. It may be noted, however, that the rules of the United Enginekeepers' Mutual Protective Association of Scotland provide that "if a member is working where the majority of enginekeepers are non-unionists, he may combine with them to protect their common rights." The majority of the associations in question have also some regulations respecting the conditions of labour, such as the rates of wages, hours of labour, piece-work and overtime. Thus, the rules of the London Scale, Beam, and Weighing Machine Makers' Trade Protection Society provide that "the minimum wage is 36*s.* a week, and the maximum weekly hours are 54." Certain other societies stipulate that their members are not to work for less than the established rate of wages. Piece-work, generally speaking, is regarded with disfavour, and members of some societies are forbidden to introduce the system into shops where it is not already the custom. It is stated in the rules of the Amalgamated Society of Engineers that "the society considers piece-work one of the greatest evils it has to contend with. Every member must dispense with it whenever an opportunity occurs, and prevent its introduction into any shop where it does not now exist. Members must be paid through the pay office, not through the piece-master. Branches must stipulate, when possible, that all those doing piece-work are paid their fair share of the surplus through the pay office, and that all members have a proper rated wage, apart from piece-work prices." The rules of the Journeymen Machine, Engine and Iron Grinders' Friendly Society, and of a few other societies, require that the payment for piece-work shall be shared with the foreman, in proportion to the wages of the members concerned. Sub-contracts are prohibited by some societies, and the majority lay down regulations with regard to apprentices and boy labour. Thus, the National Association of Nut and Bolt Makers allows one boy to work with every six oliver men. No member of the Operative Brass Cock Finishers' Society may employ more than one boy at a time, at work which is on the recognised trade list, nor employ any boy over 16 years of age, if he has not worked at the trade before. Regulations are sometimes made with regard to the hours of labour, the safety of employment, the provision of work for the unemployed, and other matters.

(f.) *Other regulations.*

(g.) *Objects.*

(g.) The rules of the associations in question are frequently preceded by a preface or introduction, in which the objects for which the society was instituted, and the means by which it is hoped to carry them out, are given. In many cases, no objects are mentioned beyond those contained in this introduction, and some societies do not state any objects at all. The regulation of the rates of wages and the hours of labour of members of the association is one of the most frequent objects. The regulation of apprenticeship is mentioned by three societies, namely, the Friendly Society of Ironfounders, the Scissors Forgers' Provident Society, and the National Union of Stove Grate Workers, all of which desire to regulate the number of apprentices. The third of these societies also aims at obtaining a proper training for them. The National Amalgamation of Chain Makers' and Chain Strikers' Asssociations, as well as the Friendly Society of Ironfounders, endeavour to check the introduction into the trade of adult labourers who have not been brought up to it. The objects of some societies include the regulation of certain other conditions of employment. Thus, protection against unlawful discharge is said to be an object of the Amalgamated Society of Enginemen, Cranemen, Boilermen, and Firemen; the Amalgamated Association of Iron and Steel Workers and Mechanics of South Wales and Monmouthshire; the Associated Iron and Steel Workers of Great Britain; the British Steel Smelters' Amalgamated Association; and the

[§ 148 (g.)] Amalgamated Society of Iron and Steel Workers. The formation of benefit funds, and the regulation of the general relations between employers and employed are among the objects put forward by these societies. Certain more general objects are also included, such as the furtherance of the interests and welfare of the members, and the advancement and prosperity of the trade. The South Wales, Monmouthshire, and Gloucestershire Tin Plate Workers' Union desires to "provide a labour newspaper." Many societies refer to the promotion of trade unionism, the assistance of trade societies with similar objects to their own, or the federation of various unions together. Thus, it is an object of the Amalgamated Tube Trade Society to amalgamate with other societies to redress grievances in the general conditions of labour.

Joint Boards. (a.) *History. Board of Arbitration and Conciliation for the manufactured Iron and Steel Trade for the North of England, 1869.*

149. (*a.*) The history of Boards of Arbitration and Conciliation in the trades here under review begins with the establishment, in the year 1869, of the Board of Arbitration and Conciliation for the Manufactured Iron and Steel trade of the North of England. The trade in this district had undergone a very rapid development from the year 1860 and onwards, with the consequence that labourers had been hastily collected from all parts of the country. The men were, for the most part, ignorant of the conditions of the trade, and unable to understand the great fluctuations to which it is liable. These causes combined to create a hostile feeling between the employers and operatives, and led to some very prolonged disputes, during which the opposing sides became organised into two strong associations. The labour difficulties further led to a disastrous strike and lock-out in the year 1866, when "the men were obliged to give way for a time, but did so with much discontent." Mr. Dale came forward at this stage to effect, if possible, a better relationship between employers and employed. He succeeded in gaining the support of Mr. Kane, the workmen's leader. It was "chiefly owing to the "exertions of these two gentlemen, and to the influence "that they possessed over their respective sides," that the Board was established in 1869 (1). Since that date the Board has continued in successful operation. It has effected 60 wages settlements; seven by mutual arrangement, 20 by arbitration, and 33 by sliding scales. Mr. Dale was the first president of the Board. He held that position till 1875, when Mr. Whitwell succeeded him. He has, however, filled the office of referee since 1883. The board, Mr. Trow stated, has no arrears of work. The average number of cases dealt with per annum during the last ten years is 18·7, and the total number since February 1883, is 161. Only four cases have come before Mr. Dale as referee since 1883, when the office was established. At present the number of cases brought before the board tends to decrease, but this is attributed to the circumstances of the trade, and the greater frequency of local settlement, and not to any loss of confidence. The membership of the board was at its highest point in January 1874, when it included 35 works, and at its lowest in January 1888, when it included 10 works. In 1892, only 12 works were in membership, and the number of operatives subscribing was 4,270. The number of operatives has varied from 14,867 in January 1873, to 3,127 in January 1886. This diminished membership is not due, however, to any dissatisfaction with the working of the board, but to the transition from iron to steel, the improvements in machinery, and to the fact that a large number of the employers prefer, by standing outside the board and following its decision, to reap all the benefits without sharing the expenses of membership. Owing to the change in the character of the industry, the number of puddling furnaces was diminished between 1874 and 1890 from 2,136 to 604, and the steel workers who replaced the puddlers were not at first eligible for membership. Moreover, less labour is required to produce steel than iron, and, as a matter of fact, fewer men were employed to produce 1,158,874 tons in 1890, than there were to produce 613,812 tons in 1873. The introduction of machinery has caused a similar diminution in the number of men employed and eligible for membership of the board. Finally, the men are ineligible for membership, unless their employers are subscribers. The confidence felt in the board, Mr. Trow stated, is now greater than ever, and its decisions are loyally carried out, both by the men and by the employers. In May 1876, upon the refusal of a small section of the men's organisation to obey a decision of the board, that body paid compensation to the employers to the extent of one-half the loss which they had sustained in consequence, and ballotted for substitutes to take over the work of the recusants. It may be noted that the decisions of the board have been retrospective ever since its formation. In questions concerning an advance in wages, the men are willing to continue working upon the original terms, pending the decision of the board, because they know that the extra payment will take effect from the moment that their claim is filed. When questions concerning a reduction in wages come before the board, the employers continue to pay the original rate, and trust to the men's honesty to refund the extra amount if the decision is given against them. This trust, Mr. Trow added, has only once been abused by the men. In view of the fact that, before the board was established, it was impossible for employers and employed to agree upon any question of a change in the rate of wages without a cessation of work, it is evident that a great improvement has been effected in the relations between employers and employed. Moreover, since the year 1873, the puddling trade has been "decaying," and the board has had great difficulty in keeping up wages, and preventing employers and employed from trying to take advantage of each other. Yet, only two or three short stoppages have occurred since its formation. These were all merely sectional and the operative members of the board did their best, Mr. Whitwell stated, to check them. The board is said to have been successful in removing a large number of evils, and to have created a friendly and courteous relationship between the rival parties (1). The first attempt to form a Wages Board in the Midlands was made in 1872, when an equal number of representatives of the associations of employers and employed respectively met for the purpose of discussing and settling wages. Their proceedings were, however, quite informal. No rules were drawn up, no special times of meeting were fixed, and no president was appointed. About two years later, an attempt was made to form a board for the district of South Staffordshire and the new iron-making district of Middlesborough, but this failed. In the beginning of the year 1876, the employers and employed of South Staffordshire agreed upon the formation of a board to be called the South Staffordshire Mill and Forge Wages Board, consisting of an equal number of employers and operatives, a chairman (who was, for the time being, to be the chairman of the Ironmasters' Association), two secretaries and a president. The last was to be a gentleman outside the trade, who should arbitrate when the board came to a deadlock, and whose award should be final. The board was constituted as closely as possible on the lines of the similar board in the North of England, and continued in this form successfully in operation from 1876 to 1886. It was then re-organised upon a wider basis, so as to include the whole iron-making district of which Birmingham is the centre, and its title was changed to that of the Midland Iron and Steel Wages Board. The board has, however, very little connection with the steel trade. In March 1892, 42 firms were represented by the twelve employer-representatives on the board. It was stated by Mr. Hingley that employers who are represented on the board, without being actually members of it, are not so completely in touch with their men as those that have the opportunity of meeting the men's representatives. Mr. Aucott even stated that the board would cease to exist, unless the rules of the board were amended in such a way that each of the firms connected with the board had two representatives on it, one chosen by the employers and one by the employed*. The board has proved very useful in preventing disputes, no general strike or cessation of work having occurred since its establishment. Mr. Hingley acknowledged that the board had "been an education for both sides"; "as a "result, the employers took up a much less arbitrary "attitude than heretofore, and the workmen were much "more reasonable in their demands." Moreover, "the "workmen are much more amenable to their leaders, "and the industry can be carried on without that danger "from strikes and lockouts which formerly interfered "with it" (2). The Cleveland blast furnacemen and ironmasters agreed in 1872 to a sliding scale, and a Joint Committee in connexion therewith. A similar sliding scale was established in the Cumberland district in 1880.† In 1880, a Board of Arbitration and Conciliation for the Wrought Nail Trade was established at Birmingham, "to arbitrate on all questions of wages "that may be referred to it from time to time by the "joint consent of the employers and workmen, and by

Nail Trade Boards, 1880 1892.

(1) Memorandum on the Rules of Boards of Arbitration and Conciliation, p. xxxvi., xxxvii. Digest, Vol. II., p. 100.

* It may be noted that the Board has recently been reconstituted. At a meeting held on July 31st, 1893, the chairman stated that sixty-two firms had "now pledged themselves to support the Board," and "they were now in a much better position than ever before." (The "Labour Tribune," August 5th, 1893.)

[§ 149 (a.)]

"conciliatory means to interpose its influence to put an "end to any dispute that may arise." The board consisted of twelve employers and twelve workmen. Three committees were appointed, each composed of four employers and four workmen, one committee to represent the "Cwt." work, one the "Bromsgrove" work, and the other the "M" nails made in the Dudley or "Up-Country" districts. Owing, however, to the refusal of some masters to join it, and the consequent underselling of some of the members, the board was a failure, and came to an end within one year (1). During and after the strike at Bromsgrove, 1891–2, conferences took place between employers and employed for the purpose of negotiation. At one of these meetings, it was decided to form a Wages Board, composed of six representatives of each party, with a view to avoiding strikes in the future (2).

West of Scotland Manufactured Steel Trade Board, 1890.

In August 1890, a Board of Conciliation and Arbitration was established in connexion with with the manufactured steel trade in the West of Scotland. Its constitution and rules are closely copied from those of the Board for the Manufactured Iron and Steel Trade of the North of England, with the exception of the standing Committee, which is absent in the West of Scotland Board. The formation of this board was the consequence of a strike of the Scotch millmen, which was settled by the arbitration of Sheriff Spens. Overtures for starting the board, Mr. Cronin stated, came from the employers. The suggestion was "readily accepted" by the men, but they appear now to have lost confidence in it, and "have even gone so far," he added, "as to instruct me to withdraw the delegates from the board" (3). Mr. Cronin admitted that the board had not worked well. In certain instances the employers acted in violation of its rules, as well as of its practice. The men, moreover, had given them no excuse for their conduct by similar acts of disloyalty on their part, except in one case, when a small section struck against an award contrary to the wishes of their leaders, who at once proceeded to find other men to supply their places. In order that a board of this nature may be successful, "it must have a strong organisation behind "it" (4).

South Wales Iron and Steel Trade Joint Committee, 1890.

In September 1890, an agreement was entered into between the representatives of the employers and workmen in the South Wales and Monmouthshire iron and steel trade, for a sliding scale and Joint Committee. The board has only had one general statement to deal with since its formation. Several minor matters, however, arising out of the terms of the sliding scale, have been brought before it for settlement (5).

Brass Trade Board, 1890.

In the same year, a Board of Conciliation for the Amalgamated Brass Trades was established at Birmingham, which is said to have already performed some useful work (6).

Nut and Bolt Trade Board, 1890.

For the last two years, Mr. Juggins stated in March, 1892, a Board of Conciliation or Joint Committee had existed in connexion with the nut and bolt trade. It had, he added, prevented the outbreak of many strikes which would otherwise have occurred in the year 1891, owing to depression in trade (7).

Proposed Board in connexion with British Steel Smelters' Association.

In March 1892, Mr. Hodge stated that conferences had been held with regard to the establishment of a Board of Conciliation in connection with the British Steel Smelters' Association. It had been agreed to constitute such a board, and a committee had been appointed to draft its rules. The employers' representatives, however, desired to frame a rule to the effect that half the expenses of the board should be deducted from the men's wages, and the men's representatives had proposed that their share of the expenses should be paid through the union. "The "objection of the employers," Mr. Hodge stated, to this suggestion on the part of the men, "was that in accepting "that rule it would practically compel them to make "every man a union man. We on our part did not see "that that was a very great hardship, as the men in the "various works were all union men anyhow. . . . Unless "the men who formed the board were our members we "would have no control over them. . . . That was "the difference of opinion," and negotiations were suspended in consequence (8) There is, Mr. Lougher stated, a tendency in the South Wales district towards a better understanding of employers and employed (9).

(b) Relations between employers and employed in other industries.

(*b.*) No boards of conciliation have been established in connection with the other industries included under this group, but, with the exception of the relations which exist between the Scotch ironmasters and blast-furnacemen, and between the members of the Enginemen, Firemen, and Boilermen's Association and the Cleveland ironmasters, the relations between employers and employed appear to be satisfactory. The Amalgamated Society of Engineers has no uniform policy with regard to its dealings with employers, but varies its attitude, Mr. Whittaker stated, according to the circumstances of the different districts. The society encourages its various district organisations to conduct negotiations with the district associations of employers, before resorting to strikes, and the employers are in most cases quite willing to confer. With regard to the Associated Iron Moulders of Scotland, Mr. Jack stated that the employers' associations (viz., the North-East of Scotland Iron Founders' Association and the West of Scotland Iron Founders' Association) meet the men's union in conference, by means of delegates, for the purpose of settling questions which relate to wages and the conditions of employment generally. On the other hand, disputed questions which arise between the brass-founders and their employers have generally been arranged amicably between the men's association and individual employers. They have no official dealings with the employers' association as such (1). It may be noted that the chain and nail makers, the joiners, the engineers, and representatives from certain other industries expressed themselves in favour of the establishment of boards of arbitration and conciliation (2).

[§ 149 (b.

(c.) Constitution and government.

(*c.*) The constitution of the boards in question is the same in so far as they all consist of equal numbers of representatives of employers and employed. The number of members on each side varies from six to twelve, but in the North of England Manufactured Iron and Steel Trade Board and the West of Scotland Manufactured Steel Trade Board, one representative of each side from each of the works in membership may sit upon the board. An equal representation of labour and capital has been the object kept in view in the constitution of these boards; nevertheless it has been found necessary, except in the South Wales Iron and Steel Trade Sliding Scale Committee, to provide for a decision in case of an equal division of the votes of the members. Thus, disputed questions which cannot be settled by the board are referred, in the North of England Iron and Steel Trade and West of Scotland Steel Trade Conciliation Boards, to the referee, and in the Midland Iron and Steel Wages Board to the president, who "must "be a person of position not connected with the iron trade." According to the rules of the Cleveland and Cumberland Blast-furnacemen's Joint Committees, the two sides each appoint one arbitrator, and these two choose an umpire. The officers, generally speaking, are a president or chairman, vice-president or vice-chairman, one or two treasurers, and two secretaries. Two auditors are also appointed by the Board of Conciliation and Arbitration for the Manufactured Iron and Steel Trade of the North of England, and the Manufactured Steel Trade of the West of Scotland. The Cleveland Blast-furnacemen's Joint Committee has no permanent chairman, but one is elected at each meeting by the members present. Some boards appoint sub-committees which deal with those questions which are not of sufficient importance to be laid before the full board, or to which all questions must in the first instance be referred, before they are submitted to the full board. Thus, the North of England Iron and Steel Trade Board of Conciliation annually appoints from its members a standing committee, consisting of ten representatives of the employers* (only five of whom, however, may speak or vote at any meeting), and five representatives of the workmen, in addition to the president and vice-president of the board. All questions must in the first instance be submitted to this standing committee, which investigates and has power to settle all matters referred to it, except a general rise or fall of wages, or the selection of an arbitrator. According to the rules of the Midland Iron and Steel Wages Board, a dispute arising at any works may be referred to a sub-committee consisting of the chairman, vice chairman, one member from each side of the board, and the two secretaries.

(d.) Dispute regulations.

(*d.*) Most of the rules impose certain restrictions upon the right of bringing any dispute under the consideration of the board. In the Cleveland Blastfurnacemen's Joint Committee, any workman member who has a grievance, must lay it before the committee of his lodge. If, after investigation, the committee decides that the case shall be sent to the Executive Council, it must first appoint a deputation to wait upon the manager of the works where the dispute arose, to endeavour to settle the dispute. In the South Wales Iron and Steel Trade Joint Committee, no appeal may be made before an attempt has been made to settle the matter locally

(7) Digest, Vol. II., p. 104. (8) Digest, Vol. II., pp. 102–3; Hodge, 16414–6. (9) Digest, Vol. II., p. 53.

* This double representation of the employers was introduced by mutual consent, because it appeared that the employers' nominees were not able to attend as regularly as those of the operatives. (Digest, Vol. II., p. 100.)

(1) Digest, Vol. II., pp. 37, 41, 53; Digest, Vol. III., pp. 33, 39, 41, 43. (2) Digest, Vol. II., p. 104; Digest, Vol. III., p. 82–3.

[§ 149 (d.)] between the owner or manager and the workmen themselves, and the rules of the Cumberland Blastfurnacemen's Joint Committee contain a similar regulation. According to the rules of the North of England Iron and Steel Trade and the West of Scotland Steel Trade Boards of Conciliation, any member who has a grievance must lay it first before the manager or foreman of the works, and then, if necessary, before the operative representative of the works, whose duty it is to investigate the matter, and attempt to effect a settlement with the manager or foreman in question. Regulations are laid down as to the time and the manner in which such attempts at settlement are to be made, and it is only after their failure that a written statement of the case is to be drawn up and signed by the employer and operative representatives of the works, and forwarded to the secretaries of the Conciliation Board. When any difference arises at any of the works connected with the Midland Iron and Steel Wages Board, the Works' representatives must first endeavour to effect a settlement. If they fail, the matter may be referred to a sub-committee appointed to investigate it, which may summon a board meeting, if necessary. If all preliminary attempts at settlement fail, the matter is laid before the board or committee. It is then stipulated in the rules of some of the boards that a written statement of the case must have been prepared and laid before the board by the two parties to the dispute, and, in some cases, they are required to sign a submission to the decision of the board, before the latter commences its inquiry. Verbal evidence may, as a rule, be brought forward in addition to the written statements. The members of the board vote upon the question at issue, and the rules provide for the equalisation of the voting power of the two sides by the withdrawal of as many members upon the side on which there is a majority, as will make the two sides equal. In the North of England Iron and Steel Trade Board of Conciliation, if the employer or operative representative of any works is absent from a meeting, the other representative of the works is not allowed to vote. In the Midland Iron and Steel Wages Board, if any representatives of the employers or workmen are absent, the secretaries of their respective sides are empowered to vote in their place. Finally, if no agreement can be arrived at by means of conciliation, the rules generally contain some provision for reference to arbitration. In the North of England Iron and Steel Trade and West of Scotland Steel Trade Boards of Conciliation, when the question is a general rise or fall of wages, a board meeting must be held, at which the referee may be invited to preside, and in case no agreement is arrived at, the matter must be referred to the decision of an individual arbitrator.

(e.) Minor regulations. (*e.*) A certain length of notice of any proposed alteration in the rules is usually required. In the North of England Iron and Steel Trade Conciliation Board, alterations in the rules may only be made at the January meeting of the board in each year, and notice of the proposed alterations must be given one month beforehand. In certain boards, it is also a rule that, pending the decision, the board or committee must do all in its power to prevent the occurrence of any strike or lock-out. The North of England Iron and Steel Trade Board of Conciliation lays down that there must be no strike or suspension of work pending the decision of the board; should such take place, the board will refuse to inquire into the matter in dispute till work is resumed, and will take the fact into consideration in dealing with the case. The West of Scotland Steel Trade Board of Conciliation has similar regulations.

(f.) Objects. (*f.*) No objects are mentioned in the rules of the Cumberland Ironmasters' and Blastfurnacemen's Joint Committee, and the South Wales Iron and Steel Trade Sliding Scale Committee. In the other boards the objects are in all cases very similar, and include the peaceable settlement of wages and the adjustment of any dispute which may arise between employers and employed in the trade or locality in question. The Cleveland Ironmasters' and Blastfurnacemen's Joint Committee, it may be noted, expressly limits its power by excluding from its jurisdiction "county questions, "or such as may affect the whole trade." (1)

II. SHIPBUILDING TRADES.

Organisations of employers.

150. Written evidence has been received from the Shipbuilders' Associations on the Wear and on the Tees and at Hartlepool, from the East of Scotland Association of Engineers and Ironfounders, the National Federation of Shipbuilders and Engineers, and the Belfast Employers' Association, a combination of employers engaged in ship-building, engineering, machine-making, and iron-founding.(2)

a.) Extent and date of formation. (*a.*) It was stated in the oral evidence that the National Federation of Shipbuilders and Engineers had been in existence for about three years. It is not registered under any Act of Parliament, but is virtually a trade union for the purpose of protecting the employers' interests. (1) About 40 employers are connected with the Association, which together employ, as ship-builders and in the various works connected therewith, about 45,000 persons. The East of Scotland Association of Engineers and Ironfounders was established in 1865, and includes 31 employers, who together employ about 6,000 men. In the case of the other associations the date of establishment is not given. The Shipbuilders' Associations on the Wear and on the Tees and at Hartlepool embrace thirteen and six firms respectively. About 10,000 workpeople are employed at the establishments connected with the former association. The rules of the Belfast Employers' Association and the East of Scotland Association of Engineers and Ironfounders are the only ones which have been handed in to the Commission.(2)

[§ 150 (a).]

(b.) Constitution and government. (*b.*) The government of the latter association is vested in a Board of directors chosen annually. The officers of the societies are a president or chairman, treasurer, and secretary. The Association of Engineers and Ironfounders has also a vice-president, and the Belfast Employers' Association appoints an auditor. The board of directors in the former association meets quarterly, and special meetings are called at the request of the president or vice-president, who has a second or casting vote at these and all other meetings. General meetings of the associations are held annually. Special general meetings are held in the former association at such times as may be appointed by the directors, or at the request of six members, and in the latter association on the request of any member. Each member of the former association has only one vote, and in the latter one to three votes, according to the number of workmen employed. All questions as to the construction of the rules of the former association are referred to the directors, whose decision is final. Any director dissatisfied with the decision of the board may appeal to the next general meeting, or the directors may appoint a special general meeting, the decision of which is final. No alteration in the rules of these associations can be made except at a general meeting, previous to which notice of the proposed change has been given to the members.

(c.) Conditions of membership, entrance fees, and contributions. (*c.*) Membership of the former association is open to employers who carry on business in the district as engineers or ironfounders, and of the latter association to "employers and managing directors of limited com-"panies employing skilled labour, or their authorised "representatives." The entrance fee to the former association is 2*l.* The subscriptions are payable annually, and amount in the former association to 2*l.* (or such sum as the directors may fix from time to time), and vary in the latter association from 10*s.* to 20*s.*, according to the number of workmen employed. Any breach of rules in the former association is punishable by a fine not exceeding 5*l.*, or expulsion from the society.

(d.) Dispute regulations. (*d.*) No regulations with regard to disputes are given in the rules of the Belfast Employers' Association. Any member of the East of Scotland Association of Engineers and Ironfounders, "who considers himself aggrieved by "the conduct of the journeymen, apprentices, or work-"men in his employment, may inform the secretary, who "shall report the matter to the president. The latter, if "he sees cause, may order a special meeting of the board "of directors to be summoned."

(e.) Regulations with regard to conditions of employment. (*e.*) Regulations with regard to the conditions of employment occur in both of the societies in question. The East of Scotland Association lays down that "the "week's work is 57 hours, and is paid for as 60 hours. "Fortnightly payments shall continue, except where the "present practice is different. Workmen shall work "overtime when required, and be paid therefor as "formerly." In this society and in the Belfast Employers' Association, members may not employ workmen who have left other members, without applying to the former employer for information.

(f.) Objects. (*f.*) The objects of the former association are "to "regulate the terms of agreement with journeymen, "apprentices, or workmen in the employment of mem-"bers; and generally to protect and promote the "interests of members in all questions arising in connec-"tion therewith." The latter association desires "to "collect and furnish information on all subjects of in-"terest to the employers of skilled labour; to discuss "questions affecting the interests of such employers; to "take joint action, when advisable, in case of wages' dis-"putes, strikes, or other matters connected with the "employment of labour."

[§ 151 (a).]

151. Oral or written evidence has been received from seventeen associations of employed in the various branches of the shipbuilding industry. Eight of these are shipwrights' societies, viz., the Hull Shipwrights' Provident Association, the United Kingdom Amalgamated Society of Shipwrights, the Associated Shipwrights' Society, including the Chatham Ship Construction Association, the Chatham Royal Dockyard Ship Joiners' Association, and the Chatham Dockyard Iron Caulkers' Society; the Liverpool Shipwrights' Trade and Friendly Association, and the Newport Shipwrights' Society. Two of the societies are connected with the boat or barge building industry, viz., the Boat Builders' Trade Union of the River Thames, and the Barge Builders' Trade Union. The other societies are the United Society of Boilermakers and Iron and Steel Shipbuilders, the Liverpool Operative Ship Painters' Association, the Amalgamated Society of (Ship) Carpenters and Joiners, the Sailmakers' Society (London and Glasgow branches), the Rose of Tyne Society of Drillers and Cutters, and the United Drillers' and Cutters' Society. The rules of all these societies have been handed in to the Commission, but those of the Amalgamated Society of Carpenters and Joiners have been dealt with in the summary on organisations of employed in the building, printing, and miscellaneous trades.

(*a.*) The United Society of Boilermakers and Iron and Steel Shipbuilders was established in the year 1834, and extends over the whole of the United Kingdom. Its membership amounts to 37,000 out of a total of about 50,000 engaged in the industry, and includes the five classes of mechanics connected with iron and steel shipbuilding. Mr. Knight stated that nearly 190,000*l.* had been accumulated by the society to form a reserve fund, and about 95 per cent. of the society's income is devoted to accident, sick, out-of-work, and superannuation benefits and to other benevolent purposes. The proportion of its income devoted to dispute allowance had averaged during the last 11 years only about $3\frac{3}{4}$ per cent. per annum. This proportion, Mr. Knight added, is "surprisingly small," especially if regard be paid to the fact that the suspension of work due to the continual readjustments of the prices paid for piece-work, on which fully 90 per cent. of the members of the union are engaged, are classed as disputes, even when amicably conducted throughout. Even taking a period of 21 years, the average proportion of the annual income of the society spent in disputes is not more than 5 per cent (1). With regard to the development of organisation in Scotland, Mr. Conley stated that the Scotch workers have lately become well organised, and, at the present time, there are over 7,000 members in that country. Only 2 per cent. of the persons engaged in the industry are still outside the union, and they, he added, are strictly confined to the small boiler shops and the bridge and girder shops inland (2) There are 1,800 members of the union in the North of Ireland, and, in the town of Belfast, there are no non-unionists (3). The South Wales district, on the other hand, is not well organised, and Mr. Fox stated that in the ironworks there is a general desire on the part of employers to break up the union and employ non-union men (4). In 1844, the Liverpool Shipwrights' Trade and Friendly Society was formed, and its membership at the present time was stated to amount to 1,350 (5). The Amalgamated Society of Carpenters and Joiners, which embraces both the house and ship branches of the trade, has held a continuous existence since the year 1860. It has now 36,000 members, of whom 7,000 are engaged in the shipbuilding branch of the trade. . . The Bargebuilders' Society was founded in 1872, and includes 420 out of the 500 bargebuilders employed on the Thames. This society was amalgamated with an older organisation in 1890 (6). In many of the ports of the United Kingdom, local shipwrights' societies began to be instituted in connection with the trade as early as the beginning of this century, and since 1850, Mr. Wilkie stated, these had been connected "by correspondence and annual delegates' meetings." The single central society was established in the year 1882. Owing to the pace at which this union has absorbed the local societies, its membership has been more than doubled during the last two or three years, and now amounts to 12,000. There still remain, however, between 4,000 and 5,000 shipwrights in local societies, and there are a few who do not belong to any organisation at all. The union extends over the whole of the United Kingdom (7). In 1883, the Chatham Ship Construction Association was established, and, in 1886, the Sailmakers' Society, Glasgow. The membership of the latter society numbers 180; there are no non-unionists in the district (1).

(*b.*) With regard to the constitution and government of the above societies, there is a striking difference between the elaborate regulation of associations like the United Society of Boilermakers and Iron and Steel Shipbuilders and the Associated Shipwrights' Society, and the simple constitution of small societies like the Boat Builders' Trades Union of the River Thames. The government in all the associations is in the hands of an Executive Council, Committee, or Committee of Management. The officers are a president or chairman and secretary. There are also, generally speaking, auditors and trustees; the latter, according to the rules of the United Society of Boilermakers and Iron and Steel Shipbuilders, consist of the members of the Executive Council. In certain cases one or more vice-presidents, a treasurer, and assistant secretary, are appointed in addition to the other officers, and, in the United Society of Boilermakers and Iron and Steel Shipbuilders, a referee is chosen from the members of the Executive Council. The supreme government of these societies is vested either in a General Council, conference, or delegate meeting, as in the larger societies, or in a general meeting of members of the association. Thus, in the United Society of Boilermakers and Iron and Steel Shipbuilders, the General Council, one member of which is elected by the Executive Council, and the others by the districts from candidates nominated by the branches, "decides all matters reserved for its decision." In the United Kingdom Society of Shipwrights, a conference meeting of branch delegates is held every alternate year, or oftener, if necessary. A delegate meeting of the Associated Shipwrights' Society is summoned, when required, by the Executive Council. General meetings in the smaller societies are held annually, half-yearly, quarterly, fortnightly, or even weekly. Special conferences, delegate or general meetings may, as a rule, be summoned on the request of the Executive or of a certain number of members of the association. Regulations for branch and district government are laid down by the United Society of Boilermakers and Iron and Steel Shipbuilders and the Associated Shipwrights' Society. The form of government is similar in both cases to that of the central administration. Members may appeal from the branch Committee to the district Committee or Executive Council or Committee, thence, in the United Society of Boilermakers and Iron and Steel Shipbuilders, "to the society through the monthly "report," and, in the Associated Shipwrights' Society, "to the delegate meeting, or finally to the votes of all "members." The Executive Committee of the Rose of Tyne Society of Drillers and Cutters, Northumberland, and of the United Drillers' and Cutters' Society, "determines all appeals." In the London and Glasgow branches of the Sailmakers' Society, and in the Liverpool Operative Ship Painters' Association, any member may appeal from the decision of the Executive to a general meeting of the society. Disputes between members and the officers or Committee of the Liverpool Shipwrights' Trade and Friendly Association must be referred "to "three of the five arbitrators, who are elected at a "general meeting." No provision for appeal on the part of dissatisfied members is made in the rules of the other societies. Generally speaking, new rules may be added, or old rules altered or rescinded, only by an ordinary or special general meeting, a general Council meeting or a conference of the society. A certain length of notice of the proposed alterations is frequently required before they can be discussed. The rules of the Associated Shipwrights' Society and the Rose of Tyne Society of Drillers and Cutters, provide that the rules may also be altered by submitting the proposed changes to all members by circulars or otherwise. Changes may be made in the rules of the United Society of Boilermakers and Iron and Steel Shipbuilders by the vote of a majority of all the members, "after submitting the proposed alterations to the society in the monthly report."

(*c.*) The rates of contributions vary considerably in the different societies, and are payable weekly, fortnightly, monthly, or quarterly. Members in arrears for a specified length of time are suspended from all or certain benefits of the society, until all arrears have been paid up, and they have been "clear upon the "books" for a certain specified period. Members in arrears for a longer period are excluded from the society. The entrance fees, rates of contribution, and the benefit funds connected with the societies in question, are given in the following table.

TABLE of Entrance Fees, Contributions, and Benefits in Associations of Employés in Shipbuilding Trades (Tabulated Rules, Nos. 100 15).

Entrance Fee and Contribution.	United Society of Boilermakers and Iron and Steel Shipbuilders. No. 100.	Boat Builders' Trades Union of the River Thames. No. 101.	Barge Builders' Trade Union. No. 102.	United Kingdom Amalgamated Society of Shipwrights. Central Association. No. 103.	United Kingdom Amalgamated Society of Shipwrights. Hull Shipwrights' Provident Association. No. 104.
Entrance Fee - - - -	Full first-class members and second-class members (*i.e.* persons who have worked five years at the trade, but not before the age of 21), if aged 20 to 25, pay 12*s.* 6*d.*, which increases at the rate of 1*s.* a year until the age of 30. Full members, aged 30 to 31 years, pay 1*l.* 15*s.*, which increases at the rate of 1*l.* a year until the age of 35. Second-class members, aged 30 to 45, pay 25*s.*, and are entitled to all but sick benefit. Third-class members (*i.e.* persons over 45) pay 15*s.*, and are entitled to trade protection. Members 'wives are admitted to funeral benefit on payment of 2*s.* 6*d.* entrance fee.	1*s.* for those who join within one month after serving their apprenticeship, after which it is fixed by the Committee.	2*s.* 6*d.* Excluded, full, and over-age members pay 1*l.* and 10*s.* respectively.	6*d.* - - - - - - - - -	Young men joining on the expiration of their apprenticeship pay 1*s.*, afterwards like journeymen, they must pay an entrance fee of 3*l.* Membership of the sick, accident, and death fund is optional. Entrance fee 1*s.* In the Junior Shipwrights' Provident Association the entrance fees are as follows :— Apprentices joining within 3 months pay 1*s.* Apprentices joining within 3 to 12 months pay 1*s.* and contributions. Apprentices joining within from 1 to 2 years, pay 5*s.* and contributions. Apprentices joining within from 2 to 5 years, pay 10*s.* and contributions.
Contribution - - - -	Full second-class and third-class members pay 4*s.*, 3*s.* 4*d.*, and 2*s.* a month respectively. Second-class members entering between 30 and 45 years of age pay 9*d.* a week. Each member pays 1*d.* a quarter for law expenses incurred under the Employers' Liability Act. Levies can be raised when necessary. Full or second-class members, if 20*s.* or 15*s.* in arrears, pay 3*d.* or 2*d.* a week extra for six months; if 12*s.* or 10*s.* in arrears, they will be suspended from benefits until four weeks after paying up.	½*d.* a day for each day employed, and 6*d.* a quarter. Any boat builder on going to sea may remain a member by paying 2*s.* a year and 3*d.* a quarter. Members not working at the trade may remain as honorary members by paying 2*s.* a year, and can return to the trade without further entrance fee. On the death of a member a levy of 1*s.* is raised.	Each full or over-age member pays 8*d.* or 4*d.* a week for the first 12 months, and afterwards the same while in work, but if out of work, 1*d.* a week. A levy of 1*s.* is raised on the death of a free member. Members leaving the trade may pay 3*d.* a week for funeral benefit.	1*s.* a member quarterly - - - -	Each member pays 2*d.* a week, or such sum as the general body may determine, besides 2*d.* a week to the sick, accident, and death fund. Each member of the Junior Shipwrights' Provident Association pays 1*d.*, or not more than 2*d.*, a week. A levy of not more than 6*d.* a member may be raised if the funds are less than 15*l.*

Entrance Fee and Contribution.	Associated Shipwrights' Society. Central Association. No. 105.	Associated Shipwrights' Society. Chatham Ship Constructive Association. No. 106.	Associated Shipwrights' Society. Chatham Royal Dockyard Ship Joiners' Association. No. 107.	Associated Shipwrights' Society. Chatham Dockyard Iron Caulkers' Society. No. 108.	Liverpool Shipwrights' Trade and Friendly Association. No. 109.
Entrance Fee - - - -	Full members under 35 pay - - - - - - 20*s.* " " from 35 to 40 pay - - - - 25*s.* Non-full members pay 15*s.*, and are not entitled to dispute and out-of-work benefits. Trade members pay 10*s.*, and receive dispute, distress, and out-of-work benefits.	3*d.*, except for apprentices, who enter free, and honorary members, who pay one guinea.	3*d.* - - - - - - - - -	3*d.* charged after second month - -	Journeymen entering within 3 months after their apprenticeship pay 1*l.* 1*s.* Journeymen entering within 3 to 6 months after their apprenticeship pay 1*l.* 10*s.* Journeymen entering within 6 to 12 months after their apprenticeship pay 2*l.* 2*s.* Journeymen entering more than 12 months after their apprenticeship pay 3*l.* 3*s.* Members excluded for arrears pay 21*s.* on their re-entry.
Contribution - - - -	The contribution for full members is, high scale, 1*s.* a week; low scale. 9*d.* or more a week, paid fortnightly to collectors. Non-full members pay 2*s.* 6*d.* every four weeks. These members pay all extra levies. Trade members pay 3*d.* a week, and levies for trade purposes.	1*d.* a month, and a voluntary subscription of 1*d.* a month to the sick fund. Apprentices pay half contributions.	1*d.* a month. Honorary members pay 2*s.* 6*d.* a year.	1*d.* a month - - - - - -	Each member pays 1*d.* a day while working at the trade, ½*d.* a day if doing labouring work, 1*s.* 5*d.* a month if working at another trade, or if at sea, 1*s.* 11*d.* a calendar month. An annual contribution of 3*s.* 3*d.* a year is paid for medical expenses. An extra levy of 1*d.* may be raised when required.

Entrance Fee and Contribution.	Newport Shipwrights' Society (Monmouth). No. 110.	Liverpool Operative Ship Painters' Association. No. 111.	Sailmakers' Society. London Branch. No. 112.	Sailmakers' Society. Glasgow Branch. No. 113.	Rose of Tyne Society of Drillers and Cutters (Northumberland). No. 114.	United Drillers' and Cutters' Society, Kingston-upon-Hull. No. 115.
Entrance Fee	Persons who have served their time in Newport:— Aged 21 to 22 years, pay - - - - - 10s. „ 22 „ 23 „ „ - - - - - 1l. „ 23 „ 24 „ „ - - - - - 2l. Persons who have served their time elsewhere in the United Kingdom pay 5l.	The entrance fee and fee for rejoining are determined at a quarterly meeting. Any person who, not being an apprentice, has worked at less than the current rate of wages, must pay, besides the entrance fee, a fine of 2l. 10s.	2s. 6d. - - - - -	For persons joining within four weeks after the end of their apprenticeship 5s., after this 10s., or whatever the Committee may determine. Foreigners pay 2l.	Persons aged 18 to 25 years, pay - - 5s. „ „ 25 „ 35 „ „ - - 7s. 6d „ „ 35 „ 40 „ „ - - 10s. Persons over 40 may enter as honorary members on payment of 10s.	
Contribution	Each member pays 1d. a day while working at the trade, and ½d. a day if working out of the trade, or at sea. A levy of 6d. per member is raised on the death of a member's wife. Extra levies may be raised when the funds are insufficient.	3½d. a week, besides all levies raised from time to time.	For ordinary members, 6d. a month; for honorary members (subject to no levy), 6d. a quarter.	½d. a day while in employment, paid fortnightly. Members while at sea, pay 1½d. a week.	Ordinary members 4d. a week, which may be increased with the consent of the members. Honorary members pay 3d. a week, which entitles them to all benefits except funeral benefit. A levy of 1s. is raised to aid cases of permanent disablement.	4d. a week, which may be increased with the consent of the members. A levy of 1s. is raised to aid cases of permanent disablement.

Benefit Funds.	United Society of Boilermakers and Iron and Steel Shipbuilders. No. 100.	Boat Builders' Trades Union of the River Thames. No. 101.	Barge Builders' Trade Union. No. 102.	United Kingdom Amalgamated Society of Shipwrights. Central Association. No. 103.	United Kingdom Amalgamated Society of Shipwrights. Hull Shipwrights' Provident Association. No. 104.
Accident benefit	A bonus of 100l. or 50l., according to circumstances, is raised by a levy in case of accident. Law expenses incurred under Employers' Liability Act are defrayed by the Society.	- - - - - - - - - -	10s. a week for 12 weeks. - - -	Any branch with an accident fund must support its own members, even when they are working away from their branch.	For the Junior Shipwrights' Provident Association, 5s. a week for 8 weeks, then 3s. a week for a further period as decided by Committee.
Dispute benefit	12s. a week for eight weeks, then out-of-work benefit till end of dispute; 10s. a week for eight weeks if piece-work is the cause of dispute; victimised members receive 25s. a week.	Support is granted as the Committee may consider just.	2s. a day, or as the members may decide.	Members on strike in defence of general principles may receive 5s. a week from the central fund, besides what they may be paid by their branch.	—
Distress benefit	Relief may be granted in cases of distress: a member's widow may receive 5l., and 1l. for each child under 13 years of age.	- - - - - - - - - -	From 10s. to 5l. is paid in compensation for loss of tools by fire or shipwreck.	- - - - - - - - -	Members are compensated for loss of tools by fire or shipwreck, at the rate of 50 per cent. of their value, up to 5l.
Funeral benefit	Full member, 12l.; on the death of his first and second wives, 6l. and 4l.; second class member, 6l.; on the death of his wife, 4l., on the death of a widow who has paid 1s. a quarter, 5l.	6l. - - - - - - - - -	12l.; on death of a member's wife, 3l. -	- - - - - - - - -	5l.
Out-of-work benefit	After 2 to 5 years' membership, 4s. a week for 14 weeks, then half for 14 weeks. After 5 to 7 years' membership, 6s. a week for 14 weeks, then half for 14 weeks. After 7 to 9 years' membership, 7s. a week for 14 weeks, then half for 14 weeks. After 9 to 11 years' membership, 9s. a week for 14 weeks, then half for 14 weeks. After 11 to 13 years' membership, 10s. a week for 14 weeks, then half for 14 weeks. After 13 or more years' membership, 11s. a week for 14 weeks, then half for 14 weeks. Second-class members: After 2 to 5 years' membership, 3s. a week for 14 weeks. After 5 or more years' membership, 4s. a week for 14 weeks. The above sums are paid in the course of 3 years, for not more than 14 weeks in any one year.	- - - - - - - - - -	1s. 8d. a day for 96 days in 12 months; then as decided at a general meeting.	—	—

TABLE of Entrance Fees, Contributions, and Benefits in Associations of Employés in Shipbuilding Trades (Tabulated Rules, Nos. 100–15)—*continued*.

Benefit Funds.	United Society of Boilermakers and Iron and Steel Shipbuilders. No. 100.	Boat Builders' Trades Union of the River Thames. No. 101.	Barge Builders' Trade Union. No. 102.	United Kingdom Amalgamated Society of Shipwrights. Central Association. No. 103.	United Kingdom Amalgamated Society of Shipwrights. Hull Shipwrights' Provident Association. No. 104.
Sick benefit	Full members: 10*s.* a week for 26 weeks. 5*s.* a week for 26 weeks. 4*s.* a week until recovery. Second-class members: 8*s.* a week for 18 weeks. 5*s.* a week for 18 weeks. 3*s.* a week until recovery.	-	-	Any branch with a sick fund must support its own members, even when they are working away from their branch.	8*s.* a week for 8 weeks, after which 8 weeks must elapse before further benefit may be paid. The Junior Shipwrights' Provident Association allows 5*s.* a week for 8 weeks, then 3*s.* a week for a further period as decided by the Committee.
Superannuation benefit	Persons aged 55 years may become entitled to this benefit; after 25 years' membership, 4*s.* a week, which increases at the rate of 1*s.* a week for every 5 years until 40 years' membership.	-	-	-	A grant may be made for the support of any person who, after 10 years' membership, has become incapable of work through old age or other infirmities.
Travelling benefit	Members entitled to out-of-work benefit may have a travelling card, and receive benefit once in three months from any branch they may visit.	—	—	—	—

Benefit funds.	Associated Shipwright's Society. Central Association. No. 105.	Associated Shipwright's Society. Chatham Ship Constructive Association. No. 106.	Associated Shipwright's Society. Chatham Royal Dockyard Ship Joiners' Association. No. 107.	Associated Shipwright's Society. Chatham Dockyard Iron Caulkers' Society. No. 108.	Liverpool Shipwrights' Trade and Friendly Association. No. 109.
Accident benefit	Paid at the same rate as sick benefit.	—	—	—	—
Dispute benefit	10*s.* a week for eight weeks, and then 8*s.* a week.	—	—	—	—
Distres benefit	Members are compensated for loss of tools by fire or shipwreck at the rate of 50 per cent. of their value, up to 5*l.*	-	-	-	5*l.* is granted in compensation for loss of tools by shipwreck.
Funeral benefit	High-scale members, 10*l.*: and 5*l.* on death of one wife. For low-scale members half these sums are paid. Trade members, 3*l.*	-	-	-	6*l.*, 7*l.*, 8*l.*, according as the membership varies from 1,600 to 2,000; 6*l.* on the death of a member's wife, and 5*l.* on the death of a member's widow who has paid 2*s.* a year.
Out-of-work benefit	9*s.* a week for 10 weeks, and 5*s.* a week for 10 weeks in the course of 12 months.	—	—	—	—

Benefit Funds.	Associated Shipwrights' Society.				Liverpool Shipwrights' Trade and Friendly Association.
	Central Association. No. 105.	Chatham Ship Constructive Association. No. 106.	Chatham Royal Dockyard Ship Joiners' Association. No. 107.	Chatham Dockyard Iron Caulkers' Society. No. 108.	No. 109.
Sick benefit	High-scale members, 12*s.* a week for 13 weeks, 8*s.* a week for 13 weeks, 6*s.* a week for 6 months, 5*s.* a week for as long as the recipient of benefit has been a member. Low-scale members receive half the above sums.	3*l.* once in 12 months to members of the sick fund absent from work for 12 weeks through illness.	-	-	6*s.* a week for 16 weeks. 4*s.* „ „ 16 „ Medical attendance is provided.
Superannuation benefit	Persons 55 years of age :— After 20 years' membership, high-scale 4*s.*, low-scale 3*s.* After 25 years' membership, high-scale 4*s.* 6*d.*, low-scale 3*s.* 6*d.* After 30 years' membership, high-scale 5*s.*, low-scale 4*s.*	—	—	—	—

Benefit Funds.	Newport Shipwrights' Society (Monmouth). No. 110.	Liverpool Operative Ship Painters' Association. No. 111.	Sailmakers' Society.		Rose of Tyne Society of Drillers and Cutters (Northumberland). No. 114.	United Drillers and Cutters, Society, Kingston-upon-Hull. No. 115.
			London Branch. No. 112.	Glasgow Branch. No. 113.		
Accident benefit	-	12*s.* a week for 26 weeks. 8*s.* a week for 13 weeks. 6*s.* a week for 13 weeks. Medical attendance is also provided.	-	-	6*s.* a week for 13 weeks. 4*s.* a week for 13 weeks. 2*s.* 6*d.* a week for 26 weeks. A levy is raised to aid members who are permanently disabled.	A levy is raised to aid members who are permanently disabled.
Dispute benefit	-	-	Members leaving a shop by order of the Committee receive 3*s.* a day until they can get work.	Members leaving off work with the approval of the Committee receive support as determined at a general meeting, so long as the dispute continues and the funds allow.	8*s.* a week	Support is granted in cases of dispute.
Funeral benefit	Two-thirds of a member's contributions are returned at his death to his representative. Benefit is allowed to a member on the death of one wife.	After six months' membership, 5*l.*; after twelve months or more, 10*l.*; a member may register one wife, and receive at her death, after six months' membership, 3*l.*, twelve months, 5*l.*, or two years, 7*l.*	-	-	8*l.*; or 4*l.* on the death of a wife, and 4*l.* on the death of the member.	—
Travelling benefit	-	-	-	-	Members entitled to dispute benefit may demand travelling cards.	—

[§ 151. (c.)] It may be noted that these benefits are only granted in accordance with certain specified conditions laid down in the rules.

(d.) Dispute regulations. (*d.*) In the event of a dispute with an employer, the members concerned are generally required to lay the case before the secretary or other officers of the branch or lodge, or before the general secretary of the association or Executive Committee. These officials must investigate the matter, and endeavour if possible to arrange the question in dispute. In the United Kingdom Amalgamated Society of Shipwrights, a Committee of Investigation is appointed, composed of a member of the Executive Committee, two from the branch of the society connected with the dispute, and one from each of the two nearest branches. This Committee tries "all "peaceful means of effecting an amicable settlement," and, if it fails in its attempt, has power to sanction a strike. If the local authorities in the other societies fail to bring about a settlement, information is then forwarded to the general secretary, who must lay the matter before the Central Executive. This body must then try to arrange the matter peaceably, if possible, otherwise a special meeting of the association is, in some instances, called to decide the same. The rules frequently provide that strikes may not be undertaken, nor individual members leave their employment, without the sanction of the Executive. In some cases the consent of either a simple or specified majority of the members is necessary before the cessation of work may take place. Thus, the United Society of Boilermakers and Iron and Steel Shipbuilders provides that a general vote by ballot is necessary, if the funds of the society are likely to be affected by the dispute. A strike among the members of the United Kingdom Amalgamated Society of Shipwrights is supported "if a majority of the branches are in its "favour." No strike or lockout is recognised by the Associated Shipwrights' Society "unless sanctioned by "the Executive Committee, or by a majority of the votes of all members, or by two-thirds of the mem- "bers of the branch concerned." The general conduct and final settlement of the dispute, according to the rules of the United Society of Boilermakers and Iron and Steel Shipbuilders and the Associated Shipwrights' Society, is in the hands of the Central Executive, but a strike Committee is appointed with the object, in the latter society, of conducting "the dispute under the advice of the branch and Executive Committees," and of bringing it "to a speedy and successful termination."

(e.) Minor regulations. (*e.*) Regulations for the attitude of members towards non-unionists occur in the United Society of Boilermakers and Iron and Steel Shipbuilders, the Liverpool Operative Ship Painters' Association and the Sailmakers' Society. Members of the first of the above societies are punished either by a fine or exclusion from the association, if they obtain work for a non-unionist or instruct non-members (except legal apprentices) in the trade. According to the rules of the Ship Painters' Association and the Glasgow Branch of the Sailmakers' Society, members are not allowed to work with non-unionists. Nine of the societies in question have some regulations with regard to the conditions of employment, *e.g.*, the rate of wages, hours of labour, piece-work, apprenticeship, overtime, and sub-contracting. The majority of societies have also certain regulations with a view to providing work for the unemployed.

(f.) Objects. (*f.*) In the rules of the United Society of Boilermakers and Iron and Steel Shipbuilders, the Hull Shipbuilders' Provident Association, the Associated Shipwrights' Society, and the Glasgow Branch of the Sailmakers' Society, the actual objects are preceded by a preface, introduction, or preamble. In this, attention is directed to the advantages which organisation may secure to members of the society, details are given of the objects for which it was instituted and of the means by which it is hoped to carry them out. No objects are stated in the rules of the Boat Builders' Trade Union of the River Thames. The majority of these societies place the formation of benefit funds for the assistance of their members amongst their objects. Others also wish to regulate the relations between workmen and their employers; to "encourage the amicable settlement of dis- "putes between employers and employed," and to "regulate the relations of workmen towards one "another. The Hull Shipwrights' Provident Association aims at regulating "all questions relating to trade, "viz., wages, arbitrators, rules, credentials, and the pro- "tection of members." The furtherance of the interests and welfare of the members, socially, morally, and intellectually and the advancement and prosperity of the trade are also mentioned among the objects of a few societies.

[§ 152 (a.)] 152. (*a*) The first board was formed in connection with the shipbuilding industry on the Wear in the year 1850, when, Mr. Laing stated, iron shipbuilding was in its infancy, and the shipwrights formed the main bulk of the workmen. Some of its initial decisions proved adverse to the men, and it only continued in existence for about two years. The formation of a new board was suggested in 1883, on the occasion of a very severe strike between the platers and their helpers. With the exception of the members of the Boilermakers' and Iron and Steel Shipbuilders' Society, this suggestion was adopted by all classes of workers, and the present board was then constituted. The rules of the board were signed in November 1885 by the shipbuilding employers, and by the shipwrights, joiners, smiths, and drillers, in the district. The decisions of the board are now followed throughout the north-east coast, including the districts of the Wear, the Tyne, and the Tees. Strikes were formerly so frequent in the district that Sunderland, Mr. Laing stated, was known as "the "cockpit of the north." Nevertheless, the four wage settlements which have taken place since the formation of the board have all been effected without dispute. Mr. Chandler stated that the board "worked ad- "mirably" (1).

Joint Boards. *(a) History of Wear Shipbuilding Board of Conciliation.*

(b.) Relations between employers and employed in other districts. (*b*). No other boards of conciliation have been formed in connection with the shipbuilding industries. The Boilermakers' and Iron and Steel Shipbuilders' Society has only once met the Engineers' and Shipbuilders' Association in conference, and in most of the negotiations between the two parties, the employers are represented by their various district associations. Good relations exist between employers and employed, and wage settlements are generally arranged by mutual discussion between the two parties (2). The Shipwrights' Association also approaches employers through its various district organisations. Generally speaking, the relations between employers and employed are very cordial. Advances and reductions in wages, Mr. Heslop stated, have always been amicably settled in conference, and no wage dispute has occurred in the Tyne district since 1879 (3).

(c.) Constitution and government. (*c*). The peculiar features of the Wear Shipbuilding Conciliation Board are the so-called departmental boards, representing different branches of the trade, which endeavour to effect the settlement of disputes in their particular branch without reference to the general board; and the board of referees to whom disputes must in the last instance be referred, and who must be chosen from a list of the prominent men in the district. This list is contained in the rules. The departmental boards consist of six representatives from the employers, and a like number from each branch of the workmen. The general board, which exists in addition to these boards and the board of referees, consists of three representatives from each section of the workmen, and a number of shipbuilders equal to the total number of the workmen's representatives, together with the two secretaries. No chairman of the departmental boards is entitled to a casting vote.

(d.) Dispute regulations. (*d*). Any question in dispute is referred, in the first instance, to the departmental boards, and if they fail to effect a settlement, the matter is then referred to the general board, or, if desired, direct to the board of referees. Any question referred to the general board is, if possible, settled by a majority of at least three-fourths of those present. When both the general and departmental boards fail to effect a settlement, the rules provide that the referees shall be nominated, and the matters in dispute placed before them at a meeting called for the purpose. The decision of the majority of the referees is final and binding upon the parties concerned. It may be noted that "in one point, the prac- "tice of treating questions referred to the board has de- "parted from what might appear to be a strict compliance "with the rules; it is this, when the departmental board "has failed to settle a question, it has been the practice "to carry it direct to the board of referees, and not to "make it pass through the general board. The reason "is," Mr. Haswell added, "that the questions being in "their essence technical and specific, in the sense of "applying to one branch of the workmen only, it is "considered undesirable that they should be examined "by a Board composed of the class immediately affected, "along with other workmen not interested. Except the "annual meetings and one meeting early this year (1892),

(1) Chandler, 22022; Digest Vol. III., pp. 30, 53, 54. (2) Digest Vol. III., pp. 22, 24. (3) Digest Vol. III., pp. 27, 28.

[§ 152 (d.)] "on the eight hours' question, a composite board has "never sat." Moreover, generally speaking, Mr. Doxford stated, "the parties have shown a disposition "to arrange questions wherever possible without the "intervention of referees, to have mutually waived "points to obviate a recourse to the ultimate court" (1).

(e.) Objects. (e.) The objects of the Board of Conciliation are given in the rules as follows: It must "at all times adjust "by conciliatory means all questions that may from "time to time arise, and be referred to it by either "employers or workmen, and, pending settlement of any "question by the Board, there must be no stoppage of "work, and the wages, piece-rates, hours or other work-"ing conditions must, until settlement, be those current "at the time of notice given."

Federation of associations of employed. 153. Oral and written evidence has also been received from the Federation of Engineering and Shipbuilding Trades of the United Kingdom, and from the Midland Counties Trades Federation. The latter was formed in the year 1886. The former was established in the year 1890, and includes all the shipbuilding and engineering unions, with the exception of the Amalgamated Society of Engineers (2). Mr. Glennie, the secretary of the Tyneside district of this society, stated that it was not considered advisable to join the federation in the form in which it is at present constituted. Federation, he added, is a powerful weapon in case of disputes, but it tends to increase rather than to diminish industrial warfare, inasmuch as every union has to fight the battles of its neighbour in addition to its own. Nevertheless, Mr. Knight stated that they "were in hopes of "getting the Amalgamated Society to join it, but it "appears that the chief difficulty in the matter of their "not joining has been that their rules, as they are at "present (*i.e.*, May 1892), would not permit it" (3).

(a.) Constitution and government. (*a.*) The government of these federations is vested in an Executive Council or Committee of Management, consisting of representatives or delegates from the various societies belonging to the federation. The officers are a president or chairman, treasurer, and secretary. The Federation of Engineering and Shipbuilding Trades also appoints a vice-chairman, and the Midland Counties Trades Federation two auditors and three trustees. The Executive Council in the latter society meets quarterly, or oftener if necessary, and a financial or sub-committee is appointed to consider disputes and financial and other matters, and to meet when required. No provision is made for a general meeting of this federation, but a general meeting or conference, containing not more than two representatives from each society belonging to the Federation of Engineering and Shipbuilding Trades, is summoned at the desire of the Executive Council, or any four of the Executives of the different federated societies. The rules of the federation in question may be altered either, as in the Midland Counties Trades Federation, at a meeting of the Executive Council, or, as in the Federation of Engineering and Shipbuilding Trades, at an annual meeting, provided that due notice of the proposed alterations has been given.

(b.) Contributions and benefits. (*b.*) The contributions in the former society are 1*d.* a week for men and ½*d.* a week for women, and in the latter, 3*l.* a week from each federated society. Dispute benefit, to the amount of 5*s.* a week for men and 2*s.* 6*d.* for women, is granted by the former, but no benefits are granted by the latter, society.

(c.) Dispute regulations. (*c.*) The attitude taken up with regard to the disputes which occur in connection with any of the federated societies, varies in the federations here under review. It is laid down in the rules of the Federation of Engineering and Shipbuilding Trades of the United Kingdom, that, in the event of any dispute arising between a federated society and the employers, "the "other societies are not to interfere, unless non-society "men are brought in to take the places of the men in "dispute, or other unfair means used to crush the society "affected." Under these circumstances, however, the Executive of the society in question must submit the matter to the Executive Council of the federation, and if the latter fails to effect a settlement, the matter in dispute is submitted to a conference, which has "power "to determine the course to be taken." On the other hand, if a dispute occurs in any trade connected with the Midland Counties Trades' Federation, the committee of such trade must consider the case, and send particulars to the general secretary, who, if necessary, must personally investigate the dispute and consider the best means of settlement. If no arrangement is possible, he must summon the Executive to determine what further action shall be taken. [§ 153 (

(d.) Objects. (*d.*) The objects of this latter federation are stated to be as follows:—To provide benefit funds; to enable members to get compensation for accidents when employers or managers are liable, and to resist any unjust encroachment in connection with their employment; to secure the prices and wages legally bargained for, to prevent all illegal stoppages at the pay offices, and to protect members when unjustly dealt with by their employers and managers; to shorten the hours of labour when desirable; to prevent as far as possible the introduction of adults not brought up to a trade; to obtain laws for the more efficient management of factories and mines, that the lives and health of working men may be preserved; and to assist any movement that concerns the working classes generally. On the other hand, the objects of the Federation of Engineering and Shipbuilding Trades of the United Kingdom are "to "maintain the right of combination of labour by trades "unionism, by supporting any of the societies within the "federation, if individually attacked by employers or "bodies of employers; to use every legitimate means "to abolish the character note system"; and to promote "the elevation of labour in general," and arbitration or conciliation in trade disputes. It was stated, with regard to the objects of this latter federation, that it does not exist primarily in view of the relations between employers and employed; its main function is to take cognisance of the disputes between one federated union and another (1). With regard to the objection to federation urged by Mr. Glennie, it may be noted that a statement was made by Mr. Knight to the effect that, in ordinary cases, the federation would not interfere in support of a strike undertaken by one of its members. It is, moreover, a general rule that disputes both between employers and employed and between the various unions as to the demarcation of work must be referred, unless amicably settled, to a court of arbitration (2).

2. CONCILIATION, ARBITRATION, AND MEDIATION.

Conciliation. 154. It has been already seen that some system of conciliation, either by means of informal conferences or negotiations between associated employers and employed, or between individual employers and associated employed, or by boards of arbitration and conciliation, joint committees and wages boards, has been established in by far the greater number of industries under consideration. The evidence given shows that this tends to the avoidance of disputes and to the promotion of a better understanding between employers and employed.

Arbitration. 155. There is, however, at times, the need for the existence of some final authority, to which reference may be made in the case of a deadlock, and almost all the representatives of the industries here under review were, under these circumstances, in favour of arbitration.

(a.) Arguments for arbitration: (i.) That it lessens the danger of and reduces the number of strikes, because it ensures great care on both sides with regard to the position taken up, and the common recognition of some final authority. (*a.*) The chief advantage claimed for this method of settlement is that it promotes a "better understanding" between employers and employed, and reduces the number of strikes, by the common recognition of some final authority. "There is nothing in my opinion up to "the present time," Mr. Trow, a member of the Commission, and an iron and steel worker, stated, "which is equal to arbitration . . . I do not "think that conciliation alone would have succeeded "with us. . . . There would always have been a "stop" (3). An employer in the same industry, Mr. Hingley, considered that the institution of an independent arbitrator had been "of very great service to "the district." "It has the effect of making both sides "very careful in regard to the position they take up" (4). The degree to which a recognised system of arbitration lessens the danger of actual conflicts between employer and employed, can be estimated to some extent by the fact that, in the rules of many of the highly organised associations, it is stipulated that the point in dispute must be referred to arbitration before a strike takes place. This is more or less explicitly stated in the rules of the Associated Iron and Steel Workers of Great Britain (5), the Engineers', Firemen's, and Boilermen's Society (6), the Federation of the Shipbuilding Trades (7), and the Midland Iron and Steel Wages Board (8). The Tyneside and National Labour Union (9) and the United Plumbers' Association (10) reserve to their Executive Councils the power to refer a dispute to

[§ 155 (a).]

arbitration. The National Association of Blastfurnacemen (1) "recommends" that course where possible, and an ironmaster from Cleveland stated that where the joint committee in that district failed to agree, the matter was referred to arbitration (2). The result of the rule of the Associated Iron and Steel Workers never to support a strike without a previous offer to submit the dispute to arbitration, had been, it was stated, that no general strike and only a few local disputes had occurred during a period of 22 years (3). It is further claimed by the advocates of arbitration that the award of the arbitrator is accepted, and that the dispute is settled even if it has reached the stage of a strike. In reference to this subject Mr. Hills said, "I have seen that the "moral result of giving an absolute verdict on one side "or the other, is to break up the strike" (4) Various instances of successful arbitration, chiefly in connection with wages, are given in the evidence. The only four occasions it has been resorted to by the Iron and Steel Association were in reference to that point. In two cases wages were reduced, in one case they were advanced, the fourth was still *sub judice* at the time the witness was giving evidence. He said, however, that "all (the men) stood faithful to the award when their "wages were reduced, and never grumbled even" (5). It was stated by a member of the Iron and Steel Wages Board that during the four years that Mr. Chamberlain held the office of arbitrator he was appealed to several times, and his awards were always respected by both sides (6). A representative of the Scotch millmen instanced a strike which occurred in August 1890, and was referred to arbitration at the suggestion of the employers. The award was loyally accepted by the men, though it was given against them (7). An ironmaster of the Cleveland district stated that, in 1890, fifteen points were referred to the arbitration of a referee, appointed by a representative from either side. Of these, twelve resulted in some slight advance in wages, two in a reduction in the men's wages, while in the remaining case no change was made. Only twice have matters affecting the whole district been referred to arbitration, viz., in 1880 and 1889, when disputes arose as to the interpretation of certain clauses in the sliding scale agreement. "The men's association always does its best to carry out "the bargain" (8). A representative of the nut and bolt trade stated, that, before the Board of Conciliation connected with his industry had been formed, he had acted as permanent arbitrator for five years. During that time he successfully disposed of 200 questions relating chiefly to wages. The establishment of a standard rate of wages has reduced the necessity for arbitration, and the clause referring to it has now been struck out of the rules of the board (9). Disputes in the engineering industries concerning the demarcation of work led to the formation of two courts of arbitration. One was formed at Hull in 1889, to decide the dispute between the joiners and shipwrights; the other at Jarrow in 1891, to settle the differences between the plumbers and fitters. A steel smelter stated that "as a rule we are in "favour of arbitration in South Wales." An employer, Mr. MacIlwaine, advocated arbitration in cases of dispute as to demarcation of work, and Captain Noble was of opinion that "voluntary arbitration should be en- "couraged" (10). Besides the industries already referred to, the evidence of the whitesmiths and cutlers, spike-nail makers, bargebuilders, boilermakers and iron shipbuilders, pattern makers and ironmoulders, and some of the engineers and steelsmelters, is in favour of arbitration (11).

(ii.) That the award of the arbitrator is accepted and disputes and strikes are brought to an end.

(b.) Arguments against arbitration.

(b.) On the other hand, in certain industries a few objections are raised against this method. This is especially the case with the engineers, where the general opinion concerning it appeared to be unfavourable. For instance, Mr. Glennie "did not think that "the results of arbitration would be satisfactory, ". . . . owing to the difficulty of getting suitable men "as arbitrators, men who thoroughly understand the "technical points that are in dispute." It may be noted that the fitters appeared to object on this ground to Mr. Burt's award, in the dispute on the Tyne as to the demarcation of work. Another objection raised by Mr. Glennie, was "the fact that the majority "of men occupying a high position have interests "involved in most cases; they are not thoroughly im- "partial" (12). This was supported by a steelsmelter, who stated that "the strongest objection that we have "to these solitary cases of arbitration is that, as a

(i.) That the arbitrators would not understand technical points.

[§ 155 (b.)]

"general rule, the arbitrator is a person who has not "very much sympathy with the workmen" (1). An engineer said that "in Dublin they do not believe in "arbitration. They do not believe in go-betweens: "they are something like myself. I believe our disputes "are best arranged between our employers and our- "selves" (2). Several employers also expressed a preference for conciliation (3). Are presentative of the British Steel Smelters Association said that arbitration had only been found "fairly satisfactory." "We do not "always find the firm willing to accept arbitration" (4).

(ii.) That arbitration is not always accepted by the employers.

(c.) Method of arbitration.

(e.) Individual Arbitrator and Board of Arbitration.

(c.) Most of the cases of successful arbitration before referred to were when the matter in dispute was settled by an individual arbitrator. This was the case with the Iron and Steelworkers' Association, the Midland Iron and Steel Wages Board, the Association of Scotch Millmen, and in the instances mentioned in the nut and bolt trade, and in the iron trade at Cleveland. The other method of arbitration, to which reference is made in the evidence, is that of a board. The one that was formed at Hull in 1889 to settle the difficulties between the joiners and shipwrights "has continued in existence "ever since that . . . . date . . . . so that any dispute "that may arise now is referred to this standing board "of arbitration" (5). A joiner, Mr. Paterson, favoured this plan. He was "not an advocate of one man arbi- "tration. . . . . I have no objection to a board being "formed of that description. I would have it inde- "pendent of the two conflicting parties. They should "come and make their statements, and leave the inde- "pendent parties to give their decision" (6). The board, he stated, should consist of three, five, or seven arbitrators, and the award should be made by the majority. A somewhat similar, but more complete, scheme was sketched out by Mr. Hobson and Mr. Wardley of the Sheffield Federated Trades Council. Mr. Hobson stated that at a Trades Union Congress in 1877 he proposed a resolution, which had been unanimously passed, in favour of the establishment of joint boards of employers and employed, as courts of arbitration for the settlement of trade disputes. The constituency which would elect these boards should not, he suggests, be the industry, but the commercial centre. In Sheffield the members might be nominated by the Federated Trades Council on the one side, and by the Cutlers' Company and the Chamber of Commerce on the other. "Indeed there was no "good reason," in his opinion, why standing committees should not be appointed by all county and borough councils, with authority to deal with trade disputes. Mr. Wardley endorsed this proposal, but agreed with Mr. Paterson that those who sat upon the boards should not be directly interested in the disputes they were called upon to settle (7). On the question as to whether resort to arbitration should be made compulsory, and further, whether awards should be legally enforced, there was much difference of opinion. Some were in favour of the first proposal, though they were not prepared to go as far as the second, where practical difficulties arise. This was the position taken up by various members of the Sheffield Federated Trades Council. Mr. Wardley stated that "there ought to be an Act "passed making it imperative that each large centre "should appoint a permanent board." Mr. Uttley thought that Parliament should enact that all trades entering into a dispute either on the part of the masters, or on the part of the employés, shall before work is stopped or a lock-out takes place, lay their case clearly before this court of appeal. They both considered that moral force would be sufficient sanction to ensure the carrying out of the awards (8). A blastfurnaceman was of opinion that "if arbitration was offered by one party "upon a point, and refused by the other, there should "be some means of compelling them . . . . to accept "the decision of an arbitrator, so that such serious stop- "pages of work as (we) have had in Scotland might be "avoided." With regard to the enforcement of awards, he considered that, practically, compulsion would not be necessary, "the force of public opinion would be so "strong" (9). Mr. Hobson also admitted that the practical difficulties in the way of enforcing awards, otherwise than by public opinion, would make it almost impossible. Mr. Trow, representing the Iron and Steel Workers, thought that resort to arbitration might be made compulsory, but that Government should not interfere either with the composition of the boards, the appointment of the arbitrators, or the enforcement of awards (10).

(ii.) Compulsory versus voluntary arbitration.

(1) Tabulated Rules, No 60. (2) Digest, Vol. III., p. 97. (3) Digest, Vol. II., p. 99. (4) Minutes of Evidence, Vol. III., 24,962. (5) Digest, Vol. II., p. 43; Minutes of Evidence, Vol. III., 14,870. (6) Digest, Vol. II., p. 99. (7) Digest, Vol. II., p. 50. (8) Digest, Vol. II., p. 97; Minutes of Evidence, Vol. II., 14,578. (9) Digest, Vol. II., p. 104. (10) Digest, Vol. III., p. 84. (11) Digest, Vol. II., pp. 100 and 104; Digest, Vol. III., pp. 82–4. (12) Minutes of Evidence, Vol. III., 23,147.

(1) Minutes of Evidence, Vol. II., 16,412. (2) Minutes of Evidence, Vol. III., 23,320. (3) Digest, Vol. III., p. 84–5. (4) Minutes of Evidence, Vol. III., 16,412. (5) Digest, Vol. III., p. 83; Minutes of Evidence, Vol. III., 21,980. (6) Minutes of Evidence, Vol. III., 22,166–171. (7) Digest, Vol. II., pp. 104 and 105. (8) Digest, Vol. II., pp. 104–5. (9) Minutes of Evidence, Vol. II., 13,985–90. (10) Digest, Vol. III., p. 99.

155 (c).)] Another witness from the same industry did not think it "likely" that an award would be repudiated by the men, but were this to occur, it should be enforced by law (1). Another stated, that though personally preferring the voluntary system of arbitration, he "would not be "against the decision being made binding on both "parties" . . . "anything but the old system of strike "and lockout" (2) One employer also advocated the same course. "There should be . . . the power to claim an "arbitrator to be appointed by some authority . . . "Where there are two parties at variance, compulsory "arbitration might be beneficially resorted to." The only definite proposal made as to how this could be brought about, was Mr. Price's suggestion, that the award should be enforced by damages payable by the employers' or the men's association. This, he acknowledged, "implies a very perfect organisation amongst the "men" (3). Various objections, however, are urged against compulsory or State arbitration by the majority of the employers. An ironmaster said: "I do not think "it would be beneficial. I think discontent would arise "in the minds of the men. They would think they "were being compelled, and would resent it" (4). "It is "rather difficult," Captain Noble stated, "for a State "arbitrator to be acquainted with the technicalities "either as regards the employers or men, of the various "questions that are likely to arise. . . Any awards "made by the State arbitrator would be binding upon "the employers. If the men are dissatisfied, the various "societies can order a certain number of their men to "leave work, and take other means of evading the award. "The employers, of course, are bound by it" (5). Another employer argued on the same lines that the arbitrator's decision could not be made legally binding without depriving either masters or men of the right which both possess, of terminating the contract of hiring, if dissatisfied (1). Finally, Mr. Laing stated that he was not sanguine, at all events, "that any interference on "the part of the State would be productive of much good" (2). [§ 155 (c).)]

Mediation. 156. With regard to mediation, or the intervention of a third party on his own initiative, Mr. Seaton was of opinion that a mediator should be appointed, "whose "interest it would be to see peace effected and justice "done." "Some one," Mr. Seaton added, "(I do not say "how appointed), agreed upon by both parties, could "attend the meetings of the masters, and put before "them the views of the men, and moderate the views of "the masters who were disposed to be fightable. This "same individual could attend the meetings of the men, "and put the views of the masters before them fairly "and justly; then, I think, most of the disputes would "be amicably ended between employers and employed." When it is necessary for a ballot to be taken, the mode of conducting that ballot and the supervision of it would be in the hands of the mediator, who, Mr. Seaton thought, should not have the power to act as an arbitrator (3). As to the appointment of this mediator, the witness was "not prepared to formulate a scheme," but at the same time saw "difficulties in doing it in any other way but "by legislation" (4). It may be noted that the only mention made in the evidence of the settlement of strikes by mediation occurs in the Tees district. Mr. Rothwell stated that disputes in that district are frequently settled by this means. "I look upon a dispute "in my district," he added, "as being in some sort a "reflection on my character, and an indication that I am "not doing my duty. . . . I have the entry of all the "yards; in fact, the employers send for me quite as "often as the workmen themselves" (5).

C. TRADE DISPUTES.

1. GENERAL RELATIONS BETWEEN EMPLOYERS AND EMPLOYED.

Causes of strikes. 157. By far the greater number of strikes that have occurred in this group of industries have been caused by disputes either for an advance or against a reduction in wages, or the prices of piece-work. This is especially the case with the less highly-organised trades. The secretary of the Bromsgrove Co-operative Society for Manufacturing Wrought Nails, stated that "all the strikes "from my experience, which has extended over some "years now, are caused by the sweater entirely . . "and we have always been compelled to strike . . "I never remember but once that we had an advance of "wages without striking for it." A representative of the Lock and Key trade complained similarly that, owing to the weak position of the men, the masters would try and beat them down by taking orders "which it was im-"possible for them to manufacture at the price." "I "call that being sweated" (6). The question of demarcation of work has been a constant cause of friction between the Boilermakers' and Iron Shipbuilders' Society, the Amalgamated Society of Carpenters and Joiners, and the Amalgamated Society of Engineers. These disputes are of comparatively recent growth. A member of the Executive Committee of the Federation of Engineering and Shipbuilding Trade Unions stated that disputes relating to demarcation of work are due to the transition from wooden to iron and steel ships. As the transition is still proceeding, the settlements have no permanent value (7). "When "men are not organised in a trade union, these little "things are not taken much notice of; but the moment "two trades become well organised, each trade is looking "after its own particular members' interests. . . . "That would account for their differences getting more "acute during the last few years" (8). A great many disputes have arisen on different points connected with unionism, particularly in the more highly-organised trades. The men complained that sometimes the masters refuse to meet or to recognise them in their official position, and that thus avoidable strikes occurs (9). The employers complained that the men refuse to work with non-unionists. This is a prominent cause of disagreement in the shipbuilding trades. One employer stated that "the ironworkers have simply made union-"ism a perfect system of terrorism, and no man who will "not join their society and conform to the rules is "allowed, in this trade, to earn his livelihood" (7). The employers stated generally that they never dismiss the men's representatives nor the prominent trades unionists as such, and that "they are treated the same as any "other workmen" (8). On the other hand, the complaint of the men that delegates or prominent trade unionists are dismissed, is by no means infrequent, though in several cases it is said to be a rare event (9). "In my experience, men are not dismissed at once for "being on deputations; that would be too straightforward "a course to adopt, but they are usually marked and "discharged for some frivolous thing that may trans-"pire on the first opportunity" (10). Only three strikes are mentioned as occurring in consequence of the employment of non-unionists, and one in consequence "of "a firm discharging six of their workmen for being "members of our society" (11). The question of the hours of labour has also been the cause of a large number of disputes. (12)

2. SPECIAL STRIKES.

Strikes in more highly organised trades. Plumbers and fitters (Tyne). 158. The question of demarcation of work is a fruitful source of dispute in trades that overlap, which is liable to occur whenever two of them work in the same materials. This is especially the case with the plumbers and fitters, and the shipwrights and joiners. Disputes have been very protracted, and difficult of settlement. Stoppages of work have been frequent. Thus, it was stated that the interests of the employer had suffered largely, through no fault of his own, and, more indi-

[§ 158.] rectly, those of the community at large (1). An employer asserted that it is difficult to estimate the injury that has been caused by the disputes on this point in these two trades (2). Another stated that "it disorganises his whole business, and sacrifices his interests." In his opinion, the difficulty of settling these differences has been greatly due to the way in which each trade union has sought to push the interests of its own members, to the entire exclusion of those of the employer, and regardless of any common good (1). In consequence of a series of disputes between the plumbers and the fitters, a conference was held in January 1891, at Newcastle-on-Tyne. It was attended by representatives of the Executives of the Amalgamated Society of Engineers and the United Operative Plumbers' Association. After careful investigation, a plan of demarcation of work was drawn up and issued. In the Clyde district it was accepted, but in the Tyne district difficulties at once arose, because each party disputed the other's reading of its provisions. An employer attributed its failure to the facts that the settlement was not clear in its definitions, and that there was no third party to interpret them (3). The engineers stated that in a certain yard the plumbers were doing the work that had been awarded to them (4). As the plumbers refused to give it up, the fitters employed in that yard struck, and the employers in the whole district retorted by locking out 25 per cent. of the members of the Engineers' Society in their service. This occurred in April 1891. In June, a conference was held between the employers, plumbers, and fitters, at which it was agreed that work was to go on temporarily under certain modifications, until a committee, which had now been formed, should be able to draw up a final settlement. This joint committee gave a certain decision on a technical point against the fitters. They rose in a body and left the committee, which, on October 28th, issued its general award without them. The fitters refused to be bound by it, although when a similar case had arisen the year before, the Amalgamated Society of Engineers had passed a resolution censuring the conduct of the joiners for refusing to abide by Mr. Burt's award (5). The fitters now struck for the second time. The employers again locked out 25 per cent. of the engineers, whereupon the Amalgamated Society called out the remaining 75 per cent. (6). After a strike of 12 weeks the engineers gave in, and came back to work upon the basis of the award issued in October by the employers and plumbers (7). In the opinion of one of the employers, it was impossible to draw hard and fast lines of demarcation of work. In certain cases it would necessitate the shifting of the same piece of work from one trade to another no less than three or four times before it was completed, which would involve a "complete sacrifice of "both economy and efficiency." It is the function of the employer to decide through the foreman, when disputes arise, what particular trade shall do any particular job (8). It was further stated that a few years ago the fitters had refused to do the very work which they are now fighting to obtain (9). The plumbers' and fitters' disputes at Barrow and on the Clyde and Tyne cost the plumbers 675*l.* 12*s.* 1*d.*; their estimated loss in wages was 1,395*l.* 10*s.* (10). The Amalgamated Society of Engineers spent about 15,000*l.* in disputes in 1891, but information is not given as to the exact amount expended in the fitters' disputes on the Tyne (11).

Shipwrights and joiners.

159. Several differences as to demarcation had taken place between the shipwrights and joiners since the year 1865 (12). The difficulty in question, however, was a standing one, and the dispute became so serious that in 1890, on the failure of various methods of negotiation, including "a joint committee," "the employers urged "the delegates of the two societies to refer their differences to an independent and capable arbitrator, "promising that they would, as employers, accept any "award that he made" (13). This was ultimately consented to. Mr. Wilkie was nominated as arbitrator by the shipwrights, and Mr. Paterson by the joiners, and Mr. Burt, M.P., was chosen by both parties as umpire (14). It was agreed that no stoppage of work should take place in the meantime, and that the decision of the umpire should be final. "A very long, patient, and exhaustive enquiry was made into the practices of the "Tyne and other places; past and present evidence was "taken from old hands, delegates, and from all who could "throw light on the history of the division of work. [§ 159.] "The cost was large, and became a serious charge upon "the two societies. After an investigation extending "over five and a half months, Mr. Burt issued his award, "allotting, out of the 168 items in question, 96 to the "joiners and 72 to the shipwrights. Yet the award was "no sooner published than the joiners assailed it as "grossly unfair, and absolutely refused to work under "its provisions" (1). The joiners accounted for their refusal to accept the award on the ground that it was not in accordance with the evidence, and that it contained a clause transferring to the shipwrights the work of 70 joiners in the engineering department, from which no evidence had been taken (2). The latter appeared to be the chief cause of complaint. Mr. Paterson stated before the board of conciliation which was subsequently constituted, that they had letters from "five of the largest engineering "establishments in the north of England," who stated that "they had never employed any shipwrights." The witness further remarked that they did not want any work belonging to the shipwrights. They only wanted their own. With reference to this point, it may be noted that Mr. Burt, in his award, referred to the extreme difficulty of getting at the facts, owing to the absence of "uniformity" in many classes of work. "In one yard shipwrights do the work that "joiners do in another. In a second, both are doing precisely the same; while in a third, the work done at "one time by shipwrights is now being done by joiners, "and *vice versâ*." The joiners struck for a period of three months. They soon offered to submit the matter in dispute to a board of conciliation composed of the representatives of different trades. This proposal was refused at first, but two months later it was accepted (3), and in spite of their annoyance at the refusal of the joiners to abide by Mr. Burt's award, the shipwrights agreed to re-open the question before a board of conciliation. This court was presided over by Mr. Bell, the Mayor of Newcastle. The joiners and shipwrights each sent three representatives, including Mr. Paterson and Mr. Wilkie, to state their case before it. The first step taken was to pass the following resolution:—"That this board, "having heard representatives of the joiners and shipwrights, and carefully considered the same, feel that "they must uphold the principle of arbitration, and "hold both parties bound to comply with their written "agreement to adhere to Mr. Burt's award. They, "therefore, direct the joiners to at once resume work, not "later than Monday next, upon Mr. Burt's award, with "the exception of that referring to the engineering "work." The joiners accordingly went back to work at once, pending the decision on the disputed points (4). These were for the most part of a highly technical character, but many of them were decided by the board of conciliation. The remainder, which consisted chiefly of points of detail, were left over to be settled by a temporary "Referee Court," which was established to deal with the questions omitted by Mr. Burt and the board of conciliation. "This Court "decided the whole question, and drew up a list of work "which has been wrought to by both parties" (5). The representative of the joiners claimed that the general result, as far as they were concerned, had been that they "had about 70 per cent. of the objections that they had "made to the shipwrights; and, on the other hand, the "only point that the shipwrights got on the whole of the "16 objections that they made to the joiners, was in reference to the fixing of blocks for torpedo heads. One "of the jobs alone, after the alteration which the board "of conciliation made upon Mr. Burt's award, has been "the means, during the last 12 months, of something like "2,000*l.* in wages being paid to the joiners, in a certain "class of work, that would have been paid to the shipwrights" (6).

The barge-builders' strike.

160. In March 1890, the Barge-builders' Union, at a meeting of non-unionist as well as unionist workers, submitted the following proposals for approval:—(i.) That the rate of wages should be raised to 9*d.* an hour. (ii.) That the hours should be reduced to 54 a week. (iii.) That overtime should be paid for at 1*s.* an hour. (iv.) That two hours' notice should be requiredon either side for leaving a job, and that an equivalent sum of money should be paid sufficient to enable the men to have

1890.] their tools ground, because they were obliged to bring them properly sharpened on entering upon a new job. These proposals were sanctioned by the meeting, but refused by the employers, whereupon the men struck. The employers seemed to object chiefly to the demand for 1*s.* an hour overtime. "We did "not ask it," said the bargebuilder's representative, "because we wanted the extra money, but because we "wished to put a stop to the pernicious system of "systematic overtime which has been in vogue in our "trade for some years past. In some yards men have "been working from six in the morning till eight at "night, and some men in the winter would be working "three-quarter or short time, and about 25 per cent. of "the men would be unemployed altogether in our trade." The masters offered 8½*d.* an hour overtime, but the men refused to accept it. Rather than continue the strike, the men offered 10½*d.* as a compromise. The employers met again, refused the men's offer, and adjourned for a month. "That practically meant that they were going "to do all they possibly could to starve us out." The men had only 750*l.* in hand when the strike took place, but they procured outside assistance, and the Dockers' Union lent them money. Then the employers began to give way, and at last "after 18 weeks' trouble, we gained "what we asked for" (1). "The cost of the strike was "2,361*l.* 16*s.* 11*d.*, and the loss of wages to the men was "3,697*l.*, so that the total cost of the strike was "6,058*l.* 16*s.* 11*d.*" (2). "The employers acted very "fairly to us after the strike was over, because, with the "exception of one or two instances, they took all their "old hands back that came out on strike" (3). During the whole 18 weeks not a single member of the union was taken up for violence or intimidation. For six weeks afterwards, however, the men employed by the Union Lighterage Company used to "hallo at" a fellow workman whom they refused to recognise as a member of the trade, and they were in consequence bound over to keep the peace. The reduction in hours that the men got through the strike has been the means of furnishing employment to 30 additional men. Whereas the Union at one time spent about 15 per cent. of its income in "out-of-work" benefit, last year (1889), it spent only 5 per cent, and this year only 3 per cent. for that purpose (4).

...kes in ...e loss ...ghly ...rolized ...lustries. ...Last ...rnacemen ...Scotland).

161. The object of the strike among the blast-furnacemen in Ayrshire and Lanarkshire, was stated by the agent of the Association from Scotland to be "to bring "forward the Scotch blast-furnacemen to something "like a similar level to our English brethren in relation "to Sunday labour, and our claim was put in for time "and a half to be paid for Sunday and Sunday night "labour, that is, from six o'clock on the Sunday morning "until six o'clock on the Monday morning, with the "alternative of Sunday labour to be abolished," "the "hours were that long, and the work was that hard, "and the pay was so miserably small" (5). The strike lasted from 4 October 1890 to 21 March 1891. About 1,100 unionists and 200 non-unionists were engaged in the dispute, and a large number of colliers, miners, and steel workers were thrown out of employment in consequence. The employers refused to concede the demands of the men, or to submit to arbitration, or even to discuss the question in any form. The union supported the men (6), "After a 23 weeks' struggle, "in which the whole of the furnaces in Scotland stood, "except six, at a cost to our association of 12,500*l.*, "practically speaking, we were compelled for want of "funds to give up, and the same miserable state of "things remains in Scotland to-day" (7). The result of the dispute was a reduction of 20 per cent. in the tonnage rate, which was equal to a reduction in wages "averaging 12½ per cent. all round." The cost to the union in strike pay was 12,413*l.* 15*s.* (8).

...hain ...akers ...radley ...eath).

162. The chainmakers struck for an advance in wages, which, in consequence of the conditions under which the trade was carried on, were extremely low. The representative of the Cradley Heath Branch of the National Amalgamation of Chain-makers' and Chain-strikers' Associations stated that strikes were unfortunately constantly occurring, and that the one which took place in 1886–7 was "a good typical" instance (9). The men at that time were only getting from 7*s.* to 10*s.* per week, and the women from 3*s* 6*d.* to 5*s.* The witness went to the employers and asked them if they could not raise these "starvation prices" They replied that this would only be possible if the workers struck, and by restricting the output sent the prices up artificially. This was accordingly done. Between 2,000 and 3,000 workpeople turned out and demanded an advance in wages, and the discontinuance of what was really a form of "trucking," *i.e.*, the practice of selling the "breeze" (1) to the workers at more than half as much again as the market price. "As a society, we had no money in hand, "because we had only just then re-organised the union. "The people played then something like 13 or 15 weeks." After the masters had reduced their stock, both the disputed points were conceded to the men. They then got the advance in their rate of wages, and likewise abolished the system of trucking with the breeze (2). [§ 162.]

Nailmakers (Bromsgrove).

163. The object of the strike among the nailmakers at Bromsgrove was somewhat similar. "We approached "the masters for the 10 per cent. advance in wages, and "they refused to accede to our request. The men "decided that they could not live at the present prices, "and thought it best to come out on strike." It was a general strike, and about 1,500 men and women were affected by it. No union existed at the time, but a union was got up for the purposes of that particular dispute. "The men got extraordinary help from the "country, more than 3,000*l.*" The strike began on 9th November 1891, and ended on 1st March 1892, and was "one of the most successful that ever the nailmakers "have been engaged in." The result was that an advance in wages was procured which "would average "about 3 per cent. all round. In some cases it was as "much as 50 per cent.; in some cases 20 per cent." "We got another advantage by the strike which is "almost superior to the advance, at any rate it is equal "to it, that is, that the employers have decided to form "a board of conciliation for the nail trade" (3).

3. PICKETING AND INTIMIDATION.

Difficulties attending the working of the Conspiracy and Protection of Property Act in relation to strikes. Picketing disputes in Glasgow shipyard.

164. Under Section 7 of the Conspiracy and Protection of Property Act, while "intimidation" was forbidden, picketing, Mr. Wilkie stated, was clearly allowed (4). The section runs thus: "Attending at or near the house "or place where a person resides or works, or carries "on business, or happens to be, or the approach of such "house or place, in order merely to obtain or communi-"cate information, shall not be deemed a watching or "besetting within the meaning of this section." The Parliamentary Committee of the Trades Union Congress defined picketing as "the trade term for 'attending at "'or near a house, etc., in order merely to obtain or "'communicate information'" (5). "A dispute occurred "in Glasgow three or four years ago, and we stationed "a member as a picket at a particular point, and the "constable said to him, 'you are not allowed to in-"'timidate workmen here either by your presence or "'otherwise. You are hereby warned, &c.' that is, their "mere presence was objected to." The picket at once reported the matter at the office, and the officials demanded an explanation from the superintendent of police. This, however, he refused to give, although he upheld the action of the constable. The shipwrights placed the matter in the hands of their law agents, who wrote to the Chief Constable at Glasgow, and carefully explained the exact circumstances. "The threatened "action" they stated, "on the part of the police "is considered by our clients such a new departure "and an invasion of what every trades union in the "country considers to be its legal right under Section 7 "of the Conspiracy (Master and Servant) Act of 1875, "that we have deemed it proper to communicate direct "with you, and to inquire if you adhere to the position "taken up by your superintendent. If so, perhaps "you will kindly inform us under what existing Statute "you claim such a right. The society will arrange to "have two men in attendance on a particular day and "hour to be intimated to you, in order that you may "charge, or if necessary, apprehend them, with a view to "the question being tested in the competent court. We "have asked the society to do nothing further in the "matter until we hear from you." In reply, Captain Boyd, the Chief Constable, wrote, "I am informed that "Messrs. Inglis complained of their gates being beset "by pickets of shipwrights, and of their loitering about "the entrance, supposed with the intention of intimida-"ting men calling for employment, and otherwise giving "annoyance. I have instructed the superintendent of the

(7) Minutes of Evidence, Vol. II., 13,958. (8) Answers to Schedules of Questions, p. 109. (9) Digest, Vol. II., p. 54.

(1) "Breeze: small cakes for firing purposes, used instead of coal in the manufacture of chains."—Glossary. Digest, Vol. II., p. 143. (2) Digest, Vol. II., p. 77. (3) Digest, Vol. II., p. 77. (4) Digest, Vol. III., p. 94. (5) 26th Quarterly Report of Associated Shipwrights' Society, p. 23.

[§ 164.] "district only to interfere if any intimidating language "or action is used towards any of the employés, or if "any obstruction or annoyance is caused to any one in "contravention of the 149th Section of the Police Act, "Sub-section 47" (1). This declaration entirely satisfied the shipwrights in this particular instance. Since, however, other cases of the same kind had subsequently arisen, in which the law had been differently interpreted, "what we desired was that some means should be taken "to make the clause so distinct and clear that no diversity of opinion could arise" (2). On the other hand, the employers are of opinion that the law needs amendment in a contrary direction. The Managing Director of the Thames Ironworks Shipbuilding Company said, "I think there should be strong powers given to the "police, or whatever may be the local authorities, to see "that neither side takes advantage of the other. . . . "If this Commission could give emphasis to the idea "that there should be police to see fair play, it would be "very desirable. . . . If you once got the police "into the hands, for instance, of the local council, it "would follow that we should not be able to rely on "anything being done at all. . . . If a blackleg is "offered employment, he has a right to take it, and he "should not be interfered with, so long as he has "accepted a job which is offered to him" (3). It was stated by an employer in the National Federation of Shipbuilders and Engineers that the law against picketing, though quite explicit in itself, has been made "totally inoperative," by the clause which permits attendance in the neighbourhood of dwellings or places of business, "for the purpose of giving information." "This "permission once given, leaves the way open for all the "evil that picketing can do, and the clause ought to be "at once deleted. . . . It is not necessary to have a "man or a number of men stationed 'to give information'; there are other ways of doing it. . . . I "absolutely object to men loitering near a place with any "object whatever. . . . I do not wish to prevent the "man who is on strike from honourably conferring with "his colleague upon the strike. But I would prevent him "persistently following him about, or waiting for him "continually. . . . Persistent following is intimidation within the meaning of the Act, I think; but it is "very difficult to prove" (4).

(1) Digest, Vol. III., p. 94. (2) Digest, Vol. III., p. 94. (3) Digest, Vol. III., p. 95. (4) Digest, Vol. III., p. 95.

[§ 165.] The Mother well Riots.

165. A strike took place amongst the steel smelters about six months after they had formed themselves into the British Steel Smelters' Amalgamated Association. The cause was a 10 per cent. reduction of wages, of which only 24 hours' notice was given. "The men were work- "ing on day's notice at the time, therefore it was quite "legitimate. Since that time the firm have worked on "14 days' notice. The men left work at the end of the "day. The strike lasted nine weeks." While it was going on, riots occurred between the Union men and the men who were imported into the place to supply the places of the men on strike (1). The firm made an attempt to take a carriage load of imported men into the works, and a crowd, variously estimated at from 3,000 to 5,000, prevented the carriage being taken in. Two or three hours after that had occurred, the police made an unprovoked assault upon the crowd, when there were no imported men upon the scene, nor anything else. As a result of the action of the police, the crowd of course turned upon them, and these men were apprehended.

"But as far as I can remember, the men were not "apprehended until six or eight weeks after the occur- "rence, and when they were apprehended there was a very "long delay before they were tried." "It was a very "serious cause of complaint, when the case did come on, "that the Procurator Fiscal made no effort to take the "precognition of the witnesses for the defence, notwith- "standing the fact that special defences in a number of "cases had been lodged, and if he had examined the wit- "nesses beforehand we felt assured that the case would "never have come before the court, as the first case was "not found guilty, and in the other case only one man "was fined for a common assault" (2). "They were "tried under the Protection of Property Act. . . . "There is one thing that we complain of, that several of "the clauses of that Act are not very clearly defined. "The Crown Prosecutors in different districts take "different views. In one case they have only one count "under one section, and in another they will have that "section split into five or six counts in the indictment. "We think it ought to be clearly defined, so that we "should know exactly what we were doing" (3).

GEOFFREY DRAGE,
Secretary.

APPENDIX.

TABLE showing the VARIOUS RATES OF PAY (exclusive of Special Rates) for CERTAIN CLASSES of ESTABLISHED and HIRED WORKMEN in HER MAJESTY'S NAVAL ESTABLISHMENTS AT HOME on APRIL 1st, 1893.[c]

CLASS OF LABOUR.	Daily Rates of Pay.	
	"Established" Men.	"Hired" Men.
	s. d. *s. d.*	*s. d.* *s. d.*
Boilermakers	5 1 to 6 4	5 0 to 6 8
Caulkers	5 0 to 5 4	5 0 to 5 6
Founders	5 4 to 6 4	5 0 to 6 8
Joiners	4 8 to 5 0	4 6 to 5 2
Patternmakers	5 4 to 6 4	4 10 to 6 8
Plumbers (and Braziers)	4 10 to 5 2	4 8 to 5 4
Shipwrights	4 9 to 5 6	4 6 to 5 8
Labourers, skilled	3 4 to 4 2	3 2 to 4 2
Labourers, ordinary	2 10 to 2 11	2 10 to 3 0
Smiths	5 0 to 5 9	4 8 to 6 0

[c] For detailed information, showing particulars of the numbers on the various rates of pay (exclusive of special rates) in each trade. *See* Blue Book C. 7135.

GROUP B.

SUMMARY of the Evidence, oral and written, received by GROUP B. of the Royal Commission on Labour.

PART I.—TRANSPORT BY WATER.

A. CONDITIONS OF LABOUR: Page.

1. Wages.—(i.) *Statements of Wages* - 144
(ii.) *Co-operation and Profit-Sharing* - 149
2. Hours.—(i.) *Statements of Hours* - 149
(ii.) *Irregularity of Employment* - 152
(iii.) *Limitation of Hours, by Law or otherwise, e.g., the Eight Hours' Day* - 156
3. Municipalisation - 158
4. Inspection and Registration, and Legislation relating thereto - 159
5. Accident Funds and Employers' Liability, and Legislation relating thereto - 163
6. Other Conditions of Labour - 166

B. ORGANISATIONS:

1. Organisations of Employers, Organisations of Employed, and Joint Boards - 167
2. Conciliation, Arbitration, and Mediation - 183

C. TRADE DISPUTES:

1. General Relations between Employers and Employed - 184
2. Special Strikes - 185
3. Picketing and Intimidation, and Legislation relating thereto - 189

Note.

In accordance with a Resolution of the Commission, the Secretary was directed to prepare Summaries of the Evidence (oral and written) received by the Committees. This Evidence includes:—

1. The Minutes of Evidence, with Appendices.
2. The Answers to the Schedules of Questions.
3. The Rules of Associations of Employers and of Employed, and of Joint Boards.

N.B.—The following books have also been consulted:—

(i.) Law Reports, Wilson *v.* Merry, 1 H.L. Sc. 326.
(ii.) Noy's Legal Maxims.

PART I.—TRANSPORT BY WATER.

PART I.—TRANSPORT BY WATER.

A. CONDITIONS OF LABOUR.*

1. WAGES.

(i.) STATEMENTS OF WAGES.

[§ 166.] DOCKS, WHARVES, AND WAREHOUSES. Nature of information.

166. A large amount of evidence, both oral and written, was given on the subject of the rates of wages in docks, wharves, and warehouses, but owing to the nature of this information it has been found impossible to reduce it to a tabulated form, or to found on it any general and unqualified statement. The misleading tendency of any such statement is plain from several considerations. The classes of labour included in this industry are numerous, and many of the distinctions drawn between them are of a highly technical kind. These distinctions, however, are frequently passed over in the evidence, and the less specific terms applied to different classes of labour are not always used with the same meaning. Thus in the port of London, only men employed in discharging are called dockers, while the comparatively skilled work of loading is confined to stevedores. Dockers, again, are classed as ship and quay labourers, and these are further classed according to the nature of their work. Statements of wages are made sometimes with and sometimes without reference to these classifications, and moreover in ports other than London, the distinction between men employed in discharging and in loading does not exist. The rates of wages are variously stated by the hour, the day, the week, or the piece, and to the difficulty of comparing time-work and piece-work rates is added the difficulty of comparing one time-work rate with another, in dealing with an industry in which there is considerable irregularity of employment, the effect of which is felt in varying degrees by different classes and individuals. Statements such as frequently appear in the evidence, of average earnings, generally per week, while affording to a certain extent an impression of the facts, are too untrustworthy to be taken as the basis of a calculation. They are in some cases apparently the result of guesswork, and are expressed in general terms without reference to the time over which the average is taken, while in other cases they are in the form of a calculation by the employer of the wages actually paid for a certain class of labour during a given time. These statistics, though no doubt trustworthy, are frequently of limited application. Moreover, even where exactly commensurable statements can be obtained, the discrepancy between evidence from different sources has still to be reckoned with. A certain amount of information as to standard rates of wages can, however, be gathered from the evidence, and is valuable so far as its limitations are borne in mind.

Rates of wages in the London district.

167. A common feature in rates of wages for ordinary dock labour, so far as London is concerned, is the minimum of 6*d.* an hour with 8*d.* for overtime, fixed by the Mansion House agreement in 1889.(1) This is the regular wage for hour-work, and at piece-work rates the same minimum is paid, with the addition of a plus if earned.† The wages of permanent men at the docks range from 24*s.* a week under the Joint Committee(2) to 30*s.* at the Surrey Commercial Docks(3), and at the wharves from 25*s.* to 30*s.* a week(4), with overtime at the usual rate of 8*d.* an hour. Steamship work, which is considered harder and more dangerous than ordinary dock labour, is paid at the rate of 7*d.* an hour and 9*d.* overtime.(1) Stevedores, whose employment requires a [§ 167.] certain amount of skill, and who are considered a superior class of workmen, have a rate of 8*d.* an hour with 1*s.* overtime.(2) There are special departments of dock labour in which higher wages are earned, but these are for the most part paid at piece-work rates, which show the utmost variety. The wages of foremen and clerks under the Joint Committee average, it is stated, 31*s.* a week.(3) At the wharves the pay is said to be higher, but the hours longer.(4)

Calculations of average daily and weekly earnings in the London district.

168. In the case of casual labour, however, the connection between rates of wages and money earned is obviously slight, and the question of average earnings is an intricate one. The most promising method of obtaining definite and fairly comprehensive information on such a subject would appear to be to procure statistics such as those referred to above, based strictly on the actual figures shown in the books of employers, but of as wide a range as possible. This was the method adopted by one witness in attempting to determine "the ordinary value of a day's work at the docks" (in London). For this purpose the Chairman of the Joint Committee supplied calculations extending half-year by half-year from January 1st, 1891 to June 30th, 1892. It appeared from these that the value of piece-work (or work at 6*d.* an hour with a plus) during this period, was on an average 4*s.* 11*d.* a day, while the value of time-work, of which there is much less, was on an average 4*s.* 6*d.* a day for permanent men, and 4*s.* 1*d.* a day for day labourers, the total average over the Joint Committee's docks, excluding Tilbury, being 4*s.* 7*d.* It was estimated that since many of the men on piece-work were drawn from the permanent list, the total average wages would be divided as follows between the permanent and casual men, that is, 1,700 permanent men would average 5*s.* a day, and 3,300 daily labourers would average 4*s.* to 5*s.* a day. The value of piece-work, it was stated, varied very much in the different docks, the London and St. Katharine's Docks representing the average, whilst at the East and West India Docks the value was lower, and at the Victoria and Albert Docks and the town warehouses, it was higher. The lower limit of value was found to be 4*s.* and the upper limit 5*s.*, the latter being generally accompanied by longer hours or more strenuous work. Thus at Tilbury, which is excluded from the above calculations, more overtime is worked than at the other docks, and the value of piece-work and daily labour is estimated at 5*s.* 9*d.* and 4*s.* 4*d.* a day respectively. Particulars furnished by a steamship owner in the Royal Albert Dock showed, it was stated, that work on the co-operative or piece-work system was more efficient than time-work in exact proportion as it was better paid. At one large wharf the average value of a day's work for the casual men, taken over a period of a year, proved to be fully 5*s.*, the hours being longer than at the docks. The permanent hands at the same wharf received 28*s.* a week, "thus accepting less "pay per hour in exchange for the regularity and per-"manence of their employment." Statements obtained by the same witness from a number of the men gave 4*s.* a day as a full average wage all round. It was pointed out that the slight discrepancy between this statement and the figures taken from the books of the employers might be accounted for by the exclusion from or inclusion in the average, of large occasional earnings. The wages earned, for example, during the wool sales, are said to amount in many cases to 50*s.* a week. These extra earnings, it was stated, are in effect a privilege enjoyed by a few. Thus "while the true average value "of a day's work at the (Joint Committee's) docks is fully "4*s.* 6*d.*" this figure does not exactly represent the position of the "ordinary docker." In wharf and warehouse

* The few suggestions with regard to the publication of statistics, given in the oral and written evidence, have been dealt with in the Summary of the Evidence given before the Commission Sitting as a Whole, under the head of "Labour Department."

† A plus may be defined as that part of the sum earned at piece-work rates which remains over at the end of the week or the job, during which a sum calculated at 6*d.* an hour has been drawn daily as "subsistence money." F. Brien, 24.

(1) Digest, Vol. I., pp. 11, 12. Answers to Schedules of Questions, No. 343, p. 13; No. 380, p. 83. (2) Digest, Vol. I., pp. 14, 17, 23. (3) Digest, Vol. I., p. 18. (4) Digest, Vol. I., p. 28.

[§ 168.] labour there are also some men in an exceptionally favourable position, either as to regularity of work or through having special work which from its nature commands an extra price. The grain work at the Millwall and Surrey Commercial Docks is an instance of a highly paid class of labour, and of those employed in it the witness thought it probable that a considerable proportion earned an average on the year of 30*s.* a week, while others certainly took far less. (1) With this statement may be compared the independent statements of the employers and employed at different docks and wharves, also apparently referring to the "ordinary docker," and excluding such special classes of labour as steamship workers, stevedores, &c. A calculation made by the Chairman of the Joint Committee of the earnings of 263 casual labourers (classes B and C) showed a weekly average per man of 19*s.*, or 3*s.* 2*d.* a day, while the inclusion in the total of the wages of the permanent men (24*s.* a week), and of class A., which averaged 22*s.* 6*d.* a week (winter and summer), brought the total average up to 3*s.* 7*d.* a day, which is of course lower than the average shown by the previous calculation. (2) With reference to the Albert and Victoria Docks, the statement of an employer that the usual earnings of ship and quay labourers taken together were 6*s.* 9*d.* a day, and that of an employé that the average wages were from 7*d.* to 7½*d.* an hour, confirm in a general way the statement that wages run higher at these docks than at the others under the Joint Committee. (3) The manager of the Millwall Docks estimated the average value of piece-work (here chiefly grain and timber) at 1*s.* an hour, and since the average number of days worked in the week is between four and five, of eight hours each, the weekly earnings are about 36*s.* In the grain department 37*s.* a week are frequently earned, working four days a week. (4) The manager of the Surrey Commercial Docks supplied data which showed the average value of grain work in those docks to be about 29*s.* a week, one season with another, and this calculation was corroborated by a representative of the employed. (5) The earnings of ordinary deal porters, omitting those working on the contract system, whose position is specially favourable, would appear to be about the same, since they earn from 7*s.* 6*d.* to 9*s.* a day (working nine hours at 10*d.* to 1*s.* an hour) and are employed from three to four days a week. (6) A statement by one of the proprietors of Hay's Wharf illustrated the difference in the earnings of different men working at the same rate. According to this estimate the average earnings of first preference men were about 26*s.* and of third preference or casual men 12*s.* a week. (7) Another witness, with some experience of wharf labour, stated, however, that some of the preference men at wharves could earn 40*s.* or 50*s.* a week, the difference being probably made up by overtime. (8) With regard to the earnings of stevedores, the evidence varied considerably, several witnesses employed as stevedores placing the average at 16*s.* or 18*s.* a week, (9) while a statement of the actual amounts paid by a certain employer showed weekly averages over different periods, of 27*s.* to 37*s.* (10)

ites of ges in rious rts mpared th those London.

169. The rates of wages in other ports can only be approximately compared with those of London, on account of the nature of the evidence. It appears, however, on the whole, that in Liverpool and Birkenhead the wages of casual dock labour are higher, as they are stated to be 5*s.* a day, or 8*d.* an hour, with 7*d.* to 9*d.* overtime.(11) At Glasgow they are also, perhaps, higher than in London, but the hourly rate appears to vary extremely, the amounts stated ranging between 4½*d.* and 9*d.* an hour for ordinary work, and between 5*d.* and 10*d.* for overtime. (12) Statements as to earnings were of an indefinite character. At Hull, again, it appeared from the scale fixed by the Dockers' Union that the hourly rates varied from 6*d.* to 8*d.*, with overtime at 9*d.* to 1*s.* and upwards, but the greater part of this scale consisted of piece-work rates of great variety and complication, and the same may be said of the statement furnished by the Birkenhead branch of the National Union of Dock Labourers. Wages on the Tyne appear to be about the same as in London or slightly higher; both 6*d.* and 7*d.* an hour were mentioned as ordinary rates for casual discharging work.(13) On turning to the ports on the south coast, the comparative lowness of wages is at once evident. At Southampton the wages of permanent men are stated to be 21*s.* a week, and the rate for casual labour 5*d.* an hour and 6*d.* for overtime. These rates are the result of an advance made by the Dock Company in 1890.(1) Southampton was described by one witness as one of the worst paid ports in the kingdom.(2) At Plymouth the wages of permanent men were stated to be 20*s.* a week, and the earnings of casual labour were said to average from 20*s.* to 25*s.*, but the latter is paid at piece-work rates, and it was stated that 7*s.* 6*d.* a day could be earned by a coal porter on a sailing ship, or from 10*s.* to 12*s.* on a steamer. The weekly average is brought down by the irregularity of the work.(3)

[§ 169.]

Fluctuations of wages.

170. With regard to fluctuations of wages in dock labour, very little evidence was given. It was stated that before 1872 the usual rate of pay in London was 4*d.* an hour with no advance for overtime. In 1872 it rose to 5*d.* an hour, through the action of a Union which then existed, and in 1889 there was an advance to 6*d.* an hour and 8*d.* for overtime, as the result of the great strike.(4) Before 1872 the wages of stevedores in London were 4*s.* for 10½ hours' work, but on the formation of the Amalgamated Stevedores' Society in that year the rate was advanced to 8*d.* an hour for nine hours' work, bringing the wages up to 6*s.* a day.(5) In March 1889 the Surrey Commercial Dock Company reduced the wages of the corn porters about 8 per cent. The men submitted at the time, but renewed their demand in August, three or four weeks before the great strike, and the former rate was partially restored.(6) One witness gave an account of the fluctuations in the wages of dock labour employed by steamship lines in Glasgow between 1872 and 1889. In 1872 the rate was 6*d.* an hour and 7½*d.* overtime, and in the same year it rose to 7*d.* and 9*d.* In 1874, after a strike for an advance to 8*d.* and 10*d.*, which the state of trade did not justify, wages went back to 6*d.* and 7½*d.*, and then to 5*d.* and 6½*d.* These remained the wages of the port until 1889, when two successive advances of ½*d.* an hour were conceded, and the rate of 1872 was thus restored.(7) In 1890 the Southampton Dock Company and other employers in that port made a considerable advance in wages in response to the demands of the men. The Dock Company raised the wages of permanent men from 19*s.* and 20*s.* to 21*s.* a week, and the rate for casual labour from 4*d.* an hour and 5*d.* overtime to 5*d.* an hour and 6*d.* overtime. Corresponding advances were made in piece-work rates. In the case of three shipping companies the rate for cargo work was raised from 5*d.* an hour and 6*d.* overtime to 6*d.* an hour and 7*d.* overtime, and for ship work from 22*s.* to 24*s.* a week. It was stated that the total weekly gain in wages was 293*l.* 19*s.* 6*d.*, and the average weekly gain per man, 4*s.* 11½*d.*(8)

Method of calculating wages.

171. The system of calculating wages which prevailed in the Joint Committee's docks before 1889 was mentioned as one of the causes of the great strike. Under this system men working piece-work drew a certain daily wage as subsistence money, and any surplus earned was paid by the contractor at the end of the job. The men complained that they were not informed of the rates they were working on, or of the number of tons in the ship, and that their representatives were not allowed to check the payments made.(9) By the Mansion House agreement after the strike, this contract system was changed into piece-work, but with payment for mealtimes as before, and also with a fixed minimum hourly wage.(10) By a special agreement between the Dock Company and the Dockers' Union, on November 4th 1889, the men's representatives were allowed to attend at the taking on of men, and to check the payments, each representative having a price list for every class of goods to be worked. This arrangement remained in force for a year, and the Dock Company then decided to discontinue it, chiefly because the work was hindered by the conduct of the representatives in blocking non-unionists, and also because it was not genuine piece-work, since the men had no interest in the despatch of business so long as there was a guaranteed minimum rate per hour.(11) Accordingly, as the result of negotiations between the Chairman of the Joint Committee and the president of the Dockers' Union, a new system was proposed, under the name of co-operation, by which the representatives of the men were to contract with the Dock Company's officials for a certain amount of work at a

[§ 171.] certain price, and to stand or fall by that price. The Dock Company agreed to allow the men to make up the gangs themselves, thus giving them the opportunity of excluding non-unionists. The men were not very ready to accept this scheme, but in October 1890 a section of them agreed to do so. Before it came into operation the Dock Company withdrew the clause as to the constitution of the gangs, and stated that the Joint Committee reserved absolute control of the work. This change of plan was made on account of the difficulties which it was thought likely to cause in the existing state of feeling between unionists and non-unionists.(1) The co-operative scheme in its modified form was accepted to some extent in the Victoria and Albert Docks, and was found to work well, but in the London and the India Docks it was almost unanimously refused. Since the system of "spurious piece-work" was acknowledged on both sides to be unsatisfactory, the Dock Company had "no alternative" but to introduce day-work pure and simple, without payment for meal-times, and without representatives, for whom there was no longer any occasion. A bonus was given, however, as an inducement to despatch.(2) It was stated by one witness that those who had acted as representatives were dismissed when this change was made, but it was stated on the part of the Joint Committee that definite instructions to the contrary were given at the time, and that as a matter of fact nearly all of these men were still regularly employed.(3) After a few months, it was stated, the co-operative system was accepted in some parts of the India Docks.(4) One witness complained that it was practically the same as the plus system which was in vogue before the strike, except that meal-time payment and inspection of the books by representatives were still disallowed as in the case of day-work.(5) It was stated on the other hand that such inspection was always allowed on request.(6) Evidence was given, however, to the effect that such a request was frequently refused, and that those who made it were sometimes left out of employment.(7) In the Millwall and Surrey Commercial Docks, the piece-work rates had, it was stated, been publicly exhibited in each department since the strike of 1889.(8) With regard to some of the wharves and warehouses complaints have been made that the men cannot satisfy themselves as to the amount of plus due to them.(9) It is considered by some witnesses that piece-work is in itself undesirable, because the wish to earn a good day's wage leads to over-work and injury to health.(10) The proportion of piece-work in the Joint Committee's docks was stated to be 59 per cent., 41 per cent. being day-work.(11) In other ports than London every variety of method of calculation prevails, and the evidence does not state the extent to which one preponderates over another, except that in Liverpool and Glasgow day-work is said to be almost universal.(12) It was stated that the work of loading and discharging large steamers does not lend itself very well to a piece-work system, and that attempts to introduce such a system in Glasgow had been unfavourably received and therefore abandoned.(13) Complaints were made as to the piece-work system in connection with dock labour in Sunderland, on the ground that it increased competition among contractors, and obliged the men to work harder than they otherwise would. Men on time-work, it was pointed out, lose by having to keep up with men on piece-work.(14) A strike was caused at Barrow Docks in March 1889, by a change from piece-work to hour-work, which had the effect of reducing wages.(15)

Method of payment.

172. Objections were expressed in the evidence to the payment of wages through a sub-contractor, or in any indirect manner.(16) Such a system prevailed in some of the docks in London before 1889, but since the strike all wages in the Joint Committee's docks have been paid directly by the officials.(17) Where piece-work is taken over on behalf of the men by their representatives, though no sub-contractor is supposed to exist, there is some complaint in the case of wharves and warehouses that the representatives are allowed to handle the money, and cannot be trusted to pay the right amount, and it is desired that each man should be paid direct by the cashier of the firm.(1) In the Surrey Commercial Docks the piece-workers in the grain department are under a contractor, who, it is stated, is not paid by the Dock Company, but deducts 5 per cent. for himself from the earnings of the men. The contractor does no work, nor does he, as a rule, superintend the work. This system is said to cause great irritation, but the men have not the courage to denounce it.(2) A sub-contract system is said to exist both in Glasgow and Liverpool. In Glasgow some of the liners employ master stevedores at a tonnage rate for loading and discharging. The stevedores are understood to work the men harder than the shipowners do, but pay higher wages as a rule.(3) In Liverpool and Barrow the existence of the middleman or contractor in dock labour is considered a great evil. Representatives of the National Union of Dock Labourers state that these contractors are sometimes ignorant of all practical work, that they contribute neither skill, labour, nor material, and yet receive a large profit. It was suggested that the contract system should be abolished, and the men brought in direct relation with the employers. It was stated that "in more than one firm at Liverpool" the workmen were systematically cheated of their time under this system, and that the conditions of employment were much better under the shipowners.(4) A witness representing the corn porters belonging to the South Side Labour Protection League complained of the contravention of the Act prohibiting the payment of wages in public-houses. He stated that employers frequently paid the wages of a gang in gold to one of the men, who is obliged to go to the public-house in order to get change. The witness urged that the workman should in such a case be exempted from liability, and the publican also, unless it could be proved that he knew that wages were being paid under his roof. The employer, on the other hand, should be liable to imprisonment instead of a fine.(5)

[§ 172.]

Deduction.

173. With regard to deductions from wages, several complaints were made as to stoppage of pay for meal-times. There was a strike on this question at St. Bride's Wharf in 1889, when the "co-operative piece-work" system was introduced. The strike was successful, but one on the same question at Hay's Wharf in 1890 was a failure.(6) It was stated that systematic deductions from the wages of fish porters are practised by the Billingsgate salesmen, who make it a condition of employment that the porters shall work for them without payment, and who further exact a charge of 1*d.* from the porters for each package of fish they carry for a customer.(7) It was represented as a great cause of complaint that the men employed by shipping companies at Southampton to discharge cargo have no payment for removing deck-loads of fruit, amounting sometimes to 40 tons.(8) There have been complaints on the part of foremen and clerks at the Joint Committee's docks, with regard to a superannuation fund towards which a deduction of 2½ per cent. is made from their wages. The benefits of the fund consist of a pension of 3*l.* a year for each year of service up to 10 years, and after that according to a further scale. On resignation, or on dismissal except for a gross fault, a member receives half his contributions.(9)

Shipping. Monthly and weekly wages. (*a*) *Sailors, firemen, &c.*

174. (*a.*) The wages of seamen show considerable uniformity, for the most part ranging between 3*l.* 10*s.* and 5*l.* a month. In those of firemen there does not appear to be sufficient variation to make tabulation necessary. In 1891, the wages of firemen in four ports were stated to be 4*l.* 15*s.* a month, in three ports, 4*l.* 10*s.*, and in one, 4*l.* 17*s.* 6*d.*, while the rate in North Atlantic mail steamers out of Liverpool was said to be 5*l.*(10) The evidence with regard to the wages of sailors in different ports, and of other classes of labour connected with shipping, has been tabulated as follows:—

[§ 174 (a.)] MEAN of RETURNS given of WAGES per MONTH* of SAILORS in VARIOUS PORTS, 1891. (Arranged in descending order.) [§ 174 (a.)]

Reference.	Port.	Class of Vessel.	Wage per Month.	Rate of Payment for Overtime.	Remarks.
			£ s. d.		
Digest, Vol. I., pp. 31, 36. Vol. II., p. 35.	Glasgow -	Monthly sailers; steamers going West; steamers to North and South Atlantic.	4 6 3	- - - -	The wages earned in the monthly sailers and in steamers going west were stated to be 3*l.* 10*s.* and 4*l.* 10*s.* to 5*l.* respectively. The wages of "seamen and firemen" in vessels going to the North and South Atlantic were said to be 4*l.* 15*s.* and 4*l.* 5*s.* In this statement, it is impossible to tell whether seamen and firemen receive the same rates of wages, or whether the average given is that of the two classes of labour taken together. In Appendix 72, the wages of firemen are frequently somewhat higher than those of seamen. The wages of seamen alone may, therefore, be somewhat lower. The arithmetic mean of the different rates has been taken as the average.
Digest, Vol. II., p. 27. Minutes of Evidence, Vol. II., Appendix 72.	Dundee -	Monthly steamers; monthly sailers, going south and west.	4 3 4	- - - -	The wages earned in monthly steamers were stated to be 4*l.* 5*s.*, and in monthly sailers, going south and west, 3*l.* 10*s.* and 4*l.* 15*s.* respectively. The arithmetic mean of these rates has been taken as the average.†
Digest, Vol. II., p. 27. Minutes of Evidence, Vol. II., Appendix 72. Answers to Schedules of Questions, p. 20.	Tyne -	„ „	4 1 8	9*d.* an hour between 5 p.m. and 6 a.m. 1*s.* an hour on Sunday, and after 1 p.m. on Saturday.	The wages earned in the different vessels were stated to be 4*l.* 15*s.*, 3*l.* 10*s.*, and 4*l.* respectively. The arithmetic mean has been taken.
Digest, Vol. II., p. 27. Minutes, Vol. II. Appendix 72.	Forth -	„ „	4 0 10	6*d.* an hour from 6 p.m. to 6 a.m.	The wages earned in the different vessels were stated to be 4*l.* 10*s.* to 4*l.* 15*s.*, 3*l.* 10*s.*, and 4*l.* respectively. The arithmetic mean has been taken.
„ „	Thames -	Monthly steamers, going south and west; monthly sailers going south and west.	4 0 0	9*d.* an hour from 5 p.m. to 7 a.m. 1*s.* an hour on Sundays, Good Friday, and Christmas Day.	The wages earned in the different vessels were stated to be 4*l.*, 4*l.* 10*s.*, 3*l.* 10*s.*, and 4*l.* respectively. The arithmetic mean has been taken.
„ „	Clyde -	Monthly steamers; sailers going south.	4 0 0	6*d.* to 9*d.* an hour from 6 p.m. to 6 a.m.	The monthly rates paid in sailers going west are frequently higher (and in no case lower) than in sailers going south. The average given is, therefore, probably too low. Wages were stated to be 4*l.* 10*s.* and 3*l.* 10*s.* respectively. The arithmetic mean has been taken. The difference between the average rates on the Clyde and in Glasgow may possibly be accounted for by other minor ports having been considered in this estimate.
Digest, Vol. II., p. 27. Minutes of Evidence, Vol. II., Appendix 72.	Humber -	Steamers; sailers going south and west.	3 16 8	6*d.* an hour from 6 p.m. to 6 a.m. 9*d.* an hour on Sundays.	The wages earned in the different vessels were stated to be 4*l.* 10*s.*, 3*l.* 10*s.*, and 3*l.* 10*s.* respectively. The arithmetic mean has been taken.
„	Cardiff -	„ „	3 16 8	- - -	Do. do. do.
Digest, Vol. II., p. 27. Minutes of Evidence, Vol. II. Appendix 72. Digest, Vol. II., pp. 37, 43.	Mersey -	„ „	3 13 4	- - - -	It may be noted that North Atlantic mail steamers are paid at rates 10*s.* higher.

* The wages per month which could be earned in weekly steamers would be considerably higher than the monthly rates in monthly steamers Thus, the rate per week in weekly steamers on the Tyne and Clyde is 1*l.* 12*s.* 8*d.*, &c.

† The true average wage must in each case be higher than the arithmetic mean between the wages in steamers and sailing ships, owing to the preponderance of steam tonnage.

MEAN of RETURNS given of WAGES of various CLASSES of LABOUR employed in SHIPPING, 1891.

Reference.	Class of Labour.	District and Class of Vessel.	Rate per Week.	Remarks.
			£ s. d.	
Digest, Vol. I., p. 30 - -	Engine drivers -	V.S.A. boats and large tugs on the Thames.	2 6 9	Engine drivers on V.S.A. boats on Thames were stated to earn 50*s.* a week, and in large tugs 42*s.* to 45*s.* a week. The arithmetic mean has been taken.
Digest, Vol. II., p. 46. Stanbury, 14,402-3.	Riggers - -	Thames, Mersey, Clyde -	1 14 6	The average rates per day on the Thames, the Mersey, and the Clyde are 6*s.*, 6*s.*, and 5*s.* 3*d.* a day respectively. The arithmetic mean has been taken. The number of days worked per week was stated to be six. It was asserted that, "the further you go North, the less pay the men get."
Digest, Vol. II., p. 27. Minutes of Evidence, Vol. II., Appendix 72.	Firemen - -	Weekly steamers on the Tyne, at Cardiff, Dundee, on the Clyde, Humber, Forth, Mersey, Thames. V.S.A. boats and large tugs on the Thames.	1 11 9¾	The wages of firemen in weekly steamers were stated to be as follows:—Tyne, 1*l.* 12*s.* 8*d.*; Cardiff, 1*l.* 12*s.* 8*d.*; Clyde, 1*l.* 12*s.* 8*d.*; Dundee, 1*l.* 10*s.*; Humber, 1*l.* 10*s.* 4*d.*; Forth, 1*l.* 10*s.* to 1*l.* 12*s.* 8*d.*; Mersey, 1*l.* 10*s.*; Thames, 1*l.* 12*s.* 8*d.* The wages in V.S.A. boats on the Thames and in large tugs were given as 33*s.* and 27*s.* to 35*s.* respectively. The average has been taken as the arithmetic mean.
„ „	Sailors - -	Weekly steamers in above districts.	1 11 6¾	The wages of sailors in weekly steamers were stated to be as follows:—Tyne, 1*l.* 12*s.* 8*d.*, Cardiff, 1*l.* 12*s.* 8*d.*; Clyde, 1*l.* 12*s.* 8*d.*; Dundee 1*l.* 10*s.*; Humber, 1*l.* 10*s.* 4*d.*; Forth, 1*l.* 10*s.* to 1*l.* 12*s.* 8*d.*; Mersey, 1*l.* 10*s.*; Thames, 1*l.* 12*s.* 8*d.* The arithmetic mean has been taken to be the average.
Digest, Vol. I., p. 43. Manton, 11,155.	Fishermen -	United Kingdom - - -	1 0 0 to 1 10 0	It was stated that, when fully employed, 15,000 fishermen earn 30*s.* a week, and the remainder 20*s.* a week.

[§ 174 (b.)] (b.) Masters and officers.

(b.) The opinion was expressed that the wages of sailors and firemen at the present time were sufficiently good considering the state of trade, but that masters and officers, on the other hand, were decidedly underpaid, and had good reason to demand a rise. Where a seaman's wages are 3*l.*, an officer's are 8*l.* a month, and where the highest wages are paid, an officer has 15*l.* or 16*l.* It was pointed out that educated men in positions of responsibility should have a sufficient salary to keep them from destitution on retiring from the service, and that otherwise a proper standard of efficiency could not be maintained.(1)

Fluctuations of wages.

175. Evidence was given with regard to the fluctuations in the wages of seamen from the year 1851 onwards. In most cases the class of labour was not specified, though it appeared that sailors alone were referred to. It was stated that in 1851 wages in foreign-going vessels were from 1*l.* 15*s.* to 2*l.* 5*s.* a month, and that by about 1855 they had risen as high as 5*l.* on ships bound for the Baltic and 4*l.* on ships bound for the Mediterranean. This fact was attributed in the evidence to the formation of the Seamen's United Friendly Society, whose decline was represented as the cause of the fall of wages in 1860 to 3*l.* 10*s.* in the Baltic and 2*l.* 15*s.* in the Mediterranean. The main features of the period from 1860 to 1890 appear to have been a rise in wages on steamships between 1870 and 1875, owing to the general briskness of trade, followed by a depression in 1880 which brought them back to the level of 1870, namely an average of 3*l.* 10*s.* a month. A rise to 4*l.* a month in 1882 was followed by a very decided depression lasting till 1888. According to one witness as low a point as 2*l.* 5*s.* a month was reached during this period, namely in 1887. After this a gradual rise took place, attributed by the same witness to the formation of the Sailors' and Firemen's Union, and by others to the improvement in shipping, the result in any case being that wages went up to 4*l.* 10*s.* or 4*l.* 15*s.* a month, and there for the most part remained. (2) One witness gave an account of recent fluctuations in wages in Leith, stating that in 1865 the weekly wages of sailors were 26*s.*, and of fireman 27*s.* 6*d.* In 1872 they rose to 27*s.* 6*d.* and 28*s.* a week respectively, and remained so till 1885, when they fell to 26*s.* and 26*s.* 6*d.* The shipping trade was in a state of great depression from 1883 to about 1887, and the owners had difficulty in keeping their ships going at all. The Leith owners, it was stated, were very unwilling to reduce wages, but in the middle of 1884 they gave notice that if trade did not improve it would be necessary to do so, and in July 1885 that notice took effect. In 1888, owing to the improvement in freights, wages were restored to their former level. In May 1889 the shipowners consented, on the demand of the men, who, it was thought, were probably instigated by the Union, to increase the wages to 30*s.* a week, both for sailors and firemen, though they had contracts running, and the state of trade did not warrant an advance. The demand of the Sailors' and Firemen's Union for a further advance of 32*s.* 8*d.* caused an unsuccessful strike. It was stated that wages in monthly boats at this time were 4*l.* 10*s.* and 4*l.* 15*s.*, and that at no time since 1865 had they been as low as 2*l.* 15*s.* in Leith. (3)

Deductions.

176. Complaints were made of deductions from the wages of seamen in the form of fines for petty offences, and also of excessive prices charged for articles bought on board ship. (4). It was stated by one witness that ship's officers occasionally detained the overtime pay which was due to the men for night work in port. (5)

RIVERSAND CANALS.

Daily and weekly rates of wages.

177. The wages of watermen and lightermen on the Thames, under Lord Brassey's award, are 6*s.* a day, and 6*s.* a night.(6) This rate appears to be higher than those in other districts, though an exact comparison is difficult owing to the variation in methods of calculating wages. It was stated, however, by an inspector under the Canal Boats Act, that the earnings of boatmen in some cases amounted to 45*s.* a week.(7) On the Humber the wages of weekly men were stated to be 26*s.*, and the rate for casual labour 5*s.* a day. It was stated that the casual men were in the majority, and that their average earnings were about 17*s.* a week.(8) With regard to wages on the Mersey, the information given referred to various classes of boats. On flats on the Upper Mersey it was stated that wages were paid partly by the week and partly on tonnage, and that the men approved of this system. The weekly wages are 16*s.* for the captain, and 11*s.* for the mate, and the ton money, which is divided equally, brings the average earnings up to 1*l.* 10*s.* 9*d.* and 1*l.* 5*s.* 9*d* respectively.(1) On the Lower Mersey, flatmen work principally on the share system, one-half or two-thirds of the freight being divided between the men. It was stated that the Mersey Flatmen's Association objected to the weekly system of payment, and that it was therefore discouraged in this district.(2) On steam barges on the Mersey the rate of wages is 3½*d.* an hour for the captain, and 3*d.* for the mate, thus amounting to 3*s.* or a little more for a day of 12 hours, but it was stated that the men were generally on duty 120 hours a week, though not working all the time. The weekly earnings would thus be 1*l.* 12*s.* 6*d.* and 1*l.* 10*s.* respectively.(3) Another witness stated, however, that on these barges the captain's weekly wage was 23*s.*, the mate's 20*s.*, and the engine-driver's 24*s.*, but that the average earnings were brought to nearly double these amounts by the bonuses given for each trip, and also on the tonnage carried.(4) On three-handed boats worked by horses, it was stated that wages were 3½*d.* an hour for 108 hours, or 31*s.* 6*d.* a week. On slow boats the captain and mate are paid weekly wages of 24*s.* and 21*s.* respectively, with a bonus of 5*d.* a day when the trips are made in exact time, but it was stated that this bonus was seldom earned. The average wages of mates on the fly-boats on the Peak Forest Canal were estimated at 22*s.* a week, the highest paid in any instance being 25*s.* On the slow boats the pay was described as "exceedingly low."(5) On the fly-boats on the Aire and Calder Canal, the wages of captains and mates were said to be respectively 1*l.* 1*s.* 8*d.* and 17*s.* 10*d.* a week, sometimes increased by trip money to 1*l.* 11*s.* 8*d.* and 1*l.* 4*s.* 10*d.* Overtime is paid at the rate of 1½ per cent., but is only reckoned while the vessel is loading or discharging cargo.(6) On the Aire and Calder, and the Leeds and Liverpool Canals, the average earnings of Union men were said to be 25*s.* a week, and those of non-unionists, 22*s.*(7) Bargemen and watermen on the Medway are paid principally on the share system, the owner taking half the freight, and the men dividing the other half. It was stated that those employed by the better firms could earn 2*l.* a week, and that a very large number made an average of 30*s.* Men engaged in chance work, however, do not earn 1*l.* a week.(8) It does not appear that there is extra payment for Sunday labour, except on the Thames and the Humber, the rate on the Thames being 8*s.* for a full day's work, and on the Humber, time and a half.(9)

[§ 177.]

Fluctuations of wages.

178. With regard to fluctuations of wages, no very definite statement was made. It was stated that wages on the Humber were very fair from 1872 to 1885, but then began to go down, owing to the collapse of a society which had been formed. In 1890, as the result of a strike, there was an advance of 1*s.* for weekly men. In the same year, after the lock-out of lightermen employed by the Trent Navigation Company, their wages were advanced from 16*s.* to 25*s.* for mates, and from 24*s.* to 30*s.* for captains.(10) It was stated that since the formation of the United Bargemen and Watermen's Protection Society in 1889, advances in wages had taken place of 15 or 20 per cent. in the cement manufacturing districts on the Medway, and 10 per cent. in the brick-carrying districts.(11) In 1878, it was stated, a decrease of 12½ per cent. took place in the wages of fly-boatmen on the Aire and Calder Canal. In 1891 they applied for an increase of 7½ per cent. in consideration of the fact that the company's business had been improved, and the men's work added to, by the use of modern appliances. Ultimately, after a strike, the reduction was restored to the extent of 10½ per cent. This result, it was stated, could not have been obtained without the help of the Dockers' Union, of which a branch had been formed in the district.(12)

Method of payment.

179. A witness representing the Amalgamated Society of Watermen and Lightermen of the River Humber, proposed that the provisions of the Payment of Wages in Public-houses Prohibition Act should be extended to the payment of freightage. He stated that it is a common practice for a publican to carry on also the business of a broker for river craft, or to be in combination with another person who does so, with the result

[§ 179.] that the waterman who is the best customer at the public-house, is also the most successful in obtaining a remunerative cargo. He pointed out that freight is a keelman's wages, and that the law should grant the same protection to this class of workmen as to any other.(1)

(ii.) CO-OPERATION AND PROFIT SHARING.*

dvan-ges of o-opera-on.

180. A witness representing riverside labour on the Tyne advocated co-operation between employers and employed, as "the best system that could possibly be adopted." He believed that it would make a strike almost impossible, because it would furnish a board of arbitration for the settlement of disputes. It would completely unite the interests of employers and employed; the work would be more cheaply done at the same wages, and a dividend would be earned on the profits of the employment. In 1889 the witness had framed a scheme of this kind, called the Tyne Co-operative Stevedore Company. A certain number of shares were taken, and the company started work in 1891, but owing, it is stated, to the persistent and violent opposition of the master stevedores and the National Labour Union, as well as to want of funds, the undertaking entirely failed. The Union regarded it as a competing organisation which would bring about a reduction of wages, and the originator of the company was expelled from the Union, and prevented from obtaining employment.(2) It was stated, however, by a representative of the Tyneside and National Labour Union, that the Union approved of the principle of co-operation or profit sharing, and believed that its adoption would be the means of "bringing capital and labour more together." The Union had opposed the Co-operative Stevedore Company solely on the ground that it was acting in opposition to unionism and bringing down the price of labour.(3) It was proposed by one witness that the Trade Union Acts should be amended with a view to allowing trade union funds to be directed to the purposes of productive and distributive co-operation.(4) There is no system of profit-sharing in the docks of London, and the employers consider such a scheme quite impracticable. The system which is in use in some parts of the docks, under the name of co-operation, is simply a contract between the Dock Company as represented by the warehouse-keeper, and the men as represented by two or three of themselves. The men agree upon a price for doing a fixed amount of work, and take that price and "stand or fall by it," dividing it equally among themselves. This system was introduced by the Dock Company at the suggestion of the president of the Dockers' Union, as a remedy for the unsatisfactory result of the payment of a fixed minimum wage according to the Mansion House agreement. The new system was not, it is stated, generally acceptable to the men, especially since the Dock Company withdrew from the original understanding that the men themselves were to have the making up of their gangs. The scheme was adopted at the Victoria and Albert Docks, and worked well, but never spread rapidly.(5) Several witnesses urged the more extensive adoption of this system of so-called co-operative piece-work.(6) The secretary of the Dockers' Union believed that it would cause more men to be employed at higher wages, and pointed out that it would do away with middlemen, and throw the responsibility of the work on the men engaged in it.(7) The Amalgamated Stevedores' Society has had under discussion a "co-operative" scheme by which the Union as a body would contract with the shipowners for the whole work of ship-loading, but this plan has not yet assumed any practical shape. One witness thought the men needed educating up to it, and another objected to the system altogether, as being likely to lead to hurried work and consequent risk.(8)

xperience f Co-opera-ion and rofit-haring.

181. In the fishing industry on the east coast, it is stated that there are some 2,000 men who work on the profit-sharing system, which is regarded by the trade as the only remunerative method. The clear earnings, after deducting all expenses for plant, and commission on sale, are in most smacks divided into eight shares, of which two and a half go to the master and mate, and five and a half to the employer. The ordinary hands are not paid by shares, but receive a weekly wage. The men would prefer to have the whole crew put on the profit-sharing system.(1) The Amalgamated Society of Thames Watermen and Lightermen has lately formed a Lighterage Co-operative Association, with the object of securing the permanent employment of lightermen, and the payment of a maximum wage out of a minimum rate of carriage. The capital of the company is 30,000*l.*, of which 2,500*l.* was subscribed by the working men, and the rest by the wharfingers and shipowners in equal shares. There are outside shareholders, and therefore the society is registered under the Companies Acts of 1882 and 1886, instead of under the Provident Societies Act. It owns two tugs and several barges, but the expense of hiring barges was a great difficulty at first. It is stated that the main object is not to earn a dividend, but that any profits are divided as in other co-operative societies, allowing 5 per cent. interest on share capital, and a 3 per cent. bonus to workmen and customers. It is part of the plan of the society to dispense with Sunday work, and reduce night work to a minimum.(2) The majority of the bargemen and watermen employed in the brick and cement manufacturing districts on the Medway work on a profit-sharing system. The owner takes half the freight of the barge, and the captain and mate the other half. Freight is calculated by the thousand of bricks, by the ton of cement, by the chaldron of coke, and by the pocket of hops. The owner and men contribute equally to the working expenses. It is stated that in the opinion of many persons it would be better if the men were paid a regular wage. The disadvantage of the share system is said to be that it bears unfairly on the men in chance work barges, who have not sufficient employment. It is further stated that the men who are paid by the week, work harder than those on the share system(3).

[§ 181.]

2. HOURS.

(i.) STATEMENTS OF HOURS.

DOCKS, WHARVES, AND WAREHOUSES. Nature of information.

182. Oral and written evidence has been received both from employers and employed with regard to the hours of labour in docks, wharves, or warehouses, in most of the principal ports of the United Kingdom. Of this the evidence relating to the port of London forms the largest part, comprising detailed statements of the hours worked in different branches of dock and riverside labour, while little or none of the information with regard to hours in other ports appears in this classified form. The daily hours are stated in the majority of cases, rather than the total for the week. The latter method does not afford a convenient basis of comparison in dealing with a fluctuating industry, unless the number of days worked in the week can also be ascertained. For this reason no use has been made in this instance of the particulars contained in the Parliamentary return on Trades (Hours of Work) 375, 1890, ordered by the House of Commons on the motion of Mr. Broadhurst.

Standard hours of labour.

183. In the following table the gross hours of labour are stated, including meal-times where these are allowed. The amount of meal-time allowed was not in every case stated in the evidence.

Table showing the Standard Hours for Dock and Riverside Labour at the Principal Ports, in 1891-2.

District.	Inclusive Hours (per Day when not otherwise stated).	Meal times.
London:		
Stevedores(4)	10	1
Dock labourers(5)	7 to 8	½
Wharf labourers(6)	10 to 12	1½ to 2
Warehouse porters(7)	7 to 8	
Foremen and clerks(8)	7 to 8	½
Steamship workers(9)	12	1½ to 2

* It appears convenient to treat the subjects of co-operation and profit sharing at this stage, inasmuch as they are methods of industrial remuneration.

[§ 183.]

District.	Inclusive Hours (per Day when not otherwise stated).	Meal times.
London—*continued*:		
Deal porters(1)	8 to 11	
Corn porters (docks)(2)	8 to 10	
Corn porters (wharves)(3)	10 to 12	1½ to 2
Wharf engine-drivers(4)	10	
Ballast heavers(5)	10	
Cardiff:		
Coal trimmers(6)	12	
Wharf and ship labourers(7)	10	
Dock labourers(8)	54 a week	
Birkenhead(9)	9	
Liverpool(10)	9, 10 and 12	
Garston(11)	10	
Hull(12)	12	2
Hull (East and S.W. districts)(13)	56½ a week	
Kingston-upon-Hull:		
Cart and Rullymen(14)	12 to 14	
Drogheda(15)	10	
Belfast(16)	8 to 10	
Dublin(17)	8 to 12	
Burntisland(18)	10	
Glasgow(19)	12	2
Bristol:		
Wharf and ship labourers(20)	10	
Dock labourers(21)	48 to 53½ a week	
Newport(22)	10	
Whitehaven(23)	54 a week	
Southampton(24)	9 to 10	
Stockton-on-Tees and Middlesbrough(25)	54 a week	
Peterhead(26)	10	
Ardrossan(27)	9	
Leith(28)	48 to 53½ a week	
Sunderland(29)	9½	
Plymouth:		
Dock labourers(30)	11	
Coal porters(31)	12 on steamers 10 on sailing ships	

It will be seen from this statement that there is on the whole a good deal of uniformity in the hours of dock labour in different districts. The most usual working day appears to be ten hours in summer and eight in winter, with time allowed for meals. Where it extends to 12 hours the meal-time is generally longer. In each case where there is a variation in the hours, it represents the difference between the time worked in winter and in summer, except in the case of Liverpool and Southampton, where the hours given were stated separately in the evidence, without anything to show whether they applied to different seasons or to different departments of industry, and in the case of Kingston-upon-Hull, where the shorter hours are those of the "Railway and Dock Company's men."

[§ 184.] Overtime and Sunday work.

184. The amount of overtime worked at the docks in London is to some extent a grievance, but it is stated that this applies only to the permanent men, except in occasional cases of extra pressure.(1) A certain amount of overtime is, it is stated, inevitable, owing to the conditions of the work, as for instance the necessity for despatching mail boats to their time, but it has been reduced since the strike of 1889.(2) It is stated that not more than 3 per cent. overtime is now worked in the London Docks. It happens occasionally that men work over 12 hours, but less often than formerly. A witness representing the Dock Companies stated that they wished to reduce overtime still further, but that the shipowners objected to a change of shifts in the middle of a job, because the men already working the ship know the stowage and the marks of the goods. It is also stated that the men would object to having another gang put on to finish their work, though they dislike overtime, and the pressure to work it comes from the customers and not from the workmen.(3) Long hours chiefly occur at the Victoria and Albert Docks, where the discharging is in the hands of the shipowners.(4) There have, it is stated, been cases of men working as much as 40 hours at a stretch, but this is rare.(5) In heavy work, such as that of corn and deal porters, it is stated that overtime seldom occurs, and that Sunday work is very rare.(6) At the Millwall docks the average length of the working day is eight hours, and overtime has been quite exceptional since the strike of 1889. The average overtime worked is said to be less than one hour a week, and that is only for the purpose of dispatching a steamer. In such cases the men prefer finishing the work to being relieved by a second shift.(7) At the Surrey Commercial Docks, where the normal hours are rather longer, from 8 a.m. to dusk in winter and from 7 a.m. to 6 p.m. in summer, there has been a great reduction in overtime since the strike of 1889, owing to the unwillingness of the piece-workers to perform it.(8) It appears to be chiefly in wharf labour that overtime is a serious grievance. It is stated that at the coasting and shipping wharves it is very common for the ship hands and wharf labourers to work 35 or 40 hours at a stretch in order to finish a ship. At some wharves this is said to occur twice a week, and more often when there is an extra boat. The hours thus frequently amount to 90 or 95 in the week. The reason for working overtime with one set of men instead of changing shifts, is that the employers suppose the latter method to involve loss of time, and the keenness of competition necessitates great despatch. At one wharf, however, a system of 12-hour shifts has been introduced.(9) It is stated that these excessive hours are very injurious to health, and that after three months' work on a wharf a man is unable to work for a month.(10) The objection is also made that men in want of employment are deprived of it by the practice of giving the extra work to those already employed, and it is stated that if the hours were properly divided there would be regular work for 3,000 out of the 4,000 men competing for it.(11) The hours are made longer by the fact that whenever a ship is expected the men are ordered out and obliged to wait at the wharf till she comes in.(12) At the colonial wharves, the hours, it is stated, are not nearly so long as at the coasting wharves.(13) It is represented on the part of the employed that the undue hurry in which the work is carried on might be partly remedied by the collection and distribution of goods at stated hours only.(14) It is pointed out on the other hand by the employers that it is impossible to prevent goods being sent late, and that though a considerable amount of overtime is worked, it is not constant from day to day, and therefore a system of relays of men could not be arranged.(15) It is stated in the case of the Free Trade Wharf, Ratcliff, that the cargoes are not sufficiently large to require relays of men, and that the men do not generally work more than 12 or 16 hours at a stretch, and further that they are in favour of overtime, and have been known to leave for other employment in order to have more of it. If they have to work 24 hours in a single shift, the firm arrange if possible for them to rest from 10 p.m. to 4 a.m. Night shifts are not worked, and Sunday labour is very rare indeed.(16) It is stated that a great

[§ 184.] deal of overtime is worked by foremen and clerks at the docks and wharves. Though the regular hours are the Customs hours, 8 to 4 in summer and 9 to 4 in winter, the hours usually worked are 10 or 12 a day for six days a week, and there is sometimes Sunday work in the docks, though not at warehouses. At wharves the average time worked is said to be as follows:—

For 20 per cent. 8 hours a day.
„ 60 „ 10 „
„ 20 „ 12 „

These are the regular hours exclusive of overtime, which is sometimes worked all night.(1) It is stated on the other hand, as far as the docks are concerned, that the hours of foremen and clerks average 50 and 45 hours a week respectively.(2) The steamship workers in the Thames, who are distinguished from dock labourers by the fact that they work on ships which are loaded and discharged by means of lighters, are said to be employed for excessive hours. Their regular hours are 12 a day, but it is stated that they sometimes work 24, and even from 40 to 56 hours at a stretch. The cause of long hours is considered to be delay through bad weather, and consequent hurry in discharging and loading a ship by a given date. It is stated that the workmen are altogether opposed to the system, and have no wish to work on in order to finish the job in hand. They are willing to give way in order to suit the employer, but their wish is to work not longer than 24 hours at a stretch, and then to be replaced by another shift. Some improvement in this direction has, it is stated, already taken place. The organisation to which the men belong is desirous of abolishing overtime as far as possible.(3) It is stated that the permanent dock labourers on the Tyne, who are in a small proportion to the whole number of labourers, frequently work 24 hours at a stretch, and in some cases 48 hours and upwards.(4) At the Southampton docks the overtime worked in the busy season occasionally brings up the consecutive hours to 24.(5) At Liverpool irregular hours are said to prevail, sometimes amounting to 40 at a stretch, but by the usual system the work is carried on continuously by means of two gangs, the first working from 6 a.m. to 12 noon and from 5 to 11 p.m., and the second for the remainder of the 24 hours.(6) At Glasgow a considerable amount of overtime is worked by the quay labourers employed by the Allan Line, and it is stated that the men never object to it, but that, being unprofitable as labour, it is restricted as much as possible.(7)

IPPING. andard urs of bour, ertime, d Sunday rk.

185. The standard hours in sea service are 12 a day, in four-hour watches, and one witness stated that as a rule only six hours are occupied with the actual work of the ship, and the remainder of the time the men are merely on duty. The official holidays are given, with payment, and on Sundays there is no work except the manœuvring of the vessel.(8) Another witness denied that the daily work on board ship occupied only six hours, and stated that the amount of Sunday work was very considerable. The hours are four on and four off, but as the time from 4 to 8 p.m. is divided into two watches, the hours vary from 10 to 14 a day.(9) They are, however, necessarily unfixed, being subject to the exigencies of the service. One witness calculated the average at 72 or 80 hours a week, while another estimated it at 106 or 107.(10) Firemen have shorter hours, generally eight hours a day, four on and eight off, but in some of the smaller vessels the rule is four hours on and four off.(11) On a few vessels belonging to one firm the firemen have a six hours' day, and it is stated that quicker passages are made in consequence of the reduced hours.(12) Firemen work a certain amount of overtime, through having miscellaneous duties to perform, and thus the average hours of those on an eight hours' shift are said to be 10 a day.(13) Serious complaints were made with regard to the hours of engine-drivers and firemen on board the Victoria Steamboat Association's steamers in the Thames. The engine-drivers, it is stated, work on an average 96 hours a week and the firemen 105 hours, including Sundays. A few of the men have three or four days' holiday on pay at the end of the summer season. There is difficulty in procuring men on account of the long hours. It is stated that they wish to have one day off in 15, but have not obtained it yet. The men in the large tugs are better off. About 60 per cent. of them work 12-hour shifts, while 40 per cent. work longer hours, ranging from 18 to 20.(1) On board the deep sea tugs in the Thames and the Channel, the hours of actual work are said to be from 70 to 100 a week. The large boats are under the Board of Trade, but have no regular hours of work. Leave of absence can only be counted upon once in six months, when the tug is cleaned out. In Liverpool, however, there is a system of keeping spare men, so that a few days' leave of absence can sometimes be obtained.(2) In the fishing industry there are no fixed hours of labour, and the hours worked, especially in steam fishing boats, are said to be excessive. In these boats the men work on an average 15 hours a day for seven days a week, and the work is very hard and monotonous as well as dangerous. The hours of labour at sea cannot, it is thought, be shortened, but more rest on shore is desired.(3) The hours of riggers on the Thames are 10 a day, from 7 a.m. to 5 p.m., but in shipbuilders' yards they are regulated by the rules of the yard. The average working hours in full employment are 51 a week, or 8½ hours a day, 1½ hours being the time allowed for meals. On the Clyde and Mersey the hours of riggers are 54 a week, or 9 a day. These hours are considered satisfactory.(4)

[§ 185.]

RIVERS AND CANALS.

Standard hours of labour, overtime, and Sunday work.

186. The hours of the Thames watermen and lightermen, under Lord Brassey's award, are 12 a day, including time for meals, but it is stated that these hours are subject to variation on account of the tides, and that night work and Sunday work, which are sometimes unavoidable, are "far too common." It was also stated that a lighterman often has to be on board for a week at a time.(5) On these points the evidence varied, one witness denying that Sunday work was at all common, or that there was more night work than was absolutely necessary. Another witness stated that it was very seldom indeed that a lighterman remained on his barge for many consecutive hours, and that he certainly did not do so from Monday to Saturday. When a barge is aground it is taken charge of by a watchman.(6) In most districts the nominal hours of watermen and lightermen appear to be 12 a day, but in many cases a large amount of overtime is said to be worked. At Hull the principal grievance is the distance to and from the work, and frequent detention at the end of the day, causing the men to be practically on duty 15 hours. It was stated that no overtures for reduction of hours had been made to the employers, and that there was some division of opinion among the men as to the concessions which should be applied for.(7) It is in the Upper Mersey district that the strongest complaints have been made as to hours of labour. The weekly hours worked by watermen on the Upper Mersey are said to average 100 hours, sometimes going up to 120 and 137. One witness stated that he had himself been on duty for 70 hours at a stretch. The employers have been asked to grant six hours' rest after 36 hours' work, and in some cases they have done so. They have also been asked for a 16 hours' day, but have answered that the men were engaged for seven days and seven nights to the week.(8) The hours of fly-boatmen in the same district are said to average 104 a week, and frequently rise to 109. The men begin work at 5.30 p.m., and are on duty till noon the next day. Work is seldom finished before midnight on Saturday, and begins again at midnight on Sunday. There are no holidays, and no rest is possible while on duty. Six or seven hours in the 24 are all that the men have for sleep and meals. They have applied to the fly-boat owners for six hours' rest after 18 hours' work, but this concession has been refused. The Burscough branch of the union to which they belong (the Upper Mersey Watermen and Porters' Association) has also applied without success for a reduction of hours.(9) In steam barges on the Mersey and the Weaver, it is stated that the men work from 40 to 60 or 70 hours at a stretch, and are sometimes on duty from midnight on Sunday till midnight on Saturday. In such cases they sleep at their work. It is stated that these excessive hours are due to fluctuations of trade, and that a week of overpressure is often followed by one of slack work. The men strongly object to this system, and believe that it could be remedied by better management and by the employment of a larger number of men. On the lower Mersey the hours of flatmen are said to be equally excessive, 60 or 70 consecutive hours

[§ 186.] being frequently worked, and sometimes 100 or 150 without any rest or sleep. It is considered that 36 hours' work should be followed by a night's rest.(1) From the statement of an inspector under the Canal Boats Acts, it would appear that the hours of boatmen are not uniformly excessive. They are sometimes as few as eight a day, sometimes as many as 16, but most of the men, it is stated, have six to eight hours' sleep in the 24, and reckon in this time in calculating the amount of work in a journey.(2) Another witness referred to Sunday labour on canal boats and barges as a serious evil, and attributed it largely to the drinking habits of the men and consequent waste of time in the week. Many boat-owners forbid it, and arrange the traffic so as to make it unnecessary. The closure of canals on Sunday would not, in the witness's opinion, injuriously affect the traffic.(3)

(ii.) IRREGULARITY OF EMPLOYMENT.

DOCKS, WHARVES AND WAREHOUSES.

Irregularity of employment in the London district.

(a) *Extent.*

187. (*a.*) A considerable amount of evidence, chiefly oral, was given with regard to the irregularity of employment which prevails in dock and riverside labour in London. It was stated with regard to the docks generally that the average number of months' employment that a man could obtain in the year was a little over seven, but the same witness made the contradictory statement that of the total number of men applying for work at the docks about 6 per cent., who are permanent men, have 12 months' work, 10 per cent. 10 months' work, 12 per cent. eight months' work, 16 per cent. six months' work, 20 per cent. four months' work, and the remainder, 36 per cent., three months' work or less. According to this calculation, which is admitted to be merely approximate, the average employment all round would be 5½ months in the year. It may happen occasionally that all the men are employed, but only about a dozen times in the year.(4) The busiest time is said to occur about December, February, and March. July and August are fairly busy months, and September is very slack.(5) The tonnage coming into the port of London is lowest in January and February, and highest in August, but the amount of tonnage does not in itself afford a measure of the number of men employed, because the different classes of goods vary in their capacity to afford employment. The season trades, which go on from June to November, employ a much larger number of men to the ton of goods than other trades. The season trades are those of tea, timber, wool, fruit, silks, jute, and spices. A ton of tea, it is stated, employs as much labour as 20 tons of ordinary goods. Hence steadiness of tonnage, so far as it exists, does not represent regularity of employment.(6) A witness representing the London and India Docks Joint Committee handed in a diagram showing the fluctuations in the average daily number of men of all grades employed on wages each week during the 12 months ending June 25th 1891. These include, besides daily labourers, the wages staff, numbering about 2,000, consisting of clerks, foremen, permanent men, and others. The maximum number shown in this diagram is 12,234 in February, and the minimum 7,558 in March. From the end of February to the end of June the average number employed appears to have been about 8,500, the maximum being 9,527 in April and the minimum 7,908 in May. The number remained very low throughout May and June. During the remaining months under consideration, the diagram shows the number employed weekly to have uniformly exceeded 9,000. Except for two weeks out of 34, it exceeded 9,500, and except for seven weeks it exceeded 10,000. From that number upwards the fluctuations become very marked. The dock labourers employed by the Joint Committee are said to vary from under 5,000 to over 7,000 and even to 8,000 and 9,000. This statement will be seen to correspond roughly with the facts represented in the diagram, if allowance is made for the permanent staff, other than dock labourers, included in the latter.(7) The number of permanent dock labourers employed by the Joint Committee is about 1,732, and these have full work all the year round.(8) The non-permanent men are divided into three classes: 1,015 are weekly labourers (Class A), and these practically have full employment. Class B, comprising 1,750 men, who have about four-fifths of full employment, corresponds very much to what were formerly called preference men. These are paid weekly, except in broken weeks. Class C, numbering 876, have perhaps two-thirds of full employment, and the remainder, who are ordinary casuals, not included in the list, have perhaps only half employment, that is, in the department where they usually work. It is stated that not a dozen casuals are now employed where formerly there were 100. The Joint Committee's instructions to the heads of departments are to the effect that the number of casual labourers is to be reduced as much as possible, and a larger permanent staff employed. It is stated that of Class B, about 10 per cent. every day fail to apply for work, and of Class C, 30 or 40 per cent. Some of these men have other trades at which they work when not employed at the docks.(1) The fluctuation of employment is more marked in the case of the London and St. Katharine's Docks than in that of any other docks under the Joint Committee.(2) In a single department, for instance (No. 11, London Docks), the number employed is said to vary day by day from 20 to 200, and only the more fortunate of the casual labourers obtain seven days' work in a fortnight all the year round. These casual men, it is stated, become gradually incapable of working six days a week.(3) This is the physical result of irregular employment, and is not due to any unsteadiness of character on the part of dock labourers, which might lead them to prefer casual work at high pay. The men's habits, it is stated, undergo a rapid change as soon as they get regular work.(4) One witness took a different view of the matter, stating that according to his experience of employment of labour in the Albert Dock, it was mainly the unsteady and unsatisfactory men who were irregularly employed, while a steady industrious man could count upon regular employment, and there was difficulty in procuring such men in sufficient numbers. The surplus labour consisted only of those who were not worth employing except when there was a press of work. In busy times the Allan and Wilson-Hill lines employ over 500 men a day in the Albert Docks, and in slack times about a third of that number.(6) In the East and West and South India Docks there is a large proportion of sailing tonnage, and sometimes no ships arrive for a fortnight or three weeks. When the wind changes there is a glut of vessels, and all the men are employed for a few days. On an average 6,000 men get about half employment in these docks.(8) In the Surrey Commercial Docks, the number employed is said to vary from 2,400 or 2,500 to 500 or 600 according to the season. It is stated that in this case the fluctuation is not a very serious evil, considering the high wages earned.(7) The employment of clerks at the docks is not in all cases regular. Sometimes they are taken on only for the season.(8) In some cases employment at wharves and warehouses, especially in the coasting trade, appears to be more regular than at the docks, but on the other hand the proportion of permanent men is smaller.(9) In the Wapping district there are about 50 wharves and warehouses, giving employment to 3,500 or 4,000 men, but of these, it is stated, only 250 or 300 are in permanent employment and entitled to a week's notice before dismissal. Of the rest, about 500 have preference of employment, but are taken on and discharged daily like casuals, and the remainder have sometimes only an hour's work at a time.(10) During slack times they are largely supported by their wives, but many could not live without further assistance.(11) At the Free Trade Wharf, Ratcliff, employment is said to be regular.(12) At Hay's Wharf, in the tea trade, about 800 men are sometimes employed in the busy season, and in the slack season not more than 150. The average is about 500. There are 27 permanent men employed on the wharf, and from 60 to 74 in the tea warehouse.(13) At the tea warehouses generally, of which there are about 22, divided among the docks and wharves, it is stated that in busy times 3,500 men are employed, and in slack times about 500, the majority of these being permanent men, but liable to dismissal at a week's notice. Of the non-permanent men, it is estimated that about one-third are employed for 10 months in the year, one-third for eight months, and one-third for six months. At other times they may get

[§ 187 (a.)] employment in the country, but not half of them get any work at all. The busy time in the tea warehouses begins about July, and lasts for a period varying from two to five months. Thus in the worst part of the slack time there is no agricultural employment to be had. The casual men then have great difficulty in finding a living, and are to some extent supported by the labour of their wives. A casual labourer is not recognised as having any claim on his employer except while actually at work.(1) The firm of Messrs. Groves and Sons, granary-keepers, employ 27 men on the staff, and a number of casuals varying from 12 to 50. About 20 of these get regular work for three days a week, and the rest only intermittent employment.(2) It is stated that in the corn trade generally, only about 20 per cent. of the men required at busy times have full employment as a rule.(3) In the grain department of the Surrey Commercial Docks, the number employed is said to vary from 100 to 800 or 900.(4) The above information with regard to the maximum and minimum numbers employed in different departments of riverside labour, may, so far as it is expressed in figures, be tabulated as follows :—

——	Maximum.	Minimum.
Joint Committee's Docks - -	9,000	5,000 (or less)
Surrey Commercial „ - - -	2,400	600
Tea Warehouses - - - -	3,500	500
Granaries - - - - - -	3,000	600
Hay's Wharf - - - -	800	150
Grain Department, Surrey Commercial Docks.	900	100

(b.) *Causes.* (b.) The irregularity above described has been attributed to various causes, such as seasonal causes, weather, fluctuations in trade, and competition for rapid delivery of goods. The cause most frequently referred to and emphasised in the evidence was the irregular arrival of goods such as tea, timber, wool, fruit, &c., which form the season trades.(5) The docks under the control of the Joint Committee do not depend on season trades to the same extent as the Millwall and the Surrey Commercial Docks, but the tea and wool trades affect them considerably.(6) Wool is dealt with in these docks in larger volume than any other class of goods, and is sold at five sales in the year, each lasting from three to five weeks. During a sale the number of men employed in the wool department of the docks is said to be 1,000 or 1,100, while in the intervals 300 or 400 men are sufficient for the work. It has been ascertained that a considerable proportion of the surplus comes from other departments where work is slack at the time. The tea trade, it is stated, does not fluctuate to the same extent as formerly, when China tea was the staple variety. The season then lasted only about six weeks, beginning in July, whereas now that a very large proportion of tea comes from India and Ceylon, it arrives much more regularly, because the crop is gathered all the year round. In the Joint Committee's tea warehouses 540 men are employed, of whom 230 are permanent, 200 have about 10 months' employment, and the rest about eight months.(7) In the Millwall and Surrey Commercial Docks the season trades of grain and timber furnish the bulk of the business.(8) Grain cargoes are more equally distributed over the year than timber cargoes, and the latter arrive more regularly than when they were imported exclusively in sailing vessels. The busiest time in the corn trade is the last three months of the year, after the harvest. Cargoes arrive from the Black Sea and from America at this time, and more or less throughout the winter, while in the summer the grain begins to arrive from the Baltic ports. The timber trade falls off entirely in winter, when the Baltic and Canadian ports are closed by ice. The trade begins in March with importations from Norway, followed in May or June by Swedish, Canadian, and Russian goods, which continue to arrive until November or December according to the nature of the season.(9) One witness, alluding to the docks and wharves generally, laid more stress on the difficulties caused by the "insane" competition of shipowners than on seasonal causes of irregularity, which, in his opinion, had been considerably modified by the introduction and increasing use of steamships.(1) Another witness believed that the irregularity which was "too often ascribed to the "season" arose mainly from the fluctuation of trade.(2) The state of the weather has a great influence on employment, both by affecting the arrival of ships and by interrupting work at the docks. It is stated that this influence is chiefly felt at the London and St. Katharine Docks, which are the furthest up the river, and therefore the most difficult to reach during fog, and also at the India Docks, which depend largely on sailing vessels.(3) In the docks generally the proportion of sailing tonnage is only one-fifth of the whole, and the irregularity of shipping is therefore very much less serious than formerly. The large lines which have fixed sailing dates provide regular work, but on the other hand if a steamer is delayed in arriving, the necessity for leaving at a fixed time in itself causes a pressure of work.(4) Fog or rain causes a stoppage of work, and at Millwall, where much of the work is in the open air, it is stated that rain is the principal cause of fluctuation in the demand for labour.(5) [§ 187 (b.)]

(c.) *Remedies.* (c.) Several witnesses suggested remedies for the irregularity of employment. Some of these were merely mentioned incidentally, such as the better regulation of the arrival and departure of ships, and the institution of stated hours for the collection and distribution of the goods dealt with at the wharves. It was pointed out that such arrangements would remedy the irregular demand for labour caused by excessive hurry at certain times.(6) A plan very strongly advocated was the reduction of the number of men competing for employment, with a view to securing more regular employment for a certain number, who should be added to the permanent staff.(7) It was stated that the Dockers' Union was in favour of the permanent employment of as many as possible.(8) Objections to this plan were pointed out by some witnesses, who anticipated that the permanent men would be overworked, and also that the Dock Companies were unlikely to engage permanent men beyond the small number for whom constant employment could be guaranteed.(9) A further suggestion was therefore made that in order to secure regular work for those employed and diminish the occasional demand for casual labour, the interchange of men between different departments and different docks or wharves should be facilitated. The demand for labour, of course, occurs in different classes of work at different times, and it is thought that employment might be considerably steadied if this fact were taken advantage of to a greater extent.(10) In some degree the practice already exists of changing from one department to another, as in the case of the wool trade already referred to.(11) There is also said to be a very large influx of men into the tea trade when it is busy. On the other hand, a man has little chance of employment where he is not well known, and there is, moreover, a limit to the possibility of interchange. Very few men, it is stated, are available for transfer from other departments to the timber and grain trades, which require special strength and aptitude.(12) The manager of the Surrey Commercial Docks stated that interchange between departments was formerly more frequent, but that in recent years the unions had introduced a rule against it.(13) It was stated that the Joint Committee always endeavoured to provide employment for the men in this way, but found them disinclined to move.(14) Unless the whole river were organised and the docks centralised, there must, it is stated, always be a certain demand for casual labour from time to time.(15) It was pointed out that the immense variety in the size of the ships and nature of the cargoes made it impossible to concentrate the docks in one locality.(16) It was suggested, however, that the unification of control by some such scheme as municipalisation, would facilitate mutual arrangements.(17) The inclusion of the wharves in the plan of centralisation would present great difficulties on account of their divided ownership.(18)

[§ 188.] Detailed statistics and recommendations on the above subject, submitted by Mr. Booth.

188. A witness, Mr. Charles Booth, who had made a special inquiry into the conditions of dock and waterside labour in London, dealt with the subject of irregularity of employment in considerable detail, and illustrated his evidence by charts and diagrams showing the amount and distribution of ordinary riverside labour during the year from April 1891 to April 1892. Among ordinary riverside labourers the witness did not include lightermen, stevedores, or coal porters, whose work was better organised and better paid than that of the docker, but he included the men who handled grain and timber, and the ship workers who discharged and sometimes loaded vessels lying in the stream. The fluctuations of employment at the docks both severally and collectively were shown on the charts, and the comparative numbers of men employed for the whole or for part of the year were shown for each dock separately in the form of a diagram, and in figures for the whole. The details shown on the charts were summarised in a table giving the maximum, minimum, and average numbers of men employed daily at different docks, with the totals of various groups of employment, and the general total of all. According to this table the maximum number employed on any one day during the year under review was 17,994, but the day of maximum employment differed in each division, so that, taking each centre of employment as a distinct labour market, 21,353 men would be required for the work, this number being the sum of the different maxima. But it was pointed out that although the men were mostly attached to some particular centre and placed on a list for employment there, yet within a certain range there was a great deal of movement, which produced an adjustment, though an imperfect one, of the supply of labour to the demand. Hence the number of men necessary for the work under the present system, though more than the actual daily maximum, would be less than the sum of the district maxima, and might be estimated at about 20,000. The number of those regularly competing for employment might amount to 22,000, but no positive statement could be made on this point. The table giving the comparative numbers of men employed for the whole or for part of the year, at the docks and wharves as a whole, showed that, taking the working year as 309 days, there was full work for 12,500 men, and nearly full work (298 to 301 days) for 500 more, and so on in a decreasing scale for each additional 500, up to the maximum of 18,000. About 2,000 of the surplus over the 13,000 in constant work appeared to have very fair employment, averaging 255 days, while the remaining 3,000 had no work in March, and practically none from then to September, and averaged only 63 days' work each. There is thus good work for 14,500 or 15,000, or, allowing for contingencies, for about 16,000 men. The details with regard to the various centres of employment were stated in separate charts and diagrams. The Joint Committee's docks were dealt with in Chart II., both exclusively and inclusively of Tilbury, and the numbers employed at Tilbury were also stated separately, on account of the great distance of this dock from the others. Over the whole of the Joint Committee's docks there appeared to be a deficiency of work from the end of April to the middle of November, becoming especially marked after the middle of July, though subject to a temporary rush of work at the end of September. During part of this time, work might possibly be found in the country. At Tilbury the charts showed special depressions in May, June, and November, not shared by the other districts as a whole, and the irregularity of employment was more marked, and due to less general causes than in the case of the others. The diagram showed that, excluding Tilbury, the maximum number employed by the Joint Committee on any one day during the year under consideration was 7,750, but on three days only was there work for more than 7,500, on seven or eight days only for more than 7,000, and on 21 days only, for more than 6,500 men. Thus 6,500 would suffice for the ordinary work of these docks. For these, if all shared alike, there would be about four-fifths of full employment. They do not, however, all share alike, some being permanent men, and others having preference of employment according to their position on the lists A, B, and C. It is stated, moreover, that the number who take up this work for their livelihood is certainly more than 6,500. According to a table accompanying Diagram A, the amount of work available in the year under consideration would have given 294 days' work each to 1,700 permanent men, 278 days' work to 1,000 men on A list, 247 days' work to 2,000 men on B list, and 195 days' work to 1,800 men on C list, leaving a margin in each case for loss of time. Seven days' work each would remain for 1,250 outsiders. The numbers here assigned to each class are merely assumed. At the Victoria and Albert Docks, the employment offered by the Dock Company, as shown in Chart III., is more regular than elsewhere, while the shipowners' employment is very irregular. The necessarily irregular work amounts to about 25 per cent. There is, it is stated, no very distinct busy or slack season, the irregularity showing itself in short periods, but there is on the whole most work from August to March. The work is considered desirable, and attracts many of the best men, the result being that very few outsiders find employment. The witness estimated that on the present system about 3,000 men were regularly needed, and that there was an average of 222 days' work for each of these, while there were probably 3,500 men actually seeking employment. At the East and West India Docks, shown in Chart IV., the employment is characterised by what the witness termed regular irregularity, being steady from week to week, though irregular from day to day, and thus requiring the constant attendance of those who habitually work there. August and March are the worst months, and there is on the whole most work in the winter, but the difference is not very marked. According to Diagram C the maximum number of men employed on any one day in the year 1891–2 was 2,400, but only on nine days were more than 1,900 employed, which is the number on the Dock Company's lists. The per-centage of irregular work, according to this diagram, is 35½. It was stated that those who work only at these docks are at a disadvantage, owing to their central position, which makes them easily accessible to men who have failed to find work at other docks. At the London and St. Katharine's Docks the great irregularity shown in Chart V. is caused partly by the periodical wool sales, which afford occasional employment for 700 extra men, and apparently affect the work of the docks beyond the wool department itself. The maximum number employed during the year was 4,000, on February 5th, and the minimum 1,300, on November 11th. According to Diagram D, the work of these docks would afford an average of two-thirds employment to 2,150 men, but the number on the lists is 2,400. The per-centage of irregular work is 37½, which is larger than in the case of any of the other docks under the Joint Committee. The work at the London and St. Katharine's Docks is, it is stated, generally considered the most casual of any on the riverside, and it is here especially that the labourers are found who do not desire regular work. The wharves and warehouses on the north side, west of St. Katharine's Dock, including the Joint Committee's town warehouses, were shown separately on Chart VI. The Joint Committee's employment here appears to vary very little day by day, but the amount is least from March to July, and there are depressions at Christmas and early in August, which are possibly due to holiday-making. On the other hand, the employment at the wharves and other warehouses in this district, while not less uniform on the whole, is subject to acute daily fluctuations. From Chart VII., illustrating the whole of the wharves and warehouses, both north and south of the river, it appears that there is considerable regularity of employment throughout the year, with no great variations from day to day or week to week. The chart shows, on the whole, a surplus of work from September to Christmas, and a deficiency from March to August. Though the work at the wharves is less subject to fluctuation than at the docks, it was pointed out that there was less interchange of labour between different wharves than between departments of the same dock. The proportion of necessarily irregular work, according to Diagrams E and F, is 10½ per cent. on the north side, and 12½ per cent. on the south side. On the north side there is fair work for 4,500 men, but it is computed that 5,000 find their living in it. On the south side there is, according to Diagram F, fairly good work for 3,500 men, but it is computed that not less than 4,000 compete for it. At the Surrey Commercial and Millwall Docks, as shown in Chart VIII, work is best in the autumn and winter, until the middle of January. At the Surrey Commercial Docks, the maximum of employment (1,802) was reached in July 1891, and at the Millwall Docks the maximum (1,178) was reached in November, the busy time there beginning only at the end of August. Diagrams G and H show a larger proportion of irregular work at these docks than at any other. It is stated that 3,000 men probably seek their living there. The two principal branches of the

[§ 188.]

[§ 188.] business of these docks, namely, grain and timber, were dealt with in a separate chart (Chart IX.) combining the two docks. It appeared from this that the irregularity of total employment was largely due to that of grain work. Special strength and aptitude are required for handling grain and timber, and therefore outsiders cannot compete for it, and those employed in it are not disposed to leave it for less highly paid work. A compendious view of the total employment in the docks and wharves of London, excluding the Tilbury Docks, was presented in Chart I., which showed that the maximum number, 17,994, employed during the year under review, was reached on December 3rd, 1891, and the minimum, 11,967, on December 24th. The chart included a daily record of the weather, showing how far work was interrupted by rain and fog. The number of days on which there was sufficient rain or fog to interfere with work was 89 and 25 respectively, the remaining 195 days, out of the 309 which constituted the working year, being classed as fine. Dense fog, it was stated, puts an absolute stop to work, but the witness suggested that in the case of rain, which throws 500 to 2,500 men out of work, some kind of shelter might be provided, such as is sometimes used on ships in the form of tents hoisted to the rigging. It was pointed out that the loss to the men through rain was not made up when work was resumed, because the extra demand brought in additional workers. As already stated, the general result of the observations and calculations shown on the charts was that the number of men needed for the whole work of the docks and wharves, as at present distributed, might be estimated at about 20,000. The number of professional dock labourers regularly competing for this work is believed to be as much as 22,000. Their earnings are shared by incomers from other trades, who seek work not because the docks are busy, but because their own trades are slack, and it is this, the witness stated, which constitutes the peculiar difficulty of regulating the dock industry. The remedy which he suggested for improving the position of the professional dockers was that their numbers should be reduced to the 15,000 or 16,000 for whom good work could be found, and that the extra number occasionally required should be drawn from the unemployed in other trades, who should be introduced only when needed. It was pointed out that the demand for surplus labour would occur chiefly in winter, when it might be obtained from the brick-making and building and other trades, which have then a number of labourers out of work, who would come to the docks if offered a certainty of employment. They might be placed on supplementary lists, and employed year by year. This plan, it has been seen, involves a reduction of about 6,000 in the number of men regularly competing for the work. This change could not be immediately effected, but the witness believed that the means towards it lay in perfecting the list system, and adhering to it more strictly. By the list system, preference of employment at each department is given in the order of the three classes, A, B, and C, and less strictly in the order of the names in each class. The imperfection of the system is due to the fact that men are not readily transferred from one department to another, and those who have preference in one department are thus obliged to compete as casuals in another when their own work is slack, and that without knowing where to go for the best chance of work. It is supposed that a great deal of apparently voluntary abstention from work offered is due to this uncertainty of information, which causes men occasionally to miscalculate the chances of work at different places. The improved system suggested is that the foreman of each department should communicate overnight with some central clearing house (*e.g.*, the Dock House), giving an estimate of the number of men required in that department for the following day, and stating to what extent he was over-supplied or under-supplied with labour. The central authority should then transfer the surplus shown on any list to the nearest department which was reported short of hands, the men so transferred having preference of employment over outsiders. The men should be able to ascertain from their foreman before leaving work, at which department they would be required the next day. It would, no doubt, be difficult for the dock officials to make a sufficiently accurate estimate of the number of men needed, and it would be a question whether they would take the risk of asking for too many, or whether they would give a safe estimate, leaving a margin of casual labour. Assuming that this difficulty were overcome, the question of expense in getting to the work would be a matter of bargain between employers and employed. It might be found that, on the whole, since the Tilbury Docks would be excluded from the scheme, the distances would not be greater than the men frequently travel now, and they might be willing to go some miles for the certainty of employment, but if they insisted on being paid walking time, and the employers refused it, the scheme would fail. It would be necessary, in order to complete the system, to have some mutual arrangement between the dock directors and the wharfingers and other employers of labour, but a very fair result would be obtained by agreement between the north side and south side wharves severally, and apart from the docks. With regard to a minor point, that of priority of employment according to the list system, the witness thought that the discretion sometimes exercised by the foremen, in giving preference to one man over another, needed safeguarding, and that if the names were arranged in the order of regularity shown in applications for work, this would be a self-acting system which would prove satisfactory. The witness wished it to be understood, however, with reference to his recommendations generally, that he did not offer a detailed scheme, but merely indicated a principle. He believed that it would be possible for a committee of practical men to make use of the information he had collected, to the advantage both of employers and employed, by working out a plan on the lines which he suggested.(1) [§ 188.]

Irregularity of employment in ports other than London.

189. Irregularity of employment was mentioned as a great cause of complaint among casual dock labourers on the Tyne. It is attributed to fluctuations in the market, and to seasonal causes. Out of 1,400 labourers belonging to the Tyneside and National Labour Union, it was stated that only 150 were permanent men, and the rest had sometimes only a few hours' work in the week. Dock labour at Sunderland is subject to great depression for four months in the year, while the Baltic ports are closed.(2) At Southampton the work of the port is said to be fairly constant, except for the great press of work occurring in summer through the trade in foreign garden produce. The number of men then employed daily is about 900, the average for the year being between 300 and 400. It was stated that there was usually about 50 per cent. of surplus labour.(3) At Plymouth the work of the port is said to be irregular, owing partly to dependence on the weather. Only a minority of the men are employed all the year round, and the casual labourers are too numerous for the employment offered.(4) It is stated that there is very little casual labour in the port of Cardiff, and that at least 80 per cent. of the labouring population are permanently employed.(5) Employment at the Liverpool docks is described as very irregular, and surplus labour is said to be encouraged in order that there may be a large number of men to choose from.(6) The employment of warehouse porters in Liverpool is also very irregular, owing to fluctuations in the amount of exports and imports. There are no permanent men.(7) Employment at Barrow Docks is said to fluctuate very much. About 150 men habitually seek their livelihood there, but at times as many as 300 may be employed.(8) It is stated that there is no great irregularity of employment in Glasgow, and the question of casual labour has not presented serious difficulties, because when the work of the port is slack owing to the state of trade, there is other employment to be found in shipbuilding yards, foundries, &c. There is also rarely any scarcity of labour (9)

Shipping.

190. In sea service there is regular employment unless ships are laid up.(10) In the Leith shipping trade the Baltic steamers are occasionally laid up for a short time in winter, but otherwise employment is steady.(11) Riggers' work is said to be at times very irregular, owing to the fluctuation in the number of vessels being built or coming into port.(12) The employment of deep-sea tugmen is described as very regular. The union to which the majority of them belong seldom has any of its members unemployed.(13)

Rivers and Canals.

191. It was stated that the number of licensed Thames watermen without employment was usually 30 or 40 per cent., but according to another statement, not more than 20 per cent. were unemployed in the slackest

[§ 191.] times.(1) The employment of lightermen on the Humber, the majority of whom are casual, is said to be subject to seasonal fluctuations.(2) On the Medway the employment of bargemen is very irregular through many causes, partly through delay to cargo and partly from stress of weather, which is a great cause of detention in tidal rivers. Barges are occasionally stranded in creeks for some days.(3) The employment of watermen on the Weaver and Mersey is subject to fluctuations which are partly attributed to bad management on the part of the employers' officials. There is little or no surplus labour seeking employment.(4)

(iii.) LIMITATION OF HOURS, BY LAW OR OTHERWISE.

The "Eight Hours' Day."

Docks, wharves, and warehouses. The general principle of an eight hours' day.

192. It is chiefly in connection with the conditions of labour in the port of London that the question has arisen of the application of an eight hours' day to this industry. The evidence of the representatives of London dock labourers is almost unanimously in favour of some definite limitation of hours, though it is stated that the Dockers' Union has arrived at no official conclusion on the subject. The normal day's work in the docks is about eight hours, and it is proposed that this or a proportionate weekly number should be the prescribed maximum.

(a.) *Arguments in favour of. Non-economic. (i.) The physical and moral benefit of the workers.*

(*a.*) The main arguments in favour of this restriction proceed from two considerations. The first is that of the physical and moral benefit of those who, it is stated, are now employed for excessive hours. It is maintained that a great deal of dock work, especially of the heaviest kind, is such that no one can perform it efficiently or without injury to health, for a longer period than eight hours a day. It is stated that the work of 25 per cent. of the London dock labourers is of such an exhausting character as to cause physical and moral deterioration, especially under the present system of hours. With reference to the Liverpool docks also, it was urged that the adoption of an eight hours' day would prevent overwork and give leisure for intellectual improvement.(5) The second consideration, which has been more strongly urged than the former, is the desirability of effecting a more equal distribution of work, in order to provide employment for some of the surplus labour. It is contended that the permanent men, who work overtime whenever there is a press of business, and sometimes make 90 or 100 hours a week, thereby appropriate employment which would otherwise fall to the share of those who now have little or none. According to some of the witnesses on the side of the employed, the restriction of hours would go far to solve the problem of casual labour, by remedying the irregularity of employment.(6) There would not be employment for all, but it is believed that 25 or 30 per cent. of the casual labourers would be provided for, and that the regulation of hours would so far reduce the chances of an odd day's work, that the competition for employment would diminish, and the condition of waterside labourers would be materially improved.(7) It is even contemplated that the permanent staff might be so far increased under this system that the necessity for employing casual labour during the influx of trade would no longer exist. The same argument was used in favour of the application of an eight hours' day to dock labour on the Tyne. With regard to the probable effect on wages, the view of one witness who advocated the reduction of hours was that production would be accelerated in a precisely inverse proportion, so that wages would remain the same for eight hours' work as they now are for twelve. In any case, he added, the question of wages might be left to solve itself, since nothing under a certain standard would command the market.(8) One witness, however, anticipated an increase in the cost of production, leading to "the introduction of fresh machinery" and a return to "the same condition of things, only on a higher economic plane." Hence he recommended the expedient of a reduction of hours rather as a temporary palliative than as an effectual remedy for existing evils.(1) It was stated that wages in the Tyne district would not be likely to fall in proportion to the reduction of hours.(2)

Economic. (ii.) The better regulation and distribution of employment.

(iii.) The acceleration of production.

[§ 192 (*a.*)

(*b.*) *Arguments against. Non-economic. (i.) Increased strain on the workers.*

(*b.*) An employer of dock labour in Glasgow stated that many who had had experience of the system of short hours and hard work in American ports, considered it more physically trying than the opposite practice.(3) From the economic point of view, it was stated almost unanimously by the representatives of employers of labour in docks and wharves, that though excessive hours of work are most undesirable, the varied and fluctuating nature of the business renders it impossible to adopt any uniform system of hours. A wharf in the coasting trade, for example, must be open from 6 a.m. to 6 p.m. for the reception and delivery of goods. The late delivery of goods, which is unavoidable, causes a certain amount of overtime, and moreover, absolute regularity is impossible where ships are concerned. They necessarily arrive and sail according to the tides, and are often delayed by stress of weather. Thus it is stated that an eight hours' day and a 48 hours' week are alike impracticable.(4) A witness representing the Southampton Chamber of Commerce and Free Labour Association pointed out the impossibility of adhering to a uniform system of hours throughout the year in the case of the Southampton docks, in view of the extreme pressure of business at one particular season.(5) It is further maintained that the amount of overtime usually worked in the London docks and wharves, namely, about two or three hours, could not be usefully restricted by making the men give place to another set of men, because this practice would increase the chances of casual employment, and thus maintain the very class of labour which it is desired to discourage.(6) It is also stated that the men themselves would object to being turned off a job, and deprived of the opportunity of working overtime at a higher rate.(7)

Economic. (ii.) Impracticability through irregular nature of the industry.

(iii.) The risk of encouraging casual labour.

(iv.) The objection of the men to losing overtime pay.

Method of applying the principle of an eight hours' day.

(*a.*) *A 48 hours' week.*

193. (*a.*) It is stated that at the annual congress of the Dockers' Union in October 1890, the question of the form in which an eight hours' day should be adopted was discussed, with the result that a large majority was obtained against the proposal for a literal eight hours' day and in favour of a 48 hours' week. It is stated that the adoption of the latter is very generally thought to be practicable, whereas the unavoidable irregularity due to seasonal causes, tides, and weather, is a bar to the adoption of the former.(8)

(*b.*) *An actual eight hours' day with two (or three) shifts.*

(*b.*) It is maintained on the other hand that by a system of relays or shifts a literal eight hours' day could be worked, and all overtime dispensed with. One plan proposed is that two eight-hour shifts should be worked in the course of the day, and that there should be no night work. Representatives of dock labour in London and Liverpool supported this recommendation, while a representative of the Tyneside National Labour Union proposed a system of three shifts in the 24 hours.(9) The objection made to any such scheme by employers of dock labour in London, is that it would meet with opposition, not from the dock companies, but from the shipowners, and also to a great extent from the workmen themselves, who dislike being interfered with in a profitable job. This statement was confirmed by a foreman at the docks, who also feared that the shift system would lead to quarrels between the gangs relieving each other. It was further stated by an employer of wharf labour that "relays might be very advantageous" if the amount of overtime were constant from day to day, but since it is not, there would be difficulty in equalising the shifts. An arrangement by which the gangs would overlap, one beginning early and the other ending late, would, it was stated, be unsuited to the nature of wharf work. To employ short gangs for any part of the day would cause the work to be delayed.(10)

Method of bringing about an eight hours' day.

(*a.*) *By the voluntary action of trade unions.*

194. (*a.*) The proposal to attempt a reduction of hours of labour by putting pressure on employers through the unions, finds very little favour among the representatives of dock and wharf labourers, who believe it to be impracticable.(11) This method was advocated,

(10) Digest, Vol. I., p. 57. J. Greig, 5779. (11) Digest, Vol. I. p. 55, 56.

194 (a).] however, by a witness representing the Southampton Free Labour Association, a large employer of dock labour, who stated that if the men thought fit, irrespectively of legislation, to apply to the employers through the Association for an eight hours' day, the question would certainly be entertained; but that legislative interference with hours of labour, and the establishment of a fixed maximum, would lead to disastrous results. The work of the port of Southampton is fairly constant, except that in the months of June and July there is a great rush of business in connection with the trade in garden produce from the Continent and the Channel Islands. More than twice as many casual labourers are required then than at any other time, as the work has to go on continuously day and night with different gangs. If an eight hours' day were enforced, a very large extra number of men would be necessary. There would be no employment for them in the slack months, and if they remained in the town the existing difficulties from overcrowding and scarcity of employment in winter would be aggravated, and the congestion of the labour market would be very serious. As a matter of fact, however, the extra labour would probably not be obtainable, as the inducement which brings a number of men from other trades, namely, the prospect of earning high wages by doing night work, would be removed by a limitation of hours. In that case the work of the port would stand still, and its trade would be injured. An employer of dock labour in Glasgow objected to State interference with hours of labour unless for "non-adults" and females, or in trades in which long hours are dangerous, and even in such cases due regard should be had to foreign competition. Businesses connected with shipping cannot be carried on without full legal power to work as long hours as necessary, whatever may be done by combination to shorten hours or define a day's work.(1) It is stated that at the Liverpool Trades Union Congress in 1890, the only opposition to the resolution which was carried in favour of a legal eight hours' day proceeded from those who objected, not to an eight hours' day in itself, but to a legal enactment of it.(2)

(b.) By legislation. (b.) It is stated by nearly every representative of dock labour who advocates the restriction of hours, that there is no satisfactory means of obtaining it except by legislation. It is said to be the unanimous opinion of members of the South Side Labour Protection League that it is absolutely impossible to obtain a reduction of hours by trade organisation, owing to the crowded state of the labour market. At the Liverpool Trades Union Congress in 1890, a resolution in favour of a legal eight hours' day was carried by a majority.(3) One witness believed that if satisfactory hours were obtained by trade union effort they would be lost again in a year or two. Constant attacks were being made, he argued, on the position gained by the strike of 1889. He wished for legislation on the subject, notwithstanding the objections of a considerable number of people to an eight hours' day. He would interfere to any extent with "individual freedom to starve."(4) Another witness who was less strongly opposed to voluntary methods, still thought that it would take too long to educate employers and unions to take steps in the matter for themselves.(5)

(i.) Act establishing a universal eight hours' day. (i.) It is not clearly stated whether the Dock Labourers' Union advocates an eight hours' day for all trades, but one of its members expressed the opinion that it was no use "having it sectionally." He thought that a universal eight hours' day would have the effect of taking hundreds of men from the dock gates into the shops and factories where labourers are employed, and where the men are now working from 80 to 90 hours a week.(7) A representative of the South Side Labour Protection League stated that an eight hours' day or 48 hours' week for the docks alone would place some men in a worse position, while giving more regular employment to others, and that in his opinion this limitation of the hours of labour should be carried into all departments of industry, and might result in the employment of all the unemployed.(7) Another witness considered it unjust to apply a legal day to one trade rather than to another, and thought that if it were left optional, the eight hours' day would never be obtained. The resolution carried at the Liverpool Trades Union Congress was in favour of a general eight hours' day, not one subject to trade option, and it is stated that a very large proportion of the old as well as the new unions are in favour of it.(1) [§194(b.)(i)]

(ii.) Act establishing an eight hours' day subject to trade option or local option. (ii.) A representative of the Dock Labourers' Union stated that he thought that the Union was in favour of an eight hours' day on the lines of local and trade option. This position was further explained by another representative, who proposed that the law should be so framed that if a two-thirds majority in any trade decided in favour of an eight hours' day, it should be enforced in that trade. He saw no objection to interfering with the individual freedom of the minority in such a case.(2)

(iii.) Practical difficulties. (1.) Avoidance of overtime. (iii.) The view of those who advocate a legal eight hours' day appears to be on the whole that overtime on a day's work should be abolished as far as possible, and that overtime on a week's work should be prohibited altogether. It is recognised that cases may occur in which it would be scarcely possible to avoid overtime on a day's work. There is already, it is stated, an understanding between various sections of dock and wharf workers and their employers, that if a ship is within a given number of tons being completed, overtime shall be worked in order to finish her, and this understanding might continue, since it is quite consistent with a limitation of hours to a given maximum in the week. It should, under this limitation, be a punishable offence to work over 48 hours a week, unless the case were shown to be one of absolute necessity. Of this point, according to one witness, the employers and employed should be the judges; according to another they should be represented on an arbitration board which should decide whether "justifiable cause" had been shown; according to another, a man accustomed to the work should be called in as arbitrator. But for these necessary exceptions, the rule against overtime must, it is stated, be absolute, or it would be valueless to the workman. Those who now work overtime at a higher rate would certainly earn less, but in the cases of emergency already mentioned, overtime rates would still be paid.(3) According to some witnesses overtime should be entirely prohibited, and a system of three eight-hour shifts a day introduced: (4) according to others the night work which this would involve is undesirable on account of its dangerous nature. It is stated that all the London waterside labourers would prefer to have night work done away with.(3) It is admitted that it would be difficult, in administering an Eight Hours' Act, to prove that the employer knew how long a man had worked. In the case of the workman, however, it is thought that his fellow workmen would be willing to inform against him.(6) It is proposed that infringement of an Eight Hours' Act should be punishable by fine or imprisonment both for the workman and employer, if the latter was aware of the offence, otherwise the workman only should be punished. One witness maintained that the workman should not be punished unless he was alone responsible for the offence, because he is not altogether a free agent. Exemption would of course be granted in the cases of exception already defined.(7)

(2.) Detection of infringement

(3.) Penalties under an Act.

SHIPPING.

The general principle of an eight hours' day. (a.) Arguments in favour of. 195. (a.) Representatives of the National Amalgamated Sailors' and Firemen's Union advocate an eight hours' day for all seamen, maintaining that there is no more difficulty in applying it to sailors than to sea-going firemen, who have had a customary eight hours' day for many years, and that any work in excess of eight hours a day is injurious to health.(8) Representatives of the North of England Sailors' and Firemen's Union expressed the same opinion, and added that the reduction of hours would diminish the loss of life at sea by causing more men to be employed and a better look-out to be kept. It was stated that the reduction of hours in the case of firemen had resulted in increased efficiency, and that the same result might be expected in the case of sailors.(9)

(b.) Argument against. (b.) It was pointed out by several witnesses that hours of labour at sea must depend on the requirements of the service, and that to limit the discretion of officers in this respect by a definite restriction would be to subvert discipline and endanger life and property.(10) It was stated on behalf of the National Federation of

[§ 195 (b.)] Fishermen, that the men in the North Sea fishing industry would prefer longer periods of rest on shore to a reduction of hours of labour at sea, which they consider hardly practicable.(1)

Method of bringing about an eight hours' day.

196. It is stated by a representative of the North of England Sailors' and Firemen's Union, that unless an adequate manning scale were first enforced by law, the establishment of a legal eight hours' day would increase the dangers of sea service, and also that legislation is unnecessary, since a reduction of hours can be brought about by the action of trade unions, as in the case of firemen.(2) The National Amalgamated Sailors' and Firemen's Union advocates a legal eight hours' day on the ground that to demand reduction of hours by trade union methods would lead to continual strikes, and a concession gained in that manner would be easily lost.(3) It is proposed that an Eight Hours Act should allow overtime to be worked at sea in cases of necessity, of which necessity the captain must be the judge.(4)

RIVERS AND CANALS. The general principle of an eight hours' day. (a.) *Argument in favour of.*

197. (a.) It was stated that the question of an eight hours' day had never been discussed by the Amalgamated Society of Thames Watermen and Lightermen, but its representative was personally in favour of an eight hours' day, "because it would give the workmen "an opportunity of relaxation and social education."(5) The same opinion was expressed by a representative of the Society of Lightermen and Watermen of the River Humber.(6)

(b.) *Arguments against.*

(b.) It was stated, however, that the members of this society are divided in their opinions, for though some wish for eight hours a day, others wish for nine, and others prefer the present state of things. It was stated by representatives of the Amalgamated Society of Watermen and Lightermen of the River Humber, and of the United Bargemen and Watermen's Protection Society (Medway district) that the hours of labour in river traffic cannot be reduced, because the work depends on conditions of wind and weather.(7)

Method of bringing about an eight hours' day.

198. A representative of the Amalgamated Society of Thames Watermen and Lightermen was opposed to a legal enactment of an eight hours' day, on the ground that what would suit one class of work would not suit another.(8) It is stated that the Society of Watermen and Lightermen of the River Humber has already been so far successful in obtaining improved conditions of labour, that if the men were unanimous the reduction of hours could be obtained in the same way.(9) One representative of the Watermen and Lightermen of the River Humber was personally in favour of a legal eight hours' day. Representatives of the Thames Steamship Workers' Union and of the Upper Mersey Watermen and Porters' Association were in favour of a legislative restriction of hours of labour, but not to eight hours a day.(10)

3. MUNICIPALISATION.

(a.) *Municipalisation of docks.*

199. (a.) Several witnesses expressed the opinion that a remedy for the irregularity of employment in the docks of London would be found in the acquisition and control of the docks by the municipality. It was apparently contemplated that the scheme should extend to the wharves also. (11) The secretary of the Dockers' Union proposed that the purchase should be effected by means of a State loan, the interest to be paid out of the local rates. The municipality should have power to compel owners to sell dock and wharf property at a rate not exceeding 25 years' purchase on the rental; and it should not be competent to the vendors to invest the purchase money in the construction of new docks for the purpose of competing with the municipality. By this scheme, it was pointed out, the middleman would be abolished, and every advantage in the way of more effective machinery and increased efficiency of labour would contribute to the general benefit, instead of to that of the employer only. The workmen would, moreover, have some control over the docks through the municipal elections. It was maintained that any possible loss would be more than covered by improved management. (12) Other witnesses advocated the municipalisation of the docks and wharves on account of the excessive competition now prevailing. One of these witnesses represented the Association of Foremen and Clerks, an experienced and comparatively well educated body. He proposed that the municipality should have optional power to purchase the docks with capital raised from the local rates. The warehouses should be let to merchants, who would work their own goods, and the rent would be a sufficient interest on capital. Any loss incurred would fall upon the general public. The advantage to the employed would consist, according to this view, in increased wages and greater regularity of employment, not in the employment of more men. (1) Another witness also advocated the municipalisation of the docks on account of the greater regularity of employment which would result from the centralisation of control, and further pointed out that the public would benefit because the profits would go towards the alleviation of the rates, and the provisioning of London would no longer be controlled by private monopolists. (2) On the other hand several objections to the scheme were pointed out. The manager of the Surrey Commercial Docks denied that the municipalisation of the docks would have the effect of equalising the distribution of employment, because according to the rules of the unions a man may only work in his own department. Any scheme of municipalisation, moreover, must include the wharves and warehouses, which would otherwise act as competitors, because the dock owners must carry on the business of wharfingers and warehouse keepers in order to make any return on their capital. The cost of purchase would thus be far larger than the advocates of the scheme probably expected.(3) Similarly, with regard to the Southampton Docks, it was suggested that the municipality should purchase them, possibly by means of a State loan, and should adopt a "fair-wages "clause" for all work done in its employment. It was stated that "the people" were in favour of this scheme, and it was maintained that it was "a step in the right "direction," although municipal ownership had not improved the conditions of dock labour at Bristol. The municipality should not, in the opinion of this witness, be compelled to purchase the docks, but the Legislature would have to intervene in the combat with vested interests. Although it would be to the interest of the whole body of ratepayers that the docks should be worked as cheaply as possible by the municipality, it was contended that many of the ratepayers would gain as much directly or indirectly by the increased wages of the dock labourers as they would lose by increased rates.(4) A witness representing the National Union of Dock Labourers advocated the municipalisation of the Liverpool Docks. (5) [§ 199 (a.)]

(b.) *Municipal workshops.*

(b.) Nearly every witness representing the Dock, Wharf, Riverside, and General Labourers' Union proposed the establishment of State or municipal workshops for the employment of surplus labour. The chief ground on which it was advocated was the principle that it is the duty of the State to find employment at sufficient wages for all persons who cannot get it otherwise. (6) The secretary of the Dockers' Union proposed therefore that the State should undertake, in co-operation with local authorities, to establish workshops which should provide employment of various kinds together with facilities for learning every class of skilled trade. For this purpose the State should grant a loan to the local authorities, they being responsible for its repayment. (7) Other witnesses explained further that these workshops should produce necessaries exclusively, at a fixed minimum wage, and that the products should not come upon the market, but be interchanged with each other, the cost of material being apparently borne by the rates.(8) The majority of witnesses regarded the proposed plan merely as a means of finding employment for workmen driven from their trades by competition, or for dock labourers not in regular work. They maintained that only better distribution of work was needed, and that municipal control would effect this.(9) Some, on the other hand, wished the scheme to extend further, and ultimately to absorb the whole industry of the country. According to this view the state of labour can only be reformed by a fundamental re-organisation.(10) It was also proposed that the State or the municipality should establish good eating-houses

4. INSPECTION AND REGISTRATION, AND LEGISLATION RELATING THERETO.

he erchant hipping cts. 854-90.

200. Evidence relating to the text and the administration of the Merchant Shipping Acts was given by the representatives of the employed, the employers, and the Board of Trade respectively. It may be summarised, according to the subjects with which it deals, under 15 heads, as follows:—1st, local marine boards, their composition and functions; 2nd, engagement of seamen; 3rd, allotment of wages; 4th, wages and effects of deceased seamen; 5th, provisions; 6th, cases of illness; 7th, accommodation on board ship; 8th, unseaworthiness of ships; 9th, desertion; 10th, deck cargoes, overloading, &c.; 11th, rating of seamen, discharges, &c.; 12th, watertight compartments; 13th, liability of shipowners; 14th, presence of unauthorised persons on board ship; 15th, life-saving appliances.

i.) *Local Marine Boards.*

(i.) Local Marine Boards are constituted subject to the provisions contained in sections 110–121, and section 241 of the Merchant Shipping Act of 1854. They are composed of local magistrates, representatives of the shipowners, and nominees of the Board of Trade. The last mentioned, however, are generally shipowners also (indeed 143 of the 184 members of Local Marine Boards are shipowners), and Mr. J. Havelock Wilson, representing the National Amalgamated Sailors' and Firemen's Union, proposed to compel the Board of Trade always to nominate independent persons. Sir Henry Calcraft, on the other hand, representing the Board of Trade, intimated that its policy was always to nominate suitable persons belonging to or in sympathy with the seaman class, where such could be found. Mr. Wilson further suggested that the Seamen's Union at every port should directly elect six additional persons to sit on the Local Marine Board. Although, as was pointed out by Mr. Scrutton and Sir Henry Calcraft, the judicial functions of the Boards extend only to alleged misconduct on the part of certificated officers, Mr. Wilson and Mr. Plimsoll claimed that seamen are nevertheless immediately interested in those functions being properly discharged, and the last-named witness considered that they should be enabled to secure the transfer of such cases as did concern their interests from the jurisdiction of the Local Marine Board to that of the nearest magistrate who was not a shipowner. (2)

(ii.) *Engagement of seamen.*

(ii.) Engagements of seamen are regulated by sections 146–167 of the same Act of 1854. According to the provisions of section 147, no person other than the owner, master, or mate, or some person who is *bonâ fide* the servant and in the constant employ of the owner or master, may engage or supply any seaman to any ship in the United Kingdom, without a special license from the Board of Trade. Inasmuch as the said Board has refused to grant such a license to the agents of the Shipping Federation, Mr. Laws and Mr. Morrison, as representatives of that body, proposed to amend the law so as to entitle them to supply men without applying to the Board of Trade at all, by substituting the word "agent" for the word "servant," and omitting the words "in the constant employ." In any case, the Board of Trade ought, according to Mr. Laws, to exercise its power of granting special licenses in favour of the Federation. As matters stand at present, the Shipping Federation and other corporations and individuals were represented by several witnesses on behalf of the employed to be constantly breaking the law by illegally supplying men to ships, and this was admitted to be the case by Mr. Laws himself, though he added that he had obtained an opinion of counsel to the effect that the sections of the Act which deal with the engagements of seamen were not intended to affect such a question as that now raised. Sir Henry Calcraft, while claiming that the Board of Trade had materially diminished the practice of "crimping," as offences against this law are called, considered that no further enactment would suffice to entirely stamp it out. Mr. Weston urged the expediency of special licenses being granted to officials of sailors' homes, one of which he represented. Mr. Smith Park, who represented the Glasgow Shipowners' Association, proposed to amend sections 149 and 150 of the Act of 1854 by making it a penal offence for seamen to sign on for one ship before they were clear of their engagements for another, and by giving shipowners perfect liberty to make their agreements with the men when and where they pleased, in whatever terms they pleased, and without the presence of an officer of the Mercantile Marine. It was the opinion of Sir Henry Calcraft, however, that permission to sign the agreements elsewhere than at the Mercantile Marine Offices would favour the development of "crimping."(1) [§ 200 (ii.)]

(iii.) *Allotment of wages.*

(iii.) Allotment of wages is dealt with in sections 149–169 of the Act of 1854, and in section 3 of the Merchant Seamen (Payment of Wages and Rating) Act, 1880. Mr. J. H. Wilson, Mr. J. B. Lee, and Mr. W. Key, representing various Seamen's Unions, desired to extend the power of allotment from one-half to two-thirds of the seaman's wages. The allotment notes should, moreover, be permitted to be made in favour of any registered trades union or friendly society. The same witnesses also contended that payments under allotment notes should begin at the end of a week, Mr. Key observing that the long intervals during which seamen's wives had to wait for the wages caused great hardship. Indeed, he thought that the best thing to be done was to abolish allotment notes altogether, and to definitely substitute for them weekly payments to the man's family direct, beginning from the very first week of his engagement. It was also pointed out that, under the present system, the men were in the habit of getting tradesmen, Jews, and other persons, to cash their allotment notes, who in return for the favour, took the first month's payment for themselves, thereby obliging the man's family, in whose favour the notes were drawn, to wait two months instead of one for their money. Mr. Soll Samuel, moreover, urged on behalf of the cashiers referred to, that in view of the difficulty they experienced in recovering the money advanced by them on the security of the notes, a law should be passed enabling them to guarantee the seaman's future earnings simply on proving their claim before a magistrate or the Board of Trade. The said notes, he added, should be sold only by authority from the Board of Trade in order to prevent the forgeries that were not unknown. On the other hand, Mr. Smith Park, representing the Glasgow Shipowners' Association, contended that the more frequent payment of larger portions of a seaman's wages to his family by means of allotment notes would weaken the power of the master to prevent desertions, besides exposing the seaman himself to the annoyance of finding on his return from a long voyage that his wages had almost all been spent. Sir Henry Calcraft, moreover, considered that the policy of the Act of 1854 in limiting the allotment of wages to the case of relatives should not be departed from without good cause.(2)

(iv.) *Wages and effects of deceased seamen.*

(iv.) Wages and effects of deceased seamen are protected by sections 194–204 of the Act of 1854. Mr. J. H. Wilson, Secretary of the National Amalgamated Sailors' and Firemen's Union, stated that the owners of the ships "Donegal" and "Rowena" illegally withheld portions of the wages of deceased seamen from the relatives on the plea that the above-mentioned sections of the Act were inapplicable to the cases in question. Mr. J. Smith Park, however, denied Mr. Wilson's allegation, and pointed out that in every case where deductions were made from the wages of deceased seamen, the provisions of the law were carried out to the satisfaction of the Board of Trade.(3)

(v.) *Provisions.*

(v.) Provisions must be supplied to seamen in the manner laid down in sections 149, 221–227, and 232 of the Act of 1854, in section 31 of the Passengers Act of 1855 and in section 7 of the Merchant Shipping Act of 1867. The evidence on this subject was particularly voluminous, and centred round three main points—first, what the scale of provisions should be; secondly, how their quantity should be checked; thirdly, how their quality should be ensured. The law provides that every agreement shall contain a statement of the scale of the provisions to be given to each seaman, and that such scale shall be subject to the general approva

(1) Digest, Vol. II., p. 22. (2) Digest, Vol. I., p. 63. Digest, Vol. II. p. 103.

(1) Digest, Vol. I., pp. 63, 64. Digest, Vol. II., pp. 103, 104, 105. G. A. Laws, 4960. (2) Digest, Vol. I., pp. 64, 65. Digest, Vol. II., p. 106 (3) Digest, Vol. II., p. 106.

[§ 200 (v.)] of the Board of Trade. The Board has accordingly drawn up a minimum scale, which Mr. J. H. Wilson, Mr. J. B. Lee, and Captain E. B. Hatfield, representing various branches of the merchant service, agreed in characterising as insufficient, and the two first-named witnesses went so far as to propose the insertion of a revised scale in the text of an Act of Parliament. It was pointed out, however, by the representatives of the employers, that the Board of Trade scale was regarded as a minimum, not as a standard, and that the provisions actually provided were in most cases superior both in quantity, quality, and variety to those authorised in the said scale. Indeed the bill of fare authorised by the Board of Trade was rigidly adhered to only when necessitated by the exigencies of long voyages, and by way of punishment for insubordination, &c. Mr. Lee admitted the truth of these statements in some cases, but denied that they held good universally, and added that he considered penal reduction of the men's allowance of provisions to be "a very bad plan." Sir Henry Calcraft, on the other hand, was of opinion that the law as it now stood afforded quite sufficient protection to the seamen in the matter of their food supply. He intimated, however, that the Board of Trade was instituting inquiries as to how far an improvement could be effected in the matter. In regard to the means of checking the quantity of the provisions served out, Mr. J. H. Wilson complained that, though the law required scales and weights to be kept on board, there was no enactment compelling those scales to be kept in proper order. In respect to the means of ensuring the provisions being of the proper quality, both Mr. Wilson and Mr. Plimsoll urged the desirability of extending the Act providing for the inspection of the provisions taken on board of passenger ships to ocean-going vessels that did not carry passengers, and the former witness further complained that Local Marine Boards did not avail themselves of their statutory power of appointing inspectors of stores. Mr. Plimsoll detailed at some length the sufferings inflicted upon sailors by being obliged to consume food of inferior quality, and referred the Commission to a Blue Book on the Health of Crews, dated August 1876. The representatives of the employers, on the other hand, agreed in declaring that the supply of inferior provisions was quite exceptional, and Mr. Raeburn, who represented the Clyde District Committee of the Shipping Federation, maintained that the real ground for complaint, where any such ground existed at all, was not the bad quality of the food itself, but the spoiling of good food by bad cooking, and urged the advisability of adopting better and more systematic methods of procuring competent cooks for the sea service. Mr. J. Scrutton, representing the Chamber of Shipping of the United Kingdom, denied the truth of the allegations made by Mr. Plimsoll, who, he pointed out, had himself qualified them by the remark—"I should mislead your Lordship (the Earl of "Derby) if I wanted you to suppose that that is in "existence now." Personally, the witness entertained no objection to the inspection of provisions as a matter of principle; but, as a matter of practice, he contended that there were several obstacles to its more general adoption. Sir Henry Calcraft's statement to the effect that the law was sufficient as it stood, covered the enactments relating to the quantity and quality of the provisions as well as those relating to their variety. (1)

(vi.) *Cases of illness.*

(vi.) Cases of illness are to be provided for in accordance with sections 224–232 of the Act of 1854 and section 7 of the Act of 1867. Mr. Manton, who represented the National Federation of Fishermen, complained that the Grimsby employers charged the fishermen for the use of the medicine chests placed on board the boats belonging to the North Sea fishing fleet. This charge, he contended, was illegal, inasmuch as the employers were bound to place such medicine chests on board the vessels by the terms of section 224 of the Act of 1854, which provides that "the owner of every ship navigating "between the United Kingdom and any place out of "the same, shall provide and cause to be constantly "kept on board such ship a supply of such medicines "and medical stores in accordance with the scale drawn "up by the Board of Trade." The fishing vessels, he urged, did come under this section, inasmuch as the North Sea might fairly be construed as being "a place "out of the United Kingdom" within the meaning of the Act. Mr. J. H. Wilson made three distinct proposals for the amendment of the law on the point. First, that the expenses of sending home seamen invalided abroad should be paid by the shipowners without deduction from the wages; secondly, that the wages of seamen invalided abroad should recommence at the moment they leave the hospital and embark upon their homeward voyage, and should continue until the moment of their arrival in the United Kingdom; and, thirdly, that the seamen's hospital and medical expenses incurred abroad should be paid by the shipowners without deduction from the wages. As the law stands at present, shipowners are liable for such medical expenses only as are incidental to the employment, and any addition to their liability in this respect, whether effected by means of new legislation or brought about by a new interpretation of the existing law, was strongly objected to by their representatives. (1)

[§ 200 (vi.

(vii.) *Accommodation on board ship.*

(vii.) Accommodation on board ship is regulated by section 9 of the Act of 1867, which provides, among other things, that "every place in any ship, occupied "by seamen or apprentices and appropriated to their "use, shall have for every such seaman or apprentice "a space of not less than 72 cubic feet, measured on "the deck or floor of such place." The minimum accommodation here ordered to be observed was characterised by several witnesses as insufficient, and Mr. Wilson definitely proposed to extend it to 120 cubic feet, and to compel shipowners to provide an open space for the men to use for drying their clothes. Mr. Scrutton, representing the Chamber of Shipping of the United Kingdom, explained that shipowners were voluntarily increasing the accommodation on board their vessels beyond the minimum laid down by the Act of Parliament, and expressed his opinion that it was quite an open question whether, in view of the increased size of modern ships and the fewer hands they required in proportion to their tonnage, the said minimum might not wisely be raised. It was pointed out, however, both by Mr. Scrutton and Sir Henry Calcraft, the representative of the Board of Trade, that, without any further legislation, shipowners have a distinct material interest in improving the seamen's accommodation in virtue of the provision contained in sub-section 4 to the effect that the space so occupied may, if its dimensions and internal condition be in accordance with the Act, be deducted from the register of the tonnage chargeable with dues, and the last mentioned witness was of opinion that the legal minimum of 72 cubic feet per man was quite sufficient, provided that the other legal requirements contained in the same section of the Act as to the sanitary and other internal arrangements were fulfilled. That these requirements were not fulfilled, however, was the unanimous testimony of the representatives of the seamen, although one of them, Mr. P. B. Sutcliffe, stated that this was partly due to the slovenly habits of the seamen themselves. In spite of the provisions of the Act, paint, liquors, and oil stores were said to be habitually placed in the men's sleeping places, where the ventilation was defective, the protection against wind and weather inadequate, and the general sanitary arrangements positively unwholesome. The representatives of the employers, on the other hand, contended that, in all these respects, there was a marked and steadily increasing improvement throughout the merchant service, and that, as applied to vessels belonging to first class firms, the charges of bad accommodation preferred by the men's representatives were quite unfounded. (2)

(viii.) *Unseaworthiness of ships.*

(viii.) Unseaworthiness of ships is provided against by section 5 of the Act of 1876, which prevents shipowners and masters from contracting out of their obligation to use every reasonable means to secure the fitness of their vessels for sea. Mr. J. H. Wilson further proposed to compel the manning of ships according to a definite scale in proportion to their registered tonnage, on the ground that ships ought not to be regarded as seaworthy if they are inadequately manned. This proposal was supported by Mr. Friend, Mr. Key, and Mr. Butcher, representing various seamen's organisations, the first named witness urging as an additional reason for its adoption the fact that it would be the means of furnishing employment for a larger number of men. A similar manning scale was drafted and put in evidence by Captain Hatfield, an officer in the Merchant Service, but unlike Mr. Wilson,

(1) Digest, Vol. I., pp 65, 66. Digest, Vol. II., pp. 106-10.

(1) Digest, Vol. I., pp. 66, 67. Digest, Vol. II., pp. 110, 111. (2) Digest, Vol. I., p. 67. Digest, Vol. II., pp. 111, 112.

[§ 200 (viii.)] he did not propose to enforce its adoption by Act of Parliament, while Mr. Raeburn, representing the Clyde District Committee of the Shipping Federation, considered any attempt to fix a manning scale at all to be "a vast mistake," because the number of hands required in proportion to the tonnage varied in inverse, not in direct, ratio with the size of the vessel. That ships were often undermanned was asserted by the seamen's and denied by the employers' representatives.(1)

(ix.) *Desertion.* (ix.) Desertion, formerly a criminal offence and punishable as such by fine or imprisonment, became, under the terms of section 10 of the Act of 1880, amenable only to a civil action for damages. It was, however, pointed out by Mr. Graffunder, representing the Amalgamated Seamen's and Tradesmen's Union, that accessories both before and after the fact continued to be criminally liable under section 257 of the Act of 1854. In the case of the former, he preferred to leave this anomaly uncorrected, but he considered that, as applied to the latter, the law on this point was scandalously unjust, and should be amended. Some difference of opinion existed among the seamen's representatives as to the effect of the Act of 1880 upon the number of desertions, Mr. Graffunder maintaining that the number had increased and Mr. J. H. Wilson contending that it had diminished, and that it would be diminished still further, if the period of notice required from seamen desiring to be released from their contract to sail were considerably reduced. On this latter point, Mr. Wilson was supported by a representative of the Hull Seamen's and Firemen's Union, who further proposed that the same notice should be required under similar circumstances from the employers. All the shipowners' representatives concurred in a general condemnation of the present state of the law. They complained that the abolition of the punishment of imprisonment had, in effect, deprived them of all protection against desertions. Theoretically, they could get damages from the offenders, but practically they could not, because seamen had no money to pay. Mr. Smith Park, of the Glasgow Shipowners' Association, considered that seamen should be permitted to cancel their contracts to sail by giving 48 hours' notice only when they can show a reasonable excuse for so doing, that shipowners should be given the same power of arresting the wages of a deserter in home ports, as they already possess in foreign ports, and that the punishment of imprisonment should be restored, at any rate where it could be proved that the offender had had no intention of fulfilling his contract at the time when he made it. Sir Henry Calcraft, however, declared that the re-imposition of the penalty of imprisonment for desertion, simply regarded as such, was a sheer impossibility; but at the same time he pointed out that a seaman accepting an advance note with the deliberate intention of neglecting to join his ship was still liable criminally for obtaining money under false pretences.(2)

(x.) *Deck cargoes.* (x.) Deck cargoes were illegal from 1839 to 1862, when by a repeal of sections 170, 171, and 172 of the Customs Consolidation Act, they were once more permitted. In 1876, however, the prohibition was revived in the case of timber conveyed during the winter months from foreign or colonial to home ports, with an exception in favour of light wood goods to the height of 3 feet above the deck. In the opinion of Mr. J. H. Wilson and Mr. Plimsoll, the safety of the seamen demanded greater stringency, and they accordingly proposed to abolish deck loading on all ships, both British and foreign, within the jurisdiction, during the winter months, the one altogether, and the other only in the case of voyages across the Atlantic. Mr. Wilson further proposed to apply the 3-feet limit to summer voyages, while Mr. Plimsoll desired to deal with outgoing vessels by making the issue of clearance papers contingent upon the requirements of the law being satisfactorily carried out, and with incoming vessels by empowering the magistrates to confiscate all the timber carried illegally. This, he contended, would be a more effective mode of punishment than the present method of exacting money penalties for violations of the law, especially in view of the habitual reluctance of the Board of Trade to institute proceedings. To these representations, the employers replied by urging that the hypothesis that deck loading, as at present practised, rendered the ships unsafe, had not been proved and was in fact untenable, and Sir Henry Calcraft by submitting a return of the prosecutions undertaken by the Board of Trade between 1883 and 1892 in respect of vessels improperly laden. The latter witness also referred to the operation of the Act of 1890, relating to the load-line disc, which, he considered, had exercised considerable influence in diminishing the length of the seamen's death-roll.(1)

[§ 200 (x.)]

(xi.) *Rating of seamen, discharges &c.* (xi.) Rating of seamen is regulated by section 7 of the Act of 1880, which provides that no seaman shall be entitled to the rating of an A.B. unless he has served four years before the mast, and that such service may be proved by the certificates of discharge, which shipowners are obliged under section 172 of the Act of 1854 to give to every seaman on leaving their service. Mr. J. H. Wilson proposed to amend the law by providing for the exchange of these discharges for parchment certificates of competency, similar to those issued to officers, and obtainable by a practical examination, by making it a penal offence to employ as an A.B. a man unprovided with such a certificate, and by issuing similar certificates under similar conditions to firemen, cooks, and stewards. In regard to the second of these proposals, Mr. Wilson was supported by Mr. Butcher, of the Hull Seamen's and Firemen's Association, who complained of the rating of A.B. being granted by employers to men that were not legally entitled to it. Mr. J. B. Lee, a member of Mr. Wilson's union, also supported the above-mentioned proposals, and Mr. Soll Samuel, of the Amalgamated Seamen's and Tradesmen's Union, Cardiff, expressed an opinion to the effect that discharges should be "continuous," that is to say, that they should contain a record of the whole of a seaman's career, instead of merely a single voyage. Sir Henry Calcraft agreed with the principle of this proposal, because, under the present system, seamen are able to suppress those of their discharges that are not to their credit, and to exchange the good ones amongst themselves; but he pointed out that continuous discharges would be only a revival of the old register tickets, which were abolished in 1853, because they proved inconvenient in practice.(2)

(xii.) *Watertight compartments.* (xii.) Watertight compartments were formerly provided for by section 300 of the Act of 1854, which enacted that no steamer was to be allowed to clear unless she had an iron bulkhead before and another iron bulkhead abaft the engine room, but by section 2 of the Act of 1862, the former enactment was repealed. Mr. Plimsoll contended that it was not sufficient to trust entirely to the owners' personal interests for the safety of merchant vessels, because of the practice of over-insurance, and that section 300 of the Act of 1854 ought therefore to be re-enacted. On the other hand, Mr. Scrutton, representing the Chamber of Shipping of the United Kingdom, explained that the said section was repealed as having been rendered obsolete by the stricter regulations of Lloyd's, and by the voluntary efforts of the shipowners themselves, while Mr. Raeburn, representing the Clyde District Committee of the Shipping Federation, declared that systematic over-insurance would be "a decidedly losing game" and was, in fact, never practised.(3)

(xiii.) *Liability of shipowners.* (xiii.) Liability of shipowners is regulated by sections 502 to 516 of the Act of 1854, by sections 54 to 56 of the Act of 1862, and by such of the general statutes relating to Employers' Liability as apply to seamen. Witnesses representing the South Side Labour Protection League, the International Federation of Stewards, Seamen, and Firemen, the National Amalgamated Sailors' and Firemen's Union, and the Hull Seamen's and Firemen's Association, desired to procure the inclusion among such statutes of the Employers' Liability Act, 1880, from the provisions of which seamen are at present expressly excluded.(4)

(xiv.) *Presence of unauthorised persons on board ship.* (xiv.) Presence of unauthorised persons on board ship is subject to the rules laid down in section 5 of the Merchant Seamen (Payment of Wages and Rating) Act, 1880, which forbid such persons from entering a vessel on its arrival at a port without the permission of the master. In order to prevent union delegates from entering the ships and tempting the crew to break their agreements, Mr. G. A. Laws, representing the Shipping Federation, wished this provision to be extended to vessels on the point of departure.(5)

[§ 200 (xv.)]

(xv.) *Life-saving appliances.*

(xv.) Life-saving appliances are ordered to be supplied in the case of every British ship by the Act of 1888. This enactment had, in the opinion of Sir Henry Calcraft, exercised a beneficial influence in reducing the number of lives lost at sea, and Mr. Manton, representing the National Federation of Fishermen, desired to secure its extension to fishing boats(1).

The Canal Boats Acts, 1877 and 1884.

201. It appears from the evidence of Mr. J. Brydone, the Government inspector of canal boats, that, roughly speaking, about 12,000 boats have been registered under the Canal Boats Acts since 1877, but that, for various reasons, such as a desire to take advantage of an easier method of assessing the damage sustained by craft, owners often prefer to register under the Merchant Shipping Acts. Mr. T. Fawcett, representing the Amalgamated Society of Watermen and Lightermen of the River Humber, complained of the absence of a uniform system of registration, and stated that, owing to the different methods which different inspectors adopted for measuring the cubical contents of the cabins, a boat which in one district would be registered as fit to accommodate twelve persons, would in another only be registered for six. It was pointed out, moreover, by Mr. G. Smith, of Coalville, a literary expert who had made the condition of canal workers his special study, that in consequence of the present want of system in this respect, at least 8,000 boats had escaped registration altogether. All the witnesses, in a greater or less degree, found fault with the administration of the Acts, although Mr. Brydone, the inspector, declared that the defects, though worth rectifying, were few and insignificant. The chief subject of complaint was the unchecked prevalence of overcrowding, bad sanitation, and the illegal employment of children, and for this every witness, with the exception of Mr. W. Turner, of the Upper Mersey Watermen and Porters' Association, and Mr. Brydone, was disposed to blame the inspecting staff. Mr. Fawcett attributed the inefficiency of the inspection to the subordination of members of that staff to the local sanitary authorities, many of which were largely composed of owners of canal boats, and Mr. Smith advised the appointment of a special staff to assist the Government inspector. Such a staff, he explained, need not be large, because the inspection of boats that are bound to be periodically passing a given point on a canal is peculiarly easy, and the local sanitary inspectors to whom the task is at present intrusted, could soon be made to discharge this portion of their duties efficiently, if they were properly supervised and organised for the purpose. In order to assist the administration of the Acts, the same witness proposed to limit the employment of children under 13 on board the boats to the case of those that have passed the third standard as defined in the Education Acts. The other legislative proposals made by the various witnesses were as follows:—To order the issue of certificates of competency obtainable by a practical examination to all persons in charge of canal boats or lighters, to altogether prohibit women and children from living or working on board, to make Mr. Plimsoll's mark compulsory for all river craft (one inch of freeboard for every foot of draught of water being the minimum spare buoyancy), to make inspection periodical, to extend the application of the Acts to all vessels concerned in inland navigation, and to prohibit the payment of freightage in public-houses. The first proposal, that, namely, relating to certificates of competency, was made by Mr. A. Bird, of the Union of Watermen and Lightermen of the River Humber, by Mr. Fawcett, and by Mr. W. Hewson, a forwarding agent, of Hull, all of whom explained that their sole object in making it was to improve the qualifications and add to the responsibility of the persons intrusted with the task of navigation. The two first-named witnesses further expressed a desire to vest the granting of such certificates in the Board of Trade, although the Canal Boats Acts generally are under the Local Government Board. The proposal for the entire prohibition of the employment or residence of women and children on board was made by several witnesses representing the Upper Mersey Watermen and Porters' Association, and by Mr. Fawcett, on the ground that it would compel the men to work harder themselves instead of spending the earnings of the other members of their families in drink, would relieve the women from an unfeminine occupation and a demoralising mode of life, and would enable the children to be properly educated. It was suggested that any increase in the wage bill caused by the exclusive employment of adult males might, without loss of trade, be met by raising the freightage. It was Mr. Fawcett who proposed to make Mr. Plimsoll's mark compulsory, while the proposal as to periodical inspection was made by Mr. Gatley, who declared that, except for the absence of a provision forbidding the employment of women and children, "there would be very little to grumble at" if the inspecting staff were to do its duty more thoroughly. That the application of the Acts should be extended to lighters and to all vessels concerned in inland navigation was the opinion of Mr. Hewson and of Mr. Bird. The latter, indeed, contended that the Acts applied to lighters already, and that all that was wanted was an authoritative judicial decision to that effect. The last proposal, that relating to the payment of freightage in public-houses has already been mentioned under the head of "Wages, (Mode of Payment)."(1)

[§ 201.]

The Ouse (Lower) Improvement Act, 1884.

202. Reference was made to this Act by Mr. W. Hewson, a forwarding agent, of Hull, who complained that the undertakers of the navigation of the rivers Aire and Calder abused the powers it conferred on them. The driving of piles and other processes incidental to the work of improvement make the navigation exceedingly dangerous, so much so, in fact, that "vessels are "being detained in Hull with cargoes of merchandise "for up the river, because the men dare not face the "dangers which there are in Goole Bight at dark"; but the undertakers show no disposition to accelerate the progress of the work, which is at present very dilatory. They also give unfair preference at locks and bridges to the boats belonging to the canal companies, and owing to the general defectiveness of their administration, it now takes about nine hours longer to go from Goole to Leeds than it did 30 years ago. The witness, therefore, desired to deprive the undertakers of the navigation of the rivers Aire and Calder of their powers under the Act and to hand them over to the Board of Trade. (2)

The Thames Conservancy Acts, 1857–1870.

203. Mr. Fairbairn, representing the Amalgamated Society of Watermen and Lightermen of the River Thames, complained that the Corporation of Conservators failed to properly fulfil its duties, even to the extent of neglecting to take steps to punish evasions of its own by-laws. Barge owners are allowed with impunity to make false declarations of tonnage in order to avoid employing the required number of hands, and to break the rules of the river relating to speed and lights, &c. The reason of this was declared by Mr. Fairbairn to be that the Conservancy was representative solely of the employers, most of whom knew nothing by practical experience of the conditions of navigation on the Thames, and he urged the expediency of replacing them by a properly elected body, or even of transferring their functions to a committee of the London County Council. The witness, however, omitted to trace the various steps by which the present constitution of the governing body has been developed. The history of that development is epitomised in the provisions of the successive Acts of Parliament detailed below, which show, as the result of a series of compromises between the national government and the various bodies that have vested interests in regard to the river, a gradual tendency in the direction of Mr. Fairbairn's proposals, from the year 1856, when the Corporation of the City of London disputed the claim of the Government to interfere with the regulation of the river traffic at all, down to the year 1870, when the principle of including among the Conservators elected representatives of the trade was confirmed, and the definition of their qualifications was corrected. Mr. Fairbairn was also dissatisfied with the composition of the court of the Watermen's Company, and with the way in which it discharged some of its duties; but he was, at the same time, strongly opposed to the transfer of its functions to the Thames Conservancy. (3)

The Watermen's and Lightermen's Amendment Act, 1859.

204. Mr. L. S. White, representing the Watermen and Lightermen's Hall, stated that Mr. Fairbairn, of the Amalgamated Society of Thames Watermen and Lightermen, had presented a petition in 1870 against the transfer of the powers entrusted to the Court of the Watermen's Company to the Thames Conservancy, and had, in 1871, secured the introduction into Parliament of a Bill to alter the mode of electing the court by

(1) Digest, Vol. I., p. 70. Digest, Vol. II., p. 124.

(1) Digest, Vol. II., pp. 124–8. Digest, Vol. III., pp. 137–8. (2) Digest, Vol. II., p. 128. (3) Digest, Vol I., p. 70. Digest, Vol. II., pp. 128, 129.

[§ 204.] giving all the freemen the right of voting for the election of members, but he did not succeed in passing it. The composition of the court, therefore, remains unaltered. Mr. Fairbairn, however, still adhered to his original policy, and tried to promote a new Bill with the same object in November 1891, but on this occasion he failed, according to Mr. White, to get the watermen's and lightermen's support. The evidence of Mr. Fairbairn himself was mainly concerned with an enumeration of the defects in the administration of the company, which he sought to remedy by his proposed legislation. Reform, however, he insisted, should be attempted, not by remodelling the system so much as by improving its working. The watermen and lightermen, he explained, did not at all approve of the Bill for freeing the Thames from the present system of apprenticeship, which was introduced in 1890, in consequence of the report of the Thames Traffic Committee of the House of Commons, although they regarded many of the other recommendations of that Committee as excellent, especially that for permitting a man to get a license by simply proving his ability before a board of "practical" men. Mr. Fairbairn thought that, in order to secure the proper instruction of apprentices, they should not be permitted to work for anyone but the person to whom they are bound. The decision in Smith *v.* Francis has made it clear that, under the present law, they are allowed to accept work from others who only offer it to them because they are willing to take a lower wage than full-licensed watermen. The Union, moreover, thus loses power over them, and so there is no real security that barges will be well and safely navigated, such security resting simply on the fact that the men in charge have nominally gone through their apprenticeship. Mr. H. Webb, of the Thames Steamship Workers' Union, maintained that it should be made illegal for a ship's crew to usurp the proper function of qualified watermen and lightermen by taking men to and from the ship in the ship's boat, and Mr. J. Stanbury, of the London United Riggers' Association, deplored the decay of the system of apprenticeship in regard to riggers, and proposed that every applicant for a rigger's license should be required to produce proof of at least four years' service in sailing vessels, to pass a practical examination, and to be approved by the local Union of Riggers. He considered, however, that perhaps the best plan would be to abolish licenses altogether, for the main ground of his complaint was that incompetent and inexperienced men, armed with licenses which they ought never to have been able to obtain, were *ipso facto* placed upon an equal level with competent and experienced men, who would otherwise be competing against them with the advantage due to their superior merits.(1)

5. ACCIDENT FUNDS AND EMPLOYERS' LIABILITY, AND LEGISLATION RELATING THERETO.

Docks, Wharves, and Warehouses. Number and causes of accidents.

205. Frequent reference was made in the evidence to the dangerous nature of quay and ship labour, involving as it does the continuous and rapid handling of heavy goods, but very few statistics of accidents were given. It was stated that in the docks under the control of the London and India Docks Joint Committee, the number of accidents reported in the year 1891 was 900. Of these, nine were fatal, two resulted in loss of limbs, 30 in fractures, and the remainder were slight.(2) In the Surrey Commercial Docks, it is stated that in 1889 there were 44 serious and 41 slight accidents; in 1890, 31 serious and 41 slight, and in the first six months of 1891, seven serious accidents and 24 slight.(3) It was stated that there were on an average five or six accidents a week at wharves in the Wapping district, but in the case of two wharves in particular, Hay's Wharf, and the Free Trade Wharf, Ratcliff, accidents were said to be very rare and slight.(4) Steamship work is considered more dangerous than dock labour.(5) The employment of warehouse porters in Liverpool is considered dangerous, for though accidents are not specially frequent, they are liable to be serious. It was stated that three fatal accidents had occurred during the last six months of 1891.(6)

(1) Digest, Vol. I., p. 70. Digest, Vol. II., pp. 128, 129. (2) Digest, Vol. I., p. 19. (3) Digest, Vol. I., p. 24. (4) J. Greig, 5675. H. C. Smith, 6334. (5) Digest, Vol. I., p. 12. Digest, Vol. II., p. 54. (6) Digest, Vol. II., p. 14.

[§ 205.] Among the causes of accidents in dock and riverside labour those most frequently mentioned in the evidence were defective machinery and gear, hurry and carelessness on the part of workmen,(1) and also the employment of boys and incompetent workmen in responsible and difficult labour.(2) With reference to the London Docks it was stated that the gear, such as planks and trestles, supplied by the Dock Companies, was sometimes dangerously defective(3), but it was stated on the part of the Dock Companies that all machinery and gear was carefully inspected and tested, and that accidents were very rarely attributed to any deficiency in that respect.(4) Accidents in steamship work have been attributed to the condition of the gear supplied by the shipowner.(5) In the Surrey Commercial Docks the gangways giving access to the ships were said to be defective and to have caused accidents, but these occurred more frequently, it was stated, from the use of defective sacks supplied by the receivers of grain, than from any other cause.(6) Complaints were made of the quality of the plant and machinery used in the Liverpool docks by the contracting stevedores. The gear supplied by shipowners was said to be invariably good.(7) In Glasgow accidents in dock labour were said to be of rare occurrence, and no reference was made to defective gear as a source of danger. It was stated that there were no accidents from this cause among the men employed by Messrs. Allan, of the Allan Line, whose gear is constantly inspected and tested.(8) It was represented that the cotton warehouses in Liverpool were not inspected, being outside the operation of the Factory Acts, and that accidents were caused by the machinery being unprotected, and the cotton improperly stowed.(9) Coal-trimming was also described as a dangerous occupation, owing to insufficient ventilation of the holds of ships, and the consequent retention of explosive and inflammable gases. It was suggested that holes should be cut between decks in the case of two-decked and three-decked vessels, to provide both ventilation and means of exit, since the hatchways are frequently blocked with coal.(10) Among other causes of accidents, the chief stress was laid on the excessive hurry which sometimes prevails in dock and wharf labour. This causes such accidents as the fall of bales into a ship's hold while being hoisted with the crane.(11) The employment of incompetent workmen, and of foreigners who do not understand orders given in English, was also mentioned.(12) In the Liverpool docks the danger of the work was said to be largely due to the employment of boys, sometimes for excessive hours, in work for which they are unfit. It was stated that boys employed in lowering cargo were sometimes asleep at the winch, with the lives of the men in the hold depending on them, and also that they were sometimes severely injured through being unable to hold the winch.(13)

Accident Funds. (*a.*) *History.*

206. (*a.*) There are very few societies for insuring against accidents in dock and wharf labour, and such as there are appear to be of recent origin. The Surrey Commercial Docks Mutual Aid Fund was formed "some years ago" and has been, it is stated, of very great service to the men. 189 cases were relieved by the fund in the year 1891, and 197 in 1892. The Dock Company make an annual contribution to the fund, which is controlled and worked by the officers of the Company free of cost to the members.(14) There is also a superannuation fund conducted by the Dock Company, but it applies only to the officials and clerks and foremen.(15) The Millwall Docks Mutual Insurance Scheme was instituted in 1880, on the passing of the Employers' Liability Act. It is stated that a good deal of alarm prevailed at that time among employers as to the probable effect of the Act, and the directors of the Millwall Dock Company proposed to substitute for its operation a mutual insurance scheme which should cover all accidents, whether in the docks or elsewhere, and the men consented to give this scheme a three months' trial. The rules of the fund provided that a man earning 30*s.* a week should be entitled to a benefit of 30*s.* a week for 26 weeks of disablement, and that in the event of his death his family should receive 225*l.*, the maximum sum (three years' wages) allowed under the Act. The

Atkins, 893. (12) Digest, Vol. I., pp. 12, 15. (13) Digest, Vol. II., p. 23. (14) Digest, Vol. I., p. 24. J. Griffin, 6104. Statement of Accounts received from witness, June 28th, 1893. (15) Digest, Vol. II., p. 25.

[§ 206 (a).] fund was supported by a subscription of 6*d.* a week per man, the Company paying 3½*d.* and the men 2½*d.* The management was in the hands of a committee formed by the members themselves. The Dock Company desired to continue this arrangement, although they were losing by it, but at the end of three months the men decided to give it up and to stand by the provisions of the Act, which accordingly has since been in operation. The Dock Company then insured against claims, and found that the cost of doing so was about a third or a fourth of the sum which they had been paying into the fund.(1) Messrs. Allan, of the Allan Line, who employ a large amount of dock labour in Glasgow, insured against claims for accidents on the passing of the Employers' Liability Act. Not wishing, however, to leave the men to the strictly legal treatment of the insurance company, they instituted an accident society and gave a donation to its funds.(2) It was stated that other firms employing dock labour in Glasgow had similar accident funds, but no further particulars were given.(3)

(b.) Contributions and benefits.

(*b.*) The contributions and benefits in connection with these societies have been tabulated as follows:—

TABLE of Contributions and Benefits in connection with ACCIDENT FUNDS.

Contributions and Benefits.	Surrey Commercial Docks Mutual Aid Fund.(4)	Messrs. Allan's Accident Fund, Glasgow.(5)	Funds established by certain Glasgow firms (not specified).(6)
Contribution by ordinary members.	1*d.* a week -	2*d.* a week -	3*d.* a week.
Benefit.			
Non fatal accidents.	7*s.* a week for four weeks, and 5*s.* a week for the four following weeks.	12*s.* a week for 12 weeks and thereafter 8*s.* a week up to a total of 12*l.*	15*s.* a week.
Fatal accidents -	5*l.* - -	12*l.* - -	50*l.*

No complaints were made as to compulsory membership of any of these societies or deduction of subscriptions from wages. The only sources of income mentioned are contributions from employers and members.

Voluntary compensation by employers.

207. In several cases it was mentioned that though no accident fund existed, employers, as a matter of fact, gave compensation according to the merits of each case. The London and India Docks Joint Committee allow in a case of accident 7*s.* a week to an unmarried man and 9*s.* a week to a married man.(7) At Hay's Wharf, according to the statement of the employers, the firm allows either full pay or 8*s.* a week, according to the severity of the accident, but accidents, it is stated, are so rare that the matter is unimportant.(8) At the Carron Wharf, it is stated, the employer pays 25*s.* a week in every case of accident, whether caused by the man's negligence or not.(9) The Bute Docks Company, Cardiff, the Bristol dock owners, and the Mersey Docks and Harbour Board, grant compensation on the merits of each case.(10) At Garston Dock, Lancashire, the employers make an allowance of 14*s.* a week while a man is disabled, and 80*l.* on total disablement or death.(11)

SHIPPING. Accident Funds.

208. The only seamen's accident funds unconnected with trade organisations, which were mentioned in the evidence, were the Leith Maritime Disasters Fund, established in 1883, and the Society for the Relief of Widows and Orphans of Shipwrecked Mariners, established in 1831, and amalgamated in 1873 with the Widows' and Orphans' Fund. It was stated that these societies were chiefly supported by shipowners. The 1891 report of the two amalgamated societies showed that the subscriptions paid by shipowners in that year amounted to 538*l.* 9*s.* 11*d.* out of a total of 760*l.* 3*s.* 9*d.*(12) The Leith Maritime Disasters Fund, it was stated, is administered chiefly by shipowners, and each claim upon it is considered individually on its merits and dealt with accordingly. In some cases pecuniary assistance is given by payment of rents or otherwise, and in other cases employment is found for applicants.(1) It was stated that shipowners in all cases compensated seamen for accidents on board ship, and paid their hospital and medical expenses,(2) but one witness stated that he knew of no case in which such compensation had been given except under pressure from the Sailors' and Firemen's Union.(3) A mass of documentary evidence was produced in proof of the former statement.(4) One witness proposed, as a means of preventing disputes in the shipping trade and creating a bond of sympathy between employers and employed, that a national insurance and provident fund for seamen should be established by legislation. Shipowners and seamen should contribute in equal parts a sufficient sum to keep it up, and the fund should provide pensions for seamen at the age of 55, and annuities for seamen's widows and orphans. The amount annually contributed by shipowners and seamen should be 600,000*l.*, in addition to which the Government should refund the sum which has accrued to it during the last 30 years in unclaimed wages and deceased seamen's effects, amounting to about 300,000*l.*(5) The witness handed in a detailed scheme of this fund, and of an alternative plan by which an annual sum of 300,000*l.* should be contributed by Government, and the pension should begin at the age of 50.(6)

[§ 20[illegible]]

RIVERS AND CANALS. Causes of accidents.

209. It does not appear that there are any accident funds in connection with the employment of watermen and lightermen. It is stated that accidents are frequent on the Mersey, the Humber, and the Medway, owing to the absence of life-saving appliances and other necessary equipment on board the boats.(7) It was stated that on the Mersey there were over 400 craft unprovided with any life-saving appliance except a rope, and that on the Medway not two per cent. of the barges were so provided.(8) The absence of rails and man ropes on board the lighters on the Humber was mentioned as a cause of serious danger in rough or wintry weather.(9) On the Peak Forest Canals, several lives are said to be lost every winter in the locks during frost or fog. In one mile of canal there are 16 locks 20 feet deep, without ladders or any means of rescue in case of an accident.(10) Undermanning and incompetent manning of boats was also complained of, especially with reference to the Humber, and it was contended that only qualified and certificated persons should be in charge of river craft.(11) Overloading, it was stated, was not practised to any great extent.(12)

Voluntary compensation by employers.

210. Only one case was mentioned in which compensation for an accident (in this case a fatal one) had been given by the employers, and then a sum of 50*l.* was paid to the relatives of the deceased, at the request of the Amalgamated Society of Watermen and Lightermen. It was stated on the part of the employers that a larger sum would have been given if the society had not intervened,(13) and with reference to owners of river craft on the Thames generally it was stated that they usually offered compensation, but to a limited extent.(14)

DOCKS, WHARVES, AND WAREHOUSES. The Employers' Liability Act, 1880. *(a.) Operation of the Act.*

211. (*a.*) The Employers' Liability Act appears on the whole to have had no unfavourable effect on independent and voluntary schemes of compensation not intended to supersede its provisions. From a considerable amount of evidence given on the subject it appears that the principal ground of complaint in connection with the operation of the Act is the application of the doctrine of common employment, which precludes compensation for injuries resulting from the negligence of a fellow-workman.* The Act, which was designed to

* The Employers' Liability Act does not cover the whole ground of the liability of employers with respect to the personal safety of their workmen. It simply "extends and regulates" the liabilities to which the relationship of master and servant was held by the common law to give rise. Much of the evidence given in regard to this Act, therefore, is rendered intelligible only by reference to the common law rules which the Act has either left untouched or but imperfectly superseded. According to the common law, the liability of masters towards their servants was considered to arise solely from the terms of the contract of service. And, in the absence of express provision to the contrary, every such contract was held to imply an undertaking on the part of the master to exercise due care to associate his servants with competent persons as mates and superiors. But here the master's responsibility was held to cease. Provided that he had exercised due care in the selection of the members of his staff, he was not held liable for the Wilson *v.* Merry, Law Reports, 1 H. L. Sc. 326.

[§ 211 (a.)] modify this doctrine, makes the employer responsible only for the injuries caused by superior servants to inferiors—not for those caused by one workman to another of the same grade—and Mr. J. Falvy, representing the corn porters employed in the London warehouses, Mr. H. Quelch, representing the South Side Labour Protection League and the Steamship Workers' Society, and Mr. J. H. Wilson, representing the National Amalgamated Sailors' and Firemen's Union, desired to extend the employers' liability to the latter class of cases also, thereby eliminating the doctrine of common employment altogether. Mr. T. McCarthy, representing the Dockers' Union, and Mr. S. Sims, representing the Amalgamated Stevedores' Labour Protection League, moreover, stated that, even where an injury results to a workman from the negligence of a superior servant, the employer is released from his liability by section 8, unless such superior is "a person "whose sole or principal duty is that of superintendence "and who is not ordinarily engaged in manual labour," and the last mentioned witness proposed to destroy the effect of this limitation by inserting the words "for the "time being" after the words "any superintendence "entrusted to him" in the first section of the Act quoted above. In the present state of the law, the rule of common employment is declared operative as between a "ganger" and his subordinates, and Mr. Quelch said that about 90 per cent. of the accidents that had come under his notice had been due either to defective gear or to the negligence of some person temporarily in authority, but not a "superintendent" within the meaning of the Act.(1) Again, the Act leaves untouched the common law doctrine of "contributory "negligence," which arises from the application of the maxim *volenti non fit injuria*.† Mr. J. Atkins, representing the Dockers' Union, Mr. H. Quelch, and Mr. J. Falvy regarded it merely as a quibbling means of defence, sanctioned by the law for the use of employers. Mr. Atkins said that in many cases where men had tried to get compensation, they had lost by the company's officials finding other men ready to give false evidence in support of a defence of contributory negligence. This statement was corroborated by Mr. Salter. Mr. Quelch characterised the defence of "contributory "negligence" as too easy to prove or rather to appear to prove, and Mr. Falvy informed the Commission that he had himself been prevented from establishing a claim by the doctrine of "contributory negligence," and that he held that failure on the part of a workman to report to his superior the existence of defects in the machinery or plant should no longer be deemed sufficient to absolve the employer from his liability. He stated that if a man did so report a defect in the gear used, the fact of his continuing to work with it, though by the foreman's orders, would bring him under the contributory negligence doctrine if an accident resulted. He added, however, that he considered this doctrine to operate less severely than the doctrine of common employment, because the application of the former was left to the jury, whereas that of the latter was invariable.(2) On the whole, therefore, it would appear that the representatives of the employed approved of the policy of the Act in extending the liability of their employers, but complained that it had not gone far enough. One of the employers' representatives, on the other hand, Mr. W. B. Hill, of the firm of Allan Brothers and Company, of Liverpool and London, shipowners, hinted that the law was now too favourable to the workmen, and expressed his opinion that "the employer should be held responsible only for "those injuries that resulted from orders given by "himself or his representatives or from defective gear." Colonel G. R. Birt, however, the general manager of the Millwall Docks, stated that, though the Act had caused much alarm to employers in its enactments, yet, in its operation, it had proved to be, on the whole, a pleasant surprise. "The Act" he said, "practically "throws a very small liability indeed upon the em- "ployers of labour, as far as the docks are concerned; "nothing like to so alarming an extent as was an- "ticipated." Hence there did not appear from the evidence to be any case in which employers of dock labour had contracted out of the Act, except in the instance of the Millwall Docks Mutual Insurance scheme already referred to. This was discontinued entirely through the exaggerated idea entertained by the men of the probable benefit to be derived from the Act. Neither Mr. W. Langridge, of the shipping firm of Messrs. Gray, Dawes and Co., nor Mr. J. Smith Park, of the Glasgow Shipowners' Association—the only other representative of the employers who referred to the matter—expressed disapproval of the Act, although the latter witness objected to its further extension as being a mere encouragement to litigation.(1)

[§ 211 (a.)]

(b.) Contracting out, and insurance against claims.

(*b.*) The foregoing review of the evidence has been confined to such portions as relate to the effect of the Act upon the extent of Employers' Liability. As has already been seen, however, in the case of the Millwall Dock Company, employers may escape their legal liabilities by persuading their men to "contract out" of the Act in consideration of certain benefits. In that instance it appeared that, in spite of the pecuniary advantages which the men might derive from entering into such a contract, they nevertheless preferred to remain under the protection of the Act. The only representatives of the employed who touched upon this precise point were Mr. Ben Tillett, representing the Dockers' Union of London, and Mr. J. Sexton, representing the National Union of Dock Labourers at Liverpool. The former said:—"Our men would be "against any joint insurance between workmen and "employers for the purpose of contracting themselves "out of the ordinary liability, because they know their "share of the spoils would be very little." And the latter:—"The Government should enforce a law that "no employer should be allowed to contract himself "out of the Act by bribing and subsidising a workman "not to take action where he thought he had a good "case," and "it should be made penal for a man to "accept anything from an employer before the case "goes before a court of justice, and it should be made "penal for the employer to offer it." The men's objections to the cognate practice of insuring against the liability took more definite shape. Mr. H. Quelch complained that its prevalence made the employers careless, and Mr. J. Falvy expressed the same opinion, and added that it was very difficult for men to fight insurance companies in the law courts, for where insurers and employers were jointly liable, the latter executed a bill of sale and the former were not compelled to satisfy the verdict, and where the insurers took over the whole liability they fought the case right up to the House of Lords, so that the workman's victory was either converted into a defeat, or, if confirmed, proved more expensive than it was worth, even supposing that he could afford to continue the fight. The witness also desired insurers against Employers' Liability to be compelled to make the same deposit as is required in the case of life insurance.(2)

(c.) Suggested amendments.

(*c.*) In section 3, it is enacted that "the amount of "compensation recoverable under the Act shall not "exceed such sum as may be found to be equivalent to "the estimated earnings, during the three years pre- "ceding the injury, of a person in the same grade "employed during those years in like employment and "in the district in which the workman is employed at "the time of the injury." Mr. H. Quelch and Mr. S. Sims objected to this clause and considered that the amount of compensation should be left entirely to the discretion of the jury.(3) Section 4, moreover, runs as follows:—"An action for the recovery under this Act "of compensation for an injury shall not be maintain- "able unless notice that injury has been sustained is "given within six weeks, and the action is commenced "within six months from the occurrence of the accident "causing the injury, or, in the case of death, "within 12 months from the time of death: Provided "always, that, in case of death, the want of such notice "shall be no bar to the maintenance of such action, if "the judge shall be of opinion that there was reason- "able excuse for such want of notice." This provision, limiting the period of notice to six weeks, whereas the

results of their subsequent actions towards one another. The absence of such liability finds positive enunciation in the doctrine of common employment, and it is to modify this doctrine that the Employers' Liability Act provides that "where personal injury is caused to a "workman by reason of the negligence of any person in the service of "the employer who has any superintendence entrusted to him, whilst "in the exercise of such superintendence; or by reason of the "negligence of any person in the service of the employer to whose "orders or directions the workman at the time of the injury was "bound to conform, and did conform, where such injury resulted from "his having so conformed," &c., "the workman . . . shall have the "same right of compensation and remedies against the employer as if "the workman had not been a workman of, nor in the service of, the "employer, nor engaged in the work." That is to say, servants are, in certain cases, given the same right of action against their master as is conferred by the application of the maxim *respondeat superior* upon members of the general public.—G. D.

† This doctrine is described by Sir Frederick Pollock in his memorandum on the Act as "somewhat refined."

(1) Digest, Vol. I., p. 62. (2) Digest, Vol. I., pp. 13, 14, 62.

(1) Digest, Vol. I., pp. 61, 62. Digest, Vol. II., p. 103. (2) Digest, Vol. I., pp. 60, 61. Digest, Vol. II., p. 102. (3) Digest, Vol. I., p. 62.

common law right of action extends over six years, was strongly objected to by Mr. J. Sexton, who had himself been debarred by it from establishing a claim for compensation through not having sufficiently recovered from the injury to give notice within the prescribed period.(1) Apart from the Act, the relatives and legal representatives of a deceased claimant for compensation cannot recover,* and it would seem that it is with reference to this rule that Mr. Fairbairn, representing the Watermen and Lightermen of the Thames, to whom it is probable that that Act does not apply, said that "if the deceased was "allowed to be represented by the relatives, or through "a solicitor, it would be the means of minimising the "accidents on the river and bringing the liability to "the proper shoulders." In the case of claims made under the Act, however, it is expressly provided that "in case the injury results in death, the legal personal "representatives of the workman, and any persons "entitled in case of death, shall have the same right of "compensation and remedies against the employer as "if the workman had not been a workman of, nor in "the service of the employer, nor engaged in his "work."(2) Section 6 provides that "every action for "recovery of compensation under this Act shall be "brought in a county court, but may, upon the "application of either plaintiff or defendant, be re-"moved into a Superior Court in like manner and "upon the same conditions as an action commenced in "a county court may by law be removed," *i.e.*, by writ of *certiorari*. Mr. H. Quelch and Mr. S. Sims objected to this right of appeal on the ground that workmen could not afford to follow the appellant from court to court, and the latter witness explicitly proposed to abolish that right except in cases where the damages originally awarded did not exceed 50*l*. On this point, Colonel Birt professed entire agreement with the men's representatives. He stigmatised the practice of appealing as "a denial of justice all round," and went even further than Mr. Sims by proposing that, for all cases involving a smaller sum than 500*l*., the decision of the county court should be regarded as final.(3) Mr. J. Falvy expressed his opinion that the whole system of proceeding by civil action and for the recovery of a money penalty was a farce, and that employers should be criminally liable, whether for their own or for their servants' negligence, to imprisonment. The expense of a civil action was described as a frequent bar to redress in the case of a poor man, and Mr. Tillett therefore suggested that the burden of instituting proceedings should be transferable to a Government Department, and that "the decision should "cost nothing to either party." Colonel Birt, however, considered that such a practice would be to the disadvantage of the workman, for the fact of having applied to a Government Department and having failed to convince them that the case was good, would create a presumption against him if he afterwards were to take proceedings on his own account.(4) The last subject mentioned by the witnesses in connection with this Act was the question of its application. According to section 8, it applies only to railway servants and to persons to whom the Employers and Workmen Act, 1875, also applies, and, inasmuch as it is expressly stated in section 13 of that Act that it does not apply to seamen, while the courts have held that the definition in the Merchant Shipping Act, 1854, of the term "seaman" as including "every person employed or "engaged in any capacity on board any ship" held good with regard to these Acts also, it would appear that a very large number of the men represented before this Group are excluded from the operation of the Act altogether. Several witnesses, representing seamen's unions and various branches of the sea service, desired to include "seamen" within the Act, on the ground that there was no good reason for their exclusion, and that they stood in as great need of its protection as workmen on land. It was stated that numbers of seamen were injured through the neglect of the employer to send the ship to sea properly equipped. Whether the persons employed in inland navigation are also excluded appears doubtful, and Mr. E. Gatley, representing the Upper Mersey Watermen and Porters' Association, was anxious to get the point authoritatively decided by the courts.(5)

* Under the common law no action will lie by personal representatives or relations for tortious injury to the person of an individual causing his death, the rule being *actio personalis moritur cum persona*.—Noy's Maxims, pp. 20, 21.

6. OTHER CONDITIONS OF LABOUR.

[§ 212.] Home and foreign competition.

212. Two other subjects dealt with in the evidence may here be mentioned: the influence of competition on the labour market, and the effect of the introduction of labour-saving machinery. The congestion of the labour market by the influx of agricultural and foreign labour was mentioned as one of the principal grievances connected with the docks of London. With regard to the former, while some witnesses represented the competition of agriculturists with the "*bonâ fide* docker" as a serious evil,(1) it was stated by others that such competition did not exist to any great extent, and that the only considerable migration from the country to the docks in recent years was that which occurred during the strike in the early part of 1891. It was further stated that the migration was often in the other direction, and that dock labourers competed for occasional agricultural work at certain periods of the year.(2) The Dockers' Union, however, appears to recognise the existence of a difficulty of this kind, by its endeavours to enrol agricultural labourers as members with a view to keeping them on the land and helping them to improve their condition.(3) On the other hand, the influence of foreign competition on dock labour was acknowledged by every witness who alluded to the subject. It was represented as one principal cause of the over-supply of labour, and that in two ways. English manufacturers, it was stated, are driven by the comparative cheapness of foreign products to buy the component parts of their manufactures abroad, and employ English workmen only to fit them together. There is also an immense immigration of skilled but cheap foreign labour, which congests the market. In both cases large numbers of skilled English workmen are displaced, and seek a living at the docks as the only resource. It is mainly in these ways, rather than directly, that foreign competition is said to be felt in this industry.(4) Complaints were made, however, of the displacement of dock labour at Sunderland and Glasgow by the employment of foreign crews in discharging timber, and it was pointed out that they ought, like British seamen, to confine themselves to the work of the ship.(5) The influx of country labour is regarded as a grievance among the Liverpool warehouse porters. It was stated that outsiders were brought in by persons in a position to give them work, to the disadvantage of local labour.(6) Serious complaints were made of the extensive and increasing employment of foreigners in the British mercantile marine. It was alleged that they overstocked the market and brought down wages, and that shipowners employed them in preference to Englishmen. It was stated, on the other hand, that there was no difference between the wages paid to British and foreign seamen shipped in England, and that shipowners and captains always preferred to employ their own countrymen if equally competent and well-behaved. Foreign seamen, however, were sometimes employed on account of their greater sobriety and amenability to discipline, especially in the case of Scandinavians. These, it was stated, are more particular than British seamen in the matter of accommodation and food.(7) Apart from the question of outside competition, reference was made to several matters affecting the distribution of employment. It was represented as a grievance that in some cases boys and old men were employed in docks and wharves to do the work of able-bodied men at reduced wages. The employer, it was stated, profits by this practice at the expense of the employed, who are also brought into unfair competition with others. It was suggested that an agreement should be made between employers and employed as to the limits of boys' work and men's work, and that it should be made illegal to overstep such limits.(8) The Billingsgate fish porters have struck unsuccessfully against a system of encroachment on their employment by unlicensed middlemen, who employ men with barrows to intercept the porters on their way from the market to the buyers' carts.(9)

Introduction of labour-saving machinery.

213. Objections were expressed in the evidence to the use of labour-saving machinery, on the ground that while diminishing the number of men required, it increases the work for those who are employed. It

213.] was proposed that it should be taxed in proportion to the displacement of labour which it causes.(1) With regard to the introduction of such machinery in the Surrey Commercial Docks, it was complained that the men were obliged to stand by without payment while waiting for that part of the work which could only be done by hand.(2) It was pointed out, however, by the manager of the Millwall Docks, that in his experience the saving effected in annual expenditure by the use of certain kinds of machinery had given rise to improved trade and consequently to an increased demand for labour to the extent of three times the amount displaced.(1) It was stated that at Glasgow and Liverpool labour-saving machinery was used to a greater extent than in London. Besides cranes and steam winches, elevators for discharging grain have been introduced, though objections were made to them at first. It was stated that they could not be used in London owing to the resistance of the men.(2) The effect of the use of grain elevators was said to be that 12 men could do in 10 hours what 36 men formerly did in 23 hours, that is, the increase in efficiency was nearly 600 per cent.(3) [§ 213.]

B. ORGANISATIONS.

1. ORGANISATIONS OF EMPLOYERS, ORGANISATIONS OF EMPLOYED, AND JOINT BOARDS.

Docks, Wharves, and Warehouses.

Organisations of Employers.

(a.) *History.*

Organisations of Employed.

(a.) *History and Extent.*

214. There was, it is stated, no organisation whatever among employers of dock and wharf labour in London until 1890. The London Docks, Wharves, Warehouses, and Granaries Association was formed in February 1890, on the occasion of the Dock Labourers' Union forbidding their members to deliver goods to non-unionist carmen (3). It is a purely defensive organisation, and its rules recognise no distinction between unionist and non-unionist labourers (4).

215. (*a.*) Before the year 1889, such organisation as existed among dock and riverside labourers was of a merely local character. It was in that year that the three chief national unions in connection with this industry were formed: the National Union of Dock Labourers, the Dock, Wharf, Riverside and General Labourers' Union, and the Tyneside and National Labour Union. The oldest local union which has been mentioned in evidence is the Glasgow Society of Harbour Labourers, which was formed in the year 1853, and includes the better class of dock labourers (5), and has always maintained friendly relations with the employers (6). In 1871, the first riverside union of any considerable extent was formed in the port of London (7). This was the South Side Labour Protection League, a local organisation, mainly limited to Bermondsey, Rotherhithe, Deptford, and Wapping. Any organisation for the protection of labour is, however, eligible for affiliation with the League (8), which is a federation rather than a centralised organisation (9). It was designed to include "all sections of hitherto unorganised labour," and its present membership of 3,000 is composed of corn porters, steamship workers, engineering labourers, factory workers, warehousemen, and riverside and general labourers (10). It is stated that the League has generally met with opposition from employers, but always endeavours to settle disputes by negotiation, without a strike (11). It has taken part in seven strikes since its formation, beginning with the dock strike of 1889. These, it is stated, have cost the Union about 1,200*l.* in actual disbursements (12). The members of the League joined in the dock strike of 1889 in order to regain the rate of wages which had prevailed in 1871 (13). After the strike they agreed to go back and work with the non-unionists who had not struck, and the agreement has been faithfully carried out, but in the Surrey Commercial Docks the non-unionists are receiving less than the union rate of wages, and every possible inducement has been held out to them to join the Union, but with very little success (14). The next union formed in the port of London, the Amalgamated Stevedores' Labour Protection League, also called the Amalgamated Stevedores' Society, differed from the former in being an organisation of more or less skilled labour (15). It is said to have originated as follows: About 1872, it is stated, a revolution was brought about in stevedores' work in the port of London by the introduction of labour-saving machinery. Formerly, only one-fourth of the men working on board ship were employed in the comparatively skilled work of stowing cargo in the hold, the remainder being merely rough labourers. After the introduction of hoisting-gear, most of the latter were transferred to the ship's hold, and came in contact with the other men. The exchange of ideas which resulted brought about the formation of the union, the aim of which was to bring the employers into closer relation with the workmen (16). The master stevedores were then, it is stated, "a band of tyrants," and did not treat the men fairly, but that grievance is now "a thing of the past." The shipowners and brokers assisted the Union "in bringing about a better state of things." Soon after its formation the Union obtained a nine hours' day at 8*d.* an hour, instead of the previous rate of 4*s.* for 10½ hours' work (4). It also obtained a rate of 1*s.* an hour for overtime and night-work, including meal-times, with an extra shilling an hour for work during meal-times (5). It improved the system of taking on men by limiting the number of calls to three a day, and restricted overtime by prohibiting more than 24 consecutive hours of work (6). The general condition of the men materially improved between 1872 and 1889. The Union undertook educational work, and taught them thrift and self-respect (7). Everything worked very smoothly, and the relations between the employers and the Union were satisfactory. The only dispute was in 1874, when the master stevedores attempted a reduction of wages, with the result that the shipowners and brokers who employed them held a conference with the society and decided that the existing rate should be maintained. From that time there was no dispute until 1889 (8). When the dock strike began, the stevedores joined in it spontaneously, before obtaining the sanction of the Union, because they knew the condition of the dock labourers, and thought that they "had a case" (9). Afterwards, when the dock strike committee, which represented all the trades connected with shipping, was formed into the United Labour Council, its action was resented and disowned by the Amalgamated Stevedores' Society. The society was not fully represented on the United Labour Council, and when the latter issued its manifesto of the 5th of December 1890, declaring a general strike in support of the Seamen's Union, the stevedores refused to cease work incompliance with it (10). The Stevedores' Society regarded the manifesto as "very wild," and declined to be "made a catspaw of other unions who had no case" (11). Since the formation of the Shipping Federation, the Society has been concerned in several disputes, owing, it is stated, to the employment on board ship of Federation "coalies," whom its members consider incompetent and dangerous to work with (12). In 1891 the P. and O. Company locked out certain members of the Amalgamated Stevedores' Society, who demanded double pay for working on their annual holiday. The Union, it is stated, tried all methods of conciliation in vain (13). This society has about 4,000 members, of whom 25 per cent. are seamen (14). All the stevedores in the port of London belong to it, "except those that have been introduced lately by the Shipping Federation" (15). Foreigners are excluded from membership (16). The first attempt at a general organisation of unskilled riverside labour was the formation in 1872 of the Dock Labourers' Union, which obtained a temporary advance of wages, but lasted only eight months. In 1889, at the beginning of the movement which has been said to mark "a new era in the history of labour," was formed the Dock, Wharf, Riverside, and General Labourers' Union, "the only properly organised riverside union in the port of London." It immediately took up the various grievances of its members, and made a series of attempts to negotiate with the Dock Companies on behalf of the men. It was, however, ignored by the employers, who did not regard it as representative of the men, or believe that there was any great amount of discontent among them. The great strike which followed was organised by the Dockers' Union, and before its close "several discussions" took place between the Union officials and the employers (17). For a year after the strike their mutual relations were greatly improved, but more recently the attitude of the Dock Companies towards the Union has, it is stated, been one of professed neutrality but actual hostility, the former having "never forgiven the success of the strike." In the Millwall Docks, however, none but unionists have been employed since 1889.

[§ 215 (a.)] The Union has undertaken a great deal of educational work for the benefit of its members (1). The members of the Dockers' Union in the port of London are said to number about 25,000 or 26,000, out of a number of workmen eligible for membership, stated variously at 45,000 and 100,000 (2). It has numerous branches in different parts of the United Kingdom, but few details have been furnished with regard to these (3). In 1890 a branch was formed at Southampton, which at first had a membership of 2,000 or 3,000, and prospered for some little time, but after the strike which took place in the summer of 1890, it was almost entirely broken up, and its numbers sank to 200 or 300. The men had entered on the strike without the consent of the executive, and by the rules of the Union no strike pay was allowed. The members being unaccustomed to the discipline of an organisation, seceded from it on account of the enforcement of the rule (4). The Dockers' Union endeavours to organise agricultural labourers, in order to keep them on the land (5). It has 28 branches in agricultural districts (6).

The action of the Dockers' Union in 1889 brought about, in an indirect and somewhat peculiar manner, the formation of the Association of Foremen and Clerks of the Docks of London. The dock labourers, on returning to work after the strike, refused, it is stated, to work under the foremen unless they joined the Dockers' Union. The foremen and clerks, who had stood by the employers during the strike, did not care to join an organisation of men who were under their supervision. They therefore resolved to form themselves into a union "not inimical to the interests of the employers," hoping to strengthen their position and to be able through organisation to express their grievances (7). The employers gave their full concurrence to the formation of the Union, and to its federation, if necessary, with other unions, on condition that arbitration should be resorted to in all cases of dispute. Since then, it is stated, the employers have become indifferent to the Union, while the officials immediately over the foremen and clerks are decidedly hostile, and discourage members from remaining in it (8). From this cause, and in consequence of a reduction of staff by the Joint Committee, the number of members has considerably fallen off, and the Association is not in a position to press its grievances (9). It has endeavoured to obtain improved conditions for its members by application to the Joint Committee, but with very little success (10). The Union now consists of about 700 members, though at its formation there were about 2,000 (11). It represents foremen and clerks employed in the superintendence of work in the warehouses, and in assorting goods for merchants. There are about 10,000 persons so employed in the port of London (12). In 1889 the National Union of Dock Labourers was formed. Branches were formed in Glasgow and Liverpool in the same year, and at Barrow-in-Furness in 1890, with others at Garston, Belfast, Drogheda, Londonderry, Burntisland, and other places (13). In Glasgow the majority of dock labourers joined it shortly after it came into existence. Its rules "hampered the stevedores greatly in carrying on their work; in fact the officials of the Union were the masters" (14). The Union blocked vessels which had been worked by non-unionists in other ports where there were branches of the Union, and, in December 1890, refused to allow its members to work on ships with non-unionist crews, in order to support the Sailors' Union. The National Union also came into conflict with the old Society of Harbour Labourers, which had existed in Glasgow for many years. Its policy was defeated by the action of the Shipping Federation, and it has since declined in numbers, and is not strong enough to enforce its own terms (15). When the Barrow branch was formed in June 1890, only 14 out of 100 "old hands on the docks" remained outside the organisation. A conference of the various branches, held in the following month, revealed the fact that the financial position of the Union was not very strong. The contractor who employed the dock labourers at Barrow immediately introduced a system for the permanent men, to which the Union objected, with the "intended result" that the permanent work was given to non-unionists. The Union had no resource but to refuse to work with the non-unionists unless the latter were placed on equal terms with them (16). This was the origin of the strike at Barrow, and of the series of "blocks" which occurred in connection with it at other ports, leading to the break-up of the organisation at Garston and Londonderry, and the weakening of its general position. The secretary, treasurer, and four other members of the Union were dismissed from their employment after the strike, in consequence, it is stated, of the active part they had taken (1). At Liverpool, though the National Union has partly succeeded in obtaining its demands, the employers have refused throughout to recognise the Union, or to hold any communication with its representatives (2). It is stated that since the Liverpool dock labourers have been organised, accidents have been 50 per cent. less frequent (3). The Tyneside and National Labour Union was also formed in 1889. It comprises members of various unskilled industries. The Tyneside branch, formed in June 1889, was the first riverside branch, but the 31st branch of the Union. It is stated that it has secured and maintained advanced wages for the dock labourers in the Newcastle district. It is also stated, however, that the policy of the Union in insisting on a certain rate of wages has sometimes caused the men to lose the work altogether (4). Until lately, according to one witness, the great bulk of the work on the Tyne was done by Union men, but the Union has now considerably declined in numbers and power, and is not able, as it formerly was, to insist on the exclusion of non-unionists from employment (5). The number of members of the Tyneside branch is stated to be 1,400, and the total membership of the Union about 30,000 (6). Two local unions are mentioned which date from about the same time as these three national organisations. The Coal Trimmers' Protection and Benefit Association, Cardiff, Penarth, and Barry, was formed in May 1888. It has about 1,200 members, out of 1,600 employed in the industry represented. It has never conducted a strike (7). The Grain Weighers' and Tally Clerks' Union of the port of Dublin was registered in 1888, and has since been amalgamated with the Dock, Wharf, Riverside and General Labourers' Union, with which it co-operated on the occasion of the strike of July 1891 in the port of Dublin (8). It has 64 members, all unskilled labourers (9). The Sunderland and North East Coast River, Dock, and Wharf Labour Union is not federated with any of the other dock labourers' unions. The date of its establishment is not stated. Of about 650 casual labourers employed in the docks and wharves in Sunderland it is stated that about 560 are members of the Union (10). The Liverpool Cotton and General Warehouse Porters' Society is a local union without branches. It has about 2,700 members, the total number of men employed in that district and branch of industry being about 10,000 in winter, and 6,000 in summer. The date of its establishment is not stated. The society has conducted no strikes. It has attempted to bring employers and employed into closer relations by conference with employers' associations. Its delegates have met the Liverpool Cotton Association, and the Liverpool Corn Association, for the discussion of questions affecting the men, and have been cordially received. It is expected that "some material good" will result from these interviews (11).

[§ 215 (a.)]

(b.) Constitution and government.

(b.) The rules of the following dock labourers' unions have been furnished to the Commission: the Tyneside and National Labour Union, the Cardiff Coal Trimmers' Association, the National Union of Dock Labourers, the Dock, Wharf, Riverside, and General Labourers' Union, the South Side Labour Protection League, the Amalgamated Stevedores' Society, and the Dublin Grain Weighers' and Tally Clerks' Union. It appears from the rules, which are all of recent date, that these unions are very similar in constitution. There is in each case an Executive Council or Committee, varying, however, in numbers and mode of appointment, and including a staff of officials, generally a president, vice-president, secretary, and treasurer, whose salaries, except in the case of the secretary, are merely nominal. There are also trustees and auditors, the trustees being in some cases members of the Executive Council (12). In the case of the Cardiff Coal Trimmers' Association and the Amalgamated Stevedores' Society the entire management of affairs is vested in this Committee or Council which consists of representatives from the different branches in proportion to the number of members. Questions are decided by a majority, and the president has both a deliberative and a casting vote. The president and other officers of the Cardiff Coal Trimmers' Association are elected at an annual meeting of the society, which also elects a sub-committee for the purpose of canvassing and collecting contributions, but appears to have no further powers (13). In the case of the Dock, Wharf, Riverside, and General Labourers' Union, a Finance Committee is elected from the Executive Council, which may also divide

[§ 215 (b.)]

nto sub-committees for special purposes (1). In this Union, and in the South Side Labour Protection League, the National Union of Dock Labourers, and the Tyneside and National Labour Union, the Executive Council is supplemented by a general council or delegate assembly, meeting monthly, quarterly, or annually, or "when necessary." It consists of delegates in proportion to the number of members in a branch or district, except in the case of the Tyneside and National Labour Union, where each branch sends a delegate, who has votes in proportion to the number of members, with a maximum of four votes (2). The Dock, Wharf, Riverside, and General Labourers' Union has a quarterly delegate meeting, consisting of one delegate for every 3,000 members in a district, and also an annual delegate meeting consisting of one delegate for every 1,000 members in a district (3). The Dublin Grain Weighers' and Tally Clerks' Union, being a small society, has a quarterly general meeting, at which all members are expected to be present (4). Where a general or delegate assembly exists, it is alone competent to change the constitution or rules of the Union and to hear appeals from the Executive. The voting powers of the president or chairman at the meetings of such assemblies are not specified. Branches are governed in most cases by a small committee together with a body of officials similar to those of the central organisation, generally a president or chairman, vice-president, treasurer, and one or two secretaries (5). The South Side Labour Protection League is somewhat peculiar, being a federated organisation, with sectional autonomy, so that the branches act as independent unions, subject only to the general rules (6). The Dock, Wharf, Riverside and General Labourers' Union, and the Tyneside and National Labour Union are divided into districts, and these again into branches. Each district is governed by a committee consisting of one member from each branch, elected half-yearly, and by four officers. The district committees have full local authority, subject only to the general rules and the Executive Council (7).

(c.) Entrance fees and contributions.

(*c.*) Each of these Unions charges an entrance fee, the most usual amount being 2*s.* 6*d.* or 5*s.*, and a weekly contribution of from 2*d.* to 4*d.* (see *infra*, "Table of Entrance Fees and Contributions," pages 170, 171). Members who are a given number of weeks in arrears are suspended from benefits, and in the case of three Unions—the National Union of Dock Labourers, the Tyneside and National Labour Union, and the Dublin Tally Clerks' Union—members 13 weeks in arrears are excluded from the society.

(d.) Benefits.

(*d.*) The extent of benefits granted to the members varies considerably in different organisations. Three only—the National Union of Dock Labourers, the Tyneside and National Labour Union, and the Liverpool Cotton and General Warehouse Porters' Association—pay dispute, accident, and funeral benefit. The Dock, Wharf, &c. Union, and the South Side Labour Protection League pay dispute benefit only, and the Cardiff Coal Trimmers' Association and the Amalgamated Stevedores' Society pay accident and funeral benefit only (see *infra*, "Table of Benefits," pages 170, 171). The funds are invested in the names of the trustees.

(e.) Dispute regulations.

(*e.*) All the unions whose rules have been quoted, except the Dublin Tally Clerks' Union, have special regulations with regard to disputes between employers and employed (8). The Tyneside and National Labour Union has an elaborate system by which cases of dispute are referred for settlement, first to the branch Committee, then to the delegate or corresponding secretary, and failing these to the Executive Council, which has power, subject to the approval of two-thirds of the members affected, to resort to arbitration, or on the failure of all amicable methods, to order a strike. Members who instigate a strike against the wish of the Executive are expelled from the society. The district Committee can only give permission to less than 50 members to suspend work (9). The power to order a strike rests with the Executive Council in the case of two other unions—the Dock, Wharf, Riverside, &c., Union, and the Amalgamated Stevedores' Society. In the former case the matter in dispute is first referred by the branch to the district Committee, which must endeavour to settle it (10). The rule of the Cardiff Coal Trimmers' Association is that in cases of dispute the president or secretary must call together the Committee of Management "to see right and justice done to all parties" (11). In the National Union of Dock Labourers there appears to be no special provision for the settlement of a dispute but the branch Committee can alone authorise a strike (12). In the case of the South Side Labour Protection League the ultimate responsibility rests with the General Council. Any dispute between a branch and the employers is notified to the Executive, who endeavour to settle it by mediation. Failing this, the question is submitted to a special meeting of the General Council, of which a two-thirds majority is required to authorise a strike. Should the Council, however, decide against a strike, the branch may nevertheless enter upon one without affecting either its relations with the League or the obligation of other members to support such a strike. The extent of this obligation is such, that any branch or member assisting any employer whose workmen are on strike, is punishable with exclusion from the League, even though the full standard wages be insisted on, and the strikers do not belong to any branch of the League (1). The Glasgow Society of Harbour Labourers has, it is stated, a rule providing for the settlement of disputes, in the following terms:—"No strike shall be organized unless decided by a three-fourths majority of the whole of the members of the society, and that only after the matter in dispute had lain for one clear week before the Honourable the Lord Provost of Glasgow, the Provost of Govan, and the Provost of Patrick, as a board of conciliation to act between the parties" (2).

[§ 215 (e.)]

(f.) Regulations with regard to non-unionists.

(*f.*) In some cases there are rules with regard to the attitude of members towards non-unionists. The South Side Labour Protection League discourages its members from working with non-unionists, and whenever they are sufficiently strong they refuse to do so, on the principle that "liberty to combine does not imply liberty not to combine" (3). In the Surrey Commercial Docks, where a majority of the men employed are non-unionists, there is, it is stated, great bitterness between them and the members of the League (4). The National Union of Dock Labourers also prohibits its members, in certain cases, from working with non-unionists, and has frequently ordered strikes on this ground (5). Its rules provide that every branch shall "see that the name of every man working at the quays or docks in the port in which it is located is on the roll of members," and that members must exhibit their badges when seeking employment (6). The Tyneside and National Labour Union has no rule against working with non-unionists, but prohibits it when sufficiently powerful (7). The rules of the Amalgamated Stevedores' Society and the Dublin Tally Clerks' Union prohibit members from working with non-members only if there are members present who are without employment (8). The Sunderland and North East Coast River, Dock, and Wharf Labour Union has no rule on the subject, but its practice is similar (9). The Dock, Wharf, Riverside and General Labourers' Union has no rule on the subject, and does not insist on the exclusive employment of unionists, but approves of it in principle (10). In the Liverpool Cotton and General Warehouse Porters' Society no question of excluding non-unionists from employment has ever arisen (11).

(g.) Objects.

(*g.*) These organisations have, of course, certain objects in common, such as the regulation of wages, hours, and other conditions of labour, and the promotion of the general interests of their members. Most of them have also special objects, in which they vary considerably (12). The Tyneside and National Labour Union proposes to regulate the relations between employers and employed, and to endeavour to arrange differences between them by amicable and conciliatory means (13). The National Union of Dock Labourers desires "to secure the legal recognition of the natural rights of labourers to the produce of their toil, and to foster a spirit of co-operative enterprise" (14). The Dock, Wharf, Riverside, and General Labourers' Union has for one of its objects "to abolish the system of sub-contract in the trades embraced by its membership;' and its principles are further stated as follows:—"It is the duty of trades unions to work unceasingly until the evils of industrial competition are removed by industrial co-operation. The first step towards this end is to join the workers in one industry in unions, and the next for the various organisations to affiliate together, in Trades Councils or otherwise, for the purposes of education in industrial economics, and for the elevation of the worker" (15). The South Side Labour Protection League was organised, as stated in the preamble to the rules, to form "an irresistible barrier to capitalist aggression, and a powerful instrument for raising the physical, moral, and social standing of the labourer." It is added that "in any dispute between employer and employed the position of this League should be that the workman is bound to be right, and the employer is bound to be wrong" (16).

[§ 215 (g.)]

TABLE of Entrance Fees and Contributions paid to (Tabulated Rules, Nos.

Payment.	Tyneside and National Labour Union. No. 149.	Cardiff, Penarth, and Barry Coal Trimmers' Association. No. 156.	National Union of Dock Labourers. No. 158.
Entrance fee	2*s.* 6*d.* Sailors and firemen pay the same entrance fees that their union charges the members of this society.	2*s.* 6*d.*	5*s.*, or such other sum as the branch committee, subject to the approval of the executive, may fix.
Contribution	Ordinary members 4*d.* a week; honorary members not less than 2*s.* a year.	3*d.* a week.	3*d.* a week. An assessment on all members may be levied by the executive for any special object.

TABLE of Benefits granted by Associations of

Benefit.	Tyneside and National Labour Union. No. 149.	Cardiff, Penarth, and Barry Coal Trimmers' Association. No. 156.	National Union of Dock Labourers. No. 158.
Accident	6*s* a week for 13 weeks; 4*s.* a week for 13 weeks; 2*s.* 6*d.* a week for 26 weeks. After which time the benefit ceases for that illness.	12*s.* a week for 26 weeks; 6*s.* a week for remaining time of disablement.	Branches may advance money to assist any member to enforce his legal claims for compensation in case of accidents for which the employers are responsible.
Dispute	1. 8*s.* a week for 12 weeks; afterwards 6*s.* a week until the end of the dispute. 2. "Victimised" members 10*s.* a week for 8 weeks; 6s. a week for 8 weeks. 3. Legal assistance may be provided for members in matters connected with the society, if on inquiry the case is found to be justifiable.	-	The amount paid every week is determined by the executive.
Funeral	4*l.* on the death of a member; 2*l.* on the death of a first wife.	6*l.* in case of a fatal accident met with whilst engaged in the occupation of coal trimming.	2*l.*, if a member for 3 months; 4*l.*, if a member for 4 months; 6*l.*, if a member for 6 months. Branches may have their own sick or other bene fit funds.
Superannuation	-	-	-

Associations of Employed (Dock, Wharf, and Riverside Labour). [§ 215 (g.)]

149, 156, 158-60, 162-3.)

Dock, Wharf, Riverside, and General Labourers' Union. No. 159.	South Side Labour Protection League. No. 160.	Amalgamated Stevedores' Society. No. 162.	Dublin Grain Weighers' and Tally Clerks' Union. No. 163.
5*s.* 6*d.* for members over 18, and 2*s.* 9*d.* for members under 18.	Not less than 2*s.* 6*d.* except in the case of new branches, whose members may enter free. In branches composed exclusively of men employed in Government departments, who are not entitled to strike benefits, the minimum entrance fee is 1*s.*	2*l.* for members over 18 years of age; 1*l.* for members from 14 to 18; 2*s.* 6*d.* for members' sons from 14 to 18.	10*s.*
3*d.* a week for members over 18; 2*d.* a week for members under 18. The Executive Council may raise a levy from all members, in case of emergency, at 20*s.* for each member.	Not less than 2½*d.* a week for each member. Each branch or association must contribute to the central fund 6*d.* a quarter for each member. The funds must be maintained, if necessary, by levies at a minimum of 5*s.* a member.	2*d.* a week for members over 18; 1*d.* a week for members under 18. Quarterly payments are determined by the executive council, and branches may make levies when necessary.	2*d.* a week.

Employed (Dock, Wharf, and Riverside Labour).

[§ 216 (a.)]

SHIPPING. Organisations of Employers.

(a.) *History.*

216. (*a.*) The first instance of combination among shipowners was the Shipowners' Association of Great Britain, which was formed in the ports on the north-east coast in June 1889. An organisation on a national basis took its place in September 1890, on the formation of the Shipping Federation, Limited (1). This is a federation of companies and persons whose interests are closely connected with the shipping trade. About 25 associations, companies, and firms are affiliated with it, representing some seven million tons of shipping (2). The motive of its formation is stated to have been the necessity of resisting improper interference with the business of shipowners through the unreasonable demands and coercive tactics of the National Amalgamated Sailors' and Firemen's Union (3). The Federation has never professed to be opposed to "sound principles of trade unionism," or to seek to interfere with the rate of wages, or to exclude members of any union from employment (4). Registry offices were established by the Federation on its formation at all the principal ports, and registration tickets were issued to seamen desiring employment (5). These tickets, for which a charge of a shilling was made, entitled the holder to preference of employment, at the recognised port wages, with any shipowner affiliated with the Shipping Federation, and also to membership of the Amalgamated British Seamen's Protection Society, if desired, though members of any other seamen's union might avail themselves of it without prejudice. Registration was understood as a pledge that the holder of the ticket would proceed to sea in any vessel in which he signed articles, notwithstanding that other members of the crew might or might not be members of any seamen's union (6). It was thought at that time that if no charge were made for the ticket it would be useless for purposes of registration, but the Federation did not then refuse to employ men who were without tickets (7). The Federation ticket "aroused the bitter hostility of the Union leaders," who forbade the members to take it. So violent was the opposition to the registration system that "it was found necessary, in many instances," to sign crews on board ship instead of at the shipping offices, the approaches to which were, it is stated, beset by pickets. The United Labour Council of the Port of London issued a manifesto in December 1890 against this practice, and in favour of the exclusive employment of members of the Sailors' and Firemen's Union. After the unsuccessful strike which followed, the Federation required all seamen employed by its members to take the Federation ticket, and so pledge themselves to sail with unionists and non-unionists indifferently after having signed articles. The clause promising preference of employment only, was now withdrawn as meaningless. It was also felt that since the ticket was compulsory a charge should not be insisted on, and therefore a free paper ticket was issued to seamen who preferred not to pay. The charge for the parchment registration ticket was continued, and entitled the holder to the use of the reading rooms attached to the registry offices (8). It is thus incorrect to state, as has sometimes been done, that the preference clause was withdrawn from the ticket, and the charge abolished (9), since the paper ticket, which is alone compulsory, never had a preference clause, and was never charged for (10). This ticket is issued practically to all comers, including foreigners with British discharges and a knowledge of English. The parchment ticket is issued only to the better class of seamen, and on a stricter examination of discharges. "A brief but desperate resistance," it is stated, was offered by the Seamen's Union* to the Federation ticket, but its objection was at last withdrawn, and the Federation claimed to have "completely established freedom of contract" (11). One of the functions of the Federation is to supply labour to any district where it is required, especially during a strike, unless it is a strike on a question of wages, with which the Federation does not desire to interfere (12). Its policy, however, as stated by its representatives, is to displace local labour as little as possible, and to give work to the unemployed in each district, and especially to restrict the employment of foreigners in the British mercantile marine. Foreigners are not registered unless they can produce four years' discharges from British vessels, or can speak and understand English (13). In the opinion of some witnesses the Shipping Federation is an aggressive body, formed by a certain number of capitalists in order to cause dissension and trouble in the ranks of the various trade unions, or even to crush them altogether, and at the same time to reduce wages (1). The secretary of the Sailors' and Firemen's Union believes that the collapse of that organisation is the main object desired by the Shipping Federation, which he accuses of coercion and aggression (2). Members of this union regard the Federation ticket as a "badge of slavery" (3). It has been stated, moreover, that the Federation agents supply seamen to ships by illegal methods, since they are not, as the Merchant Shipping Act requires, in the constant employment of any individual owner. The Federation has also been accused of encouraging foreign labour, and giving preference of employment to non-unionists, while its individual members have, it is stated, engaged crews at reduced rates of wages, but each of these statements has been repeatedly contradicted by representatives of the Federation (4). Among the associations and companies affiliated to the Shipping Federation, are the Employers' Labour Association, Liverpool and Birkenhead, the Clyde Sailing Ship Owners' Association, and the Clyde Steamship Owners' Association, of which the rules all date from 1891 (5). The Employers' Labour Association, formed in 1890, includes master stevedores as well as shipowners, and its members employ both seamen and quay labourers. There are 32 employers or firms connected with the Association (6).

[§ 216 (a.)]

(*b.*) The form of government of the Shipping Federation is as follows. It is managed by an Executive Council, consisting of representatives elected annually by the members, in the proportion of one representative for every hundred thousand tons of shipping entered with the Company. The president and vice-president for the time being of the Chamber of Shipping of the United Kingdom are ex-officio members of the Executive Council. Questions arising at any meeting are decided by a majority of votes, the chairman having a casting vote. The Council may delegate any of their powers to a sub-committee or sub-committees. Ordinary general meetings of the Company are held annually, at which each member has one vote for every hundred thousand tons entered with the Company. The president is elected at the general meeting, and the general manager and secretary are appointed by the Executive Council. The Executive Council has power to define the districts of shipping centres and to appoint local district committees (7). The Employers' Labour Association and the Clyde Steamship Owners' Association are very similarly constituted, each having a general committee and sub-committees, and an annual general meeting. In the case of the former, the general committee consists of the shipowning members, and in the latter of the chairmen and members of the two sub-committees. In the Employers' Labour Association, each member has one vote only at the general meeting, but in the Clyde Steamship Owners' Association members have one vote for every 3*l.* subscribed, with a maximum of four votes (8). The Clyde Sailing Ship Owners' Association is managed by six directors elected by the members, each member having one vote for each ship entered, and there is an annual general meeting in which the decision of the majority is binding on all the members. There is a special section within the Association for the purpose of insurance against ownership risks, and this has a similar form of government (9).

(*b.*) *Constitution and government.*

(*c.*) The funds of these associations are maintained by contribution from the members in proportion to the tonnage entered by each. These contributions are levied from time to time when necessary. In the case of the Shipping Federation, the amount so levied in any one year must not exceed 1*s.* a ton for steamers, or 4*d.* a ton for sailing ships. In the other associations mentioned there is also a regular annual subscription, which in the Employers' Labour Association is 5*l.* 5*s.*, in the Clyde Sailing Ship Owners' Association 1*l.* 1*s.* per ship entered, and in the Clyde Steamship Owners' Association 1*l.* per 1000 tons upon the gross registered tonnage, with a minimum of 3*l.* and a maximum of 50*l.* a year (10).

(*c.*) *Contributions.*

(*d.*) The Shipping Federation has established a benefit fund for officers and seamen employed by the members, "in order to promote good feeling and accord between members and the seamen employed by them, and to encourage and assist steady and reliable men." The scale of allowance for loss of life or incapacitation through an accident occurring on board a Federation vessel, is as follows:—

(*d.*) *Benefit fund for Seamen.*

* In the evidence, and in this summary, the National Amalgamated Sailors' and Firemen's Union is frequently referred to as the Seamen's Union.

	£.
Master	100
Chief Officer, Chief Engineer, Surgeon and Purser	75
Second Officer and Second Engineer	50
Other Executive Officers (on articles)	40
Petty Officers, Chief Stewards, &c.	35
Sailors, Firemen, and all other members of the crew	25
Asiatic Seamen	12 10*s.*

Or alternatively, the following allowance while incapacitated, for a period not exceeding 13 weeks:—

Master	40*s.* a week.
Chief Officer	30*s.* ,,
Second Officer, &c.	20*s.* ,,
Any other Executive Officer	16*s.* ,,
Petty Officers, &c.	14*s.* ,,
Sailors and Firemen	10*s.* ,,
Asiatic Seamen	5*s.* ,,

Or, alternatively, half the amount payable in each case. The benefit selected must be declared when application is made for the benefit certificate. Seamen do not contribute to this fund. They are entitled to participate in it, if they hold parchment Federation tickets, and can show six months' faithful service in Federation vessels. The benefit certificate contains the name and description of the holder, with a record of service, so that it is in the form of a continuous discharge, and serves as a means of identification (1).

(*e.*) The Employers' Labour Association, Liverpool and Birkenhead, alone among these organisations, has specific regulations with regard to labour disputes. In the event of strikes seeming imminent it undertakes to obtain an immediate supply of outside labour and to arrange accommodation and police protection, and to take such other steps as seem expedient. Members are forbidden to concede the demands of men on strike without first consulting the committee (2).

(*f.*) The objects of the Shipping Federation are to consider all questions affecting the interests of the shipping trade, and to take such action as may be necessary to promote such interests; to procure the improvement of existing laws and customs affecting shipping, and to prevent the enactment or establishment of laws and customs which are prejudicial to the trade: also to protect and indemnify the members against any loss arising in the management of their trade without their actual default (3). The objects of the affiliated organisations are very similar, but it is a special feature of the Shipping Federation that it undertakes to indemnify members for losses incurred in carrying out the general policy of the Federation and upholding the principle of absolute freedom of contract (4). The objects of the Employers' Labour Association have a still more explicit reference to labour questions. It was formed "to secure mutual support and co-operation in arranging terms with trade unions or counteracting unreasonable demands made by them"; to assist members in taking legal proceedings in furtherance of the objects of this rule, and to establish an office for the organisation and registration of labour (5).

217. (*a.*) Organisation among seamen is of older date than that among dock labourers, but until recently it was on the whole either unsuccessful or merely local. In 1851, when wages were very low (from 1*l.* 15*s.* to 2*l.* 5*s.* a month in foreign-going vessels), a union was formed which was called the Seamen's United Friendly Society. It became very powerful, and had branches in about 30 different ports, but was not sufficiently centralised. It met with considerable opposition from the shipowners, who, it is stated, opened free labour offices and issued tickets through which preference of employment was given to the holders. This policy resulted in the collapse of the union in 1859 or 1860. The condition of seamen, which had improved considerably between 1851 and 1855, deteriorated with the decline of the union, and still more after it had ceased to exist. Wages, it is stated, fell from 5*l.* to 3*l.* 10*s.* a month on ships bound to the Baltic, and from 4*l.* to 2*l.* 15*s.* on ships bound to the Mediterranean (6). In 1872 a union was formed called the British Seamen's Protection Society, which has had about 8,000 or 10,000 members, but has declined of late years (7). The last return it sent in to chief Registrar was in 1882, when the society's balance in hand was 4*l.* 7*s.* (8). Its members were nearly all absorbed by the "new unionism," but in 1891 it was still in existence, and had as its secretary the superintendent registrar of the Shipping Federation for the port of London (9).

The first issue of Federation tickets contained a clause stating that the fee for registration entitled the holder of the ticket to membership of this society (1). This apparent connection with shipowners has caused the British Seamen's Protection Society to be termed a "bogus union (2). In 1879 a union was formed which is still in existence, called the North of England Sailors' and Sea-going Firemen's Friendly Association (3). It was first established in Sunderland, which is still its head-quarters (4). Immediately on its formation the Union addressed a circular to a large number of shipowners in the ports on the north-east coast, asking for an increase of wages on board their vessels, from 30*s.* a week to 32*s.* 6*d.*, in consideration of the improvement in freights, and at the same time proposing a conference (5). The circular was ignored, and the Union then sent deputations to the shipowners, with no better result; but on the men threatening to strike, an advance of 1*s.* 6*d.* a week was offered and accepted. In other ports, however, such as London and Liverpool, wages remained low, with the result that men shipped in the north lost the advantage of their position through being discharged on their arrival in London. In 1880 the association numbered about 1,000 members, (6) chiefly men employed in the home and coasting trades, (7) and up to 1882 it made considerable progress, and formed branches in adjacent ports (8). In 1882, however, these branches began to collapse, and wages were then reduced, and preference of employment was given to foreigners. The reduction of wages was not attributed by the union to any lowering of freights, which, it is stated, were better at that time than in 1891, when wages were 30 per cent. higher. Between 1884 and 1886 there were not more than 200 members of the Union (9), and the total yearly contributions were only 80*l.* or 90*l.* (10). In 1885 the seamen, being dissatisfied with their position, mainly because large numbers were kept out of employment by the preference given to foreigners, again began to agitate. In 1886 an attempt was made to reorganise the North of England Society by issuing a privilege card, admitting members free of charge. The attitude of the union towards the owners was still conciliatory, and at the time the secretary invited about 400 shipowners to attend a conference on the subject of wages and the employment of foreign seamen. The invitation was not accepted, and some of the owners stated in reply that they could not give a rise of wages, or that they did not want dictation from agitators, and represented that the rate of wages depended, not on freights, but on the supply of labour. Wages were at that time about 1*l.* a month higher on the north-east coast than in ports elsewhere, owing, it is stated, to the influence of the North of England Union. Another attempt at organisation was made in 1886, by the formation of a union in London called the Vigilance Association, which had shipowners on the committee (11). About 1,000 members were enrolled, but the organisation only lasted about 18 months. A similar one at Shields collapsed after about three months, owing to dissensions between the shipowners and seamen on the committee (12). In 1887 a member of the North of England Union, Mr. J. H. Wilson, attempted to reorganise that society on a national basis, but meeting with opposition from the other members, he seceded from it and founded the National Amalgamated Sailors' and Firemen's Union (13). He then asked the North of England Union to amalgamate with the National Union, but the former refused (14). After a certain amount of friction and mutual defiance the two unions came to terms and federated, and worked harmoniously together (15). Since then the North of England Union has apparently become more prosperous. In 1891, there were 1,800 financial members, and perhaps 2,000 names on the books (16). It is stated that its relations with some of the largest firms of shipowners have been very satisfactory, and that the society has so conducted its affairs as to secure their respect and co-operation. There have been differences between the Union and the shipowners, but these have always been settled "without undue heat or temper on either side" (17). One particular firm in Sunderland always engage their men through the Union, and settle disputes by conference with the Union officials. The Union has spent about 400*l.* on strikes since its formation. These have been few and of short duration, and have always met with success (18). The secretary has obtained by negotiation a six hours' day for the firemen employed by a certain firm which owns 22 boats. In other cases the

[§ 217 (a.)] firemen have obtained an eight hours' day through the action of the Union, though the limit is practically exceeded (1). On the formation of the National Amalgamated Sailors' and Firemen's Union, a circular was issued in its name to a number of shipowners, with the object of gaining their co-operation and sympathy. This circular, dated 20th September 1887, announced that the Union was prepared to supply men to all ships that might require them, and to guarantee their going on board at the proper time and in a fit condition for work, and also to pay compensation for any delay caused by members failing to join their ships. It appealed to the owners to assist the Union in endeavouring to provide a better class of men for the merchant service. The Union was not, however, very cordially met either by shipowners or seamen (2). Many sailors, it is stated, held aloof at first through doubts as to the *bonâ fide* nature of the movement, and the shipowners considered that the secretary was endeavouring by his speeches to foment troubles between them and their sailors at a time when the shipping trade was just emerging from a prolonged and disastrous period of depression (3). They therefore refused to co-operate with the Union in establishing the standard of wages desired by the latter (4). In November 1887, wages on the north-east coast rose from 2*l.* 5*s.*, 2*l.* 10*s.*, and 2*l.* 15*s.* a month, to 3*l.* 15*s.* for sailors, and 4*l.* for firemen, but there were always individual shipowners who would engage crews, if possible, at lower rates than those prevailing (5). The Union claimed the credit of the improvement in wages which took place at this time, but it has also been stated that it was simply the natural result of improved trade and the fuller employment of seamen. It is agreed, however, that the Union called attention very distinctly to the rise in freights, and showed the men that they were entitled to a share in it, and that in this respect its action was wise and advantageous (6). By the end of 1887, and before the Union had extended beyond Sunderland, about 200 members had been enrolled (7). In 1888, branches were formed in Glasgow, Liverpool, Cardiff, and Hull, and the membership rose rapidly to 7,000 or 8,000, partly through the belief entertained by large numbers of seamen that the rise in wages was being brought about by the Union (8). In 1889, branches were formed in about 45 ports, and the membership continued to increase rapidly. By the end of that year there were branches in every port in the United Kingdom (9). At the end of 1890, there were about 60,000 financial members, and in 1891, the total number of members enrolled reached 130,000, and there were 15 branches on the Continent (10). It was calculated at that time that almost the whole of the seamen in the mercantile marine had joined the National Union, though they were not all paying members (11). Up to 1889, the tactics of the Union were conciliatory, and "the bulk of shipowners" made no objection to it so long as its efforts were "confined to obtaining increase of pay, &c.," though it is also stated that its representations on the subject of provisions on board ship were treated "with very little courtesy" (12). The shipowners, in fact, tolerated the Union, though they were not disposed to countenance it in view of the attitude adopted by the secretary towards shipowners as a body (13). During these two years the Union frequently came into conflict with the owners, but no serious strike occurred (14). In 1889, however, as the Union increased in numbers, its demands, it is stated, became unreasonable and aggressive.(15) A circular which it issued in May 1889, stating the rate of wages which would be required after a certain date out of all ports in the United Kingdom, has been described as a clear attempt to dictate to the shipowners "without ever consulting them "(16). A rise of wages was granted by nearly all the shipowners at this time, the shipping trade being very good (17). The effect of endeavouring to force a further rise was that in Leith and Liverpool the movement was entirely unsuccessful, and the strikes which occurred were disastrous to the men (18). It is stated, however, that the Union was opposed to the Liverpool strike (19). In 1889 the National Union began to advance a demand for the exclusive employment of its members, and to endeavour to compel all seamen sailing from British ports to join it, by refusing to let its members sail with non-unionists (20). The shipping offices on the north-east coast were picketed by members of the union, and it is stated that non union men who attempted to enter were in many cases threatened and ill-used (21). The comment of one witness on this development of policy was that the National Union was only conciliatory so long as it was not sufficiently strong to be otherwise (1). Meanwhile organisation was in progress among the officers of the mercantile marine. In 1888 a union was formed, called the National Amalgamated Certificated Officers' Union of Great Britain and Ireland. The members became dissatisfied with the manner in which the society was conducted by the secretary, but according to the rules it was not open to them to discharge him. They therefore dissolved the Union in 1889, and formed another called the Certificated Officers' Union of Great Britain and Ireland, appointing the secretary of the National Union as honorary general manager (2). He formed four branches of the Union, namely, at Glasgow, Leith, Liverpool, and Hull, but resigned his post in the following year (3). The officers, it is stated, objected to the existing officers' Unions on the ground that they were controlled to some extent by shipowners, the Sunderland Shipmasters' and Officers' Union having five shipowners on the committee of management (4). On the formation of the Certificated Officers' Union, the National Seamen's Union took steps to compel masters and officers to join it. The method adopted was to prohibit members of the National Union from sailing in any ship where the master and officers refused to join the Officers' Union (5). "In this way," it is stated, "masters and officers were coerced into joining it," even if they were already members of other societies; otherwise their vessels under contract to charterers would be detained. In many cases the owners paid the Union fees for them rather than incur damages for breach of contract. The National Union also had arrangements with the Dockers' Union at several ports, providing that dockers, lightermen, and others should strike against vessels of which the officers or crew were "free" or non-union men (6). The shipowners were in most cases helpless under the "coercive tactics" of the Union. They could not break their obligations by detaining vessels pending a fight with the Union. The captains, whose only interest was to avoid detention of vessels, and unpleasantness among the crew, gave way in the great majority of cases to the demands of the Union, at the risk of proceedings by the men whom they were forced to discharge. Non-unionists, finding themselves at a disadvantage, were obliged to join this "apparently invincible" Union (7). The policy of the Union at this time has been described as entirely subversive of discipline. This opinion has been supported by the statement that Union officials have called out crews after they had signed articles (8). It is maintained, however, on the part of the Union, that nothing further has been done on any occasion than to prevent men from signing articles. In some cases, it is stated, the men themselves have refused to sail, but their action has not received the sanction of the Union (9). In any case, the position was one which the shipowners could no longer tolerate, and they proceeded to combine in order both to resist "improper interference with their business" and to establish and maintain the principle of absolute freedom of contract. Thus in September 1890 the Shipping Federation was formed (10). The effect, according to the account given by representatives of the Federation, was "almost magical." The attempt to "coerce" the officers into joining the Officers' Union "was abandoned after a very brief struggle." The claim for the exclusive employment of seamen of the National Union "was fought for more strenuously," but the failure of the strikes in Leith, London, Hull, Cardiff and elsewhere gave the death blow to this claim, and the Federation ticket, which is simply a free-labour pledge, "was soon firmly established, and almost universally adopted." Under these circumstances the membership of the Union, it is stated, "steadily dwindled and declined," though wages kept up and employment was good (11). The secretary of the Union, on the other hand, states that in addition to this policy of organisation the shipowners were, in the meantime, carrying out a plan of conspiracy against the Union, by importing men into it for the purpose of causing dissension, and discrediting both him and the Union in the eyes of seamen generally (12). The existence of any such conspiracy is, however, emphatically denied by the persons said to have been concerned in it (13). When the Shipping Federation was formed, the National Union, it is stated, regarded it with approbation, believing that it was only by strong combination on both sides that a more uniform system could be arrived at in the matter [§ 217 (a.)]

[§ 217 (a.)] of wages, provisions, &c., on which competition had a disadvantageous effect (1). The individual members of the Federation, however, adopted, it is stated, an aggressive attitude towards the Union, and the Federation shortly issued a ticket, and gave preference of employment to the holders, who pledged themselves by taking it to sail with unionists or non-unionists indifferently (2). Members of the Seamen's Union in many cases refused to take the ticket, believing that the main object of the Federation was to bring about the collapse of their organisation (3). The executive having ascertained that every branch of the Union objected to the ticket, instructed the members to refuse to take it or to sail with men who took it (4). The Union thus came into conflict with the Shipping Federation, and a series of strikes took place, of which the most serious were those in London, Cardiff, and Aberdeen, in 1890 and 1891 (5). There were others at Liverpool, Shields, Newcastle, Hull, Glasgow, and a number of other ports (6). It has been repeatedly stated that during these strikes, intimidation and violence were practised by members of the Seamen's Union; but on the other hand this is denied, and it is stated that there has been a great decrease in the violence and disturbance attending strikes since the formation of the Seamen's Union (7). The general result of the conflict was that, for reasons which have been variously represented, the Seamen's Union withdrew its objection to the Federation ticket, at least for the time being. The membership of the Union sank in 1891 from 60,000 to 40,000, and its financial position was much weakened by the strikes. At the end of 1890 it had a balance of 31,000*l.*, which in 1891 was reduced to 10,000*l.* Since its formation the Union has spent about 50,000*l.* on strikes, but it claims to have procured a total gain of 3,000,000*l.* in increased wages paid to seamen (8). The Union's view of the situation is thus presented in its annual report for 1890: "In 1887, when the Union first started, the wages in many ports were 3*l.* 5*s.* for sailors and 3*l.* 10*s.* for firemen. To-day, in the same ports, sailors are earning 4*l.* 10*s.*, and firemen 4*l.* 15*s.* to 5*l.* a month. . . . . In the weekly boats, in 1887, the highest wages paid to sailors and firemen were 28*s.* At the present time the highest wage paid is 32*s.* 8*d.* a week, and the lowest 28*s.*, giving a mean average of 30*s.* 4*d.* a week; but . . the lowest rate is paid in very few. Moreover, in addition to securing this substantial increase, the crews are now kept on pay, no matter how many days the vessel may lie in harbour" (9). It is maintained, on the other hand, by shipowners, that the increase of wages from 1887 to 1889 was due to economic causes quite independent of the Union, or at any rate that the Union was not the sole cause, since a gradual increase had, on the whole, been going on since 1883 (10). The Union perhaps increased wages in certain ports, or in certain individual cases (11). The Seamen's Union has endeavoured to secure the enforcement of the law as it affects seamen. In 1885 an attempt was made in this direction by forming an organisation for the sole purpose of providing legal protection for the members against individual shipowners, but it met with no support from the men, and considerable opposition from the shipowners, and was therefore abandoned. The Seamen's Union instituted a special legal department for the purpose of enforcing the pecuniary claims of members, conducting prosecutions for maltreatment by officers, and above all, calling the attention of the Board of Trade to infringements of the Merchant Shipping Act (12). The Union has frequently reported to the Board of Trade cases of unseaworthiness, over-loading, shipping of incompetent seamen on false discharges, and so forth (13). A large number of shipowners, it is stated, object more seriously to this than to any other part of the work of the Union, but it is contended that it has contributed to bring about the recent decrease in loss of life at sea. It is partly to ensure the employment of competent men that the Union claims exclusive employment for its members. A number of ships are lost, it is stated, entirely through the incompetency of the crews, and discharges are inadequate as a guarantee of ability. The Union therefore has a rule that every man who joins must show four years' sea service. It does not consider that under these conditions the policy of refusing, when possible, to ship with non-unionists, is a policy of aggression or tyranny (14). The Union is anxious to co-operate with the shipowners so far as they will allow it to do so. In 1891 the secretary issued a circular to the shipowners in the Tyne district, stating that he had established a call office in telephonic [§ 217 (a.)] communication with the shipowners' offices, where a number of men were stationed ready to sail at 20 minutes' notice. It was proposed to extend this scheme if it met with the approval and co-operation of the shipowners, but the latter practically refused to have anything to do with it(1). In short, it is complained that the claim of seamen to be regarded as skilled workmen, and to have their organisations dealt with on the same terms as have generally been secured by associations in skilled industries, has not been conceded by the employers, except partially and in some individual cases(2). The Hull Seamen and Marine Firemen's Association was formed under its present title in 1887. It has not worked very harmoniously with the National Seamen's Union, but they are now both federated with the Federation of Trade and Labour Unions. It is stated that the shipowners recognise this Union, and all disputes have been settled by conference. There have been no strikes in connection with it. It is stated that although wages have been raised by the action of the Union, the gain to the men has been in part merely nominal, since a crew is now discharged on arriving in port instead of remaining to work the ship. Since 1886, wages in Hull have risen from 26*s.* a week to 30*s.* 4*d.* and from 3*l.* 5*s.* a month to 4*l.* 10*s.* The Association has 1,000 members (3). In April 1890, the International Federation of Stewards, Seamen, and Firemen was founded in opposition to the National Union, with the idea of co-operating with the shipowners. It is stated that it met with very little success, and that it never collected more than about 200*l.* (4). The statement that it was financed by shipowners, and had no *bonâ fide* members, was denied (5) The Amalgamated Seamen and Tradesmen's Union, established in 1890, is said to have been called into existence by the coercive policy of the National Sailors' and Firemen's Union, by which seamen were forcibly prevented from obtaining employment in Cardiff if they could not pay the Union entrance fee, which was 30*s.* or 35*s.*, and in certain cases 20*l.* (for foreigners who had not served more than a year on an English ship (6). The Cardiff Boarding Masters' Guarantee Association, after vainly endeavouring to obtain a reduction of the entrance fee from the local officers of the National Union, proceeded to form the Amalgamated Seamen and Tradesmen's Union, at the request of a number of seamen. This Union undertook to supply crews to ships and to send them on board sober and in proper time (7). It has received a number of testimonials from shipmasters as to its success in doing so (8). It is stated that the National Union has persisted in an aggressive attitude towards this organisation, and that members of the former have assaulted and intimidated members of the latter (9). This hostility ceased, however, after a time, when the men found that the Seamen and Tradesmen's Union was not "a bogus union got up by the shipowners in order to reduce wages." The Union has branches at Newport and Barry, and a membership of 83 tradesmen and about 5,000 seamen (10). The Federation of Trade and Labour Unions connected with the Shipping, Carrying, and other Industries, came into existence nominally in October 1890, and formally in January 1891 (11). It was a development from the United Labour Council, which was itself the outcome of the dock strike committee of 1889 (12). It was the formation of the Shipping Federation which suggested the idea that the various unions in the shipping trade should also federate in order to "withstand aggression" (13). In February 1891, the London shipping strike being in progress, the Federation first exercised its powers as such, by bringing out the members of four unions who were working in connection with the ships affected by the dispute (14). The Federation includes about 26 unions connected with shipping and one connected with railways. Its numbers rapidly increased during the first year of its existence (15). The National Independent Seamen and Firemen's Association, Liverpool, was formed in 1891, but no details have been furnished as to its history (16). The National Federation of Fishermen was established in its present form in 1890. It has conducted no strikes, but has obtained certain concessions by meeting the employers in conference (17). It is not a federation of unions, but simply a union composed of local branches, chiefly on the east coast. There are branches on the west

[§ 217 (a.)] coast, but these have never paid any contributions. There are about 5,000 members, employed mainly on board the North Sea fishing smacks, and also at the ports where the fish are landed. The non-unionists in the district number about 5,000 (1).

(b.) Constitution and government.

(b.) Of these organisations some are national and others local. The former resemble each other to some extent in their constitution. They comprise the International Federation of Stewards, Seamen, and Firemen, the National Amalgamated Sailors' and Firemen's Union, the Union of Shipmasters and Officers, the Amalgamated Seamen and Tradesmen's Union, the Federation of Trade and Labour Unions, and the National Federation of Fishermen. These are all governed by an Executive Council or Committee of Management, consisting of a president, vice-president (one or more), a secretary, treasurer, and other officials, with a number of representatives varying from 12 to 20, or more, who are elected at the annual general meeting, in most cases by ballot. The only exception is the International Federation of Stewards, Seamen, and Firemen, in which the members of the Committee, here called a board of directors, are representative of the different districts. The National Amalgamated Sailors' and Firemen's Union, the Amalgamated Seamen and Tradesmen's Union, and the National Federation of Fishermen, have a Finance Committee for the management of the funds. The Union of Shipmasters and Officers has, besides the Executive Committee for the transaction of ordinary business, an Executive Council which is appointed by the annual meeting, and is, as far as possible, representative, and has full control over all officials and all administrative business. The National Amalgamated Sailors' and Firemen's Union and the International Federation of Stewards, Seamen, and Firemen are divided into districts, each managed by a Committee consisting of a chairman, a secretary, and delegates from the branches. Branches are governed by a chairman and other officials, with a Committee, except in the case of the International Federation of Stewards, Seamen, and Firemen, where the branches have only a chairman and a secretary. There is in each case an annual meeting consisting of delegates from the different districts or branches (or organisations in the case of the Federation of Trade and Labour Unions) in proportion to membership. Appeals may be made from the executive to the annual meeting, which also has sole power to make, amend, and rescind rules. The Federation of Trade and Labour Unions has also district councils, composed of delegates in the proportion of one for every 500 members, which meet once a month, or oftener if required (2). The local seamen's unions, namely, the Hull Seamen and Marine Firemen's Amalgamated Association, the National Independent Seamen and Firemen's Association, Liverpool, and the North of England Sailors and Seagoing Firemen's Friendly Association, are governed in each case by a Committee of Management, consisting of a president or chairman, a vice-chairman, secretary, and other officials, with a number of members varying from 12 to 20. The Hull Seamen and Firemen's Association holds an ordinary meeting of the society once a week, and the North of England Association twice a week. The former of these, and the National Independent Seamen and Firemen's Association, have an annual general meeting. Rules may be made, altered, or rescinded only at a general meeting (3).

(c.) Entrance fees and contributions.

(c.) The entrance fee for all these organisations is subject to alteration from time to time by the Executive Council, but is usually 2*s.* 6*d.*, except in the case of the National Federation of Fishermen, where it is 1*s.* The usual contribution is from 3*d.* to 6*d.* a week (see *infra*, Table of Entrance Fees and Contributions, pp. 178–9).

(d.) Benefits.

(d.) All these societies, except the Federation of Trade and Labour Unions, have benefit funds. The extent of benefit varies, but dispute and funeral benefits are granted by all. Accident or sick benefit is granted by all except the North of England Association and the International Federation of Stewards, Seamen, and Firemen, but these, in common with the National Sailors' and Firemen's Union and the Amalgamated Seamen and Tradesmen's Union, allow a small distress benefit for loss of clothes at sea. The National Sailors' and Firemen's Union and the Union of Shipmasters and Officers grant a superannuation benefit after 20 and 15 years' membership, respectively. (See *infra*, Tables of Benefits, pp. 178–9).

(e.) Dispute regulations.

(e.) All these organisations, except the Union of Shipmasters and Officers and the National Independent Seamen and Firemen's Association, have special regulations with regard to disputes between employers and employed. By the rules of the National Sailors' and Firemen's Union, a general strike cannot be proclaimed until the Executive has stated the circumstances to the branches, and obtained the consent of a majority of the members ashore at the time. In the North of England Association the only provision is that no member may take the place of a "victimised" member, on pain of expulsion from the society. All the other unions have a rule that disputes between members and their employers must be referred to the Executive Council or the District Committee, which must endeavour to effect an amicable settlement. In the case of three of these, the rule further provides that on the failure of other methods the Executive must offer to refer the dispute to arbitration or conciliation. The International Federation of Stewards, Seamen, and Firemen only resorts to a strike "as an extreme measure," and with the sanction of a majority of the district and the approval of the board of directors. The Federation of Trade and Labour Unions has a rule that even in the case of a strike which the Executive has not sanctioned, no federated organisation may take the work of the men on strike. [§ 217 (e.)]

(f.) Regulations with regard to non-unionists.

(f.) Only the National Independent Seamen and Firemen's Association and the National Federation of Fishermen have rules as to the attitude of members towards non-unionists. The former enjoins on its members to proceed to sea in any vessel in which they sign articles, in accordance with the Merchant Shipping Act, "notwithstanding that other members of the crew may or may not be members of this or of any other seamen's organisation." The National Federation of Fishermen forbids its members to engage non-members to work for them.

(g.) Objects

(g.) The objects of these different organisations are somewhat various, but there are several which are common to most of them, such as, to obtain and maintain fair rates of wages and reasonable hours of labour, to afford legal and other assistance to members; to provide for the safety of ships and prevent loss of life at sea, and to provide a better class of men for the merchant service. The National Independent Seamen and Firemen's Association, the International Federation of Stewards, Seamen, and Firemen, and the Amalgamated Seamen and Tradesmen's Union, propose in addition to promote the settlement of disputes by arbitration or conciliation. Among the objects of the National Amalgamated Sailors' and Firemen's Union are the promotion of the Parliamentary representation of seamen; the assistance of members whose interests have suffered by reason of prominent services to the Union; and the establishment of homes for seamen. The National Independent Seamen and Firemen's Association has for one of its objects "to support freedom of contract;" the Union of Shipmasters and Officers has the special object of "protecting certificates," and the National Federation of Fishermen that of "improving the share system." The Federation of Trade and Labour Unions was formed to facilitate mutual assistance between unions in cases of dispute (1).

Riggers.

(a.) History

218. (a.) Associations of riggers hold a somewhat different position from those of seamen, since their employment is regarded as a skilled trade, but at the same time nearly all riggers are also seamen, though experience at sea is not a necessary part of a rigger's apprenticeship. The members of riggers' societies have special privileges with regard to transporting ships and going runs (2). The Loyal London United Riggers' Association, with which several others, at Glasgow, Greenock, Liverpool, and other places, are federated, was established in 1853 (3). In 1872 its members obtained an increase of pay and shorter hours "without any agitation worth calling a strike," and since then there has been no dispute, except an occasional difference with an individual employer as to a breach of the society's rules. In 1889, when the Sailors' and Firemen's Union became powerful, it began to be antagonistic to the Riggers' Unions, and, it is stated, endeavoured to debar their members from going to sea in accordance with their recognised privilege, unless they consented to join the Sailors' and Firemen's Union. Both on the Thames and on the Clyde riggers were sometimes compelled to join it in order to be able to do their work unmolested. Members of the Sailors' and Firemen's Union also, it is stated, showed antagonism by cutting down the prices for rigging work on purpose to get it into their own hands. Attempts on the part of the Riggers' Association to settle matters amicably were ignored by the rival union, but through the co-operation of the employers

(1) R. Manton, 11150–4; Digest, Vol. I., pp. 43, 44. (2) Tabulated Rules, Nos. 174, 175, 176, 177, 178, 183. (3) Tabulated Rules, Nos. 171, 172 173.

(1) Tabulated Rules, Nos. 171, 172, 173, 174, 175, 176, 177, 178, 183. (2) Digest, Vol. II., pp. 45, 46. (3) Tabulated Rules, No. 179.

[§ 218 (a.)] the former maintained its position. In 1890, the Riggers' Association was affiliated with the United Labour Council of the Port of London, but refused to obey the manifesto issued by the latter on December 5th, declaring a general strike against some of the principal shipping firms. The Association objected to any move which tended to strengthen the Seamen's Union in its demand that none but its own members should be shipped. Moreover, the delegate of the Riggers' Association on the United Labour Council reported that two of the delegates of the Seamen's Union had declared that they would efface any smaller unions which dictated to them. The Association therefore issued a counter manifesto, complaining of the treatment received by the riggers, and protesting against the proposed strike. After this the cause of complaint against the Seamen's Union to a great extent ceased (1). The Clyde Federated Ship Riggers' Association was formed in 1872, and is federated with the London society, and with all the principal ship riggers' associations in the United Kingdom (2). The Greenock Ship Riggers' Protective Association, formed in 1890, and the Liverpool Riggers' and Mariners' Trade Society, of which the rules date from 1891, are also federated with the London Riggers' Association (3).

(b.) Constitution and government.

(*b.*) The rules of these associations have been received. Each of them is governed by an executive consisting of a president, secretary, treasurer, three trustees, and a committee. In some cases there is also a vice-president and a minute secretary. In the case of the Liverpool Riggers' and Mariners' Trade Society, the president, secretary, and trustees form an Executive Council, with power to convene all special meetings. The Clyde Federated Ship Riggers' Association has a committee chosen from the Executive for the management of the "subsidiary fund." There is in each case a general meeting of the society, which is finally responsible for any alteration in the rules.

(c.) Entrance fee and contributions.

(*c.*) The entrance fee is from 5*s.* to 10*s.*, except in the case of the Clyde Federated Ship Riggers' Association, where it "varies from time to time." The usual contribution is 3*d.* a week (see *infra*, Table of Entrance Fees and Contributions, pp. 178–9).

(d.) Benefits.

(*d.*) Benefit funds exist only in the Loyal London United Riggers' Association, and the Clyde Federated Ship Riggers' Association. The former allows accident, dispute, and funeral benefit, the latter dispute and out-of-work benefit (see *infra*, Table of Benefits, pp. 178–9).

(e.) Dispute regulations.

(*e.*) These two associations have the same rule with regard to disputes, namely, that any member who has a dispute with an employer must give a written notice to the president or secretary, who summons the opposing party before the Committee. Appeal from the committee's decision may be made to a general meeting, when a majority of votes is binding on both sides. The chairman can order all members to cease work for the said employer until the dispute is settled. The Clyde Federated Ship Riggers' Association and the Greenock Ship Riggers' Protective Association have a further rule in common, that members who attempt to strike for a rise of wages without the sanction of the office-bearers and Committee, do so on their own responsibility. The Liverpool Riggers' and Mariners' Trade Society has a rule that if an employer victimises a member, or refuses to agree to the rules of the society, all members then working for him must leave work pending a settlement.

(1) Digest, Vol. II., pp. 45, 46. (2) Tabulated Rules, No. 180. (3) Tabulated Rules, No. 181; No. 182.

[§ 218 (f.)] (*f.*) Members of these associations are forbidden to work with non-members while members are available, but in the case of two unions, occasions of "sudden danger or calamity" are excepted from this rule. In each case there are regulations with regard to wages, hours, overtime, Sundays and holidays.

(f.) Other regulations.

(g.) Objects.

(*g.*) The objects of the Loyal London United Riggers' Association and of the Clyde Federated Ship Riggers' Association are "to protect the hours of labour, overtime, and meal hours, and to resist, by lawful combination, any infringement of the rules by the employer or other persons; to co-operate with other societies in maintaining the rights and privileges of the trade, and cultivating a friendly intercourse throughout the entire profession." The Greenock Protective Association substitutes for the first part of this statement the words, "to protect the interests of the operative portions of the profession against unjust innovations" (1).

Note.—With regard to the Shipping Federation and the National Amalgamated Sailors' and Firemen's Union, a series of statements and counter-statements were made which it was not found convenient to embody in the text. With regard to the Shipping Federation, it was stated by the secretary of the Sailors' and Firemen's Union and others:- (1.) That members of the Federation have refused to ship union men, and that its officials have insisted on non-unionists being shipped instead of unionists (2). (2). That in 1889 the Federation encouraged certain persons to throw discredit on the Sailors' and Firemen's Union, and subsequently subscribed for their defence on a trial for libel (3). (3.) That the Federation had shipped incompetent men without discharges, and men who were not seamen at all (4). (4.) That during the strike at Cardiff in 1891, men were brought there by the Federation on false pretences (5). (5). That Federation agents had taken money from boarding masters for shipping men (6). (6.) That men had been kept out of employment by being refused a Federation ticket (7). (7.) That the Federation attempted to beat down wages. (8.) That the Federation had agents abroad for engaging foreign seamen. (9.) That the Federation had supplied their labourers with revolvers on the occasion of the "Wade's Arms" strike. (10.) That the Federation employed a "gang of ruffians" for the purpose of dealing with unionists (8). (11.) That it was the object of the Federation to break up the Seamen's Union (9). In contravention of these statements, it was stated by representatives of the Shipping Federation: (1.) That it was no part of the policy of the Federation to give preference to non-union men (10) (2.) That the Federation did not exist in 1889, and had nothing to do with the defence of the persons referred to (11). (3). That the Federation had introduced no incompetent seamen into the mercantile marine, and that Federation tickets were never given to people without discharges, except in the case of boys (12). (4.) That the fact of the Cardiff strike was widely known at the time that the men here referred to were engaged, and that they had all stated that they were willing to take employment anywhere (13). (5.) That Federation agents had never been known to take money in return for employment, and any official reasonably suspected of doing so would be instantly dismissed (14). (6). That the Federation officials give tickets to all applicants who can show the requisite sea service, and that in the instance quoted to the contrary the facts were incorrectly stated (15). (7.) That the Federation had never interfered with the current rates of wages (16). (8.) That the Federation had never had a single agent abroad. (9.) That the Federation officials had no knowledge of their labourers being armed. (10.) That the Federation had never employed or heard of any such persons (17). (11.) That the Federation was simply a defensive union (18) With regard to the Sailors' and Firemen's Union, it was stated by the Secretary of the Union: (1.) That officials and members of the Union had never assaulted non-unionist seamen, or interfered to prevent them from signing articles at shipping offices. (2). That the Union had never called out crews who had signed articles. (3.) That the Union had established call offices on the Tyne for the convenience of shipowners in engaging seamen (19). (4.) That the action of the Union had increased the wages of seamen (20). On the other hand it was stated:—(1.) That in a large number of cases officials and members of the Seamen's Union had been convicted for assaults on non-unionists, and that the shipping offices, *e.g.*, at South Shields, Cardiff, Glasgow, and in London, had been systematically blocked by unionists to an extent which rendered police assistance necessary (21). (2.) That the secretary of the Union himself, and other officials, had been convicted of calling out men who had signed articles (22). (3.) That no trace could be found of such offices as the secretary described, and that shipowners had no difficulty in obtaining seamen (23). (4.) That the rise in wages in 1889 was due to the improvement in the shipping trade, and not solely or mainly to the action of the Seamen's Union (24).

[§ 218 (g).]

TABLE of Entrance Fees and Contributions

Tabulated Rules,

—	Hull Seamen' and Marine Firemen's Amalgamated Association. No. 171.	National Independent Seamen's and Firemen's Association, Liverpool. No. 172.	North of England Sailors' and Seagoing Firemen's Friendly Association, Sunderland. No. 173.	International Federation of Stewards, Seamen, and Firemen, United Kingdom. No. 174.	National Amalgamated Sailors' and Firemen's Union, United Kingdom. No. 175.	Union of Shipmasters and Officers, United Kingdom. No. 176.
Entrance fee -	The entrance fee is fixed from time to time by the Committee; but messroom stewards, ordinary seamen, and lads coming out of their time, may pay a minimum entrance fee of 2s. 6d.	The entrance fee is 2s. 6d. for ordinary members; but members of existing societies may be admitted free at the discretion of the Committee. Persons over 16 years of age, who have not previously been to sea, may be admitted as associates on payment of 2s. as entrance fee.	2s. 6d., or such an amount as the Committee may decide from time to time.	2s. 6d., or such other sum as the directors determine. Paid-up members of existing societies may be admitted without entrance fees.	The entrance fee is fixed from time to time by the Executive Council. Engineers, stewards, ordinary seamen, and boys, pay not more than 2s. 6d. Foreign seamen, showing one and a half year's British and two and a half foreign service, or two years' British and two foreign, are enrolled on the same conditions as British seamen. Otherwise, in addition to the entrance fee, they pay from 10s. to 1l., according to the length of their service in a British ship.	2s. 6d., which may be varied at the discretion of the governing body of the Union. All certificated British and Irish shipmasters and officers, all foreigners with masters' certificates for five, or first mates' certificates for one and a half consecutive years in British ships, are eligible as members at a single entrance fee. There is a scale for an increased fee for shorter service. British and Irish and foreign members, liable to a single entrance fee, may be enrolled without payment, on the understanding that they will exert themselves to get a ship as soon as possible, and on getting it, pay the entrance fee and three months' subscription in advance.
Contribution -	5d. a week for ordinary members, and at least 10s. 6d. a year for honorary members. If the funds fall below 1l. a member, and in cases of emergency, the Committee, with the consent of two-thirds of the members present at a general meeting, may raise a general levy.	1s. a month for ordinary members and associates, and at least 10s. a year for honorary members. If the funds are ever found to be insufficient to meet the expenses, the managing Committee has power to declare a levy, and to raise the entrance fee or contributions.	4d. a week, or such other sum as the majority of members decide.	Each member pays a contribution of 1s. a month. Boys over 16 years of age, who are admitted as associates, pay a subscription of 2d. a week. The various districts contribute to the general fund at the rate of ½d. a week for each member within the district.	6d. a week in advance. Engineers, stewards, ordinary seamen, and boys, have the option of paying 3d. a week, which will entitle them to half benefits. Any person who subscribes 500l. a year can be enrolled as an honorary member by a vote of two-thirds of the members present at a branch meeting convened for the purpose. The contribution to the optional sick and burial fund is from 1s. to 1s. 4d. a month, according to age, and to the optional widows' and orphans' fund, ½d. a week.	6d. a week, varied at discretion by the governing body of the Union. The contribution to the optional sick and burial fund is from 4d. to 6d. a week, according to age.

TABLE of Benefits granted

Tabulated Rules,

Benefit.	Hull Seamen and Marine Firemen's Amalgamated Association. No. 171.	National Independent Seamen's and Firemen's Association, Liverpool. No. 172.	North of England Sailors' and Sea-going Firemen's Friendly Association, Sunderland. No. 173.	International Federation of Stewards, Seamen, and Firemen, United Kingdom. No. 174.	National Amalgamated Sailors' and Firemen's Union, United Kingdom. No. 175.
1. Accident - -	5s. a week for 26 weeks. In case of shipwreck, the Committee or general meeting determines the amount of compensation.	20s. a week for five weeks; 15s. a week for five weeks; 10s. a week for five weeks.	—	—	A sum not exceeding 20l., in weekly instalments of 10s., unless the Council sees fit to pay it in a different way.
2. Dispute - -	The Committee, or a meeting summoned for the purpose, determines the amount to be paid each week to members who are on strike, or victimised by the employers. Legal assistance may also be granted to members with a good claim or defence.	Legal assistance may be given when considered necessary by the Managing Committee or secretary.	Such sum will be paid as the Committee of Management may think the funds of the Association allow of.	Such sum is paid as the district Committee, with the approval of the board of directors, may determine. Legal assistance is provided for members when deemed necessary by the district committee.	12s. a week, or 2s. a day, and 1s. a week for each child under 12 years of age. Victimised members receive not more than 12s. a week till work is obtained, or a lump sum of 20l. Dispute benefit is not allowed if the funds in hand are lower than in the proportion of 2s. 6d. a member. Legal assistance can be granted by the branch Committee.
3. Distress - -	—	For loss of clothes at sea, compensation not exceeding 2l.	For loss of clothes at sea, members may receive compensation not exceeding 1l. 10s.	For loss of clothes at sea, members may receive compensation not exceeding 1l. 10s.	For loss of clothes at sea, 2l.
4. Funeral - -	6l. - - - - - -	2l. for members of one year's standing, and an additional 10s. for every year of membership.	3l., or 4l. 10s., in case of member's death through shipwreck.	After one year's membership, 1l. 10s., and an additional 10s. for each additional year, up to a maximum of 5l.	10l. on member's death, but 4l. if his wife dies first, and the remaining 6l. on his own death.
5. Out-of-work -	—	—	—	—	—
6. Sick - - -	—	—	—	—	10s. a week for 16 weeks; 5s. a week for 20 weeks; 2s. 6d. a week for any further period at the discretion of the branch Committee.
7. Superannuation	—	—	—	—	After 20 years' membership, if disabled, a sum not exceeding two-thirds of the payments the member has made to the Union.
8. Travelling -	—	—	—	—	—

[§ 218 (g.)]

paid to Associations of Employed (Shipping).

Nos. 171–83.

Amalgamated Seamen and Tradesmen's Union, United Kingdom. No. 177.	Federation of Trades and Labour Unions connected with the Shipping, Carrying, and other Industries. No. 178.	Loyal London United Riggers' Association. No. 179.	Clyde Federated Ship Riggers' Association, Glasgow Branch. No. 180.	Greenock Ship Riggers' Protective Association. No. 181.	Liverpool Riggers' and Mariners' Trade Society. No. 182.	National Federation of Fishermen, United Kingdom. No. 183.
Must not exceed 2*s.* 6*d.*	—	7*s.* 6*d.*, which may be raised or lowered by the Executive from time to time. The entrance fee to the accident and burial fund is 2*s.* 6*d.*	The entrance fee varies from time to time. All boys serving their time as riggers are members without payment of any entrance fee.	5*s.* Boys under 18 years of age are admitted free; from 18 to 21, they pay 1*s.* entrance fee.	10*s.* - - -	1*s.*, subject to alteration by the Executive Committee from time to time. For other than British born subjects the entrance fee is 5*l.*
Not more than 3*d.* a week, subject to alteration by the Executive Council. Honorary members subscribe 10*s.* 6*d.* a year. The contribution to the optional sick and burial fund is from 1*s.* to 1*s.* 4*d.* a month, according to age.	Each organisation contributes ½*d.* a member at the commencement of each quarter.	3*d.* a week. If on the death of a member the funds do not amount to 10*l.*, a levy is raised on every member to raise the required amount.	3*d.* a week. Boys contribute for the first two years, ½*d.* a week; for the third and fourth, 1*d.* a week; for the fifth, 1½*d.* a week.	4*d.* a fortnight. Boys under 21 pay half contribution.	3*d.* a week - -	3*d.* a week. The contribution to the optional sick and burial fund is from 4*d.* to 5*d.* a week, according to age. Honorary members subscribe not less than 10*s.* 6*d.* a year. Levies may be made when the Executive thinks it expedient.

If totally disabled, 10*s.* a week, to be stopped as soon as the injury is seen to be temporary, but if permanent, to be continued up to 20*l.*	—	1*s.* a day, or 6*s.* a week for six working days, for not more than eight weeks from the date of the accident.	—	10*s.* a week for 10 weeks; 7*s.* 6*d.* a week for 10 weeks; 5*s.* a week for 10 weeks.
12*s.* a week, and 1*s.* a week for each child under 12 years of age. Victimised members receive 12*s.* a week till employed, or a lump sum of 20*l.*	12*s.* a week or 2*s.* a day, and 1*s.* a week for each child under 12 years of age. Victimised members receive not more than 12*s.* a week till work is regained, or a lump sum of 20*l.*, from which all previous weekly payments are deducted. No dispute benefit is granted if the funds are lower than in the proportion of 1*l.* a member. Legal assistance is granted at the discretion of the Executive Council.	Half time for all time lost until the settlement of the dispute.	Half time for all time lost until the settlement of the dispute.	Such sum is granted as is in accordance with the state of the funds, or as the Executive may determine. Victimised members receive not more than 1*l.* a week till they regain employment. Legal assistance is granted by the branch Committee subject to the approval of the Executive.
—	For loss of clothes at sea, a sum not exceeding 2*l.*	—	—	—
10*l.* on member's death, 5*l.* on death of his wife.	10*l.* on a member's death, but 4*l.* if his wife dies first, and the remaining 6*l.* on his own death.	5*l.* on the death of a member.	—	10*l.* at member's death, but 4*l.* if his wife dies first, and the remaining 6*l.* on his own death.
—	—	—	The books of members who are four weeks out of employment are cleared by the subsidiary fund. No other claim but the clearance of members' books can be granted unless there is 2*l.* in hand.	—
12*s.* 6*d.* a week for four months; 6*s.* 6*d.* a week for two months.	10*s.* a week for 16 weeks; 5*s.* a week for 20 weeks; 2*s.* 6*d.* a week for any further period at the discretion of the Committee.	—	—	The same as accident benefit.
After 15 years' membership, half the member's contribution, if disabled. After 20 years' membership, two-thirds of his contributions.	—	—	—	—
2*s.* a day for the first month; 1*s.* a day for the second month, to cease as soon as the member owes three months' contribution.	9*s.* a week for six weeks; 4*s.* a week for six weeks. The relief must be repaid as soon as work is obtained.	—	—	—

[§ 219.]

Joint Boards.

219. There are only two conspicuous instances of organisation of this kind in industries connected with shipping. These are the Southampton Free Labour Association and the Plymouth and District Free Labour Association, of similar constitution and method, and founded under similar circumstances.

(a.) The Southampton Free Labour Association, 1890.

(*a.*) The formation of the Southampton Free Labour Association immediately followed the dock strike of September 1890, by which the trade of that port was seriously menaced, though there was no adequate cause of dispute between the employers and employed. The employers proposed that an Association should be formed with the object of preventing the recurrence of a similar state of things. The proposal was warmly received by 1,000 or 1,200 workmen at a mass meeting of persons interested in the matter, held on the 20th of October 1890. The constitution and rules of the Free Labour Association were then settled and adopted. It was constituted as "an Association of workmen and employers in the port of Southampton, for their mutual benefit, and for maintaining and promoting the trade of the port." The members comprise 44 employers and firms, and up to January 1892 about 2,200 workmen had been enrolled, that is, practically the whole number of employers and employed connected with the unskilled waterside industries of Southampton belong to the Association. The Association is divided into two sections, the employers' section and the workmen's section. Each has its separate committee, and is represented on the Council. The workmen's section is divided into sub-sections according to the different branches of labour employed by the Dock Company, the wharf owners, and the steamship companies. Each of these sub-sections elects, at a separate meeting, a representative on the workmen's committee, and this election is free from any control or suggestion by the employers. The workmen's committee meets regularly for the conduct of business, usually once a month, and no employer or employer's representative attends any such meeting except by a special request from that committee. Any sub-section can use the office of the Association for a private meeting at any time, without interference on the part of the employers. The employers' committee is called whenever it is found necessary. The Council consists of 20 members, in equal numbers of workmen and employers. The workmen's representatives are nominated at the sub-sectional meetings, but all members are elected at the annual general meeting of the Association. The manner in which the Association acts is as follows: A body of workmen having a grievance for which their employer does not give them a satisfactory remedy, would instruct their representative on the workmen's committee to bring the matter before the next committee meeting for discussion. If the complaint is considered a legitimate one, the question is again brought before the employer in the name of the workmen's committee. Failing a satisfactory settlement, the workmen's committee is entitled to ask for a joint conference with the employers' committee in order to discuss the matter from both points of view, and arrive at a decision. In case the committees do not agree, a final court of appeal is provided in the Council, which is a sort of second chamber. The Association in this way acts as a board of arbitration for the settlement of disputes, but its decisions are not legally binding. The first object of the Association is to secure freedom of agreement between workmen and employers, and also freedom of communication between them without the intervention of outsiders, for the mutual consideration and settlement of all differences which may arise. The advantages of such an Association, it is pointed out, are that the interests of individuals are protected by the whole body of their fellow-workmen, and at the same time any measure which an individual may advocate is thoroughly considered by intelligent persons before any action is taken. Workmen and employers deal directly with each other, and the workmen's representatives on the committee and council are selected from those who have actual experience of the conditions of labour in each department. Again, when a question is placed before an employer by these representatives, the decision does not depend on his opinion alone, but is considered by a body of employers engaged in various though similar classes of trade. The Association provides an easy means of bringing workmen and employers together to discuss differences calmly instead of entering on a disastrous strike. The Association has, it is stated, already been very useful in promoting harmony and adjusting small matters, and has established its position as affording a means of communication between masters and men, and so tending to prevent strikes. It encourages a feeling of the real community of interest between employers and employed, and therefore both parties, it is stated, prefer it to the Union. There was at first an idea among some of the men that the Association might be used to reduce wages, but when the subject was introduced at a joint committee meeting, the employers disclaimed any such intention, and the idea was at once dispelled (1). A witness representing the Dock Labourers' Union denies, however, that the workmen place any great confidence in the Free Labour Association, and states that they "dare not speak out" at its meetings, and that they are in harmony with the employers only because they have been defeated and have no alternative. It is stated that membership of the Association is a condition of employment at the Southampton Docks, but this is denied by the honorary secretary of the Association (2). It is part of the work of the Association to act as a labour registry. It keeps a list of men unemployed, stating the kind of work required, and circulates it among employers. It has also established an accident fund, a sick fund, and a savings bank. The accident fund is primarily for the benefit of the casual labourer, who is "nobody's man," having no permanent employer to take an interest in him. Members while in work pay a penny a week, which insures them for that week, and in case of accident they receive 10*s.* a week for total disablement, and 5*s.* a week for partial disablement for 10 weeks. In a case of fatal accident the member's family receives 8*l.* The employers have a guarantee fund of about 1,000*l.*, in case the subscriptions should not meet the claims. The fund is administered by a committee consisting of three workmen and three employers, elected annually from the Joint Committee of the Association. The sick fund applies only to sea-going members, who are unable to keep up their subscriptions to the ordinary benefit societies. A subscription of 2*d.* a week secures a benefit of 10*s.* a week for 10 weeks during sickness on shore, and 5*s.* a week for a further period of 10 weeks. The savings bank is in connection with the Post Office, and receives deposits of 1*d.* and upwards, up to 5*l.* (3)

[§ 219 (*a.*)]

(b.) The Plymouth and District Free Labour Association, 1890.

(*b.*) The Plymouth and District Free Labour Association was formed after the strike which took place in the house-coal trade of that port in October 1890. It is an organisation of employers and employed, primarily for the settlement of disputes, and its constitution is almost precisely the same as that of the Southampton Free Labour Association. It has separate committees and a joint council. Disputes have frequently been referred to the council, but the only serious question before it has been that of the division of the work. Membership is open to everyone whose character is thought satisfactory, and preference of employment is given to those who hold a free-labour ticket. It is a rule of the Association that members shall work indifferently with unionists and non-unionists. The effect of the formation of the Association has been, it is stated, a material diminution in the amount of support given to the unions which exist in Plymouth (4).

(c.) Other joint boards.

(*c.*) In connection with the Cardiff, Penarth, and Barry Coal Trimmers' Association there is a "disputes committee" which acts as a board of conciliation. It consists of one colliery proprietor, one shipowner, and one trimmer, or representative of the trimmers. This body is said to have acted successfully in the settlement of disputes (5). At Hull there is a board of conciliation composed of an equal number of employers and of men representing the different unions, with an umpire whose decision is final. Up to February 1892 no dispute had yet been submitted to it. There is a similar board of conciliation in connection with the Leeds Trades and Labour Council, which represents all the trades of the district (6). An instance was mentioned of the entire failure of a scheme of joint organisation similar to that which has succeeded at Southampton and Plymouth. In August 1890 a Committee of the Cardiff Chamber of Commerce was formed with a view to establishing a board of conciliation which should remedy the "great disorganisation" at that time existing in trade. The scheme had been very carefully thought out by the dock owners, and handed to the workmen for their consideration. An Association was to have been formed, called the Bristol Channel Docks Association of Employers and Workmen, whose members were to nominate a joint committee equally representative of employers and employed, which should act as a referee on questions of forms of contract, wages, and general conditions of work. This scheme was accepted by the Cardiff Chamber of Commerce, but was frustrated by the refusal of the Trades Council of Cardiff as the representative of the

(1) Digest, Vol. II., pp. 15, 98, 99; Appendix 76. (2) Digest, Vol. II., pp. 17, 18. (3) Digest, Vol. II., p. 16; Appendix 77. (4) Digest, Vol. II., pp. 18, 19, 99. (5) Digest, Vol. II., pp. 21, 97. (6) Digest, Vol. II., p. 43; Digest, Vol. III., pp. 14, 16.

[§ 219 (c.)] trade unions of the district, to take any part in the formation of a board of conciliation on which non-unionists were to be represented. Since the aim of the promoters was to form a body which should be thoroughly representative of every class of labour which was then in a state of disturbance, the idea of excluding any section could not be entertained, and the attempt was abandoned (1).

RIVERS AND CANALS. Organisations of Employers. (a.) History and Extent.

220. (*a.*) The Association of Master Lightermen and Barge Owners, River Thames, was registered under the Trade Union Acts in 1890 (2). Its members number about 120, representing 97 firms. 4,600 barges, and 50 or 60 steam tugs are owned by members of the Association (3). They employ about 4,000 men and apprentices licensed under the Watermen and Lightermen's Act, exclusive of watchmen and labourers (4). As an instance of the combined action of the Association it was stated that on the occasion of a strike of watermen and lightermen in 1889, which affected only one firm, the whole of the firms belonging to the Association came forward and did the work of the firm that was threatened (5).

(b.) Constitution and Government.

(*b.*) The Association is managed by a general committee called the Council, which consists of 20 or 30 members of the Association, who are elected at the annual general meeting. The Council is intended to represent as far as possible the various branches of the lighterage trade. A president and three vice-presidents are elected annually from the members of the Council at the general meeting. There are also a treasurer, a secretary, two auditors, and two trustees. All questions before the Council are decided by vote, the chairman having a casting vote. The Council may appoint special committees, with power to appoint sub-committees from their number. At a general meeting each firm, company, or individual has one vote only.

(c.) Entrance Fees and Contributions.

(*c.*) Members pay an entrance-fee of 1*l.* 1*s.*, and an annual subscription of 2*s.* 6*d.* for each barge, with a maximum of 21*l.*, and a minimum of 1*l.* 1*s.* for the year.

(d.) Objects.

(*d.*) The objects of the Association are to protect the general interests of the master lightermen and barge and tug owners of the Port of London; to consider and deal with, for the benefit of members, all questions relating to lighterage, demurrage, rates and charges, wages of workmen, and all other matters of interest to the trade; to establish a central place of meeting for business purposes; to arbitrate, when requested by both sides, upon any question between any members of the Association, or between any member of the Association, his workmen, and others; and to regulate the relations between masters and workmen (6).

Organisation of Employed.

(a.) History.

221. (*a.*) No evidence was given as to the existence of any organisation of watermen and lightermen before the year 1870. A society then existed called the Thames Working Lightermen and Watermen's Protection Society, which in that year presented a petition against the transfer of the powers of the Watermen's Company to the Thames Conservancy. In 1871 the Society made an unsuccessful attempt to promote legislation for the purpose of altering the constitution and mode of election of the Court of the Watermen's Company (7). After that date nothing more is stated with regard to this Society, but by 1888 at the latest there was a new organisation under the same secretary, called the Amalgamated Society of Thames Watermen and Lightermen. The action of this society has, it is stated, been chiefly in the direction of enforcing the existing laws and regulations affecting the navigation of the river (8). According to the statement of the secretary, the expense incurred in the year 1890 in prosecuting under the Thames Acts was at least 1,000*l.*, but another witness alleged that the Society's balance sheet showed the amount to be considerably less (9). During the dock strike of 1889 the lightermen were necessarily thrown out of employment (10). When it was over they returned to work on the terms of Lord Brassey's award, which was accepted by the official representatives of the employers and the Union; but disputes have since occurred in which each side has accused the other of violating the terms of the award (11). The Society has 6,000 members, of whom 5,500 are subscribers, while the rest are "non-financial." They are all either watermen, or lightermen, duly licensed by the Watermen's Company, or apprentices, of whom there is a large number (12). The total number of licensed watermen and lightermen on the Thames is stated to be about 8,000 (13), excluding apprentices, who are said to number 1,493 (14). Immediately after the lightermen's strike in 1889, the Amalgamated Society of Foremen Lightermen of the River Thames was [§ 221 (a.)] formed. It was due to the action of the members of the Amalgamated Society of Thames Watermen and Lightermen, who objected to working under foremen who did not belong to their union. The foremen were not disposed to join it, and therefore formed a society of their own. It contains nearly 300 members, or very nearly the whole of the men employed in the business (1). In the same year was formed the Amalgamated Tug Boat and Ferrymen's Union, whose members are chiefly what are called deep-sea tugmen, employed in towing ships in the Channel. A year after its formation, the Union obtained by negotiation an increase of wages varying from 3*s.* 6*d.* to 10*s.* a week, according to the different scales of payment. At first, it is stated, the relations of the society with the employers were very friendly, but after about a year and a half the tug owners on the Thames began to oppose it, and "in some cases they have intimidated the men not to belong to the society," and have employed non-unionists in preference. The society itself has never had any collision with the employers nor conducted a strike. It has never had any dispute on the subject of working with non-unionists. The society has 570 members in London. The total number of deep-sea tugmen on the Thames is stated to be about 740. There are small branches of the Union in Liverpool and other ports (2). The Thames Steamship Workers' Union was also formed in 1889. It is federated with the Federation of Trade and Labour Unions. It consists of three branches, with a total membership of 800 or 900, composed of men who load and discharge steamers in the coasting trade. They are not dock labourers, but work on ships which load and discharge by means of barges (3). Another association affiliated with the Federction of Trade and Labour Unions, is the Non-Freemen of the River Thames, Wharf, Dock, and Canal Boatmen's Labour Protection Society. The date of its establishment is not stated, but its present rules were registered in 1892 (4). The number of members is said to be 854, and, according to one witness, it includes very nearly the whole number of non-freemen, but another estimated the latter at about 3,000 (5). There is also a society called the Amalgamated Society of Engine Drivers and Firemen, which consists of about 700 members, chiefly employed on steamboats on the Thames. No details of its history or constitution have been given (6). In 1889, several associations of watermen and lightermen were formed on the Mersey and the Medway. The Mersey Flatmen's Association was founded in March 1889, and registered in 1891. It obtained advances of wages in 1890 and 1891, after very slight stoppages (7). It is stated that disputes were frequent before its formation (8). It has five branches, two at Liverpool, one at Birkenhead, one at Widnes, and one at Sankey Bridge. The number of members is about 1,100, including captains, mates, and boys over 14 years of age. There are, it is stated, not more than 100 non-unionists in the district. The great majority of the men belong to this or to some other union (9). The Upper Mersey Watermen and Porters' Association, also founded in 1889, has its headquarters at Runcorn. There are branches at Liverpool and Burscough Bridge, and two in Manchester. It includes men working on the Bridgwater, the Rochdale, the Leeds and Liverpool, and the Manchester, Sheffield, and Lincolnshire Canals, and on the Mersey between Liverpool and Warrington. The number of members is 1,035, that is, more than half the number of watermen in the districts covered by the association. There are no non-unionists in the district (10). The Burscough branch was founded in February 1892, and three-fourths of the boatmen in the district were enrolled in it within a month. The branch has applied to the employers for a reduction of hours, but without success (11). The Association has never attempted to enforce any of its demands by strikes (12). The employers have refused to meet the officials of the union (13). The United Bargemen and Watermen's Protection Society (River Medway) was established in October 1889. The first movement of the union was a strike in March 1890, in the brick manufacturing districts, by which a 10 per cent. rise of wages all round was gained. The majority of the brick manufacturers are decidedly hostile to the union, and have done all they could to break it up. The Brickmasters' Association "totally ignores" the

[§ 221 (a.)] society, and will not meet its officials. On the whole, however, it is stated that since its formation "the position of the men with the firms" has improved. In the cement manufacturing districts on the Medway, the union has, it is stated, brought the men "an advantage of 15 or 20 per cent." The cement manufacturers in 1890 met representatives of the men on a committee, which, however, afterwards fell through. The society has about 800 members. In 1890 more than two-thirds of the men engaged in the industry belonged to it, but the number decreased considerably during the year 1891–92, partly through pressure brought to bear by the employers, partly through the apathy of the men themselves, who drop out of the union in order to share in the advantages gained by combination without paying for them. The districts included in the society are from Tonbridge to Faversham, in Kent, and from Vange to Burnham, in Essex (1). Before the formation of the present organisations in the Humber district, there was a union called the Lightermen and Watermen's Protection Society, which existed from 1872 to 1885. The wages earned by its members were very fair till 1885, when the society was changed into a sick club, and shortly collapsed. Wages then went down, and remained low, the men being wholly disorganised, until 1890, when the Society of the Lightermen and Watermen of the River Humber was formed. A revised scale of wages was then sent in to the lighter owners, who sent back an amended version which the Society could not accept. The subject was then discussed by a joint deputation, and an amicable understanding was reached, but the owners did not abide by it. A strike then took place which was settled by arbitration. In the same year the Society sent in a revised scale of wages to the manager of the Trent Navigation Company, with an offer to send a deputation to discuss it, which in this case was refused. The result was a lock-out of the men employed by the Trent Navigation Company, of whom about 80 belonged to the Union. After 17 weeks, the company came to terms, and the men's condition improved. The lock-out cost the Union all it had(2). The Union has occasionally approached the employers with requests for safety appliances and other improvements in accommodation on board the lighters, but without success (3). This society is federated with the Federation of Trade and Labour Unions. It is stated that there are probably not a dozen lightermen in Hull who do not belong to it, or to the Dockers' Union. The numbers belonging to these two unions respectively are stated by one witness as 500 and 300, but another states that 300 or 400 out of 1,000 men belong to the Lightermen's Society, and the remainder to the Dockers' Union (4). The number of non-unionists in the Humber district generally is said to be 600 or 700 (5). There is also a society called the Amalgamated Society of Watermen and Lightermen of the River Humber, whose members, it is stated, number 1,000 or 1,100, but no details have been furnished with regard to it (6). The Watermen and Riverside Labourers' Union, in the Leeds district, was formed in 1890. It has conducted one strike, on a demand for increased wages. There was no disturbance during the dispute, and after a fortnight the masters agreed to make the concession required. The effect was, however, that many members who were unused to organisation left the Society, because they had not obtained all that they expected, but it is hoped that they will come back. On other occasions the advance asked for by the Union has been conceded without a strike. The Union has about 120 members, who are employed as watermen and general labourers on the Leeds and Liverpool, and the Aire and Calder Canals (7).

[§ 221 (a.)] The Weaver Watermen's Association has its headquarters at Winsford, in Cheshire. Its members are employed in navigating steam barges, or in taking charge of barges towed by steam (1).

(b.) Constitution and government.

(*b.*) Of these organisations, only three have supplied copies of their rules: the Mersey Flatmen's Association, the Thames Non-Freemen's Labour Protection Society, and the Thames Steamship Workers' Union. Each of these is governed by an executive council or committee consisting wholly or in part of delegates from each branch (2). In the case of the two former societies, this council includes in addition, a president, who has a casting vote, a vice-president, two secretaries, and a treasurer, with trustees and auditors (3). In the case of the Thames Steamship Workers' Union, each branch sends five members, including a chairman and secretary, to the executive council, who then appoint a general chairman and secretary from their number (4). In the case of the Mersey Flatmen's Association and the Non-Freemen's Society, the supreme authority is vested in a general meeting, which has sole power to make or rescind rules. Branches are governed by a body of officials similar to those of the central organisation (5).

(c.) Entrance fees and contributions.

(*c.*) In each of these three societies the entrance fee is 1*l.*, and the contribution 3*d.* a week. (See *infra*, Table of Entrance Fees and Contributions.) Members who are a given number of weeks in arrears are fined, or suspended from benefit, or both, and if payment is not made within a further stipulated period they are expelled.

(d.) Benefits.

(*d.*) The Non-Freemen's Society grants dispute and funeral benefit to its members, while the Mersey Flatmen's Association grants dispute benefit only, and the Thames Steamship Workers' Union funeral benefit only. (See *infra*, Table of Benefits, page 183.)

(e.) Dispute regulations.

(*e.*) In the case of the two former there are special regulations affecting disputes between employers and employed (6). It is provided in the Mersey Flatmen's Association that members must take no steps in such a case without the consent of the general secretary or Executive Council (7). The Non-Freemen's Society has a rule by which the branch affected appoints a dispute committee to lay the matter before the Executive Council, who refer it to arbitration. The society endeavours to form boards of arbitration for this purpose (8).

(f.) Regulations with regard to non-unionists.

(*f.*) In some cases there are rules with regard to the attitude of members towards non-unionists. Members of the Mersey Flatmen's Association are forbidden to lend their cards of membership to non-unionists, under penalty of expulsion for the second offence (9). The Society of Lightermen and Watermen of the River Humber forbids its members to work with non-unionists, and the Thames Steamship Workers' Union has a rule to the same effect, with the qualification, "if unionists are available" (10). The Amalgamated Tug Boat and Ferrymen's Union and the United Bargemen and Watermen's Protection Society allow their members to work with non-unionists, and the latter has a rule against coercive methods of bringing in members (11).

(g.) Objects

(*g.*) The objects of these societies, so far as they are stated, are for the most part simply the regulation of wages and conditions of labour. The Mersey Flatmen's Association desires "to promote a good understanding" between employers and employed (12). The Amalgamated Society of Thames Watermen and Lightermen was established for the express purpose of securing a more adequate test of competency for watermen and lightermen, and with this object it recommends the reconstitution of the Watermen's Company (13).

Fairbairn, 7482.

TABLE of Entrance Fees and Contributions paid to Associations of Employed (Rivers and Canals.)

	Tabulated Rules, Nos. 184, 185, 186.		
	Mersey Flatmen's Association.	Non-Freemen of the River Thames, Wharf, Dock, and Canal Boatmen's Labour Protection Society.	Thames Steamship Workers' Labour Protection League.
Entrance fee - - -	1*l.*, subject to alteration by the Executive Council.	1*l.*, subject to alteration by the Executive.	1*l.*
Contribution - - -	3*d.* a week. Levies may be made on all members when the Executive deems it necessary.	2*d.* a week and 3*d.* a quarter. A levy is raised by the Executive every quarter to pay funeral benefits, and a levy is also made in case of strikes.	3*d.* a week. There is a levy of 6*d.* on a member's death.

TABLE of Benefits granted by Associations of Employed. (Rivers and Canals.) [§ 221 (g.)]

Benefit.	Tabulated Rules, Nos. 184, 185, 186.		
	Mersey Flatmen's Association.	Non-Freemen of the River Thames, Wharf, Dock, and Canal Boatmen's Labour Protection Society.	Thames Steamship Workers' Labour Protection League.
Dispute	Members receive the full support of the Association. Victimised members are supported according to the decision of the Executive Council.	10*s.* a week; if sanctioned by the Executive, the amount is increased by levy. Victimised members receive compensation as the Executive thinks fit.	10*l.* on a member's death.
Funeral	——	10*l.* on member's death, and 5*l.* on the death of his wife. Members are not allowed funeral claims for more than two wives, and the second wife must be registered.	——

2. CONCILIATION, ARBITRATION, AND MEDIATION.

Conciliation.

222. With regard to the general question of the efficacy of joint committees or boards of conciliation as a means of settling disputes, a great variety of opinions have been expressed, but on the whole it may be said that representatives of the employed are in favour of such a method, while the majority of employers state that they prefer direct and informal negotiation between the actual parties to a dispute, rather than any prearranged machinery of decision (1). One of the latter, however, the manager of the Millwall Docks, approved of conciliation boards on the lines of those which already exist in the north of England (2), and an employer of dock labour at Plymouth also approved of conciliation if introduced at an early stage of the dispute (3). The choice of representatives of the employed on a conciliation board is a matter of controversy. Witnesses representing trade unions maintain the right of unionist workmen to conduct negotiations with their employers through the officials of their society, and the Hull conciliation board is formed on this principle. Some recommend in addition that the employers should be organised, and should negotiate only through official representatives. On the other hand objections are made to official representation of either side, and several witnesses, both employers and employed, insist very strongly, for practical reasons, that the men actually employed in the work in question are the only suitable persons to discuss its conditions with the employers. The latter, it is stated, prefer in most cases to "meet the men themselves," irrespectively of the union. It appears, however, that the experience of different witnesses has varied considerably with regard to the adaptability of trade organisations to purposes of negotiation. A further question arises from the alleged difficulty of securing compliance with the decisions of a board (4). It is proposed by one witness to meet this difficulty by the institution of boards of conciliation with legal powers to adjudicate finally on rates of wages or any other question in dispute (5). In the opinion of another witness a board of conciliation established by Act of Parliament should have no power to give judgment between the disputants, but should direct its attention mainly to eliciting a true statement of the facts of the case, for the information of the public as well as of those immediately concerned (6).

Arbitration.

223. Arbitration, or the reference of a dispute to persons not directly concerned, is a mode of settlement with regard to which very different opinions have been expressed.

(*a.*) Favourable opinions.

(*a.*) A large number of witnesses representing the employed were in favour of the general principle, though differing on questions of method (7). Instances were mentioned in which arbitration had been found successful, sometimes after the failure of other and less formal attempts at settlement. Thus the London dock strike of 1890 was settled by the arbitration of intermediaries who made an arrangement with the Dock Companies on behalf of the men, and it was stated that the award was still practically upheld in its entirety (8). In September 1890, the Union of Lightermen and Watermen of the River Humber met the employers on a joint committee for the discussion of a revised scale of wages, and the matter was amicably settled. However, at a general meeting of the lighter-owners, the action of their deputation was repudiated, and the men accordingly ceased work, and offered the owners a fresh scale or an appeal to arbitration. The owners submitted to arbitration, and the dispute was immediately settled. The men gained by the award, which has since remained in force (1). The Conciliation Board of the London Chamber of Commerce has also arbitrated with success. On one occasion it settled a dispute "after an hour's discussion," and the question has never since been re-opened (2). One witness representing the Dock, Wharf, Riverside, and General Labourers' Union, stated as the general result of his experience, that the decision of an impartial abitrator was always accepted by the men (3).

(*b.*) Unfavourable opinions.

(*b.*) Several of those witnesses, chiefly employers, who opposed the principle of arbitration, did so on the ground that a simple discussion of differences between employers and employed, with a view to an amicable arrangement, is preferable to any formal and compulsory method of settlement. To resort to the latter is apparently regarded as an admission of the existence of antagonism, and is therefore unacceptable to those who wish to ignore that point of view, and to promote mutual confidence between employers and employed, on the ground of a common interest. It is maintained, moreover, that when a question of conditions of labour is in the hands of those who have actual experience of the work, it is wholly unnecessary to bring in experts from elsewhere. Those who are immediately concerned necessarily understand the details of the subject better than any outsider (4). An instance was given in which arbitration was thought to have been detrimental to trade. In 1889 a strike of Thames lightermen and watermen was settled by arbitration under Lord Brassey, on the basis of a statement of the views of both parties, and of an agreement already made between them. The award was accepted by the official representatives of the employers and the Union respectively, but it was stated that it had been made without sufficient regard to the circumstances of the trade, and that the transhipment business of the port of London had been considerably injured in consequence. The tendency of this business to divert to Continental ports had already set in, and from that time, it is stated, it developed into a rush (5). It was also objected against arbitration that its machinery is too cumbrous for cases where speedy decision is essential (6). It was proposed that in preference to arbitration, an official investigator of disputes should be appointed, who should be thoroughly well-informed and impartial, and have power only to report to the Board of Trade or of Agriculture. This would prevent the intervention of untrained investigators, and the report of such an official would assist the press in forming a correct opinion of the merits of a dispute (7).

(*c.*) Practical difficulties.

(*c.*) The difficulty of upholding awards was recognised as a practical objection to arbitration, both by those who advocated and those who opposed it on grounds of

[§ 223 (c.)] principle. It was mentioned, for example, by one of the former, that in January 1890, Mr. Thomas Scrutton, of the Chamber of Shipping, drew up an agreement on behalf of six shipping or coasting companies: the General Steam Navigation Company, the Hermitage Company, the Carron Company, the Dundee Company, the Aberdeen Company, and the Irongate and St. Katherine's Wharf. This agreement fixed a certain rate of wages for the men employed on boats and wharves, but it was stated that some of the employers had broken through it without notice (1). Another instance was given of the infringement of an award by employers, in the case of a dispute in 1891, between the cement manufacturers on the Medway and the Bargemen and Watermen's Society, which was settled at the Conciliation Board of the London Chamber of Commerce. It was stated that the men had adhered to the award in every instance, but that the employers had done all in their power to evade it (2). On the other hand, a witness stated that he had known two or three cases in which the men had thrown up an award which did not suit them, though the employers had considered themselves bound by it, and that he was therefore forced to the conclusion that arbitration was useless (3). Another witness pointed out that decisions would not be so readily enforceable on the employed as on employers (4). As a means of meeting this difficulty it was suggested by some witnesses that the award of an arbitration board should be legally binding on both sides for an indefinite time, and by others that it should be binding for a limited period, a month or a year. It was proposed to enforce it on the employed by a fine imposed by their unions; or, according to another scheme, the unions should be under contract to support the decisions of the board by supplying the places of workmen who should refuse compliance. On failing to do this they should be sued for breach of contract.(5) Other witnesses dwelt chiefly on the support which the arbitrators would derive from public opinion, and regarded it as unnecessary that powers of compulsion should be vested in the Board (6).

(d.) Methods. (i.) State arbitration.

(*d.*) (*i.*) With regard to methods of arbitration, the point at which opinions diverged was that of the desirability of a "State Board." The secretary of the Dockers' Union advocated the establishment of a State board of arbitration, with power to intervene in all disputes, and to pronounce decisions which should be binding upon employers and employed. It should have no initiatory power to fix wages, but should form a court of appeal in cases of difficulty and in questions arising under the Employers' Liability Act. There should be such a board in every district, with sections for dealing with each specific difference between employers and employed. Connected with it there should be "an authority" in contact with the working life of that particular district, for the purpose of collecting data. It is thought that such a system would encourage the men to bring forward their grievances, and would oblige employers to negotiate. Several witnesses concurred in this view. [§ 223 (d.)]

(ii.) Compulsory arbitration not under State control.

(*ii.*) The Secretary of the Federation of Trade and Labour Unions suggested in preference an arbitration board not under State control, on which employers and employed should be equally represented. The board should elect a chairman, who should have a casting vote in the election of an umpire. It should have legal power to settle the rate of wages, or any other question in dispute. A fair rate of wages should be determined by an inspection of the employers' books, which they should be compelled to produce. The interest allowed on an employer's capital should be based on the existing rate of interest on Consols, with a reasonable allowance for the risk of private enterprise. (1) One witness proposed that a Government official appointed for the purpose should have power to compel the parties to a dispute to submit their case to arbitration, but that the arbitrator should be appointed by the employer and employed. (2) With regard to the question of the establishment, in any form, of boards of arbitration with legal powers to adjudicate on disputes, an unfavourable opinion was expressed on the part of a section of employers not wholly opposed to the principle of arbitration, namely, the Leith Shipowners' Society. They would think it necessary at any rate that before such a scheme were accepted, the powers of such a board and the terms of submission should be very clearly defined, and the competence of its members ensured (3).

Mediation.

224. In the evidence under consideration no instance was mentioned of mediation pure and simple, that is, the spontaneous intervention in a dispute of a third party not called in by the disputants. The Mansion House Agreement in 1889 was the result of negotiations which had the appearance of mediation, but which were in fact conducted by persons called in by the men on strike and acting on their behalf (4). The witness who advocated the appointment of an official investigator of disputes, with the object, as he stated, of superseding the untrained intermediary, apparently wished to imply an objection to mediation, as a means of settlement (5).

C. TRADE DISPUTES.

1. GENERAL RELATIONS BETWEEN EMPLOYERS AND EMPLOYED.

GENERAL RELATIONS BETWEEN EMPLOYERS AND EMPLOYED.

(a.) Influence of trade organisations.

225 (*a.*) It is apparent from the evidence that in most of thetrades here dealt with, the frequency of strikes has increased in recent years, and this tendency to dispute is attributed by many witnesses to the growth of the "new unions," with which it has coincided in point of time (7). Cases are given in which employers never had any trouble with their men until the formation of one of these unions, and protests have been made against their policy as detrimental to friendly relations between employers and employed (8). On the other hand, in cases in which personal relations between employers and employed either did not exist or were of an unsatisfactory character, the intervention of the union appears to have assisted in bringing about an understanding (9), and there are employers and others who state that it is far more satisfactory to deal with an organised body than with an unorganised and irresponsible mass of men (10). The view of many employers was expressed as follows by a representative of the shipowning interest: — "We are glad to have combinations of workmen, but a combination must act within certain fair, right, legal, and reasonable bounds, and wherever it oversteps those bounds it is becoming a tyranny of a very serious character." Trade unions, according to this witness, are very good things so far as they ameliorate the condition of their members, and afford a centre for the representation of the men in wages disputes; but when a union says that none but its own members shall be employed in the trade, then unionism becomes "a despotism of a most objection-"able kind"(6). The manager of the Millwall Docks, while approving most strongly of the organisation of labour, and regretting that union executives had not more power over the men, deplored the tendency of unions to federate for the purpose of sympathetic action in disputes, and regarded such action as an injustice which employers might fairly resist, and with every chance of success (7). There is a theory, however, maintained by some of the representatives of unions, that all that is needed to counteract the tendency to strikes is stronger organisation and more extensive federation, and that the object to be attained is a balance of power between organised employers and organised workmen (8).

(b.) Causes trade disputes.

(*b.*) The majority of strikes mentioned both in the oral and written evidence arose out of a question of wages, and those directly concerned with questions of hours and other conditions of labour appear to have been very few and slight (9). A large number, however, and those among the most important, have been due to questions of principle, such as that of working with non-unionists or of supporting the position of a federated organisation. This is peculiarly the case in the shipping trade (10).

2. SPECIAL STRIKES.

226. (*a.*) The London dock strike of 1889 has been described as a revolution, marking a new era in the history of labour. It was the beginning of a great disturbance in the labour market, and the attitude of the press and the public towards it was something unprecedented (1). The grievances which led to it were connected both with wages and hours, and other conditions of labour. It was a strike for an advance of wages from 5*d.* an hour to 6*d.* an hour with 8*d.* for overtime, but it is also stated that it was "more than anything to bring about some regularity in the work"; to secure employment for at least four hours at a time (2). The plus or bonus system of payment for piece-work was also mentioned as "really the cause of the beginning of the strike." The demand of the men with reference to this was that their representatives should be allowed to examine the Dock Company's books and check the payments (3). Another grievance is said to have been "the overbearing behaviour of the petty dock officials" (4). The strike was preceded for about two years by a series of attempts on the part of the men or their representatives to bring about a conference with the employers, but the Dock Companies, it is stated, refused to meet the representatives, or to believe that any discontent existed. The secretary of the Dockers' Union believed that the strike might have been averted by a conference, and therefore considered that the whole responsibility of it rested with the Dock Companies (5). The strike broke out very suddenly on the 15th of August 1889, beginning in one dock, and spreading to others (6). The docks directly concerned were those under the control of the Joint Committee of the Dock Companies, namely, the London and St. Katherine's Dock, the India Docks, the Royal Victoria and Albert Docks, and the Tilbury Docks (7). Sympathetic strikes followed at the Millwall Docks, and about a week later at the Surrey Commercial Docks, and at the wharves all along the river. The stevedores throughout the docks also struck in sympathy with the dock labourers; their action was spontaneous, and was taken without a formal consultation, but when their association met on the same evening, a unanimous vote was passed that no member should enter the dock gates till the labourers received what they demanded (8). The corn porters on the south side joined in the strike to regain the rate of wages which had been paid in 1871 (9). The strike was conducted by a committee representing the whole of the trades connected with the shipping industry (10). It lasted till September 14th, and paralysed the shipping and dock trade of London for six or seven weeks (11). It is stated that the majority of those who struck were non-unionists, but "became union men afterwards" (12). During the strike the officials of the Dockers' Union had several discussions with the Dock Companies, and the latter admitted the claim of the men to 6*d.* an hour as valid, but proposed to deduct 3*d.* for meal time, which was half an hour. The Dock Companies also admitted the claim of the men to four hours' minimum employment, and the right of representation, and indirectly indicated that they were willing to negotiate with the Union and with the men in all contracts (13). The strike was finally settled by the Mansion House Agreement, which was drawn up by persons acting as intermediaries on behalf of the men. By the terms of that agreement the strikers were to resume work at an advanced rate of 6*d.* an hour, with 8*d.* an hour overtime. Sub-contract work was to be changed into piece-work, but with a guaranteed minimum wage of 6*d.* an hour. There was to be payment for meal-times in the case of piece-work, but not of day-work. Men taken on were not, as a rule, to be discharged with less than 2*s.* pay. It was also undertaken that no resentment should be shown by the strikers to men who had not struck, or by the employers to the strikers (14). It is stated that on the whole the men carried out the terms of the settlement, but that the Dock Companies departed from it by closing their books against the representatives of the men. It is explained, however, by another witness that this occurred in consequence of a change of system from piece-work to day-work, by which representatives were rendered unnecessary, and that the agreement which was then terminated was merely a subsidiary agreement made on the 4th November 1889 (15). In the Surrey Commercial Docks, after the meeting of the Mansion House Committee, the remaining points in dispute were settled between the manager and chairman and a deputation of the men (1). The wharfingers had no part in the agreement, but were obliged in most cases to adopt its terms (2). There was less overtime worked in the docks after the strike, and employment was somewhat steadied by an increase of the permanent staff, and by the introduction of a classified list of non-permanent men (3). It is stated, however, with regard to the Surrey Commercial Docks, that the regulations of the Union since the strike have put a stop to the transfer of labour from one department to another according to the pressure of work, and that employment is, therefore, less evenly distributed than before (4). It is also stated that the effect of the strike in these docks was to increase the disposition of the men to ventilate trifling grievances, but that no actual friction had resulted (5). In the Millwall Docks things went on much more smoothly after the strike than before, because it became the practice to employ only union men (6). With regard to the docks under the Joint Committee, it is stated that for some 12 months after the strike the relations between the Dock Companies and the Dockers' Union were much improved, but that the subordinate officials placed obstacles in the way of harmonious working (7). After the strike there were numerous small strikes and difficulties in wharf labour, chiefly to enforce the adoption of the Mansion House agreement. In most cases the men obtained a settlement on their own terms, but some of the Union delegates were left out of work. At St. Bride's Wharf, immediately after the great strike, there was a strike for payment for the meal-time half hour, which the men received after a few days, but the proprietors soon afterwards introduced a contract system under which there was no meal-time pay. In January 1890 there was a strike at Hay's Wharf for meal-time payment for the day labourers, who had understood that they were to receive it, notwithstanding the Mansion House agreement (8). It is stated, however, that the men came out unwillingly at the instigation of the Dockers' Union, without previous negotiation (9); on the other hand it is stated that after the failure of negotiation the men came out of their own accord, and that the executive of the Union had then no power to forbid a strike. The matter was brought before the Conciliation Board of the Chamber of Commerce, but without avail (10). The men were given a week to come back, but very few did so. The strike did not succeed, and most of the men lost their employment altogether (11). The shipping firm of Messrs. Gray, Dawes & Co. had continual disputes with the stevedores in their employment at the London Docks between September 1889 and February 1891 (12). At the Victoria and Albert Docks strikes became very frequent after the shipowners took over the work in 1889, though the men had asserted throughout the great strike that they would much prefer to deal directly with the shipowners (13). With regard to the general result of the strike, it is stated that the position of the regular dock labourers, especially the permanent men, has improved, though that of the casuals has deteriorated (14). The increase in wages attracted a better class of men, but it is stated that work became less abundant, and earnings therefore decreased on the whole (15). The indirect loss incurred by the Dock Companies it is "impossible to put into figures." In one instance there was a direct payment of 5,000*l.* (16), but the effect was chiefly shown in a reduced dividend owing to the increased cost of labour (17). A great deal of tonnage was diverted from the port of London during the strike, but the diminution for the whole year was not, it is stated, very serious, and by 1891 the effects had almost passed away. The coasting and transhipment trades are said to have suffered most, but the latter had been falling off for some time (18). One witness stated that the tonnage of London was still falling off in 1891, through the increased expense and delay in handling cargo (19).

[§ 226 (*a.*)]

(*b.*) In September 1890 there was a general strike of the dock labourers in the port of Southampton. The men were called out, it is stated, by a certain William Sprow, who was acting as an agent of the Dock, Wharf, Riverside, and General Labourers' Union, of which a branch had recently been formed in the port. It is stated that there was at that time no question between the employers and the men about which a strike could properly be

(*b.*) *Southampton*, 1890.

§ 226 (b.)] declared. An advance of wages and a reduction of hours had been granted about a fortnight before. The Dockers' Union had been very active for some little time, but the advance of wages was independent of its influence. The Union was never recognised by the employers, who had never entered into any negotiations with the Union officials, preferring to deal directly with their men. The only pretext for a strike was this refusal to recognise the Union (1). According to another account, however, the rise of wages granted at this time by the Southampton Dock Company was the direct result of the applications addressed by the Union to the Southampton employers generally, though the Union itself was not recognised, and all negotiations were conducted directly by the men (2). On Sunday, September 7th, the Dock Company's officials called a meeting of permanent and casual labourers inside the docks. A report was spread that a reduction of wages had been proposed at this meeting. The Dock Company's men immediately struck in protest, without any notice whatever, and those working for other employers joined in from sympathy, notwithstanding a message received some weeks before from the Union executive, stating that a strike would not be sanctioned. On Monday, the 8th, the strike was fairly widespread, and on Tuesday it was general. While it lasted there was a great suspension of the work of the port, and only the South Western Company's boats running to the Channel Islands were able to get off. According to one witness, "this very serious state of affairs was aggravated by a considerable amount of disorder in the streets." It is stated on the other hand that, though the men congregated at the dock gates, there was no disorder and no attempt to interfere with the passenger traffic or the transit of goods, until the station yard was opened and an engine driven among the people, one of whom stopped it to prevent disaster. At this point the mayor telegraphed to Portsmouth for troops, and called out the fire brigade and the police. On the 10th the Dockers' Union in London sent Mr. McCarthy as their representative. He told the Union officials at Southampton that the strike was entirely against the rules and could not be recognised. He also sent a message to the Dock Company and other employers, announcing that he had been sent to close the strike, but they refused to allow him an interview. He therefore led the men about the town "to keep them out of mischief," and when they were tired sent them home. On the next day, the 11th, it was generally known that the London executive did not sanction the strike, and that no strike pay would be given, and the men began to go back to work on Friday the 12th. By Saturday the whole difficulty was at an end. Mr. Sprow, the Union member in charge of Southampton, received three months' imprisonment for intimidation. It was quite clear, in the opinion of the employers, who held several meetings during the strike to consider the matter, that work had been suspended for a wholly inadequate reason by the officer of the Union, and also that the Union had given no monetary support. It afterwards appeared that a certain amount of money was distributed among the men out of their own subscriptions to the Union, and not from headquarters, where it was distinctly stated that the strike was called without authority. It was believed that Mr. Sprow was aware of this, but hoped that if the strike succeeded the Union would endorse his action (3).

(c.) *Plymouth*, 1890. (c.) In October 1890 a strike occurred in the house-coal trade of the port of Plymouth. A few months before, the Dockers' Union, the Bristol and West of England Labourers' Union, and the National Gasworkers' Union had established themselves in Plymouth and enrolled a great many members. They then began to "make the men dissatisfied with the conditions under which they were working," and supplied copies of their by-laws to various merchants. The Coal Merchants' Association, though not wishing to recognise the Unions as such, were anxious that the harmonious relations between employers and employed should not be disturbed. They held several meetings with representatives of the three Unions, and also with the workmen themselves. It was decided that steam gear should not be used for working house-coal, and a charge of about 4*d.* a ton was practically imposed on those merchants who wished to use it. The Unions also wished to increase the number of men employed on a certain piece of work. The merchants, it is stated, were anxious to consider any reasonable suggestion from the men, and to submit any point in dispute to arbitration, but it was impossible to arrive at a definite understanding, and the Unions refused arbitration. The main point in dispute was the question of unionists working with non-unionists. On October 29th a non-unionist was engaged as one of a gang discharging cargo. The other men working for the same employer then struck, and the union secretaries threatened him with ruin unless he would discharge the non-unionist workman and undertake to employ only unionists. The men acknowledged that they had nothing to complain of as to wages or hours, but said that the Union had ordered them to leave their work because the employer refused to discharge the non-unionist. After some weeks the strike became general, and the whole of the house-coal trade of the port was stopped for many days. The men who attempted to work were menaced by the unionists, and some were ill-treated, and police protection had to be obtained to enable any work to be done. The worst part of the disturbance lasted for about 10 days, and the loss incurred was "incalculable." The employer with whom the strike had begun took proceedings against the three Union secretaries who had threatened him, and after a long lawsuit they were fined 20*l.* each and costs. One of the men on strike was convicted of assault and got six weeks' hard labour. The Unions did not offer conciliation until the whole difficulty was over (1). It is stated, however, on the part of a firm of steamship owners and coal merchants who are not members of the Coal Merchants' Association, that the strike was brought about by the aggressiveness of the employers rather than by the action of the Unions. The real cause of friction, according to this account, was the attempt of the coal merchants to employ their own storemen in weighing out vessels, instead of the store-weighers of the port (2). [§ 226 (c).]

Shipping. (a.) *Liverpool*, 1889. 227. (*a.*) The Liverpool shipping strike of 1889 was the first serious conflict between the shipowners and the National Amalgamated Sailors' and Firemen's Union (3). Wages had gone down considerably during the depression in the shipping trade from 1884 to 1888, and when an improvement in trade began the seamen sought to participate in it, and nearly all the shipowners at once gave a rise in wages of 10*s.* a month (4). Since, however, the wages of Liverpool were still below those on the Tyne, some of the leaders of the men hoped to force a further rise of 10*s.* (5). The shipowners "ignored their demands," and a strike took place, notwithstanding the advice of the general secretary of the Union and the vice-president of the Mercantile Marine Service Association. The strike lasted eight or nine weeks, and caused great distress and loss. The shipowners declined to be coerced and kept their ships going, and at last the sailors and firemen returned to work at the former rates. They were in a rather worse position than before, because a good many lost their employment through the introduction of fresh hands. The Union was unable at that time to give them much assistance. In the following year the shipowners in the large lines voluntarily conceded the advance which had been demanded, "for the purpose of keeping the men contented" (6).

(b.) *Leith*, 1889. (*b.*) In May 1889 the Leith shipowners consented on demand to an increase of wages from 28*s.* to 30*s.* a week, "although the state of trade did not warrant such an advance." The men professed to consider this settlement satisfactory, and it was understood that the officials of the Sailors' and Firemen's Union were of the same opinion. The secretary, however, almost immediately issued a circular to the shipowners in Leith, asking for a scale of wages equivalent to 32*s.* 8*d.* a week. The circular added that it was hoped that this scale might be adopted for the future, so as to prevent any inconvenience arising either to owners or men through the stoppage of work. The owners met and consulted on the matter, and found that they could not afford to give the wages asked. On June 3rd the men, without further notice, left their employment in obedience to the Union, and in breach of the agreement previously made with the owners. This caused great inconvenience and loss, and the regular liners which had advertised sailing dates were put to great difficulty and delay, and many of them had to be laid up. The required number of non-union men were, however, gradually obtained, and the steamers got to sea. A considerable amount of intimidation, it is stated, was practised during the strike. The non-unionists were interfered with in going to work, and it was necessary to put them on board a depôt steamer in the Forth Roads, whence they were drafted off to their vessels as required. In other cases steamers were navigated out to the roads by officers, and the crews

[§ 227 (b.)] put on board at certain ports in the Forth. Serious opposition would have had to be faced in putting them on board in the dock. There was a very strong endeavour to bring the dock labourers out, but this was unsuccessful, probably through want of funds. Twenty-two steamers were laid idle in consequence of the strike, and about 500 or 600 men were concerned in it. The strike nominally continued after the steamers got to sea, but it was then practically at an end, and the men still out had to look for employment elsewhere. Many of them had been for years in the same employment, and it was a great disadvantage for them to lose it. Some of these came and requested to be taken back, and tore up their Union books. So far as there were places vacant those men were taken back. The loss in wages was estimated at 1,800*l.* to 2,000*l.*, not reckoning the loss incurred by those who did not obtain situations at the end of the strike. In March 1891, a strike against the Federation ticket was ordered at Leith by the Sailors' and Firemen's Union. The Leith branch met to consider the matter, but finding that "the real nature of the ticket had been thoroughly misrepresented to them by their officials," and remembering the disastrous strike of 1889, the members refused to come out, and sent a deputation to the Leith Shipowners' Society to inform them of their resolution. They also referred to the harmonious and amicable relations that existed between them and the local shipowners, and declared their willingness to sail with non-unionists (1). Soon after the formation of the Shipping Federation, in September 1890, the National Amalgamated Sailors' and Firemen's Union came into conflict with it, chiefly on the question of the Federation ticket, which members of the Union refused to take. The Union, according to the statement of the secretary, had no desire to come into conflict with the Federation, and would have preferred to settle differences by conference. Strikes against the Federation took place at the ports of London, Liverpool, Shields, Newcastle, Aberdeen, Leith, Hull, Glasgow, Hartlepool, Middlesborough, Cardiff, and Swansea (2).

(*c*) *London, 1890.* (*c.*) The London shipping strike of 1890 was one of the most serious of these conflicts. It originated as follows: In September 1890 the Sailors' and Firemen's Union claimed a monopoly of certain work connected with the repair of vessels belonging to the British India Company in the Albert Docks. This work had previously been done by members of the Hammermen's Union, and the shipowners refused to take it from them. The Sailors' and Firemen's Union then withdrew their members from the ships and picketed the shipping offices, intimating that the ships would not be allowed to obtain crews. The owners were obliged to engage free men for the first ship, and to cause their crews in future to sign articles on board ship to prevent intimidation by unionists (3). The Sailors' and Firemen's Union regarded the practice of signing on board as a departure from the general custom, and it is stated on their part that the men strongly objected to it on the ground that it deprived them of certain privileges with regard to the transmission and banking of money, and prevented their having a Union delegate present to look after their interests, and ascertaining who were to be their shipmates (4). On the other hand it is stated that the men made no such objection; that the practice of signing on board was a long-established custom; that it deprived the men of no privileges, and did not prevent Union delegates from being present (5). On December 5th 1890 a manifesto was issued from Wade's Arms in the name of the United Labour Council of the Port of London, and was handed in at the office of the Shipping Federation, and at the offices of three of the principal passenger lines sailing out of London. It announced that owing to the shipowners of London having "decided to sign on board, to the detriment of unionism generally," the Council required the workmen represented to abstain from any work that would "conduce to the sailing" of the vessels of Messrs. Shaw, Savill & Co., the New Zealand Shipping Company, and the British India Steam Navigation Company, until these owners should undertake for the future to sign and discharge crews at the regular shipping offices provided by the Board of Trade, and to sign none but members of the National Amalgamated Sailors' and Firemen's Union (6). The owners of the lines in question applied to the Shipping Federation, who placarded London and the docks with a poster announcing the intention of shipowners generally to continue to engage crews on board ship, "until a better spirit should prevail," for the safety and convenience both of officers and men, and also giving notice of their refusal to employ members of one particular Union to the exclusion of others. Preference would be given, it was explained, to seamen holding Federation certificates, and these might be obtained by unionists on the same terms as by others. Notwithstanding this explanatory notice, and another which was issued by the British India Company, the crews of the boycotted vessels came out on strike, and also the coalies, ship workers, carpenters, painters, and others; but the stevedores and dockers remained at work (1). The Federation then took steps to obtain free labour, but in order to disturb the labour of London as little as possible they first gave the men on strike a week for consideration. At the end of that time the free labourers were brought in, chiefly seamen and fishermen and agricultural labourers from Kent, a fine set of men, and, it is stated, perfectly competent to do the work. A depôt ship, the "Scotland," was fitted up for their accommodation, and most effective arrangements were made for their protection by the police. After the work had begun the police were withdrawn, but it was found necessary to bring them back on account of the riotous conduct of the men on strike, who attacked the "Scotland" and pelted the free labourers. The work was done very well, notwithstanding bad weather, and the vessels were enabled to sail to their dates, though in many cases with much less cargo than they would ordinarily have taken. The strike was utterly defeated, and a great many of the strikers were permanently excluded by the retention of the free labour (2). The dispute went on till the 12th of February, when representatives of the Federation of Trade and Labour Unions, the Sailors' and Firemen's Union, and the Dockers' Union, had an interview with certain shipowners at the offices of the Shipping Federation. The result arrived at was embodied in a memorandum to the effect that the deputation would send the chairman of the meeting a written proposal from the Unions on strike, to be laid before the Executive Council of the Federation (3). The deputation, however, understood that a definite agreement had been made that the Shipping Federation would (1) not give preference to non-union men, and (2) would agree to sign on crews at the shipping offices, provided that the manifesto of the United Labour Council were withdrawn, and the monopoly of the Sailors' and Firemen's Union no longer insisted on. These terms were accepted by the United Labour Council, on condition that the Federation would agree to re-employ the coal porters then on strike. The Shipping Federation refused to discuss the point till the manifesto should be publicly withdrawn, and the block on the boycotted ships removed by the men returning to work (4). The situation was thus a dead-lock, and in the meantime the Amalgamated Stevedores' Society informed the Shipping Federation that unless the free labour were removed from the port the stevedores would come out 5,000 or 6,000 strong (5). On receiving the reply that the Federation had other labour ready, they issued a manifesto, on the 13th of February, calling attention to the "aggressive action of the Shipping Federation," and the "unscrupulous manner" in which they had "withdrawn concessions" and broken off negotiations as indicating a "policy of extermination" directed against all riverside unions. The manifesto further called upon members of the Stevedores' Society to cease working on all ships in the Port of London on February 25th. A general strike of the other riverside trades was expected to take place on the 23rd, and the Federation made preparations for meeting it, but the manifesto produced only a partial result, and was then withdrawn by the men themselves. In the Albert Docks, however, it had the effect of calling out the stevedores and dockers employed by the three shipping lines already blocked by the Sailors' and Firemen's Union, and the case became serious. Free labour, chiefly unskilled, was introduced, and when the stevedores saw that these men were getting trained to the work, they gave way and came back (6). It was calculated that the loss of trade to the port of London during the strike amounted to about 10,000 tons a month in coal alone, with a corresponding loss in wages to the men (7).

(*d.*) *Cardiff, 1891.* (*d.*) Meanwhile another strike against the Shipping Federation was taking place at Cardiff (8). The difficulties which led to it began as early as August 1890, when a committee of the Cardiff Shipowners' Association passed a resolution in favour of maintaining "the right of free labour." The secretary of the Sailors' and Firemen's Union regarded this as a "declaration of war," and gave notice that the Union would stop all Cardiff vessels from getting crews in any port of the United Kingdom. It is

[§ 227 (d.)] stated that cases of intimidation and blocking, and assaults on the shipping offices by members of the Seamen's Union, became frequent immediately afterwards. At Newport and Barry the coal-tippers struck in support of the Seamen's Union, against vessels with foreign or non-unionist crews. The special cases mentioned were those of the steamers "George Booth," "Tasso," and "Rougemont." In January 1891 the ship "Glen Gelder" came to Cardiff for repairs, without a crew (1). On February 3rd she shipped a new crew, who were non-unionists, and when she came under the coal-tips, the tippers, at the instance of the Sailors' and Firemen's Union, refused to load her. The Union secretary's account of the matter was that this free crew had been shipped in the place of a unionist crew who had refused to take the Federation ticket. The manager of the Shipping Federation stated, however, that this was absolutely incorrect, since the Federation ticket was not made compulsory till February 23rd (2). On the refusal of the Bute Docks Company to turn out the steamer as the Union required, two other ships were blocked, and the Seamen's Union then gave notice that the whole dock would be brought to a standstill. The company issued a circular to the men, stating that any workman leaving his employment without due notice would be proceeded against for damages, and that all labour at the Bute Docks must be regarded as absolutely free, and that the company could not recognise any attempt to put pressure upon other employers or workmen (3). On February 5th, however, the strike became general, and the port was very seriously blocked. The ships were detained for some days, and a great loss was necessarily sustained by the owners (4). The Sailors' and Firemen's Union meanwhile, made daily processions through the streets of Cardiff, causing, it is stated, immense disorder in the town (5). The Dock Company acted very promptly, and in a fortnight all the tips were at work again with free labour obtained in Cardiff. After the collapse of the dock strike the shipowners began to obtain crews more easily (6). At first the shipping offices were blocked, and intimidation was carried on by the Union pickets. The shipowners therefore placed a depôt ship, the "Speedwell," in the Penarth Roads, and the seamen imported during the strike were kept on board in drafts of 150 or 200 at a time, and supplied to ships as required (7). They were obtained chiefly from boarding-houses in Liverpool and other ports, and about 20 per cent. were found to be "wasters" or incompetent men who were not seamen at all, but it is stated that all these were sent back. The remainder were very good average men (8). Great difficulty was experienced, not, it is stated, in obtaining men, but in conveying them into Cardiff without encountering the union pickets (9). On the other hand, the account given by the secretary of the Seamen's Union was that at no time during the strike were the shipowners able to get more than 150 men a week, instead of 1,000, which is the usual number required to man the ships, and that but for the slackness of trade at the time, the victory would in his opinion have been on the side of the men (10). However, about the 9th of March, the secretary requested an interview with the committee of the Bristol Channel branch of the Shipping Federation. He proposed the "cessation of hostilities," but refused to withdraw the Union pickets and discontinue the intimidation and blocking, unless the Shipping Federation would withdraw their ticket, which he termed a badge of slavery, although it was pointed out to him that it merely implied an undertaking on the part of the holder to go to sea in the ship on which he had signed articles, in accordance with the Merchant Shipping Act, whether the crew were unionists or not. Thus the meeting closed without result, since neither side would yield, but from that time, according to a representative of the Shipping Federation at Cardiff, increasing numbers of unionists took the Federation ticket, while remaining members of the Union (11). The strike lasted altogether some seven or eight weeks (12).

(e.) *Aberdeen, 1891.* (e.) A similar strike took place at Aberdeen, beginning on February 24th, 1891. The seamen struck against the Federation ticket, and when the Federation supplied men to take their places, the dockers struck in sympathy, and the Federation supplied dockers also. There was "any amount of free labour to be had, and good labour, too." The work of the port was done, and after about a fortnight or three weeks the strike collapsed (13).

[§ 227 (e.)] (f.) At the same time serious disputes were going on in Hull between the Shipping Federation and the unions connected with the carrying industry. In December 1890, it is stated by a representative of one of these unions, a steamer, the "Mary Anning," came into Hull with a union crew. The captain told an official of the Seamen's Union that they were good men, but that he had orders from the Shipping Federation to ship a non-unionist Federation crew. As soon as he did so, the Dockers' Union refused to discharge the ship, and the Federation fetched 70 men from Liverpool to work the cargo into the lighters, but most of the lightermen refused to take it, and it was partly discharged into another steamer. Representatives of the Seamen's Union called on the committee of the Shipping Federation and asked that the union crew might be taken back, but the reply was that they would ship whom they liked. This was the beginning of a number of strikes which went on for about six months, and it is stated that the blame in the majority of cases lay with the local officials of the Shipping Federation, and that preference of employment was frequently given to incompetent Federation men over competent unionists (1).

(f.) *Hull, 1891.*

Rivers and Canals.

228. (a.) In 1889 there was a general strike of watermen and lightermen on the Thames, partly in sympathy with the dock strike and partly on account of certain grievances in connection with night work. The matter was settled by the arbitration of Lord Brassey, according to whose award the wages for a full night's work were raised to 6*s*. It is stated by the master lightermen that the cost of lighterage was thus increased by about 4*d*. a ton, and great injury was done to the export and transhipment trade of the port of London (2).

(a.) *Thames, 1889.*

(b.) In March 1890 there was a strike of bargemen and watermen in the brick-carrying districts on the Medway. It was caused by a demand for an advance of wages. There had been, it is stated, a considerable decrease in wages for some time, and the employers seemed to be inclined to make a further reduction. The Union (the United Bargemen and Watermen's Protection Society) accordingly issued a circular, with a revised list of freights, to all the employers in the district. The revised list was to take effect on March 1st, a month after the date of issue. The employers took no notice of it till within a few days of the termination of the period specified, and then they gave orders that the employés were either to give up their union tickets or tie their barges up. The union members, comprising more than two-thirds of the total number employed, came out "to a man," and remained on strike for eight weeks. The strike ended in the men withdrawing their demand in favour of an alternative list issued by the employers. The result was that the men gained a 10 per cent. rise in wages, with other advantages (3).

(b.) *Medway 1890.*

(c.) In December 1890 there was a lock-out of lightermen employed by the Trent Navigation Company. About 80 of these were members of the Society of Lightermen and Watermen of the River Humber. At that time the captains of the company's boats were receiving 24*s*. a week, and the mates 16*s*. a week, and according to their calculation their hours were 80 or 90 a week, and they were sometimes at work all night. On November 20th the society sent in a revised scale of wages to the manager of the company, offering at the same time to send a deputation to discuss the scale and any grievance on either side. The manager refused to meet any deputation connected with the officials of the union, and, "as a counter-move," each man was given a week's notice to leave the company's service, unless he would sign an agreement which the manager had drawn up. The society advised the men not to sign any agreement which the officials of the society had not seen, and the men also alleged that they were not allowed to read the agreement. They therefore refused to sign it, and the Trent Navigation Company locked them out. Sir Albert Rollit was the only director who agreed to any conciliatory means of settling the dispute. As the other directors would give the men no hearing, the Nottingham Trades Council was asked to organise a deputation. This deputation was not received, but the men at length obtained a hearing. The chairman then told them that the reason they had not been received long before, was that the secretary of the union had sent a very insulting letter to the manager. The Mayor of Newark, to whom the secretary appealed, agreed that there was no insulting language in any of the letters sent to the company. The lock-out lasted about 17 weeks,

(c.) *Trent, 1890.*

(1) Digest, Vol. II., pp. 57, 79. (2) Digest Vol. I., p. 48; Digest, Vol. III., pp. 12, 104, 105. (3) Digest, Vol. II., pp. 58, 59, 82; J. Tookey, 13898.

[§ 228 (c).] and meanwhile there was a severe frost lasting 10 or 11 weeks. The company usually paid the men 1*l.* a week while they were frozen up, but in this case they saved the money. When the frost was over the company came to terms with the men, and conceded an advance of wages of 6*s.* and 9*s.* a week to captains and mates respectively, and a stipulated amount of rest. They all returned to work, and their general condition was much better than before the dispute. The lock-out cost the Union "every penny" it had. It had since appeared that the Trent Navigation Company really could not afford the scale of wages required, and the secretary of the Union affirmed that if this had been proved conclusively to the men, they would have been quite willing to defer their demand till a time of prosperity (1).

d.) Aire and Calder Canal. (*d.*) A strike took place in December 1891, among the Aire and Calder fly-boatmen, belonging to the Goole district of the Dock, Wharf, Riverside, and General Labourers' Union. The men asked for an advance of wages of 7½ per cent., on the ground that their work was increased by the use of machinery, which at the same time raised the profits of the Aire and Calder Company. The employers offered 2½ per cent. and then 5 per cent., both of which the men refused. The union offered arbitration, which the company refused. The company called a meeting at Goole, on December 22nd, of all the men in their employment, and issued voting papers for deciding the question of a strike. The manager of the company also issued a statement of advances recently conceded. The men, with one exception, voted for a strike. The strike lasted four weeks, and resulted in a small concession with regard to extra labour in the district above Leeds. The cost to the union was about 430*l.* (2). In the opinion of a representative of the union, the strike might have been avoided if the employers had accepted arbitration (3).

3. PICKETING AND INTIMIDATION, AND LEGISLATION RELATING THERETO.

icketing nd Intimi- ation. 229. A considerable amount of evidence was given with regard to the practice of picketing, and the system of intimidation which is alleged to prevail in connection with it.

a.) Picketing f Shipping ffices. (*a*). It was stated that the National Amalgamated Sailors' and Firemen's Union, shortly after its formation, established a system of pickets outside the shipping offices at all large ports, and no seaman was allowed to approach unless he could show a union ticket. Intimidation and violence were openly resorted to (4). Various instances of this were mentioned, and it was stated that many more could be quoted. In most cases it was impossible to bring the offenders within the law, because there was no actual threat of violence, though it was well understood that violence was intended, and such violence, it is stated, always followed if the "intimidation" was unsuccessful (5). Cases of assault described as "brutal" are said to have occurred (6). As an illustration of the system of picketing shipping offices, an instance was mentioned in which an agent of the Shipping Federation was sent to Tower Hill shipping office, to see to the shipment of a number of firemen for a vessel at Southampton. He reported that not half the firemen desiring to ship dared enter the door of the office, owing to the conduct of the pickets of the Sailors' and Firemen's Union, who were assembled in the yard to the number of 150 or 200, "threatening to break the head of any man who signed on." Those men who were shipped made their exit in safety by a back door, and were sent off from Waterloo with the assistance of the police, notwithstanding the presence of "the chief secretary of the union at the head of a very large body of pickets" (7). The same state of things is said to have prevailed at South Shields for a short period after the formation of the Shipping Federation and before the members of the Seamen's Union began to accept the Federation ticket. So riotous and disorderly, it is stated, was the conduct of the Seamen's Union delegates outside the shipping offices when free seamen approached for the purpose of signing articles, that the Federation officials were invariably obliged to call in police assistance (8). At Newport, Monmouth, in the summer of 1891, according to the report received by a witness from the master of the s.s. "Trinidad," it was highly dangerous for a free seaman even to attempt to enter the shipping offices at that port, owing to the continual presence of "a rowdy element of unionists." Unless a man first secured a union card, he had absolutely no chance of offering his services, "and this too at a Government shipping office" (1). The Shipping Federation registry offices in the Thames district were, it is stated, picketed by the unions for many months after they were opened, and the men who used them were often subjected to intimidation and rough usage. The registry superintendent in that district stated that on one occasion he was savagely attacked by 20 or 30 men, led by an official of the Sailors' and Firemen's Union, when going on board a ship in the execution of his duty (2). It is stated that from the first opening of the registry offices in the Tyne district "virulent obstruc- "tion" was offered by the union delegates to seamen being shipped through the Shipping Federation, unless they held cards of membership of the union. Several instances, it was stated, could be given, of intimidation and coercion practised upon free seamen, not by ignorant members of the union alone, but by high officials. A case was mentioned in which a union delegate at South Shields was convicted under the Conspiracy and Protection of Property Act of preventing a union fireman from sailing in a Federation ship on which he had signed articles, by threatening him with the consequences of doing so (3). At the time that the Seamen's Union was opposing the issue of Federation tickets to seamen, from two to 50 union men were, it is stated, employed daily to stand at the doors of the registry offices in North and South Shields. Every seaman who approached was stopped, and if he persisted in running the blockade, a system of jostling began, which usually ended in a crowd of people gathering, the victim getting severely handled, and no one assailant being identified. The utmost the police could do in the present state of the law was done, namely, to keep the men moving about a little, or else charge them with obstructing the thoroughfare. Such powers, it was pointed out, are of little use in preventing intimidation (4). It was stated by a member of the Shipping Federation that at Glasgow also there were at one time four pickets constantly kept opposite the office of the Shipping Federation, and that when any man approached to register his name in the Federation books, the picket was reinforced by a large collection of men at the office door. Such was the difficulty of carrying on business that police protection had to be furnished by the Lord Provost. There were, it was stated, any number of convictions of union delegates and members for assault, some of which the witness quoted. After several sentences of imprisonment the intimidation gradually diminished, until the summer of 1891, when all interference ceased (5). A representative of the Shipping Federation at Cardiff quoted from an official report book a long list of cases of intimidation and violence committed by union delegates at that port (6).

[§ 229 (*a.*)]

(b.) Picketing in connection with strikes. (*b*). Evidence was also given with regard to picketing and intimidation during strikes. It was stated that at the beginning of the London dock strike of 1889 there was a good deal of intimidation at the Millwall docks, where the strike was from sympathy. (7) During the strike at Hay's Wharf in January 1890, there were, it is stated, several convictions for assault, but it was difficult to induce men to prosecute in the state of intimidation which prevailed (8). It was stated that during the Leith strike, conducted by the Sailors' and Firemen's Union in 1889, a considerable amount of intimidation was practised. Non-unionists were interfered with in going to work, and it was necessary to put them on board a steamer in the Forth Roads, and thence draft them to their vessels. One case was quoted, in which a man about to join his ship was attacked and considerably injured by the strikers (9). During the Glasgow strike, which was simultaneous with the former, the intimidation experienced is described as "terrible." It was attributed to members of the National Union of Dock Labourers and of the Sailors' and Firemen's Union, which were acting in combination. It is stated that the foremen and men on weekly wages, employed by Messrs. Allan of the Allan line, were so terrorised that nearly all of them left work without notice, telling the employers privately that they did so on account of threats of bodily injury. The strikers, it

[§ 229 (b.)] is stated, congregated in hundreds outside the sheds, and both threatened and attacked men going to work, so that they were afraid to leave the sheds, and had to be housed by the shipowners either there or on board ship. Messrs. Allan alone had at one time nearly 600 men housed in the loading and discharging berths. Prosecution was impossible in nearly every case, owing to the difficulty of identifying the assailants, and of inducing men who were attacked to risk the consequences of taking proceedings. In support of the view that it was intimidation alone which prevented men from taking work on this occasion, it was stated that when disputes had occurred simultaneously at Glasgow and Liverpool, as in 1890, large numbers of men were willing to go from one port to the other to take work where they were not known (1). A few months after this, during the strike of the National Dock Labourers' Union in Glasgow against the old Society of Harbour Labourers, it is stated that a shipowner who employed members of the latter Union was obliged to procure a crew from Dundee, and when they arrived at Greenock the road from the station to the dock was lined with roughs, and only through the protection of the police was the crew saved from rough usage. A year later, after the formation of the Shipping Federation, the National Dock Labourers' Union struck, as on several other occasions, against a non-unionist crew. It is stated that owing to the intimidation and violence which prevailed it was impossible to put the crew on board, and a Newcastle crew had to be obtained and shipped under police protection (2). During the London shipping strike of 1890–91, a great deal of violence and intimidation is said to have been used towards the Federation free labourers (3). According to one witness, there were seventeen convictions for assault and intimidation out of 23 prosecutions, and about an equal number of cases which were not prosecuted (4). The majority of those convicted were unionists. According to another witness, there were quite 40 convictions for such offences during the strike (5). Detailed accounts were given of organised attacks made by unionists on the Federation depôt ship "Scotland" in the Albert Dock, and on the tug "Petrel," which, it is stated, was pelted with stones and other missiles while conveying labourers from the "Scotland" to the ship "Beatrice" in the Victoria Dock. Unorganised riots were also described, such as an attack upon a number of free coal porters at the Ashburton coffee-house, at Woolwich. In most of these cases, it is stated, prosecution was impossible, because the offenders were immediately transferred to another dock (6). The firm of Messrs. Gray, Dawes & Co., were obliged, it is stated, to prosecute in several cases for assaults on their employés, and to obtain police protection for their men on board their own ships (7). The general manager of the Shipping Federation handed in letters describing further cases of this kind, and expressed an objection to all the phases of picketing as now carried on, "because it amounts to distinct intimidation" (8). Several witnesses stated that a great deal of intimidation was practised during the Cardiff strike in 1891, by the pickets of the Sailors' and Firemen's Union (9). "Innocent men were beaten simply because they were endeavouring to obtain work." There were, it is stated, gangs of men posted about "in semi-military style," and armed with sticks and other missiles, guarding the entrance to the docks, and also 50 or 60 men moving about to different places, such as railway stations and steamboat landings. For five weeks the dock company experienced the greatest difficulty in getting into their docks people who had legitimate business there (10). For convenience in shipping crews, the Shipping Federation placed a depôt ship, the "Speedwell," in the Penarth Roads, and fitted her up with accommodation for about 150 men, providing good food and a variety of other comforts. Seamen were easily obtained from Liverpool, Shields, and other places, but there was great difficulty in conveying them into Cardiff without their being intercepted by the pickets. On one occasion, it is stated, a large body of men went to Rhymney Bridge in order to intercept a train full of non-unionist seamen, and a conflict was only avoided by a change of route, the Great Western Company giving the Federation the use of a branch line (11). One witness stated that about 20 men belonging to the Sailors' and Firemen's Union were prosecuted for violence and intimidation during the strike, and the majority of these were convicted. A great part of this intimidation was, it is stated, directed against members of the Amalgamated Seamen and Tradesmen's Union, and several instances were quoted in this connection (1). In illustration of the purposes for which picketing has been employed, a representative of the Shipping Federation in the Tyne district gave an account of a strike which took place there in January 1892. The quay labourers employed by Messrs Currie & Co. refused to work under a new stevedore, and the services of the Federation were called in. Day after day, it is stated, the Federation sent men belonging to the Tyne district to work the vessels, and though the men declared their intention of doing so, in nearly every case they failed to carry it out. The witness was convinced that the cause of this failure was terrorism by the Union (the Tyneside and National Labour Union) in the form of threatening looks and gestures, and "scurrilous taunts." The strikers gathered in a crowd at the wharf where the Leith boats arrived, and men going to work were afraid to pass them. At last men from other districts were induced to accept employment (2). [§ 229 (b.)]

(c.) Replies to the above statements.

(*c.*) On the other hand, the representatives of several unions furnished replies, both general and specific, to the charges practically brought against them of encouraging a policy of terrorism. The secretary of the Federation of Trade and Labour Unions stated that the unions discouraged the use of violence against free labourers, as being illegal, immoral, and inexpedient and that this view was generally acted upon by the members. The witness quoted the case of the Carron and Hermitage Wharves dispute in 1891, during which, he stated, there was only one instance of an assault by a unionist (3). That statement was, however, afterwards contradicted, and it was stated that during that strike there were numerous cases of very serious assault, for several of which convictions were obtained (4). It was stated by the secretary of the Sailors' and Firemen's Union, in contravention of various allegations, that during the strikes in London, Liverpool, and Cardiff, the shipping offices were not blocked by union men, and could not have been so, because the superintendents of the offices and the police would be certain to prevent it. The witness was at Liverpool during the strike of 1889, and could vouch that the office was not blocked, and that no force was used to repel men who were without union tickets. The witness added that in no case was any shipping office ever blocked by members of the Sailors' and Firemen's Union, and that since the formation of the Union the violence attending strikes had greatly decreased. He was not aware of any acts of violence or intimidation committed by members of the Union against free labourers. Pickets had sometimes been employed in large numbers, but only for the lawful purpose of pointing out the merits of a dispute and dissuading men from working. As many as 400 men acted in this capacity during the Cardiff strike. The witness stated, however, that they were not pickets in the strict sense of the term, because they were ready to leave their posts and take ship under any owner, not belonging to the Shipping Federation, who might require their services (5).

(d.) Proposed Amendments in the Conspiracy and Protection of Property Act 1875.

(*d.*) Several witnesses offered suggestions for the amendment of the law relating to picketing and intimidation, as laid down in the Conspiracy and Protection of Property Act, 1875. These suggestions turned mainly on the meaning to be attached to the term "intimidation." (6) It was urged that although intimidation was punishable under Section 7 of the Act, the absence of an exact definition of the term, and the difficulty in any case of bringing home an offence of that nature, frequently made it impossible to convict unless there had been an actual threat of physical violence. It was pointed out by one witness that the mere assemblage of 150 or 200 men as pickets, with the avowed object of persuading men not to take certain work, was enough to intimidate those who might wish to take it. A threat conveyed in a look, though not recognised by the law, might, the witness thought, prove quite as effectual as a threat stated in words. He therefore proposed, that especially in the case of a sympathetic strike, it should be illegal for large bodies of men to assemble for the sole purpose of preventing other men from working, and that the fact of doing so should be considered to amount to intimidation. The definition of intimidation which the witness would adopt was that contained in the Irish Crimes Act, now repealed, namely, "any words or acts intended and calculated to put any person in fear of any injury or

229 (*d.*)] danger" . . . . &c. Under the proposed amendment, picketing should be allowed to the extent of posting not more than three men at any one place, to explain the circumstances of the strike and use reasonable persuasion towards non-unionists. It should be illegal, however, to place pickets on board ship (1). Another witness recommended that picketing should be confined to two or three men, if not disallowed altogether. He referred to the system as "legalised intimidation," pointing out that few men had nerve enough to face a "howling mob" (2). Three witnesses proposed that all picketing should be made illegal. One of these pointed out that with the facilities which exist for diffusing information, picketing is no longer necessary for the purpose for which it was originally permitted, namely, to warn men of the existence of a strike. He stated moreover, that at present it was impossible to obtain a conviction under the Act for intimidation in the form of the assemblage of a disorderly crowd (3). Another witness stated that there was no foundation for the claim made by trade union leaders that picketing should be allowed to go on without interference, on the ground that its sole purpose is to persuade men to refrain from work. On the contrary, the witness stated, pickets were not selected for their eloquence, but for their size and strength. The argument employed was a threat in nine cases out of ten, and when it was not a threat it was nearly always ineffectual. The witness therefore drew the conclusion that terrorism and not persuasion was the main principle on which picketing was conducted during a strike. He recommended that it should be made illegal for any person to loiter in the vicinity of works or shipping offices on the occasion of a strike. The police should have power to arrest and proceed summarily against persons so doing, and magistrates should have no option but to pass sentences of imprisonment on proved offenders. It would not be difficult, he stated, for innocent people to prove that they were unconnected with the strike, but men concerned in it would be called upon to show their reason for hanging about a place where they had refused employment. It was urged that there would be no hardship in a law which would merely put a stop to the injustice of preventing men from accepting work rejected by others (4). Another witness proposed practically the same amendment in the law, by recommending the omission of the explanatory clause of Section 7 of the Conspiracy and Protection of Property Act. By two previous clauses it is illegal to "persistently follow" a person, or to "watch or beset" his house or place of business "with a view to compel him to abstain from doing . . . any act which such . . . person has a legal right to do," &c. But by the explanatory clause, "watching "or besetting" does not include "attending at or near the house . . , . . . &c., in order merely to obtain or communicate information." The phraseology of this clause, it is stated, makes conviction very difficult in certain cases where the fact of intimidation is evident.* The information intended by the framers of the Act was such as related to the circumstances of the dispute, but the information usually conveyed is, it is stated, equivalent to a threat, and intimidation of this kind has frequently been practised with impunity. It should be illegal, the witness contended in support of his suggestion, for men in numbers to beset the approaches to places where work is to be had, and by words or looks, or in any manner whatever, to give other men to understand that they will suffer through taking employment (1). Other witnesses were of opinion that the law as to picketing was too stringent, and that workmen had not sufficient power to protect their interests during a strike. Employers, it was stated, imported men without informing them of the circumstances of the case, and there was frequently no opportunity for the Union delegates to point out the facts to them. It was also maintained that under the Conspiracy Act convictions were too easily obtained against innocent persons, and that, so long as a man abstained from violence or threats, he ought not to be arrested for following another man and persuading him not to work. The term "intimidation" ought, it was pointed out, to be more clearly defined (2). With regard to the operation of the Act, it was stated that it frequently happened in the case of seamen, that no action could be brought under it, because the man assaulted or threatened had gone to sea and could not prosecute. It was suggested that magistrates should have power to convict on the evidence of other witnesses, and that the Board of Trade should prosecute. It was also stated that in Scotland, where prosecution under this Act rests with the procurator fiscal, there had been great remissness in giving effect to its provisions. The difficulty of obtaining evidence from intimidated persons was also referred to (3). [§ 229 (*d.*)]

GEOFFREY DRAGE,
Secretary.

(1) Digest, Vol. I., p. 71; G. A. Laws, 4965, 4968. (2) Digest, Vol. I., p. 71; H. C. Smith, 6357. (3) Digest, Vol. II., pp. 131, 132, 133. (4) Digest, Vol II., pp. 131, 132.

* The following is Sir Frederick Pollock's interpretation of Section 7 :—"There is no doubt that the intention of this section was to draw the line between legitimate and illegitimate picketing. . . . The enactment is sufficiently clear, with one exception; and, subject to that exception, the difficulties that occur in its application are such difficulties in obtaining sufficient evidence against ascertained persons as cannot be abolished by the wisdom of any legislature or the skill of any draftsman. The exception lies in the word "intimidates." Must intimidation be a threat of something which, if executed, would be a criminal offence against person or tangible property? Or does it include the threat of doing that which would be civilly, though not criminally, wrongful? Or, lastly, can it include the announcement of an intent to do or cause to be done something which, without being in itself wrongful, is capable of putting moral compulsion on the person threatened? A specially constituted Court of the Queen's Bench Division, proceeding on the intention of Parliament as shown in the Trade Union Act of 1871, as well as in the Act of 1875, has pronounced the first of these interpretations to be the correct one."

2. SPECIAL STRIKES	228
3. PICKETING AND INTIMIDATION, AND LEGISLATION RELATING THERETO	230

NOTE.

IN accordance with a Resolution of the Commission, the Secretary was directed to prepare Summaries of the Evidence (oral and written) received by the Committees. This Evidence included :—

1. The Minutes of Evidence with Appendices.
2. The Answers to the Schedules of Questions.
3. The Rules of Associations of Employers and of Employed, and of Joint Boards.
4. The Rules of Accident, Sick, Insurance and Superannuation Funds handed in to the Commission.
5. Certain other Documents, handed in or forwarded to the Commission, but not printed with the above.

Under the head of "Transport by Land," these include:—

(i.) Detailed statements showing the Hours of Employment of, and Wages paid to, Mail Cart Drivers in the Service of the Post Office Contractors (McNamara & Co., Ltd., Jas. Allen, J. M. Birch, and C. Webster), supplied through Sir Michael Hicks-Beach.

(ii.) Return of Wages and Hours of Workpeople employed by the Caledonian Railway Company, received from the Board of Trade.

(iii.) Tables relating to the Wages of Persons in the employment of Railway Companies, received from the Board of Trade.

6. Further Correspondence on certain subjects.

PART II.—TRANSPORT BY LAND.

PART II.—TRANSPORT BY LAND.

A. CONDITIONS OF LABOUR.*

1. WAGES.

(i.) STATEMENTS OF WAGES.

[§ 230.] TRANSPORT BY ROAD OTHER THAN BY RAILWAYS. Rates of wages.

230. Information with regard to the rates of wages of men employed in connection with omnibuses, tramways, hackney carriages, cars, drays, and lorries, has been obtained almost exclusively from the oral evidence given before the Commission. It appears from that evidence that in these industries there is considerable variation in rates of wages in different districts.

(a.) Omnibuses and tramways.

(*a.*) In the case of omnibus and tramway servants the wages of drivers are said to range between 3*s.* 9*d.* and 7*s.* 6*d.* a day, and those of conductors, between 2*s.* and 6*s.* The highest rates are paid in London, and the lowest in Sheffield and Nottingham. (1) With regard to London, the general statement was made by one witness that the wages of tramway men varied from 4*s.* to 6*s.*, and those of omnibus men from 3*s.* to 8*s.* a day. The former part of this statement is approximately confirmed by further and more detailed evidence, while the latter, if judged by the same standard, appears to furnish too low an estimate. The same witness expressed the opinion that the wages referred to were insufficient to meet necessary expenses, and that as a general principle an adequate subsistence wage (which in this case would be 2*l.* a week) should be paid in all industries not affected by foreign competition. (2) He stated that the wages of omnibus men had suffered from the introduction of long-distance penny fares by the London General Omnibus Company for the purpose of competition with the London Road Car Company, which had initiated certain reforms in omnibus traffic. The witness believed that the majority of the public would have no objection to the long-distance penny fares being increased to 2*d.* This would result in an increase of revenue which would enable the companies to raise wages without affecting dividends. (3) The secretary of the London General Omnibus Company was also of opinion that increased fares might to a limited extent add to the company's revenue. (4) The manager of the London Road Car Company, though convinced that the existing fares were too low, considered that the experiment of raising them would be one of extreme risk. (5) The wages paid by omnibus and tramway companies in London are adjusted on a sliding scale according to length of service. In the case of the London General Omnibus Company, the London Road Car Company, and the London Omnibus Carriage Company, an advance of 6*d.* a day is given after a year's service, and the London General Omnibus Company gives a further advance of 1*s.* after the second year's service. (6) The North Metropolitan Tramways Company gives an advance of 1*s.* 6*d.* in the course of a year, by successive steps, and the London, Deptford, and Greenwich Tramways Company gives an advance of 1*s.* to drivers after four years', and 9*d.* to conductors after three years' service. (7) It was stated by the general secretary of the Amalgamated Omnibus and Tram Workers' Union, that the men had objected to this sliding scale at the time of its introduction, and had protested against it in the strike of 1891, though without result. In his opinion the effect of the scale is that old servants are dismissed in favour of cheaper labour. (8) Another witness, the treasurer of the same organisation, supported this statement, and added that the men engaged to fill the places of the older servants were brought up by advertisement from the country. In his opinion, wages should in all cases be equal for an equal amount of labour. (1) The secretary of the London General Omnibus Company denied that it was the practice of that company to dismiss men in order to evade the increase of pay under the sliding scale. (2) The general statement was however reiterated by the president of the Amalgamated Omnibus and Tram Workers' Union. (3) Sunday work, at the ordinary rate of wages, is the rule rather than the exception on tramways and omnibuses in London, but the employés of the London General Omnibus Company have one Sunday off in six, and in all cases it appears that holidays can usually be obtained either on Sundays or week days, with loss of pay. (4) The North Metropolitan Tramways Company, it is stated, pay their men a shilling a day extra for three days at each of the public holiday times, when there is an increase of traffic. (5) With regard to the wages of omnibus and tramway servants in provincial towns, the evidence related chiefly to the district embraced by the Northern Counties Amalgamated Tramways and Hackney Carriage Employés Association, namely, East Lancashire and the greater part of Yorkshire, and Nottingham. The general statement was made that rates of wages differed in almost every town in the district, varying from 20*s.* to 32*s.* 8*d.* a week for drivers, and from 18*s.* to 28*s.* a week for conductors. (6) Special reference was made to the conditions of labour on the Huddersfield Corporation steam tramways, of which a further account is given below, under the head of State and Municipal Employment. In this case the wages for an eight hours' day are 4*s.* 4*d.* for drivers, and 3*s.* 6*d.* for conductors. The hourly rate for the latter is thus 5½*d.*, which has been compared with the average of 6*d.* an hour on the North Metropolitan Tramways. (7) It may be noted, however, that in the latter case, the hourly rate for drivers is also 6*d.*, while at Huddersfield it is 6½*d.* The difference between the total averages is thus only ½*d.* (8) It was pointed out by the manager of the Huddersfield Corporation tramways, that though the wages of tramway servants were certainly higher in London than in provincial towns, the comparison was unfair. In the case of Huddersfield they compared very favourably with the wages of similar classes of labour in the district. (9) In most cases there is Sunday work without extra payment, except at Huddersfield and Edinburgh, where there is no Sunday work at all. (10) The Birmingham Central Tramways Company pays overtime after 12 hours at the rate of time and a half. (11) With regard to the wages of persons other than drivers and conductors, employed by omnibus and tramway companies, it was stated that the usual wages of ticket inspectors in London were 2*l.* a week (12). The wages of horsekeepers in London are in most cases 4*s.* a day, but in the case of the North Metropolitan Tramways Company this was stated as the maximum, the minimum being 3*s.* 6*d.* (13) In Manchester and the north of England generally, horsekeepers are paid at a piece-work rate of 2*s.* 3*d.* a week per horse, earning from 18*s.* to 33*s.* 9*d.* a week. In a few instances, Sunday labour is paid at a penny a horse extra. (14) Washers are paid by the London Road Car Company at a piece-work rate of 4*s.* a week per car, but the wages of washers and track men employed by the North Metropolitan Tramways Company are the same as those of horsekeepers. (15) The rates of wages of drivers and conductors in different districts have been tabulated as follows:— [§ 230 (*a.*)]

* The few suggestions with regard to the publication of statistics, given in the oral and written evidence, have been dealt with in the Summary of the Evidence given before the Commission Sitting as a Whole, under the head of "Labour Department."

[§ 230 (a.)]

TABLE showing the Rates of Wages of Omnibus and Tramway Servants in different Districts, arranged in Descending Order.*

[§ 230 (c.)]

Reference.	District, &c.	Class of Labour.				Remarks.
		Drivers.		Conductors.		
		Rate per Day.	Rate per Week.	Rate per Day.	Rate per Week.	
		s. d.	£ s. d.	s. d.	£ s. d.	
Digest, Vol. III., p. 25.	London Omnibus Carriage Company.	7 3	[2 10 9]†	5 9	[2 0 3]	The wages of drivers begin at 7s., and of conductors at 5s. 6d., both receiving an advance of 6d. after a year's service.
Digest, Vol. III., pp. 20, 28, 29, 36.	London General Omnibus Company.	6 8	[2 6 8]	5 2	[1 16 2]	Wages are adjusted on a scale according to term of service. For drivers the scale begins at 6s., rising in two years to 6s. 6d. and 7s. 6d.; for conductors it begins at 4s. 6d., rising to 5s. and 6s. The arithmetic mean of these amounts has been taken.
Digest, Vol. III., p. 23.	London Road Car Company	6 3	[2 3 9]	4 9	[1 13 3]	The scale for drivers begins at 6s., rising in a year to 6s. 3d. and 6s. 6d. For conductors the scale begins at 4s. 6d. and rises to 5s. The arithmetic mean has been taken.
Digest, Vol. III., pp. 21, 22. R. L. Adamson, 18,258.	North Metropolitan Tramways Company.	5 8	[1 19 8]	5 5·41	[1 18 2]	The scale for drivers and conductors rises in a year from 4s. 6d. to 6s. The daily rates given are stated as averages in the evidence.
Digest, Vol. III., p. 18.	Burnley Tramways Company.	—	1 18 0	—	1 2 0	It is stated that the men have every fourth day as a holiday, with payment. The wages for an actual working day are thus about 7s. 2d. and 4s. 2d. respectively.
Digest, Vol. III., p. 32.	South Staffordshire Steam Tramways Company.	5 6	—	3 6	—	The rates given are stated as averages in the evidence.
App. 145 - -	London, Deptford, and Greenwich Tramways Company.	5 0	[1 15 0]	4 7½	[1 12 4½]	The scale of wages for drivers rises from 4s. 6d. to 5s. 6d. in four years, and for conductors from 4s. 3d. to 5s. in three years. The arithmetic mean has been taken.
G. T. Jackson, 17,912.	Rochdale Tramways -	5 0	[1 15 0]	[3 0]	1 1 0	In this case the rate of wages for drivers was stated to be "from 4s. 6d. to 5s. 6d. a day." The arithmetic mean has therefore been taken.
Digest, Vol. III., p. 32.	Croydon Tramways Company (horse).	4 6	—	3 7½	—	The scale for drivers begins at 4s. and rises to 5s.; for conductors it begins at 3s. and rises to 4s. 3d. The arithmetic mean has been taken.
G. T. Jackson, 7912.	Bury Tramways - -	4 6	[1 7 0]	[3 2]	0 19 0	The wages of drivers were stated to be "from 4s. to 5s. a day."
Digest, Vol. III., p. 18.	Manchester Carriage and Tramway Company (horse).	4 4	[1 10 4]	3 8½	[1 6 0]	The scale of wages rises in a year from 4s. to 4s. 8d. for drivers, and from 3s. 6d. to 3s. 8d. and 4s. for conductors. The arithmetic mean has been taken.
G. T. Jackson, 17,926.	Liverpool Tramway Company.	4 4	[1 10 4]	3 8½	[1 6 0]	It was stated that a few men in Liverpool obtained 5s. a day, but that for the most part wages were the same as in Manchester.
App. 148 - -	Birmingham Central Tramways Company—					
	Omnibuses and Cable Trams.	—	—	3 9	—	Rates of pay for drivers are not stated,
	Steam and Electric Trams.	—	—	3 6	—	
G. T. Jackson, 17,912.	Sheffield (omnibuses) -	4 4	[1 6 0]	[2 4]	0 14 0‡	The rate of wages of drivers was stated to be "from 4s. 2d. to 4s. 6d. a day."
G. T. Jackson, 17,910.	Huddersfield Corporation Tramways (steam).	4 4	[1 6 0]	3 6	[1 1 0]	An eight hours' day is worked, six days a week.
Digest, Vol. III., p. 25. G. T. Jackson, 17,912.	Bolton (tramways) - -	[4 0¾]	[1 8 5¼]	[3 0]	1 1 0	The wages of conductors are stated to be 21s. a week, which is said to be equivalent to 2¾d. an hour, working 13 hours a day, *i.e.*, 3s. a day. This gives the number of days worked in the week, and thus the wages of drivers are obtained from the hourly rate stated in the evidence, namely 3¾d.
Answers, &c., No. 329, p. 7.	Edinburgh Street Tramway Company.	[4 0]	1 4 0	[3 4]	1 0 0	The wages of drivers were stated to range from 21s. to 27s., and of conductors from 15s. to 25s. a week, but with very few at the highest rate in each case. There is no Sunday work.
Digest, Vol. III., p. 34. App. 184.	Dublin United Tramways Company.	3 9	[1 6 3]	3 3	[1 2 9]	The average wages of drivers, calculated for the week ending July 27th, 1892, were stated to be 26s. 1½d., and of conductors 22s. 10¾d., thus differing very slightly from the estimate here obtained from the daily wages.
G. T. Jackson, 17,912.	Nottingham (tramways) -	[3 11]	1 3 6	[2 6]	0 15 0	It was stated that the "average wage" of drivers was from 21s. to 26s., and of conductors from 12s. to 18s. The arithmetic mean has been taken.
G. T. Jackson, 17,912.	Sheffield (tramways) -	3 9	[1 2 6]	[2 4]	0 14 0	The wages of drivers were said to be "from 3s. 6d. to 4s. a day," and of conductors from 10s. to 18s. a week. The arithmetic mean has been taken.

* The descending order is strictly followed in the case of the daily wages of drivers only.

† The figures not enclosed in brackets are those stated in the evidence; the figures enclosed in brackets are not stated in the evidence, but have been obtained from the data which it supplies, and inserted for purposes of comparison.

‡ In a letter received July 26th, 1893, Mr. Jackson stated that the wages of omnibus conductors in Sheffield were the same as those of tramway conductors, namely, from 10s. to 18s. a week. The figures enclosed in brackets, relating to the rates of wages in Bury, Sheffield, and Nottingham are based on the statement in the same letter that the week's work in these cases consists of six days.

(b.) Hackney carriages.

(*b.*) The difference between the terms of employment of cab-drivers in London and in provincial towns prevents any exact comparison of the conditions of labour. In London the cab-driver is not a servant in receipt of wages, but a lessee who pays a certain price daily to the proprietor for the hire of the cab, and reserves the remainder of his earnings. (1) Thus it is impossible to specify any "standard wage" for the London cab trade. A man may sometimes work at an actual loss, and sometimes earn 4*l.* net in a day. (2) Earnings vary according to the kind and quality of vehicle, place of stabling, season, and other conditions. The average net weekly earnings of the 13,000 men holding drivers' licenses within the metropolitan police district (excluding proprietors of cabs) were estimated by the secretary of the London Cabdrivers' Society at 30*s.* (1) Another witness expressed the opinion that not more than 5 per cent. of London cabdrivers could be considered solvent. (2) In suburban districts a few drivers receive wages, some 20*s.* to 25*s.* a week, others 10*s.* with a commission on their earnings. (3) In the south-eastern suburbs cab-owners allow their drivers 3*s.* a day out of their takings, with luggage money at 2*d.* a package as a perquisite. It was estimated by a witness representing a firm of owners that the average weekly earnings of the men were 19*s.* 6*d.*, but with luggage money 25*s.* or 30*s.* might

(1) Digest, Vol. III., p. 37. (2) Dyke, 16,613. (3) Digest, Vol. III., p. 37.

[§ 230 (b.)] sometimes be earned (1) The wages of washers and horsekeepers in London are 32*s.* a week, and of painters 30*s.* a week. (2) In many provincial towns cab-drivers are paid weekly wages, and in some cases wages and a commission. The secretary of the London Cab-drivers' Society stated that the latter system prevailed in Manchester, and was found to work very well, the earnings amounting to about 32*s.* a week. (3) On the other hand, it was stated by a witness representing the Northern Counties Amalgamated Tramways and Hackney Carriage Employés Association, that cab-drivers in Manchester were paid weekly wages only, at an average rate of 15*s.*, but in a few cases amounting to 21*s.* They depend on the public to make up their wages, and sometimes earn altogether 30*s.*, 35*s.*, or 2*l.* a week, but the witness considered the system extremely unjust. (4) The average wages at Bolton were stated to be 14*s.* a week, and at Nottingham 18*s* (5) Horsekeepers in cab yards in this district are paid on the same terms as those in omnibus and tram yards, at 2*s.* 3*d.* a week per horse. (6)

(c.) Cars, drays, and lorries.

(*c.*) The wages of carmen, draymen, and lorrymen were stated to be extremely low on the whole, owing to the fact of the trade being entirely open. The evidence shows, however, that the variation in rates of wages in different districts and under different employers is very considerable. The secretary of the London Carmen's Trade Union stated that the average weekly wages of general carmen in London were from 24*s.* to 24*s.* 6*d.* By "general carmen" he understood those who drive heavy traffic as distinguished from light vans. For job work they are paid 4*d.* or 4½*d.* an hour, or 3*s.* 6*d.* to 4*s.* a day, and 2*s.* 6*d.* a night. These rates of wages are below the standard of the Carmen's Union, which aims at establishing a minimum of 28*s.* a week for one horse, 30*s.* for two horses, and 32*s.* for three horses, with overtime at 9*d.* an hour. These terms, it was stated, had been conceded by a few private firms. (7) Wages were said to be lowest in the case of newly imported country labour, which was paid by some firms at the rate of 18*s.* to 20*s.* a week, and in the case of carmen employed by the Post Office contractors, who paid them from 16*s.* to 21*s.* a week. Of these contractors it was stated that Mr. Webster's firm paid the lowest wages, partly through employing a large proportion of boys. (1) On the other hand, details were furnished as to the wages paid by these contractors, in certain returns and summaries supplied by the Post Office. From these statements it appears that the lowest wages paid are 18*s.* a week, and the highest 3*l.*, the average being 23*s.* 4*d.* a week. Only four men are employed at 18*s.*, and only one at 3*l.* One of these contractors pays a minimum wage of 25*s.* It was pointed out that the wages paid by Mr. Webster were rather lower than those paid by the other contractors, and that his contract with the Department was also lower for the same class of work. (2) The secretary of the National Municipal and Incorporated Vestry Employés Labour Union stated that the carmen employed by vestries and local boards in London were divided into two classes, general and dust carmen, the former being paid weekly and the latter by the piece. Weekly wages vary under the vestries from 24*s.* to 29*s.* 3*d.*, and under the local boards from 18*s.* to 26*s.* It will be observed that the former are the highest and the latter about the lowest wages paid to carmen in London. It was stated that higher wages were frequently paid by poor than by rich parishes. On piece-work, under contractors, the men receive about 10*s.* or 15*s.* a week or less, and supplement their wages by tips and perquisites. In some cases the union has succeeded in substituting a weekly wage for this system, and also in obtaining an extra rate of 6*d.* an hour for overtime. (3) In provincial towns the wages of carmen and draymen vary from 18*s.* to 20*s.* at Bradford (under the contractors employed by the corporation) to 28*s.* in Manchester (the maximum wages of railway lorrymen). Some firms in Manchester were said to pay as low a wage as 16*s.* for coal carting, but this appears to be exceptional, the standard rate being 24*s.* Overtime after 60 hours a week is paid at a slightly advanced rate by the Midland and London and North-Western Railway Companies in Manchester, but the system of "playing off" overtime, adopted by the firm of Messrs. Thompson, McKay, and Co., is said to be preferred by the majority of the men. (4) The rates of wages of carmen, draymen, and lorrymen in different districts, have been tabulated as follows, London being taken separately, and other districts in descending order. [§ 230 (c.)]

[§ 231.] Fluctuations of wages.

231. The evidence given with regard to fluctuations of wage in this industry related chiefly to the wages of omnibus and tramway servants. A witness who had been employed in London, Liverpool, Sheffield and Aberdeen, made the general statement that the wages of tramway men in London had considerably increased in the previous three or four years. (1) On the introduction of the ticket system in 1891 it is stated that the servants of the London General Omnibus Company received an advance of 1*s.* a day all round. After the strike in that year, however, the drivers' wages fell 6*d.* a day, and remained at 6*s.* 6*d.*, while the conductors' wages remained at 5*s.* (2) After this strike the London Road Car Company raised the wages of conductors from 4*s.* to 4*s.* 6*d.* for the first year of service, and those of horsekeepers from 3*s.* 5*d.* to 4*s.*, those of drivers remaining at 6*s.* to 6*s.* 6*d.* (3) The London Omnibus Carriage Company gave an advance of 1*s.* a day to drivers and conductors after the strike. (4) The average wages paid by the North Metropolitan Tramways Company rose gradually after the strike from about 5*s.* to about 5*s.* 8*d.* for drivers, and from about 4*s.* 8*d.* to 5*s.* 5½*d.* for conductors. (5) In 1888 the Huddersfield Corporation reduced the wages of the men employed on their steam tramways in consequence of a reduction of hours from 12 to 8 a day. The men, it is stated, willingly accepted the terms offered, involving a reduction from 32*s.* to 26*s.* a week for drivers and from 23*s.* to 21*s.* for conductors. After three years a demand was made by the drivers for a rise of wages, and the matter was compromised by the older drivers receiving an extra shilling an hour on the heaviest gradients. These terms came into force in April 1892. (6) An agitation in December 1887, among the servants of the Birmingham Central Tramways Company, resulted in an increase of conductors' wages from 3*s.* to 4*s.* in the case of those who had been two years in the service. (7) The South Staffordshire Tramways Company in 1891 forestalled agitation by certain concessions, raising the wages of drivers from an average of 4*s.* 11*d.* to an average of 5*s.* 6*d.* a day, and of conductors from 3*s.* to 3*s.* 6*d.* (8) With regard to fluctuations in the wages of carmen, very little evidence was given. It was stated that the National, Municipal, and Incorporated Vestry Employés Union had succeeded in raising the wages of carmen employed by vestries at Islington and Chelsea, a weekly wage of 24*s.* being now paid instead of 7*s.*, 10*s.*, or 15*s.*, which the men were supposed to supplement by tips and perquisites. (9)

Method of calculating wages.

232. The wages of tramway and omnibus men are in nearly all cases calculated by the day, though generally paid weekly. Horsekeepers, however, in Manchester and other towns in the North of England, are paid at piece-work rates. (10) It was stated that the practice of paying weekly wages to carmen in private employment was less usual than formerly in London, and that in most instances the men were engaged for the day, and paid by the day or hour according to the length of the job. The reason for the change was said to be the fact that the Carmen's Union had sometimes succeeded in recovering wages in the county court in cases of dismissal without notice. (11) With regard to carmen employed by vestries and local boards, it was stated that "general carmen" were paid weekly, and dust carmen by the piece, but that it was becoming the practice to pay weekly wages to the latter also. (12) Certain colliery companies in Manchester are said to pay their coal carters on a trip system, but the usual method in that district is to calculate wages by the week. (13)

Method of payment.

233. The only references in the evidence to the payment of wages through a contractor were in connection with the carmen employed by vestries and local boards in London, and by the Bradford Corporation. It was stated that of 26 vestries, 19 employed carmen directly, and seven through contractors; while of 15 local boards, about six employed directly, and nine through contractors. It had been estimated in 1890 that about 15,000 men were in the direct employment of the vestries, and 10,000 were under contractors, but it was stated that a change had since taken place through the growing tendency on the part of the vestries to discourage the contract system. The abolition of this system is among the objects of the Vestry Employés Labour Union, and it has succeeded in some cases in effecting it, and in others the vestry has been induced to insist on the contractor paying fair wages. It was stated that the conditions of labour both in respect of wages and hours were worse where the contract system prevailed (1). It was stated that the terms of employment under the horse and cart contractors employed by the Bradford Corporation were very disadvantageous to the men. (2) [§ 233.]

Allowances and deductions.

234. A report from the Post Office mail cart supervisor, forwarded to the Commission by that Department, stated that the mail cart contractors made small allowances to the drivers in addition to wages, for extra trips performed during rest hours, and also in some cases gave good conduct bonuses. Mail cart drivers are also, it was stated, supplied annually by the Department with uniform clothing. (3) Several witnesses representing omnibus and tramway servants referred to the subject of deductions from wages. It was stated that the London General Omnibus Company obliged their men to contribute 1*s.* a week to a fund for the repair of omnibuses in cases of accident. One witness stated from professional knowledge that the practice was a violation of the Truck Act. (4) The general secretary of the Amalgamated Omnibus and Tram Workers' Union confirmed the statement that the fund was maintained out of the men's wages, and added that they had no control over it and derived no benefit from it. The company did not contribute to the fund, and the men had no knowledge of the amount accumulated. (5) The secretary of the London General Omnibus Company denied, however, that any hardship existed in connection with it. An omnibus proprietor, he stated, is legally liable to the extent of 10*l.* for damages caused by the carelessness of a driver, who may be compelled to refund the sum. The subscription to the accident fund covers that liability. (6) It was further stated by a witness who had been for 20 years a driver in the service of the company, that the subscription was not stopped out of wages, but that the men paid it themselves, and the majority of them were convinced that the system prevented recklessness. The subscription is 1*s.* a week for drivers, and 6*d.* for conductors. The fund is managed, the witness stated, by the road director, who issues a quarterly statement of accounts. Two drivers and two conductors are on the committee of management, and see all the bills for accidents. The balance of the fund, or part of it, is divided among the men at the end of the year. The witness stated that he had never had deductions made from his wages on any pretext. (7) It was stated that on one line of omnibuses belonging to the London Omnibus Carriage Company, the men were fined 6*d.* if the earnings for the day were below 2*l.* The general manager of the company stated, however, that on the contrary a bonus of 6*d.* was paid whenever the earnings reached 2*l.*, which is the lowest return that yields any profit to the company. (8) It was stated by two witnesses that until very recently a practice of excessive and unjustifiable fining was carried on by certain tramway companies. Nothing, it was stated, had contributed more than this system to driving the men into organisation. In 1889 the efforts of a union which then existed brought about its practical abolition. (9) These statements were denied so far as they applied to the North Metropolitan Tramways Company, who, it was stated, had not inflicted fines on their servants for many years past. (10) In this case, however, deductions are made from wages for loss and damage of equipment through negligence on the part of the men; and also if money paid in is below the right amount through errors in the conductor's casting up. These errors, it is stated, amount to 2*l.* or 3*l.* on a gross receipt of 7,000*l.* or 8,000*l.* A report on them is presented to the general manager by the inspector or district superintendent, and the men have the option of challenging any debit. (11) It was stated that certain tramway companies in Lancashire and Yorkshire had a practice of inflicting fines of from 1*s.* to 10*s.* for such offences as being late on duty, or failing to notice an intending passenger. In Manchester these fines are not levied, but it is complained that the men are unjustly held liable for damage to the company's vehicles, and are dismissed if they fail to pay for it. To protect themselves they pay a weekly

[§ 234.] sum to cover any damage that may have occurred. (1) It was stated that in the majority of Manchester breweries fines were imposed on draymen for neglect of duty. In the case of one firm the amount of fine imposed was said to vary from 1*s.* 6*d.* to 4*s.*, and it was stated that any man whose case was taken into court was instantly dismissed. Horse and cart contractors at Bradford, it was stated, deduct 6*d.* a week from wages in payment for chopped hay for the horses. (2)

RAILWAYS. Sources of information.

235. Evidence with regard to rates of wages on railways was given before the Select Committee on Railway Servants (Hours of Labour), and both in an oral and written form before the Commission. Owing, however, to the want of uniformity and completeness in these statements, it was found advisable to adopt as the basis of the following table certain information supplied by the Board of Trade. That information is in the form of a tabulated statement of the number of men employed in the specified grades of railway service by the principal companies in the United Kingdom, grouped in ten districts, the men being classed according to the weekly rates of wages, which rates were stated as ranging between specified limits. Thus the wages of porters on the Great Northern and Great Eastern Railways were stated in the following manner:— [§ 235.]

Limits of rates of wages:—

	Men.
Over 25*s.* and up to 30*s.*	4
Over 20*s.* and up to 25*s.*	66
Over 15*s.* and up to 20*s.*	2,165
Total	2,235

Method of dealing with information.

236. In making use of these tables for the present purpose the arithmetic mean of the maximum and minimum rates for each class was taken as the average, and that sum, multiplied by the number of men specified, as the aggregate wages for each class. From the total number of men and the total aggregate wages, an approximate average wage for the whole grade was then obtained. The same method was pursued throughout. In the following table the wages of engine-drivers, the most highly paid section of the staff below the grade of stationmasters, are arranged in descending order, which order is disregarded in the case of the remaining grades.

TABLE showing the Weekly Rates of Wages paid in 1891 to the under-mentioned Grades in the Service of the Principal Railway Companies, grouped according to Districts.

Rates of wages.

237. The evidence given on the subject of wages before the Select Committee and the Commission was not sufficiently complete or systematic to admit of comparison point by point with the statements summarised in the above table, but so far as it goes it corroborates that information with remarkable closeness. (3) The evidence on both occasions with regard to the comparative lowness of wages on Irish railways is seen to be borne out here, but in this connection it was stated before the Commission by the representative of an Irish railway company, that the wages of their staff were from 10 to 50 per cent. in excess of the local rates. (4) A few of the details given before the Commission by the secretary of the Irish branch of the Amalgamated Society of Railway Servants may be compared with the tabulated statement. The wages of foremen were said to range from 17*s.* 6*d.* to 31*s.* 6*d.*, those of porters from 7*s.* or 8*s.*, for juniors, to 17*s.* 6*d.*, those of shunters from 13*s.* to 23*s.*, passenger guards from 18*s.* to 25*s.*, goods guards and brakesmen from 17*s.* 6*d.* to 25*s.* 6*d.*, signalmen from 14*s.* to 23*s.* 6*d.*, goods porters from 13*s.* to 18*s.*, engine-drivers from 3*s.* a day (on one line only) to 7*s.* 6*d.*, and firemen from 1*s.* 8*d.* (on one line only) to 4*s.* (1) It was pointed out by another witness that since this statement did not include the numbers paid at each rate, it failed to convey an idea of the true average. (2) The lowness of wages in railway workshops and in the permanent-way department on Scotch railways was said to be a great cause of complaint. With regard to railway wages generally it was stated that they were above the usual standard, but that the style of living was also higher than in most employments. (3) The general manager of the London and North Western Railway was of opinion that railway labour was on the whole adequately remunerated, in view of the financial position of some of the companies, and the fact that men usually enter the service as unskilled workmen. (4) A statement handed in by this witness, of the average rates of wages paid to the principal grades on the London and North Western Railway in the years 1881 and 1891, showed in nearly every case a higher, though for the most part only slightly higher, rate for 1891 than the average given in the above table for that railway and the Midland together. Thus the wages of engine-drivers were 2*l.* 0*s.* 11*d.* a week, of firemen 1*l.* 4*s.* 2*d.*, of porters 17*s.* 10*d.*, of passenger shunters 1*l.* 4*s.* 10*d.*, of passenger guards 1*l.* 12*s.* 5*d.*, of ticket

[§ 237.] collectors 1*l.* 2*s.* 11*d.*, of signalmen 1*l.* 7*s.* 5*d.* (including bonuses and extra payments), of goods porters 1*l.* 0*s.* 8*d.*, and of goods shunters 1*l.* 3*s.* 10*d.* (1).

Fluctuations of wages.

238. There was little evidence with regard to fluctuations of wages on railways, and it was stated before the Select Committee by the general manager of the London and North Western Railway, that no reduction of wages had taken place on that line within his memory. References were made to recent advances in the wages of shunters and engine-drivers on the Great Western, of platelayers and spare guards on the North Eastern (on the occasion of the Newcastle settlement of 1890), of guards, brakesmen, and shunters on the Caledonian, and of locomotive men on the Lancashire and Yorkshire Railway. In Ireland advances had also been granted to passenger and goods guards on the Midland Great Western Railway, and to all grades on the Great Southern and Western Railway, in consequence of a strike. (2) Evidence was given before the Commission as to recent advances in wages on the London and North Western, the Caledonian, the North British, the Great Northern of Ireland, and Irish railways generally. On the London and North Western Railway it was stated that agitations and strikes had taken place in the goods department in London and Liverpool, in 1871 and 1872, after which advances of wages were given which caused permanent satisfaction. The general manager stated further that between 1888 and 1891 the increase in wages was approximately 200,000*l.*, and that if it continued at the same rate, the effect must ultimately be felt by the public. (3) From the statement already referred to, showing the average rates of wages on this railway in 1881 and 1891, it appeared that an increase had taken place in the wages of all grades employed in the working of the traffic, varying from 4 to 9 per cent., with the exception of an increase of about 1 per cent. in the case of goods porters, and 18 per cent. in the case of pointsmen and signalmen. (4) On the Caledonian and North British Railways, concessions in wages were made at the time of the agitations in 1883 and 1890, but it was stated that great dissatisfaction was caused by this policy, which was regarded as an evasion of the question of reduction of hours. (5)

Method of calculating wages.

239. In the majority of cases the wages of railway servants are calculated by the week, but in the locomotive department various methods prevail. Day work was said to be usual on the Great Eastern and North Eastern, and other railways, and very general in Ireland. (6) The trip system exists on the London and North Western, the Lancashire and Yorkshire, and the Midland Railways, and in some cases in Scotland. Evidence was given before the Select Committee with regard to the effect of this system on earnings, and several witnesses objected to it on the ground that the time allowed for the trip was frequently insufficient to work the trains, and that overtime was thus necessarily worked without extra pay, while on the other hand deductions were made if the trains ran within the booked time (7). It was stated, however, by the general manager of the Lancashire and Yorkshire Railway, to which the evidence on this point chiefly referred, that the trip payment was based on a calculation of the average actual time of working, that the full amount was always paid, and that any applications for extra pay on account of unavoidable detention were complied with in the very large majority of cases. It was further stated both on the part of this company and the London and North Western, that a comparison of the wages earned on the trip system with those which would have been paid for the actual time worked, showed a difference in favour of the men. The trip system was said to be popular with drivers, and a great incentive to keeping good time. (8) It was stated before the Commission by witnesses representing the Amalgamated Society of Railway Servants for Scotland, that engine drivers and firemen on the Caledonian and North British Railways were paid by the hour, a system which resulted in short payment for a fortnight's work if the aggregate hours were below the standard. (9) On the other hand it was stated by a witness in the service of the Caledonian Railway Company that neither payment by the hour nor short payment for less than full work existed on that line, and the general manager of the North British Railway Company pointed out that short payment occurred only when traffic was slack, the alternative being to discharge a portion of the staff. [§ 239.]

Deductions and allowances.

240. Complaints were made by several witnesses representing the Amalgamated Society of Railway Servants, with regard to deductions from wages in the form of fines, which, it was stated, were frequently excessive or unjustly imposed. They are exacted on the ground of negligence, unpunctuality, and so forth. It was stated that a number of porters at New Street Station, Birmingham, were on one occasion fined 2*s.* each for being 15 minutes late on duty, and that guards and brakesmen employed by the London and North Western Railway Company were habitually fined for slight offences with the object of depriving them of leave of absence. (2) It was also stated that on Irish railways, and on the Manchester, Sheffield, and Lincolnshire Railway, engine-drivers were fined as much as 5*l.* for such an offence as running into a buffer-stop. Though this is a serious piece of negligence, it was pointed out that under a system of fines an employer might oblige a man to work for nothing. There was also said to be a rule laid down by some Irish companies, by which they claim the right to deduct from the wages of a man leaving the service a sum representing any damage done to property which he has held as a workman of the company. (3) With regard to these complaints, it was stated on the part of the companies that no fines were ever inflicted without sufficient reason, and that the statement as to fining for the purpose of depriving men of leave of absence was incorrect. (4) In a letter received from the Manchester, Sheffield, and Lincolnshire Railway Company, it was contended that the fine referred to was not regarded as excessive in the case of grave negligence on the part of a highly responsible and well-paid workman, and as the only alternative to dismissal. (5) The practice of different companies varies slightly with regard to the bonuses and other allowances granted to the staff, but in most cases uniform is provided, and houses are let at moderate rents to station-masters, signalmen, and others, whose duties require them to reside where accommodation is not easily to be had. Special facilities for travelling are generally granted to the servants of a company and to their families. (6) On the Caledonian Railway, yearly premiums of from 3*l.* to 5*l.* are granted to engine-drivers, firemen, signalmen, pointsmen, station-masters, and others, for freedom from accidents. These payments amount altogether to 12,000*l.* a year. (7) Bonuses for good conduct and freedom from accident are also granted to signalmen on the London and North Western Railway, and the Great Southern and Western Railway of Ireland. (8) On the Midland Great Western Railway a premium is allowed to locomotive men for economy and good conduct, but it was stated that the system was not a very satisfactory one. (9)

(ii.) PROFIT-SHARING AND CO-OPERATION.*

Profit-sharing.

241. Profit-sharing was only twice mentioned in connection with this group of industries. In both cases it was spoken of favourably, as tending to give workmen that interest in their work which a "pure wage" could not possibly supply. (10) It was stated, however, that in the case of the London, Deptford, and Greenwich Tramways, the chairman of the company had in 1889 drawn up a scheme which provided that the men should receive a percentage of the profits of the company, but that after it had been in operation for a certain time opposition came from the men themselves. The reason given was that they "thought it was too long to wait for the distribution of profits till the end of the financial year." (11) It may be noted that it was not at all anticipated that profit-sharing would check unionism, but, on the contrary, that trade unions would under this system become more important and influential. (12)

Co-operation.

242. It appears from the evidence that co-operation is also regarded with approval. It was held by one witness that the "condition of the cab trade all round"

*It appeared convenient to deal with the subjects of co-operation and profit-sharing at this stage, inasmuch as they are methods of industrial remuneration.

[§ 242.] would be improved by extension of the system; and he was of opinion, moreover, that it could be introduced by a settlement of price and a partial limitation of licenses, from which it would necessarily follow. (1) These industries do not however lend themselves easily to the establishment of the system, on account of the extent of competition and of the "migratory" character of the men engaged in them, and hence evidence was given of only two instances. The "Workers' Co-operative Omnibus Society" started with a capital of 800*l*. It paid no dividend and no interest on money invested, in order "that the profits that accrue from "its working shall be continually used until the busi- "ness is sufficiently extended to employ the workers." It was stated that the London General Omnibus Company had attempted to cause the failure of the scheme by competition. The witness stated that the society would be willing to hand their undertaking over to the municipality "at a fair valuation without any goodwill or compensation," if the municipality would work with the same object in view, pay the same rate of wages, and adopt an eight hours' day. (2) By October 1892 it was stated, however, that the Co-operative Society had been sold up. (3) The Hyde Park Co-operative Cab Company was stated to be a "struggling concern," but to be "making headway." It was formed under the Limited Liabilities Act in 1882; only 100 cabmen have shares in it, and only one dividend of 5 per cent. has been paid during 10 years. This want of success was said to have been due to the fact that there was little capital subscribed, and they started in debt; and thus the interest on borrowed capital absorbed what would otherwise have been capital. The profit is now being applied to increasing the stock. It was stated that special hindrances had been put in the way of the company. "All the world was against "it, the horse-dealers and the corn merchants . . . "They had to pay extraordinarily high prices (4)." The system by which certain privileged cabs only are employed at the chief London stations was also said to have seriously affected it. (5)

(iii.) SUPERANNUATION AND SICK FUNDS.

Superannuation and sick funds.

(a.) History and extent.

243. (*a.*) The evidence with regard to superannuation and sick funds referred almost exclusively to railway employment, except in the case of the North Staffordshire Tramways Sick and Mutual Benefit Society, the Croydon Tramways Sick and Benefit Society, the Birmingham Central Tramways Mutual Benefit Society, and a provident society established by the North Metropolitan Tramways Company, to which it was stated that the companies respectively contributed. (6) Evidence was given with regard to several provident funds in connection with English, Scotch, and Irish railway companies. The Midland Railway Superannuation Fund Association, of which the rules have been furnished to the Commission, was constituted under the Midland Railway Additional Powers Act, 1867, with the object of providing superannuation and retiring allowances for the clerks and other salaried officers of the Midland Railway Company. In 1885 the actuaries pronounced the fund insolvent, and the rules were consequently revised, and the scale of contribution was raised for a certain class of members, with the result that the prosperity of the fund was restored. In January 1892 the number of its members was 5,561. (7) The London and North Western Railway Company established in 1874 a provident society for securing to the staff allowances in case of illness, and a payment to their representatives in case of death. In 1883 a pension fund was established by the same company, and after a time the two societies were amalgamated. The combined provident and pension society has, it is stated, 30,000 or 40,000 members, and an income of 40,000*l*. a year. A pension fund formerly existed in connection with the locomotive department at Crewe, but after going on satisfactorily for five years, it was dissolved by a vote of the men, and the balance in hand was returned to the company and the staff according to contribution. (8) Reference was made to a friendly society established by the Caledonian Railway Company, it was not specified at what date, called the Caledonian Servants' Friendly Society. It provides sick benefits, and certain payments on the death of a member or member's wife. It was stated that the numbers of members for the half year ending June 1892 was 2,941. (1) On most of the railways in Ireland there are provident and sick funds. In the case of the Belfast and Northern Counties Railway, the Dublin, Wicklow, and Wexford Railway, and the Great Southern and Western Railway, the rules of these funds have been furnished to the Commission. The Belfast and Northern Counties Railway Provident Society was established in 1861, for securing sick benefits to the members, and a payment to their representatives in case of death. (2) The Dublin, Wicklow, and Wexford Railway Friendly Society was established for the same purpose in 1863. The secretary of the company stated that the society had always been prosperous, though the directors do not guarantee its solvency. (3) The Great Southern and Western Railway Sick Fund was established in 1884. A friendly society, it was stated, had formerly existed on that line, which was managed by a committee of the members, and of which membership was not compulsory in all departments of the service. In the year 1882 the society became insolvent, and the accounts were found to be in a state of hopeless confusion. It consequently broke up, with great loss to the contributors. The existing fund was instituted under rules prepared by competent actuaries, and has always been solvent. In the interest of the members, the company assumed the management, and membership was made compulsory in every case. (4) There is also a superannuation fund on this railway for engine drivers and firemen. (5) Similar funds on the Great Northern of Ireland and the Midland Great Western Railways were mentioned, but no reference was made to their history. (6) Evidence was given before the Select Committee on Railway Servants, with regard to the Engine Drivers' and Firemen's Insurance Society on the Great Western Railway, which provides sick and superannuation benefits, and pensions for widows; the Midland Railway Friendly Society, which provides sick and superannuation benefits, and payments on the death of members; and a provident society and pension fund on the Great Eastern Railway. It was also stated that the Midland Great Western Railway Company had a superannuation fund as well as a sick fund. (7)

[§ 243 (*a.*)]

(b.) Management.

(*b.*) The most usual form of management adopted for these funds is that of a committee appointed jointly by the members and the company. The Midland Railway Superannuation Fund is administered by a committee of six, of whom three are appointed by the members and three by the directors. Under the Act constituting the fund, one of the nominees of the directors must act as chairman, with a casting vote when required, and thus of seven available votes, four are in the hands of the company. Complaint was made in evidence that the members had practically no power to control the administration of the fund, and were afraid to offer suggestions lest they should appear to be attacking their employers. A fund established and controlled by Government, entirely apart from the employer, was proposed as a preferable arrangement. (8) In the case of the London and North Western Railway, the provident society is managed by a committee of twelve delegates of the men, with three nominees of the company, and the regulations are subject to the approval of the directors. It is stated that this plan is found to work perfectly well. (9) The Belfast and Northern Counties Railway Provident Society is managed by a committee and officers appointed at the general meeting, 13 of the members of the committee being elected by a majority vote, and three appointed by the directors. (10) In the case of the Midland Great Western Railway Fund, it was merely stated that the members were represented on the committee of management. (11) In three cases, those of the friendly societies on the Caledonian, the Dublin, Wicklow, and Wexford, and the Great Eastern Railways, the management is entirely in the hands of the members, who elect the committee and officers. (12) In the case of the Great Northern of Ireland Railway Company's sick fund, and that of the Great Southern and Western Railway Company, the management is entirely in the hands of the directors, who alter the rules at their discretion. The

[§ 243 (b.)] former company have a rule pointing out that continuance in the service will be taken as an assent on the part of the men to any such alteration in the rules. It was stated by the secretary of the Irish branch of the Amalgamated Society of Railway Servants that great dissatisfaction was caused in these cases by the exclusion of the members from any share in the selection of medical officers or the administration of benefits. (1) With regard to the Great Southern and Western Railway Sick Fund, it was stated by the company's traffic manager that experience of the opposite system had justified the constitution of the fund in its present form, and that the statement that any strong objection was felt by the members on that score was incorrect. (2).

(c.) Rules and general operation.

(c.) With regard to the rules and general operation of these funds, complaints were made by witnesses representing the Amalgamated Society of Railway Servants and the General Railway Workers' Union, that the railway companies, as a rule, made membership of these societies a condition of employment, and that contributions were compulsorily deducted from wages. It was stated that men entering the service had no definite notice of these deductions beforehand. It was pointed out that if this objection were removed other causes of complaint would have less force, though even then practical compulsion might be brought to bear. (3) It was stated, however, that membership was not compulsory in the case of the Caledonian Servants' Friendly Society, or the Dublin, Wicklow, and Wexford Railway Friendly Society, and the traffic manager of the Great Southern and Western Railway explained that membership of the present sick fund was made compulsory, only because it had been found in the case of the former society that those for whom it was optional did not generally avail themselves of it. (4) It was represented as a still more serious objection that men leaving the company's service were expelled from the sick fund without receiving an equivalent for their contributions. (5) In the case of the Midland Railway Superannuation Fund it was stated that according to the preamble of the Act it was established to provide retiring allowances as well as superannuation benefits, but that under the rules, any member dismissed the service for dishonesty, or retiring to avoid such dismissal, forfeits the whole of his contributions. It is contended that the penalty incurred under the common law is sufficient in such a case. Again, a man leaving the service for no reason discreditable to himself, receives, if dismissed, the amount of his contributions with 4 per cent. simple interest, and if leaving voluntarily, the amount of his contributions without interest. It is contended, however, that the whole sum standing to his credit should be paid to him, including the company's contribution, with compound interest for the time of membership. (6) With regard to the funds in connection with Irish railways, a similar complaint was made, but in a general form, as to the rules affecting dismissal and resignation. It was represented that after contributing for many years a man might be compelled to leave the society at a period of life when no other society would admit him, and that it was not easy to contribute to another while in the service, partly on account of the rule made by some companies that members of the sick fund shall not belong to another friendly society if the benefits from both exceed their weekly wages. It was contended that the companies should be prohibited by law from leaving such cases unprovided for, and that the partial refunding of contributions did not meet the case. (7) In reply to this evidence, the chairman of the Belfast and Northern Counties Railway Company furnished a written statement, which contained the remark that it was impossible to expect railway companies to adopt the suggestion that men should continue members of provident or sick funds in connection with the companies after leaving their service. It was further pointed out in this statement that according to the rules of the Belfast and Northern Counties Railway Provident Society, any member of six months' standing who leaves the service, unless dismissed for fraud or criminal misconduct, receives on application the amount of his contributions, less any benefits paid or subscriptions due, and with a certain further deduction for expenses and risk. (8) A rule to the same effect was said to exist in the case of the Dublin, Wicklow, and Wexford Railway Friendly Society, and the Great Southern and Western Railway Sick Fund. It was pointed out on the part of the latter company that servants of long standing were not discharged except for very serious offences and after repeated warnings. (1) Evidence was also given on certain points peculiar to the Midland Railway Superannuation Fund. The change in the rules made in 1885, in order to remedy the insolvency of the fund, was objected to as an infringement of the Act under which the fund was constituted. It consisted in an increase in the scale of payment for new members over 28 years of age. The extra contribution entitles such members to the scale of allowance provided when the fund was established, while the ordinary contribution, which is alone compulsory, entitles them only to an allowance under a new and considerably lower scale. It is objected in the first place that the increased contribution exceeds the limit fixed by the Act; and in the second place that whereas the same Act provides that the company shall contribute to the fund a sum equal to the total amount of the members' contributions, the company's contribution under the new rules has always been less than that sum, the difference increasing every year. It was also pointed out that the revised rules pressed unfairly on new members over 28 years of age, and gave undue preference to those who were already contributing. In the opinion of the witness who dealt with this subject, the fund as at present established had the effect of reducing the salaries of the members. It was stated that the actuaries' reports showed a decrease in the salaries of clerks over 18 and under 50 years of age, between the years 1880 and 1890, and at the same time an increase in the salaries of boy clerks and of those over 50. It was inferred from these facts that the fund had been used as a controlling force, the salaries having been reduced as soon as the company had a hold on the clerks through their contributions to the fund. It was stated that the salaries of the older clerks had been raised on account of a reduction of expenditure in their departments, which reduction had come out of the salaries of those under them, and that the company had also made a net profit on the whole transaction. These facts the witness regarded as a proof that the fund is detrimental to the interests of the members, who, however, have no power to put an end to it, since the Act under which it is constituted makes no provision for the manner of its abolition (2).

[§ 243 (c.)]

(d.) Contributions and benefits.

(d.) Evidence was given with regard to the contributions payable and benefits granted in connection with these societies. It was stated in every case that an annual contribution was made by the company, but in some cases this contribution was regarded by the witnesses as too small in proportion to that of the company's servants. (3) In the case of the Midland Railway Superannuation Fund the company's contribution in 1890 was stated to be 11,183*l.* (4) The London and North Western Railway Company's contribution to the provident and pension society fluctuates according to membership, but in 1891 amounted, it is stated, to nearly 7,000*l.*, and the surplus from the company's contribution of 15,000*l.* to the insurance society is also available for the pension fund. (5) In the case of the Belfast and Northern Counties Railway Provident Society, the company, it is stated, contributes one-fourth of the amount subscribed by the members. In the case of the societies on the Great Southern and Western, the Dublin, Wicklow, and Wexford, and the Midland Great Western Railways, the companies contribute a fixed annual sum, of 300*l.*, 100*l.*, and 200*l.* respectively. This last sum was stated to be about one-fifth of the members' contribution. (6) In the three cases previously mentioned, it is stated in the rules of the societies that all fines imposed on the company's servants are to be added to the funds. (7) It was stated before the Select Committee on Railway Servants, that the contribution of the Great Western Railway Company to the Engine Drivers' and Firemen's Insurance Society was over 2,000*l.* a year, and that of the Midland Railway Company to the Friendly Society 11,000*l.* a year, while the Great Eastern Railway Company contributes 2,500*l.* a year to the provident society, and half the income of the pension fund. (8) The different scales of contribution and benefit applying to ordinary members are somewhat various. In the

(1) Digest, Vol. III., p. 81. Rules of the Great Southern and Western Railway Sick Fund. (2) Digest, Vol. III., p. 87. (3) Digest, Vol. III., pp. 49, 81. (4) Digest, Vol. III., pp. 75, 87, 88. (5) Digest, Vol. III., pp. 49, 81. (6) Digest, Vol. III., p. 57. (7) Digest, Vol. III., p. 81. (8) Minutes of Evidence, Vol. III., Appendix CCII.

(1) Digest, Vol. III., pp. 87, 88. (2) Digest, Vol. III., pp. 56, 57. (3) Digest, Vol. III., pp. 49, 54, 56, 75, 81, 87, 88. (4) Digest, Vol. III., p. 57. (5) Digest, Vol. III., p. 54. (6) Digest, Vol., III. pp. 81, 87, 88. (7) Rules of the Belfast and Northern Counties Railway Provident Society, the Great Southern and Western Railway Sick Fund, and the Dublin, Wicklow and Wexford Railway Friendly Society. (8) Appendix to Minutes of Evidence, Vol. III., pp. 503, 505.

[§ 243 (d.)] case of the Midland Railway Superannuation Fund the subscription of members is limited under the Act to 2½ per cent. on their respective salaries. The higher scale of benefit begins at an allowance of 25 per cent. on average salary, after 10 years of contribution to the fund, and rises year by year, reaching a percentage of 67 after 45 years' membership. The lower scale begins at 6·4 per cent. on average salary, but after 34 years it coincides with the higher scale. (1) On the London and North Western Railway, the pensions vary from 7*s.* to 12*s.* a week. (2) In the case of the Caledonian Servants' Friendly Society, the weekly contribution is 3*d.*, 4*d.*, or 6*d.*, and the corresponding weekly benefit in illness, 8*s.*, 12*s.*, or 16*s.* (3) In the case of the Belfast and Northern Counties Railway Provident Society, and the Dublin, Wicklow, and Wexford Railway Friendly Society, the entrance fee is about one-tenth of the members' weekly wages, and the subscription, which is monthly in the former case and fortnightly in the latter, is approximately one-twentieth of the same sum. The weekly sick allowance varies in accordance with the scale of contribution from 5*s.* to 10*s.* on the Belfast and Northern Counties, and from 2*s.* 3*d.* to 1*l.* on the Dublin, Wicklow, and Wexford Railway. In the case of the Great Southern and Western Railway Sick Fund, the weekly contribution varies from 2*d.* for members whose wages are 10*s.* or under, to 8*d.* for members receiving more than 25*s.* The weekly sick allowance for the first six months is 24 times the amount of subscription, thus varying from 4*s.* to 16*s.*, and for the second six months half these sums. The weekly subscription to the superannuation fund in the locomotive department is 2*s.* for engine drivers, and 1*s.* or 2*s.* for firemen according to choice. A member leaving the company's service from whatever cause after less than 10 years' service is paid the amount of his subscriptions with 2½ per cent. compound interest, but a member leaving the service creditably after 10 years is paid the amount of his subscriptions with 4 per cent. compound interest. After 25 years' service a member has the option of receiving the sum due to him or the annuity which that sum will purchase. The rules provide for considerably increased payments to members or their representative in the case of death or disablement in the discharge of duty. (4) In the case of the Midland Great Western Railway Sick Fund the subscriptions vary from 6¾*d.* to 1*s.* 1½*d.* The scale of benefit was not fully specified, but it was stated that on the whole the benefits balanced the subscriptions. (5) It was stated before the Select Committee on Railway Servants that the weekly subscription to the Great Western Railway Engine Drivers' and Firemen's Insurance Society was 1*s.* 9*d.* for drivers and 1*s.* 2*d.* for firemen, the benefits being a pension of 10*s.* 3*d.* a week, with a bonus at the age of 60, which varies from 70*l.* to 100*l.* In the case of the Great Eastern Railway provident society the subscriptions vary from 5*d.* to 9*d.* a week, and the sick benefits from 8*s.* to 16*s.* a week for 20 weeks. Members of the pension fund contribute from 2*d.* to 5*d.* a week, and at 65 years of age, after 30 years of membership, are entitled to pensions for life of 10*l.* to 25*l.* a year, and to proportionate pensions if incapacitated between the ages of 55 and 65. The Midland Great Western Railway superannuation fund provides, for members who have not served less than five years, and are incapacitated through accident, infirmity, or age, a gratuity of 1*l.* on resignation for each year of continuous service. (6)

2. HOURS.

(i.) STATEMENTS OF HOURS.

ROAD TRANSPORT:

Nature of information.

244. Oral and written evidence has been received both from employers and employed on the subject of the hours of labour in employments connected with omnibuses and tramways, hackney carriages, cars, drays and lorries. This evidence chiefly related to London and to the district embraced by the Northern Counties Amalgamated Tramways and Hackney Carriage Employés Association.

Hours worked on omnibuses and tramways.

245. With regard to men employed on omnibuses and tramways it was stated that they were universally overworked, except at Huddersfield, where the hours were reasonable. (7) With this exception the hours [§ 245.] worked in provincial towns appear to be longer on the whole than those worked in London. The former in most cases exceed 12 a day, and occasionally reach 15 or more, while in London a very usual method is to obtain an average 12 hours' day by working 9 and 15 hours on alternate days. This system was introduced by the London Road Car Company, and adopted by others, after the strike of 1891, in response to the demand for a 12 hours' day, but it was stated that in many cases it had never come into force, the men having been persuaded to accept longer hours with higher pay.(1) It was stated, however, on the part of the London Road Car Company, that the 12 hours' day had never been departed from since the strike, and on the part of the London General Omnibus Company, that though a very large proportion of the men had petitioned to be allowed to return to the system prevailing before the strike, namely, an average day of about 14½ hours, with higher pay, the directors had not complied with this request, except in three instances, in which the omnibuses are out for 13 or 13½ hours.(2) This statement is at variance with the detailed evidence given by a former witness with regard to the hours worked on the different lines owned by the General Omnibus Company, according to which there were two instances of an average 15 hours' day, and three of an average 16 hours' day. Since, however, no detailed contradiction was offered on these points, except in two cases, this evidence in its corrected form has been used for the purpose of calculating the average hours of the staff of the London General Omnibus Company. (3) The system of working alternate days of 9 and 15 hours has the advantage of giving the relief men a full day's work, which is not possible with an actual 12 hours' day.(4) In the case of the London Omnibus Carriage Company the average 12 hours' day was introduced in 1891, but at the request of 90 per cent. of the men, the previous hours were restored, with an increase in wages of 1*s.* a day. A similar course had been taken in 1890, when a reduction of hours to about 13½ was recalled on a petition from the men, who believed their interests to be endangered by the stress of competition.(5) It was stated, however, that in general the desire of the men was for reasonable leisure rather than high wages, and that it was far from being the case, as was sometimes contended, that long hours of work in the open air were conducive to health. On the contrary, the exposure was extremely hurtful.(6) The same consideration was urged in connection with the hours worked by omnibus and tramway men in Manchester, which show a much higher average than in London. It was also stated that in this case the excessive length of hours deprives the men almost entirely of opportunities of seeing their families, and causes a state of exhaustion which is likely to lead to accidents.(7) Another point of difference between London and some provincial towns is that stated mealtimes are usually allowed by the London omnibus companies, with a certain interval of rest between the journeys, ranging from 10 to 45 minutes, while the statement was frequently made with regard to omnibus and tramway men in Manchester and other northern towns, that they had either very little time allowed for meals, or none at all, in which latter case it was the practice of the men to have their food brought to them while at work.(8) In the following table, showing the hours of labour in different districts, the gross hours are stated, including meal times and other intervals. Such intervals are stated separately in all cases in which they are mentioned in the evidence. The general statement was made, though certain exceptions to it were pointed out, that all London tramway companies allowed an interval of two or three hours in the middle of the day, but it was contended that the men were at the disposal of the companies during that time, and could not be considered wholly off duty.(9) Most of the figures stated in the following table are taken directly from the evidence. In the case of Manchester, and of the different tramway and omnibus companies in London, an attempt has been made to obtain an average from the various detailed statements made in the evidence, but the method of calculation varies with the nature of the evidence supplied. In the case of Manchester, a table was handed

eductions
n hours.

246. The general statement was made that hours in this industry were now less excessive than formerly, and in some cases details were given with regard to recent concessions made by employers in this direction.(2) The reduction in 1891 of the hours of men employed by some of the principal London omnibus companies from an average of 14 or 15 to an average of 12 a day, has been already referred to. It was stated that in Manchester the demand of the organised workmen for a 12 hours' day, inclusive of meal times, had been unsuccessful. The tramway companies first granted one day's holiday in a fortnight, in lieu of a reduction of hours, but this concession, it was stated, was tampered with in some cases by giving the men extra journeys on working days. The original demand was renewed in April 1891, but the directors of the Manchester Carriage and Tramway Company attributed the agitation to the Union, and maintained that the men were not in favour of a reduction of hours. A general meeting of 700 or 800 servants of the company supported a resolution in favour of a 12 hours' day, but the company refused their request on the evidence of a small deputation who represented that the reduction was not required. A weekly holiday was then conceded, with an increase of wages in one district. It was stated that this concession in its turn had been tampered with in various ways, and that the men were greatly dissatisfied. On the matter being laid before the company, they stated that no reduction of hours could be made without a reduction of wages.(3) In the case of the Birmingham Central Tramways Company, unsuccessful agitations for a reduction of hours from 12 to 10 a day took place in 1889 and 1890. The matter was compromised by concessions in the form of allowances, good conduct pay, and holidays.(4) The most conspicuous instance of a recent reduction in hours is that in connection with the Huddersfield Corporation Tramways. Before 1888 the hours were 14 a day, including two hours' meal time, but notwithstanding their dissatisfaction with that arrangement, the men, it is stated, made no attempt to alter it. The Corporation at the same time wished to increase the hours of running the services, without increasing the hours of the men. They therefore proposed to introduce a double eight-hour shift at reduced wages, and asked the men to vote by ballot on the question. A unanimous assent was given to the new arrangement, which was found to work satisfactorily.(1) Since the formation of the Dublin and District Tramway Union it is stated that some reduction has taken place in the hours of the men. It was stated by the manager of the Dublin United Tramways Company that many years ago the hours were 14 or 15 a day, but had been reduced before any application was made by the Union. The first application was received in May 1891, and after negotiations, in the course of which the company declined to admit the claim of the Union to represent the men, a deputation of unionists and non-unionists was received. At their request the company conceded an average 12 hours' day, including meal times, and a holiday every twelfth day with full pay. It was stated by the secretary of the Dublin and District Tramway Union, that the reduction of hours was arranged by giving two or three hours' relief in the middle of the day, a system which suited the management but was inconvenient to the men.(2)

247. With regard to Sunday labour, it was stated on the one hand that omnibus and tramway men in London usually worked on Sunday, which was in fact the hardest day in the week, and that Sundays off were not always granted on application.(3) On the other hand it was stated by the secretary of the London General Omnibus Company that the company's staff had no difficulty in obtaining a day's rest when required, beside the regular Sunday off once in six weeks. A certain number of Sunday labour.

(1) Appendix CXXIII. The witness who handed in this table appears to have misquoted it in his evidence. (2) Digest Vol. III., p. 33. (3) Digest Vol. III., p. 19. Jackson 17,893. (4) Digest, Vol. III., p. 32. Minute of Evidence, Vol. III., Appendix CXLVIII.

[§ 247.] omnibuses are stopped every Sunday (in 1891 the average number was 110) and extra men are employed for the purpose of relieving the regular drivers and conductors on due notice being given.(1) Witnesses representing the men employed by this company in two different districts confirmed this statement that Sunday relief could always be obtained with loss of pay. Most drivers, it was stated, applied for relief every alternate Sunday.(2) The general manager of the North Metropolitan Tramways Company stated that the company's servants could always obtain leave on Sunday, but that as a rule they preferred to take a holiday in the week.(3) It was stated that Sunday work was usual with tramway servants in Manchester and other towns in the north, with the exception of Huddersfield and Edinburgh, where there is none.(4) In the case of the Dublin United Tramways Company complaint was made that there was no extra payment for Sunday work, and no opportunity, except for Roman Catholics, of attending a place of worship.(5)

Hours worked by hackney carriage drivers.

248. There is some variation in the hours worked by cab-drivers in London, partly owing to the peculiar terms of employment. The limit is practically fixed on the one hand by the necessity of earning the hire of the cab, with a sufficient profit, and on the other by the objection of proprietors to employing men who overwork their horses. The general average was variously stated as 13, 15, and 15 to 18 hours a day for men working two horses, and about 9 to 10 for men working one horse.(6) With the Improved Cab Company the average hours were stated to be 13 hours 21 minutes for hansom drivers and 14 hours 5 minutes for four-wheel drivers, the former working 5½ days, and the latter 5 days a week.(7) It was stated that the drivers employed by one large proprietor worked on an average 72 hours a week, resting on Sundays and in many cases on one other day in the week.(8) A witness representing the Metropolitan Cab Drivers' Trade Union complained of the excessive hours which were necessary in order to earn the required sum, but a witness representing the various associations of cab proprietors was of opinion that a man could "do well" on 11 hours' work a day.(9) It was stated that Sunday work had increased in recent years, through an arrangement made by some of the proprietors' associations that their cabs should work every alternate Sunday. In some cases a driver who refused to do so would be discharged. It was estimated that about half the total number of cabs were worked on Sundays.(10) The evidence with regard to hours of labour in different districts has been tabulated as follows:

Hours worked in employments connected with cars, drays, and lorries.

249. The excessive hours of general carmen in London were represented as a great cause of complaint. The secretary of the London Carmen's Trade Union stated that the pressure of competition in the labour market had prevented the Union from effecting any improvement in this respect. It aims, however, at establishing a 60 hours' week, so divided as to enable the men to leave work at 2 p.m. on Saturday.(11) It was stated that the average hours of general carmen, that is, of two-thirds of the carmen in London, were from 16 to 18 a day. They begin work at 5 or 6 a.m., and go on till late at night. The hours of boys also are frequently 18 to 19 out of the 24. They are behind the vans all day, and, after resting from 7 to 12 p.m., [§ 249.] they are employed for the rest of the night in taking loads of meat from the railway stations to Smithfield. This, it was stated, occurred on three or four nights a week. The hours of men employed by private firms are said to be shorter than those of general carmen. It was stated that the carmen employed by the Post Office contractors worked on an average 18 hours a day, including a break of an hour and a half in the middle of the day for changing horses.(1) On the other hand, it appeared from certain detailed returns furnished by the Post Office that the average hours worked by mail cart drivers were 13½ a day, of which time only 6¼ hours were occupied in actual driving. A copy of a report by the mail cart supervisor included a table showing the number of men employed for each specified number of hours. The minimum is from 9 to 10 hours, worked by three drivers, and the maximum from 17 to 18, worked by three drivers. The very great majority of the men are employed for periods ranging from 10 to 16 hours. With regard to Sunday labour, it was stated in the same returns that out of 362 drivers employed by the Post Office contractors, 122 were employed on Sunday for periods varying from an hour to two hours and 20 minutes. One of these contractors gives no extra payment for such work; another pays at the ordinary rate of wages; and another pays in some cases a fixed sum of 2s., and in other cases allows time off duty on Monday morning.(2) General carmen, it is stated, are frequently obliged to work in the stables for the whole of Sunday, owing to the insufficient supply of stablemen, and the demand for light vans to be let out for pleasure on Sunday afternoons. Railway carmen and boys are not employed on Sundays.(3) The hours of carmen employed by vestries and local boards in London are said to vary from 60 to 72 hours a week, the only exception being in the case of Bethnal Green, where a 48-hours week is worked in the winter. In a few cases the Vestry Employés Labour Union has obtained a reduction of hours. Overtime is regulated by the vestries, and does not prevail to the same extent as formerly, owing to the introduction by the Union of a system of overtime payment.(4) Excessive hours were said to be worked by some of the carters' and brewers' draymen in Manchester. The average hours of the latter were stated to be 90 a week, while "some of the aerated water carters" work as many as 114 hours a week in summer. In a few cases, the Lorrymen and Carters' Union has succeeded in obtaining a 60 hours' week for railway lorrymen, with either overtime payment or a system of "playing off," which is preferred to the former. On this system a day's holiday is allowed when 10 hours' overtime has been worked. Two witnesses representing the National Scottish Horsemen's Union made a special complaint with regard to the hours of carters in Glasgow and Greenock. Where the Union is powerful, the hours have been reduced from an average of 17 a day to an average of 13, including two hours for meals. This reduction was the indirect result of a strike. On the other hand, where the Union is not strong, some of the contractors take advantage of the fact to lengthen hours and reduce wages. On the whole, trade union effort in this direction is considered by the witnesses to have been a failure.(5) The evidence with regard to hours of labour in this industry has been tabulated as follows:—

§ 250.] ILWAYS: rces of ormation.

250. Information with regard to hours of labour on railways has been obtained from the oral and written evidence received by the Commission, and also from the evidence given before the Select Committee on Railway Servants (Hours of Labour). For the present purpose, the précis of that evidence, appended to Vol. III. of the Minutes of Evidence taken before Group B., has been consulted, and is referred to as Appendix to Minutes, Vol. III. A return with regard to wages and hours, submitted to the Board of Trade by the Caledonian Railway Company, and supplied to the Commission by the Board of Trade, has also been made use of. Though not strictly typical of the systems of hours prevailing on railways generally, the following extract from that return may be taken as a starting-point, the arrangements applying to other companies being noticed where they differ.

TABLE showing WEEKLY HOURS and RATES of OVERTIME PAYMENT of SERVANTS of the CALEDONIAN RAILWAY COMPANY.

Department.	Weekly Hours.	Overtime Payment.
Coaching:—		
Foremen	72	None.
Porters	72	None.
Shunters	72	None.
Passenger guards	60 to 72	None.
Goods guards	66 to 72	Ordinary rate.
Ticket collectors	72	None.
Signalmen	48 to 72	None.
Pointsmen	72	None.
Goods:—		
Shunters	60	Ordinary rate.
Porters	60	Ordinary rate.
Locomotive:—		
Engine drivers	72	Rate of 10 hours a day.
Firemen	72	Rate of 10 hours a day.
Cleaners	60	Actual time.
Engine shunters	54	Time and a quarter.
Carriage examiners	60	Actual time.
Engineers:—		
Foremen	51 to 60	Time and a quarter or time and a half.
Platelayers	57½ to 59	Time and a quarter or time and a half.

From the evidence before the Select Committee it appeared that the system of hours on the North British Railway is very similar to that on the Caledonian.(1) In the case of English railways it is not always clear whether there is a daily or a weekly standard of hours, but in most cases it appears that overtime payment for the running staff is calculated on the week's work, while the booked time, and as far as possible the working, is kept also within a prescribed daily maximum. The standard week's work on the Great Western Railway for engine-drivers, firemen, and guards is 66 hours, with a usual daily maximum of 12 hours, and the same rule prevails on the Great Eastern Railway in the case of guards, but engine-drivers have a standard 10 hours' day, each day standing by itself.(2) The latter system was said to apply also to the locomotive staff on the Belfast and Northern Counties Railway, the Great Southern and Western Railway of Ireland, the Midland, and the Lancashire and Yorkshire Railways, except where the trip system is in operation, in the two latter cases.(3) On the Belfast and Northern Counties Railway the 10 hours' day applies also to guards, but on the Lancashire and Yorkshire Railway the hours of the latter grade are calculated by the week, and on the Midland Railway it is only stated that the booked time is uniformly within 12 hours a day.(4) On the London and North Western, the North Staffordshire, the North Eastern, and the Irish Great Northern Railways, the standard hours of the running staff are 60 hours a week, except in the case of the mineral service on the North Eastern Railway.(5) On most railways the hours of signalmen are 8, 10, or 12 a day according to class, each day standing by itself, and different railways vary only as to the proportion of signal boxes assigned to each class. The same classification exists in the case of shunters, but the eight hours' system is much less general. In the majority of cases the hours of both shunters and porters are 12 a day, with intervals of an hour or two for meals.

(4) Appendix to Minutes of Evidence, Vol. III., pp. 475, 497, 492. (5) Appendix to Minutes of Evidence, pp. 476, 483, 491, 499, 501.

[§ 250.]

Attitude of representatives of railway companies and of railway servants towards present hours of labour.

251. The general statement was made by witnesses representing railway servants or their organisations before both the Select Committee and the Commission, that the length of the present hours of labour was a cause of great dissatisfaction on the majority of English and Scotch railways, but that on Irish railways excessive hours were decidedly less prevalent, though improvements might still be made in that respect.(1) The view expressed by witnesses representing the railway companies amounted in substance to an entire condemnation of any system of working involving excessive hours, together with a statement of certain conditions under which such hours are unavoidable or otherwise defensible.(2) The grievances of railway servants in connection with hours of labour appear for the most part, though not rigidly classified, to relate to three subjects:—the length of the regular hours of work, the prevalence of overtime, and the different methods of calculating or regulating hours, including such arrangements as the relief system, the "link" system, and the weekly aggregation of hours.

Complaints with regard to the regular hours. (a.) *The staff at fixed posts of duty.* (i.) *Signalmen.*

252. (*a.*) It is chiefly in the case of signalmen that the regular hours have been represented as excessive, and in this connection great stress has been laid on the importance of their duties, and the physical and mental strain which the work involves. It was maintained by several witnesses before the Select Committee that the classification of signal-boxes into those on shifts of 8, 10, and 12 hours was not in all cases carried out in such a way as to meet the requirements. The difference in the laboriousness and responsibility of different posts is such that while in many signal-boxes the work is literally incessant, and eight hours' employment is a heavy and even excessive strain, there are others where the traffic is inconsiderable, and 12 hours' duty represents for the most part mere attendance. Several witnesses, including an inspector of railways for the Board of Trade, pointed out that all important signal-boxes should be on an eight hours' shift, and that in view of the changes in the requirements of the traffic, more frequent re-classification should be carried out. It was recognised, however, that no general rule could supply an exact definition of an "important" or "busy" signal-box, and that it was necessary to consider each case on its merits.(3) It was also stated on the part of the railway companies that this question received their continuous attention, and that re-classification proceeded according to the increase in traffic.(4) The evidence showed, however, that in some cases a reduction of hours had only been made on representations from the staff, and that cause of complaint was still considered to exist.(5) Several witnesses before the Select Committee referred to the prevalence of 12-hour shifts in busy shunting yards, where the work is continuous as well as heavy and dangerous. Special instances were mentioned in the case of the Lancashire and Yorkshire and Cambrian Railways. It is one of the demands of the Amalgamated Society of Railway Servants on behalf of the men that an eight hours' shift should be adopted in all busy shunting yards.(6) With regard to the hours of goods and passenger porters, cases were mentioned in which the nature of the work was thought to require a shorter shift than 12 hours, or in which the work was light but the hours exceeded 12.(7) It was pointed out by a witness before the Commission, representing the porters on the Lancashire and Yorkshire Railway, that at some stations 10 or 12 hours' work was enough to cause complete exhaustion, and that the maximum hours of porters should in all cases be 10 a day for six days a week. He gave details of his own work, stating that his average hours were 79 a week, including 14½ hours continuous work every alternate Sunday.(8) Similar cases were mentioned before the Select Committee. With regard to the cases in which the regular hours of porters exceed 12 a day, it was pointed out on the part of the companies that such cases existed only at small stations where the work is light and intermittent, and

[§ 252 (a.)] the hours could only be reduced by diminishing the service of trains, or by putting on additional men, for whom there would be insufficient occupation. It was not maintained, except by witnesses who advocated a general 10 hours' day, that these were instances of overwork.(1)

(b.) Running staff.

(b.) With regard to the running staff, *i.e.*, the drivers, firemen, and guards of goods and passenger trains, a large amount of evidence was given, throughout the course of which nothing was more apparent than the peculiar difficulties attending the regulation of hours in this department, and the divergence of opinion with regard to the system which should be adopted. While the difficulty of adhering to the booked time is less serious with passenger than with goods traffic on account of the precedence given to the former, the difficulty of adjusting the booked time in accordance with any given standard of a fair day's work would appear to be greater in the case of passenger traffic, on account of the variety in the nature of the work. It was stated that express drivers were seldom booked on duty more than 9 or 10 hours a day, of which the running time was probably five or six hours, but that the physical and mental strain made this a harder day's work than that of running slow trains on short journeys for 12 and 13 hours.(2) Another difficulty in the way of laying down any general rule in the matter appears in the numerous cases where the booked time on duty reaches 12 or 14 hours, but includes an interval, often of four or five hours, between the outward and return journey. It was very strongly represented by locomotive men in their evidence before the Select Committee that this interval gave an opportunity for necessary rest, and that they preferred working the return journey to lodging away from home at night.(3) The majority of complaints of excessive hours have arisen, not in connection with such cases as these, but where the journeys are arranged on a system which gives each set of men in turn a stretch of work amounting to 13 or 14 hours, with insufficient intervals of rest, but alternating with a shorter day. This system appears to apply principally to guards, and a considerable amount of evidence was given as to the overwork which it was said to involve.(4) With regard to goods and mineral traffic, it was the opinion of numerous witnesses that the booked times were almost uniformly excessive, in view of the unavoidable delays incidental to the working of the trains. It was stated that on the North British, the Manchester, Sheffield and Lincolnshire, the Midland, the North Staffordshire, the Great Northern of Ireland, and the Midland Great Western (Ireland) Railways, the booked time of the engine-drivers frequently exceeded 12 a day, so that any detention, such as might easily occur, caused excessive hours to be worked. A statement was handed in by a witness before the Select Committee, showing the whole of the hours worked by a North British engine-driver in the years 1889 and 1890. With few instances of very excessive hours, the average day's work in 1889 was 13 hours 40 minutes, and in 1890, 13 hours, and with three exceptions the day's work was never under 12 hours.(5) It was also stated before the Select Committee, with special reference to the Lancashire and Yorkshire, the Great Western, and the Midland Railways, that the booked hours of goods guards were in many cases excessive, and that the intervals between the arrival and departure of trains were usually too short and too fully occupied to be considered intervals of rest.(6)

Overtime.

253. On the subject of overtime evidence was given in great detail both before the Select Committee and the Commission.

(a.) The staff at fixed posts of duty.

(a.) The greater number of complaints of excessive overtime applied to the running staff rather than to the staff at fixed posts of duty. It did not appear that much overtime was worked by signalmen, though such cases had occurred under exceptional circumstances. The limit of 12 hours, which it was agreed by numerous witnesses should be the maximum length of a shift, is seldom exceeded, except in cases where the men arrange to divide the night and day shifts unequally. Overtime, however, may occur through unforeseen emergencies, such as the failure of the relief system. It is apparent from recent improvements on certain lines that the question of provision for such emergencies, as well as of the reduction of regular hours, is, in the case of this department, mainly a question of addition to the staff.(1) [§ 253 (a.)] Overtime was stated to be frequently worked in the case of shunters, and of goods and passenger porters. The chief cause of overtime in the case of porters appears to be occasional press of traffic at busy stations, and also the practice on some lines of employing porters as extra guards or signalmen after their regular hours. Evidence was given on this subject both before the Select Committee and the Commission, and while it was pointed out on the part of the companies that such employment is a step to promotion, and a convenient method of training porters in the work of higher grades, it was evident that it involves excessive hours of work, and it was therefore suggested by one witness that the hours of porters should be included in the returns to the Board of Trade.(2) It was stated before the Select Committee that platelayers were frequently required to work excessive hours in cases of emergency, particularly when employed in fog signalling. In cases of sudden and prolonged fog, it frequently happens that the staff is found insufficient, or that relief men cannot be brought to the spot at the time they are required. The manager of the London and North Western Railway, which has a staff of nearly 4,000 trained fogmen, admitted that additional provision for emergencies was desirable, and that other grades than that of platelayers might with advantage be trained to the work.(3)

(b.) Running staff.

(b.) In the case of the running staff, the evidence showed that the regulation of hours was attended with considerable and peculiar difficulty, and that there was often a large amount of work in excess of the standard of 12 hours a day, which, according to most of the witnesses, should be the maximum in all cases. It was admitted, however, by every witness who dealt with the subject, that a certain amount of overtime is unavoidable. Railway traffic is always liable to be delayed by accidents or by stress of weather, and a single obstruction in the working of the line affects the whole system. This difficulty is far more serious in the case of goods and mineral traffic than of passenger traffic, on account of the precedence given to the latter. Under exceptional conditions of weather, such as continuous fog, it may be barely possible to work the passenger traffic, while the goods traffic is thrown entirely out of gear. The system of relief which now exists to some extent on all railways, partially meets the case, but it is useless under exceptional conditions. An instance was mentioned by the manager of the London and North Western Railway, in which the whole traffic was delayed by dense and continuous fog, and to carry out the relief system would have required during four days an enormous additional staff, who would have no employment for the rest of the year.(4)

Extent of overtime worked on different railways.

254. With regard to the extent of overtime worked on different railways, the evidence, especially before the Select Committee, was extremely copious and detailed, consisting chiefly of statements of the hours actually worked during certain days or weeks. The force of this evidence obviously consists in the detail itself, and cannot be estimated from any general statement. In the great majority of cases replies were furnished by the companies to the statements made in evidence with regard to the hours of their servants. The evidence on this point referred to almost every railway in the United Kingdom, but the greatest number of instances of excessive hours were quoted in connection with the Lancashire and Yorkshire, the North British, and the Caledonian Railways.(5) In commenting on this evidence, it was denied on the part of several companies, including the London and North Western and Great Eastern Railways and the Great Southern and Western Railway of Ireland, that the working arrangements were such as to cause any hardship to the staff, and it was stated that the duty and expediency of keeping the hours of labour within reasonable limits were fully recognised by the management.(6) On the other hand, on the part of the Lancashire and Yorkshire, the North Staffordshire, the Midland, the Great Western, the North Eastern, the North British, and the Caledonian Railways, it was admitted in varying degrees that excessive hours had prevailed in the past to

[§ 254.]

a greater extent than was desirable, but it was stated that they were due either to unforeseen contingencies which would now be provided against, or to the special conditions attending the working of traffic on those lines.(1) In many cases it was pointed out that the instances of overtime given in evidence referred to the winter of 1890–1, when the exceptionally severe weather, accompanied by fog, caused unavoidable detention to trains, while the closing of canals by frost threw extra traffic on the railways.(2) It was stated that the relief system universally in use was not an adequate method of meeting such contingencies, and that the only effectual remedy for habitual or occasional congestion of traffic was the construction of additional relief lines and sidings, and that improvements in this direction were proceeding, but required some time for their completion.(3) In the case of the Lancashire and Yorkshire Railway, which shows a very high record of hours in the Board of Trade returns, it was stated before the Select Committee that notwithstanding an expenditure of 12,000,000*l.* on relief lines in 10 years, it had been found impossible to keep pace with the increase of traffic.(4) The irregularity of mineral traffic was mentioned as a cause of long hours on the North Eastern, North British, and Caledonian Railways, and it was pointed out in the first case that the fluctuation was so considerable that it would be impossible to dispense altogether with overtime, without either considerably overmanning the line for ordinary traffic, or resorting to the undesirable expedient of casual labour. In the case of the North British and Caledonian Railways it was pointed out that most of the instances of long hours quoted in the evidence occurred in the winter of 1890–91, when, in addition to the increase of traffic caused by the opening of the Forth Bridge, and the exceptional state of the weather, the traffic was totally disorganised in consequence of the strike.(5) In every case it was stated that great improvements in the working arrangements had been effected in recent years, partly through the pressure of public opinion, and the institution of the Board of Trade returns of overtime.(6) With regard to one railway recently constructed, the Midland and South Western Junction Railway, evidence was given by Major Marindin, Inspector of Railways for the Board of Trade, to the effect that, owing to special difficulties in the working of that line, the hours had been in many cases excessive, but that after an inquiry by the Board of Trade, and on a strong recommendation from that department, the company had revised the working of the traffic, so as to bring the hours of labour within reasonable limits without making any addition to the staff.(7) With regard to Irish railways, it was stated that in general the work was less heavy and continuous than on English railways, but that, in some cases, the absence of a definite standard of hours with payment for overtime beyond that limit, together with the fluctuating nature of the cattle traffic, which is worked by special trains, was a cause of overwork. On the part of the companies it was stated that no complaints of excessive hours had been received from their staff, and that in many cases the work was light and the intervals were long.(8)

vertime ayment.

255. It is the demand of the Amalgamated Society of Railway Servants and of the General Railway Workers' Union that overtime should be paid at a rate 25 or 50 per cent. higher than the ordinary wages. This practice is followed on many railways, especially in the case of the locomotive staff, but with other grades it is by no means universal, and where overtime is paid it is generally at the ordinary rate of wages.(9)

unday ork.

256. It was stated before the Select Committee that Sunday work was more usual with signalmen than with other classes of railway servants, and Major Marindin therefore suggested that more frequent leave of absence should be given them in consideration of the strain of continuous work of such a kind.(10) It was stated that on the London and North Western Railway most signalmen have every alternate Sunday off, an arrangement which is effected by means of a relief system, and by switching off many of the boxes. The same method is adopted on other railways, but a more

[§ 256]

usual proportion of working Sundays appears to be two out of three.(1) Passenger guards, engine-drivers, and firemen are on duty a varying number of Sundays, sometimes one in four.(2) On several railways, such as the North Eastern, the Great Eastern, the North Staffordshire, and the Great Southern and Western of Ireland, the goods and mineral staff have little or no Sunday work, but a complaint was made before the Commission as to the amount of Sunday work performed by goods guards on the Great Western Railway.(3) It appears to be usual for passenger porters to work on alternate Sundays.(4) It is one of the requirements of the Amalgamated Society of Railway Servants that Sunday work should be paid at the rate of time and a half, but the General Railway Workers' Union demands a double rate of pay, which is that prevailing in the artizan grade.(5) In many cases an advanced rate is paid for Sunday work, but this is chiefly the case with the running staff, and applies more especially to engine-drivers and firemen.(6) It was stated before the Commission that the practice of including Sunday in the week's work for the purpose of calculating wages had recently been modified to a great extent, and that in the grades of engine-drivers, firemen, guards, shunters, and signalmen, the week was now usually calculated as six days.(7)

Aggregation of hours and the "link system."

257. Among the methods adopted on different railways for the regulation of hours, that which was chiefly brought into prominence in the evidence was the system of aggregating the hours for the week or fortnight, so that excessive hours are sometimes worked on individual days, without overtime payment being earned on the whole period. This system, it was stated, is almost universal on Scotch railways in the case of the running staff, and is very usual on English and Irish railways. It is frequently combined with the link system, by which runs of different lengths are taken in turn by a certain number of engine-drivers, firemen, and guards. In this case long days are balanced by short days, so that no overtime is made on the week's work. Where the link system is not in use, the same effect is produced by booking off the men on certain days when long hours have been worked on other days. In the evidence before the Select Committee, there was a conflict of opinions among the representatives of railway servants as to the advantages of this plan, but a very general preference was expressed for a day's rest in the course of the week, even with somewhat long hours on working days. The extreme importance of preventing excessive hours from being worked on any one day was, however, unanimously emphasised, and on this ground it was claimed by representatives of the Amalgamated Society of Railway Servants and of the employed generally, and was also strongly recommended by the Board of Trade Inspectors of Railways, that the day's work should in all cases "stand by itself."(8) It was stated also before the Commission that the system of working long and short days was very much disliked, and that the fortnightly aggregation of hours, as practised in Scotland, was "iniquitous" and dangerous in its results.(9)

Relief system.

258. The relief system, which is adopted to a varying extent on all railways, for the purpose of preventing long hours, also occasioned some comment on the part of witnesses. It is the rule, where this system is in force, that an engine-driver, fireman, or guard who has been detained from unforeseen causes, and is therefore likely to be on duty for excessive hours, must apply for relief at the nearest locomotive station. The limit of hours for this purpose is usually 12. It was stated by numerous witnesses before the Select Committee, including representatives both of the companies and their staff, that the chief desire of the men was to be able to reach home at the end of their day's work, and that they preferred working a reasonable amount of overtime in order to do so, to being booked off at a specified moment and obliged to lodge away from home.(10) In some cases, as on the North Eastern and Great Eastern Railways, recent reductions in hours o labour have been much regretted by the men on this account, and the Great Western Railway Company, from the same consideration, have preferred in many cases to reduce the hours by dividing the journeys into

[§ 258.] several shorter runs. Another alternative adopted on some railways is to relieve the men and send them home as passengers.(1) The relief system has been more elaborately worked out on the London and North Western than on any other railway. At all principal centres there are extra men at command, and also lodging-houses for men unable to reach home. A man failing to apply for relief when necessary, is called to account, and the company do not countenance the practice of working overtime in order to finish the journey.(2) It was stated before the Commission by a representative of the Birmingham branch of the Amalgamated Society of Railway Servants that the relief system was popular with the men, and that the staff of the Great Western Railway, especially the goods guards, desired to have it more extensively adopted on that line.(3)

Booking off. 259. A practice of which some complaint was made before the Commission, especially in connection with Scotch railways, is that of booking off locomotive men during certain intervals in the day's work, and deducting that time from the day's work for the purposes of payment and of official returns, while holding the men at the disposal of the company. It was stated that this system had been adopted in Scotland since the strike of 1890, and was becoming very general.(4) On the part of the North British Railway Company it was stated that the system of booking off applied only to the case of excursion and other special trains, when there is a long interval between the outward and the return journey; that the men were not booked off unless the interval exceeded three hours; and moreover, that they were always paid a full day's wages, besides lodging expenses, and were at liberty to rest.(5) On the part of the Caledonian Railway Company it was stated that the practice of booking off existed only in the passenger locomotive department, and that the men were not booked off unless the interval exceeded two hours. During such an interval they are entirely at liberty, and though this time is not included in the returns to the Board of Trade, it is calculated in the payment of wages.(6)

The Hours Movement. 260. Evidence was given both before the Select Committee and the Commission, with regard to recent organised movements in the direction of a reduction of hours. In 1883 the Amalgamated Society of Railway Servants began a series of agitations on behalf of the servants of the North Eastern Railway Company, the ultimate result being the Newcastle Settlement of 1890. The demand made was for a maximum 10 hours' day for all grades, or a shorter day in certain specified cases, a minimum interval of eight hours' rest between any two days' work, and extra payment at advanced rates for overtime and Sunday work. The reply made by the directors from time to time was substantially that the programme could not be conceded as a whole, involving as it did the establishment of uniform conditions in relation to services quite dissimilar in character, and that the points brought forward resolved themselves for the most part into questions of detail affecting the working of the several departments, and relating rather to wages than hours. The company accordingly dealt with the matter from this point of view, and made considerable concessions to various grades. On their refusal to submit the question as a whole to arbitration, the Amalgamated Society took a ballot on the question of a general strike, but the proposal was defeated. The agitation, considered as a general ten-hours movement, had thus failed. The Newcastle settlement was of local character, and referred, as was pointed out by a representative of the North Eastern Company, almost entirely to wages. He added that the agitation itself had by no means been conducted on the single issue of reduction of hours.(7) At the annual general meeting of the Amalgamated Society at Hull, in October 1889, a programme was adopted which embodied all the principal demands made in the course of the North Eastern Railway hours movement, and which was thenceforth known as the National Programme. The terms of the Programme which related to hours were as follows:—"1. That the maximum hours "of duty be 10 per day, excepting for platelayers, whose "hours shall be nine per day. For shunters in busy "goods yards, signalmen at important signal boxes and "boxes always open, eight hours shall be the maximum. "In every case each day's duty to stand by itself, "and not be counted as part of the week's labour. [§ 260.]
"2. That overtime be paid for at the rate of time and "a quarter, and Sunday duty at time and a half." A circular requesting the concession of these demands was addressed to the directors of every railway company in the kingdom. Very few replies were received, and in most of these it was intimated that the companies preferred to deal directly with the men in their employment.(1) The secretary of the Irish branch handed in a pamphlet containing particulars of the improvements brought about in the conditions of labour on Irish railways since the introduction of the Amalgamated Society in 1885. The movements on the Great Northern and the Midland Great Western Railway in 1890, and on the Belfast and Northern Counties Railway in 1891, were specially successful, and considerable concessions relating to hours, wages, and overtime payment were obtained by negotiation, without a strike. On the Belfast and Northern Counties Railway the terms of the National Programme were almost literally adopted. On the Great Southern and Western Railway and the Dublin, Wicklow, and Wexford Railway, however, where the movement was carried on by means of strikes, the result was not considered satisfactory. On the whole, however, it was stated that a great deal had been effected, though in many cases there was need of further improvement.(2) It was stated that in Scotland the efforts of the Amalgamated Society in the direction of a reduction of hours were at first only sectional, owing to imperfect organisation. A ten hours' day was obtained for the mineral engine-drivers, firemen, and guards on the Caledonian Railway, and was maintained till after the strike on that line in 1883, when a 12 hours' day was again introduced. In the year 1889 a general movement began, and a circular stating the demands of the Amalgamated Society on behalf of the men was sent to all the Scotch railway companies. Its terms were practically the same as those of the National Programme.(3) The organising secretary of the Amalgamated Society of Railway Servants for Scotland referred to the result of the whole movement as a total failure, but it was stated on the part of the North British and Caledonian Companies that a considerable improvement in the hours of labour had been made since the strike, and the returns to the Board of Trade for 1892 were quoted in support of this assertion.(4)

(ii.) LIMITATION OF HOURS, BY LAW OR OTHERWISE.

ROAD TRANSPO

General principle limitation of hours.

261. It is chiefly in connection with omnibuses and tramways that the question has been raised of the application of a restriction of hours to this industry. It was stated by several representatives of the employed that an eight hours' day was advocated by the majority of the men.(5)

Argumen in favour limitation of hours.

(a.) Non economic.

(i.) The physical and mora benefit of the worke

262. (*a.*) The chief consideration which was urged in favour of this scheme was that of the physical and general benefit of the workers, who under the present system are deprived, it is stated, of health and leisure. The injury to health which almost necessarily results from continuous and prolonged exposure to the weather was pointed out by witnesses on behalf of omnibus and tramway men both in London and Manchester. The great desirability of reasonable leisure was also urged from a social and educational point of view.(6) It was further stated that the reduction of hours would remove the principal cause of disputes between employers and employed in this industry.(7)

(ii.) The preventio of trade disputes

(b.) Eco nomic.

(i.) The employme of addi tional labour.

(*b.*) The employment of additional labour was advanced as a somewhat secondary consideration. It was stated that the Edinburgh Tramway Servants Association was endeavouring to obtain an eight hours' day with this object.(8) With regard to the practicability of the proposed change, it was the opinion of several witnesses that the extra cost to omnibus and tramway companies would be little or nothing. The employment of a double shift of men would enable an extra journey to be run, the profits of which would recoup the companies for the outlay in wages. A double shift would not in any case involve double wages, since a lower rate would be considered sufficient for an eight hours' day. It was stated that the concessions hitherto granted had in all cases increased the revenue of the companies.(9) One witness who

(ii.) The financial practica bility of change.

[§ 262 (b.)] advocated an eight hours' day in all industries anticipated that the whole industrial system would adjust itself to the altered state of things. In some trades production would be unaffected, and even where it was lessened, he maintained that profits would bear the strain, and that where this was not the case, an industry should cease to be carried on rather than be conducted by means of long hours. It might be necessary to reduce wages, but their regulation might be left to the trade unions.(1) Another witness believed that a reduction of hours would result in a rise of wages.(2)

Arguments against limitation of hours. (a) Economic. (i.) *The financial impracticability of the change, except through a reduction of wages.*

263 (a.) On the other hand, it was maintained by representatives both of employers and employed that a reduction of hours must involve a reduction of wages, which would be unacceptable to the men. It was stated on behalf of a large number of the staff of the London General Omnibus Company that they were on that account entirely opposed to an eight hours' day. A reduction of wages or an increase in fares would alike be effected at the expense of the working classes. With regard to the question of giving employment to further labour, it was stated that omnibus men were "not in a position to be philanthropic."(3) The manager of the London General Omnibus Company and the President of the Tramways Institute also pointed out that the financial difficulties of the scheme were practically insuperable. An eight hours' day at the present rates of wages would drive the companies into bankruptcy, since any increase of fares would lead to a diminution of profits. The manager of the North Metropolitan Tramways Company stated that an eight hours' day at the present rate of wages would cause a reduction of profits by 5 per cent. on capital.(4) It was stated both in the case of this industry and that of the employment of carmen and draymen, that the immediate application of an eight hours' day would be too violent a departure from the present system.(5).

Method of applying a limitation of hours.

264. The only method which it was proposed to adopt in the working of an eight hours' day was that of a double shift extending over 16 hours. Owing to the practical difficulties attending so considerable a reduction of hours as from 14 or 16 to 8, it was proposed by one witness to enforce a 12 hours' day with two hours' relief, for omnibus and tramway men. The manager of the North Metropolitan Tramways Company stated, however, that such an arrangement was an absolute impossibility, and that the only alternatives were an average day resulting from alternate long and short days, or an eight hours' day with two shifts.(6)

Method of bringing about a limitation of hours. (a) *By the voluntary action of trade unions.* (b) *By legislation.* (i.) *A universal eight hours' day.*

265. (a.) The reduction of hours by voluntary methods was not largely advocated, but two witnesses representing omnibus and tramway men were in favour of it, in preference to legislation. One of these was of opinion that "any Eight Hours' Bill would "be a gross interference with the liberty of the "subject."(7)

(b.) One witness, representing the Amalgamated Omnibus and Tram Workers' Union, proposed the enactment of an eight hours' day for all industries, not excepting seasonal trades. Owing to foreign competition he believed that to be thoroughly successful the measure should be international, but in some trades the experiment could be made independently. He added that further education was necessary to secure a majority in favour of the change. The reason for advocating legislation was that trade unions were convinced by experience that strikes on the hours question were useless, since concessions thus obtained were not permanent.(8) The same argument was used by those who proposed legislation applying specially to tramway and omnibus workers. It was stated that the majority of the employed were in favour of it on that ground. Special difficulties in organising the members of this industry were said to arise from the very fact of their want of leisure under the present system.(9) With regard to the probable effect on wages of a compulsory limitation of hours, it was stated that the regulation of wages might safely be left to organisation if the hours question were once disposed of.(10) It was proposed by one witness that the maximum hours of cabmen should be fixed by law.(11) On the part of the National Municipal and Incorporated Vestry Employés Labour Union a legal eight hours' day was advocated on account of the urgency of the "unemployed question." It was not however a universal eight hours' day which was proposed, but one which should be compulsory for all Government and municipal workmen, and subject in other trades to the option of a two-thirds majority.(1) It was proposed that an Eight Hours' Act should be enforced by penalties on both sides, such as a fine for a first offence and imprisonment for a second offence, but without hard labour. It was pointed out by one witness that there would be some hardship in a very rigid application of the law.(2)

(ii.) *An eight hours' day for omnibuses and tramways only.*

(iii.) *An eight hours' day subject to trade option.*

[§ 265 (b.)]

(iv.) *Penalties under an Act.*

RAILWAYS: General principle of limitation of hours.

266. The question of the reduction of hours in railway labour, whether by law or otherwise, was dealt with in evidence before both the Select Committee on Railway Servants and the Commission. It appeared from that evidence that a decided majority of the employed, as well as many employers, were in favour of the general principle of reduction without rigid limitation of hours.

Arguments in favour of: (a.) *Non-economic.* (i.) *The physical and general benefit of the workers.*

267. (a.) The main argument in favour of this view is substantially comprised in the words of a petition handed in by a witness before the Select Committee, in which the opinion was expressed that "the present "system of excessive hours of labour," especially in the case of men employed in responsible and dangerous duties, was seriously detrimental to the health and well-being of railway servants, prejudicial to the true interests of the railway companies themselves, and a source of positive danger to the general public.(3) This argument was repeated in various forms by numerous witnesses. It was also stated that the demand of the Amalgamated Society of Railway Servants for a 10 hours' day was a fair representation of the state of opinion on the subject among railway men in general, especially in Scotland.(4)

(ii.) *The favourable opinion of the majority of railway men.*

(b.) From the economic point of view it was argued that it would not only be practicable, as a matter of arrangement, to adopt 10 hours as the maximum day in all ordinary cases, but that it would be financially possible to effect the change without a reduction of wages.(5) A witness representing the General Railway Workers' Union before the Select Committee, was of opinion that the adoption of an eight hours' day would lead to an improvement in the speed and efficiency of the work performed. A witness representing the same organisation before the Commission, believed that nearly all railway companies made a sufficient margin of profit to meet the expense of the change, and suggested in the case of others a solution of the difficulty by means of an increase in passenger fares, an expedient which he thought likely to succeed because the majority of passengers were persons compelled to travel. The argument was also used that the reduction of hours would give employment to additional labour, especially since it would be necessary for railway companies to make a large increase in their staff in view of occasional extra traffic and other emergencies. It was proposed that this surplus staff should be permanently employed, and that in slack times a further reduction of hours should be made in preference to discharging any of the men.(6)

(b.) *Economic.* (i.) *The practicability of the change.* (ii.) *Its probable financial success.*

(iii.) *Employment of additional labour.*

Arguments against a limitation of hours. (a.) *Non-economic.* (i.) *The contentment felt with the present system.* (ii.) *Objection to methods of reducing hours, which are or might be adopted.*

268. (a.) On the other hand, objections to a reduction of hours were pointed out by numerous representatives of the employed. Some were of opinion that the existing hours of labour were satisfactory, and that occasional overtime, which is the principal cause of long hours, was unavoidable, although undesirable, and should be paid for at an advanced rate, but not otherwise restricted. It was strongly urged by numerous witnesses that any reduction of hours so effected as to oblige locomotive men to remain away from home at night, would be extremely unpopular with that section of the staff, and several witnesses were of opinion that a 10 hours' day could not be arranged on any other plan. Even stronger representations were made to the effect that the curtailment of a day's work, which now includes an interval between two journeys, might involve the loss of necessary rest.(7) It was stated before the Select Committee by representatives of the Great Western Railway Company that memorials had been received from the staff at a large number of locomotive stations, expressing satisfaction with the existing methods of working and confidence in the company. It was further pointed out that a uniform limit of hours for all railway servants would be very unfair

(iii.) *The unjust operation of a uniform limit.*

[§ 268 (a.)] in its operation on account of the dissimilarity of their duties.(1)

(b.) Economic. (i.) That it would result in a reduction of wages.

(b.) It was stated before the Commission by witnesses in the service of the Caledonian Railway Company that a 10 hours' day would certainly involve a reduction in wages, owing partly to the vast expenditure on recent improvements on that line.(2)

Method of applying a limitation of hours.

(i.) An eight hours' day or 48 hours' week.

269. The evidence was somewhat at variance as to the extent of reduction of hours to be attempted, and the method to be pursued in bringing it about. Representatives of the Railway Workers' Union advocated an eight hours' day, or a 48 hours' week, with double payments for overtime on a day's work.(3) Other witnesses proposed an eight hours' maximum in the case of signalmen only, in main-line boxes always open. The great preponderance of the evidence was in favour of a ten hours' day for all railway servants, with the exception already mentioned. In the programme of the Amalgamated Society, further exceptions to the rule are stipulated for in the case of shunters in busy goods yards, and platelayers, whose hours are to be eight and nine a day respectively.(4) The necessity for a daily rather than a weekly limit of hours was pointed out by representatives of the Amalgamated Society and of various sections of railway servants. It was maintained that on no other plan could the occurrence of excessive stretches of work be guarded against, but at the same time it was allowed that a literal adherence to any daily maximum was impossible, and therefore it was proposed to recognise the necessity for overtime in emergencies, by instituting payment for it in all cases at an advanced rate.(5) It was explained that the ten hours' day was intended to exclude meal times if the men were off duty during those periods, but not otherwise.(6) Altogether nine witnesses representing the employed before the Select Committee, and nine before the Commission, were in favour of a 10 hours' day.

(ii.) A ten hours' day, each day standing by itself

(ii.) A twelve hours' day.

A 12 hours' day, applying only to drivers, signalmen, and head guards, was advocated by Major-General Hutchinson, Inspector of Railways for the Board of Trade.(7)

Evidence in favour of legislation.

(a.) For all industries.

270. (a.) The General Railway Workers' Union has pledged itself to the principle of a legal eight hours' day, or 48 hours' week, not only for railway labour but for all industries. A witness representing it stated before the Select Committee that he spoke for 20,000 men who were in favour of this movement. The London branches of the Railway Workers' Union concurred in the resolution passed at Hyde Park in May 1891, advocating an international eight hours' day for all workers, by legislative enactment. According to the proposed law, overtime should be permitted in exceptional cases, but as a rule the eight hours' maximum should be universal, without reference to the character of the employment or the amount of strain involved. All remunerative work in excess of the limit should be prohibited. The Railway Workers' Union has not, it was stated, embodied this scheme in any actual Bill.(8)

(b.) For railways.

(b.) A petition, already referred to, was handed in by a witness before the Select Committee, to the effect that, in the opinion of the petitioners, there was immediate necessity for legislative regulation of the hours of railway servants, especially of those employed in responsible and dangerous duties. Another witness, representing the Irish branch of the Amalgamated Society of Railway Servants, had drafted a Bill providing that in the case of railway servants concerned with the working of traffic the maximum day's work should be 10 hours. It was stated before both the Select Committee and the Commission, by witnesses representing the Amalgamated Society of Railway Servants for Scotland, that in view of the total failure of Scotch railway men to attain their object by combination, it was their general desire that the Legislature should intervene. Unanimous resolutions in favour of a Ten Hours' Bill had been passed at numerous centres. It was suggested before the Commission that such a bill should be framed on the lines of the evidence laid before the Select Committee.(9)

(c.) Extension of the powers of the Board of Trade, subject to local option.

(c.) A third plan, which was discussed in greater detail than the two former, was a proposal to give further Parliamentary powers to the Board of Trade, [§ 270 (c.)] enabling that Department to regulate the hours of labour on railways under certain specified conditions. This scheme was unanimously advocated before the Select Committee by representatives of the Amalgamated Society of Railway Servants. It was pointed out that the direct limitation of hours by Act of Parliament was neither necessary nor desirable, and that in view of the unavoidable contingencies of railway working, the discretionary power of the Board of Trade would be more conveniently applicable through its comparative elasticity. This opinion was supported by representatives of locomotive men and guards who objected strongly to any direct statutory limitation of hours. The details of the scheme to some extent followed the lines of the Railway Servants (Hours of Labour) Bill, introduced in 1891. It was proposed that on the application of a certain proportion of the staff of any railway company, the Board of Trade should hold an inquiry into the hours of labour on that line, and should then, if necessary, impose and enforce any limit which they thought desirable. The accountability of the Board of Trade to Parliament would be a sufficient safeguard.(1) The secretary for Ireland of the Amalgamated Society of Railway Servants laid before the Commission a similar scheme in the form of a draft Bill, which, however, left nothing to the discretion of the Board of Trade except the enforcement or non-enforcement of a 10 hours' day and other definite regulations, to the same effect as those contained in the draft Bill laid by the same witness before the Select Committee. The powers of the Board of Trade were by this plan to be set in motion on the application of a majority of the men employed in handling the traffic, in the service or in any one grade of the service of any railway company. The witness argued in support of his proposal, that if hours were compulsorily reduced the railway companies might retaliate by reducing wages, but on the optional system the reduction would not be applied for unless the men were sufficiently organised to preserve the existing rates of wages. He stated that he had formerly been much opposed to legislation in this matter as a substitute for the action of trade unions, but further attention to the subject had convinced him that the latter alternative involved continual disputes with employers, and was unlikely to be permanently effectual. The question had not, he stated, been much discussed by Irish railway men.(2) The schemes laid before the Select Committee and the Commission thus differ from the Railway Servants (Hours of Labour) Bill, already referred to, in the extent of the powers to be granted to the Board of Trade, the latter providing that the Department should impose regulations only after the company in question had been asked to frame a satisfactory system of hours, and had failed to do so.(3)

Evidence against legislation.

271. Thirty-one witnesses before the Select Committee, including representatives both of employers and employed, were opposed to any direct statutory regulation of hours of labour on railways. A number of memorials were handed in, protesting against it on behalf of men, chiefly of the grade of engine-drivers, firemen, and guards, employed on various railways.(4) The main ground of objection, besides those already mentioned in connection with the general principle of limitation of hours, was the consideration which the witnesses urged as men of practical experience, that the working of trains, dependent as it is on fluctuations of traffic, on the state of the weather, and other contingencies, is a matter which cannot be reduced to a certainty, and that the attempt to impose a limit which could not be enforced, would prove unfortunate for all concerned.(5) Witnesses representing the railway companies unanimously protested against direct legislation, partly on the ground of impracticability and increased expense, and also because in their opinion any interference by the State with the internal economy and discipline of a railway would affect the whole management of the undertaking, impair the responsibility of the company, and could only be justified by State acquisition of the entire railway system, which would inevitably be its ultimate result.(6) Sir H. Calcraft, the Permanent Secretary to the Board of Trade, and Major Marindin, Inspector of Railways, pointed out further objections to a statutory limitation, as unnecessary and inexpedient.

(6) Appendix to Minutes of Evidence, Vol. III., pp. 508-16.

[§ 271.] It is unnecessary because the force of public opinion, and motives of true economy, will deter railway companies from overworking their servants in future, and inexpedient because the difficulty of conforming to an absolute rule would cause either constant breaches of the law, or, under certain circumstances, a total paralysis of traffic. It was added that the effect of a uniform maximum might be in some cases to aggravate rather than diminish the length of hours.(1) It was also stated before the Commission, by witnesses in the service of the Caledonian Railway Company, that it was the general opinion of those whom they represented that a reduction of hours could be obtained more satisfactorily by negotiation with the company than by legislation, and that the intervention of any third party between employers and employed was a mistaken proceeding.(2) It was represented further by witnesses on behalf of the companies, that any further legislative regulation of railways had been rendered unnecessary by the recommendations of the Select Committee, which the companies would spontaneously follow.(3) The objections to a statutory limitation were considered by several witnesses before the Select Committee to apply equally to the proposal for extending the powers of the Board of Trade. Witnesses representing the railway companies unanimously opposed the scheme. They pointed out in the first place that the Board of Trade would under such a provision be required to perform an impossibility. The working of a railway, it was stated, is a matter for detailed consideration determined by constantly varying circumstances, and no experience could suggest, or forethought construct, any abstract regulation which would be useful and equitable in practice. It was objected further, that the power of the Board of Trade to intervene between employers and employed would amount to the constitution of a court of appeal over the heads of the management, and would thus be entirely subversive of the discipline of the railway staff. Moreover, the control of hours of labour implies the control of capital expenditure, and touches the independent administration of a railway to such an extent as to affect the final responsibility of the company for its safe working and commercial success. A business placed in so anomalous a position must ultimately be taken over by the State for want of private capital. It was added, that the issue by the Board of Trade of a mere recommendation would be open to no such objections, and would exercise a certain moral influence.(4) Similar considerations were urged by representatives of the Board of Trade, who were of opinion that a general control of the practical administration of railways would involve that Department in a much heavier responsibility than is advisable, and would lead to an amount of interference which might alienate public sympathy.(5)

Practical difficulties. (a.) Avoidance of overtime.

272. (*a.*) It was recognised by every witness who recommended direct legislation on hours of labour, that the exigencies of railway traffic demanded some provision for cases of unavoidable detention and consequent overtime.(6) It was contended on the one hand that such exceptions would, and on the other hand that they would not, be so numerous as to render the law inoperative.(7) No definite scheme, however, was framed to meet the difficulty of allowing, in an Act of Parliament, for "unavoidable" infringements of its provisions, except in the case of the draft Bill laid before the Select Committee by a representative of the Amalgamated Society, which expressly sanctioned overtime to the extent of two hours, and made the original limitation entirely nugatory. According to other witnesses, overtime should be permitted only when unavoidable, and then at an advanced rate of payment, but the question of discrimination between different cases was left unsolved. Several witnesses recommended the appointment of a board of arbitration to deal with such matters, but failed to define its province in conjunction with an Hours of Labour Act. A witness representing the General Railway Workers' Union proposed that a Board of Trade Inspector should decide in each case between avoidable and unavoidable overtime. Major General Hutchinson was of opinion that the law should refer only to the booked time, and that returns should be called for, enumerating cases of overtime, and the causes to which they were due.(8)

[§ 272 (*b.*)] *(b.) Penalties under an Act.*

(*b.*) The question of penalties for overtime under an Hours of Labour Act was to a great extent left untouched. A witness before the Select Committee, representing the General Railway Workers' Union, proposed that the employer should be punished for all avoidable overtime.(1) In the amended draft of his proposed Bill, laid before the Commission by the secretary of the Irish branch of the Amalgamated Society, it was provided that all cases of work exceeding 12 hours should be investigated by the Board of Trade, who, unless they found the cause of the overtime to have been beyond the control of the responsible officers of the railway company, should have power to impose a penalty on the company for the offence. For overtime on the proposed 10 hours' day the only penalty should be the enforcement of an advanced rate of payment.(2)

3. STATE AND MUNICIPAL EMPLOYMENT.

ROAD TRANSPORT. *Ownership of tramways by municipal authorities.*

273. In the industries under consideration the bulk of the evidence on this subject relates to the ownership of tramways by municipal authorities. In the case of Birmingham, Glasgow, and Manchester, the tramways are owned by the Corporation, but leased to a company. The only instance in which the municipality both owns and works them is that of the Huddersfield Corporation Tramways. The history of this undertaking was given by the manager. The tramways, it was stated, were constructed in 1880. In 1882 the Corporation, being unable to lease the lines to a company, obtained powers to work the trams themselves. It was then the opinion of experts, that owing to the severity of the gradients (1 in 17 and upwards) and the sparse population, the undertaking could not be made profitable. The powers of the Corporation are conditional. It is provided that every seven years the tramways shall be advertised to let, and that, upon an offer being made which is satisfactory to the Board of Trade, and subject to their discretion, the powers of the Corporation shall cease. The Corporation would then lease the lines and sell the rolling stock. No attempt has been made to obtain the removal of this condition, the Corporation not being in immediate expectation of losing the control of the tramways. The witness considered, however, that the prospect of a private company seeking to acquire the business was by no means remote, since the Corporation were extending and renewing the lines, and the business had been developing for the last four or five years. Seventeen miles of line are now in working order, and the extensions in progress will add about three miles. The tramcars are all propelled by steam. Twelve run daily, with some additions on Tuesdays and Saturdays, but there is no Sunday traffic. Before May 1888, the services extended over 14 hours a day, and the working hours of drivers and conductors were 12. At that date it was thought advisable to lengthen the hours of running the services, but in the opinion of the Corporation the hours of the men were already excessive, and it was out of the question to increase them. A system was therefore introduced of two eight-hour shifts daily, with a double set of men. At the same time a reduction in wages was made, from 32*s.* to 26*s.* for drivers, and from 23*s.* to 21*s.* for conductors. The proposed arrangement was ballotted on by the men, and obtained their unanimous assent. The change gave general satisfaction, and no dispute or trouble has since arisen with the Corporation's tramway servants. The cost of doubling the staff was balanced by the increase in the running hours of the trams, without any increase of fares. The witness attributed any deficit appearing on the balance sheet to causes quite independent of this change of system. In 1889, 1890, and 1891, there has been an increasing loss on the undertaking, that is, the witness explained, "a "deficiency short of paying the financial charges, "including the sinking fund set apart for the re-"demption of capital." Part of the increased deficiency in 1891 was due to extensions, renewals, and large expenditure for maintenance of ways, together with the increase at that date of the charge for depreciation, from 2 to 3½ per cent on capital. The witness maintained that the loss was more apparent than real, since the amount set apart for the sinking fund should be regarded as a profit. The receipts per running mile are 16½*d.* There is no record of the income per mile of line, but it is estimated that in 1891 it was under 1,500*l.* The witness did not regard the

(1) Appendix to Minutes of Evidence, Vol. III., p. 507. (2) Digest, Vol. III., p. 85.

[§ 273.] difference between the receipts per mile on the Huddersfield and other tramways as implying any defect in the Huddersfield system. The small proportion of trams to mileage should be taken into consideration, and moreover, it is the same peculiarity which causes the maintenance of lines and paving to be so serious a burden on the tramway department. It was stated that the Corporation takes a broad view of the matter, and can afford to look to the future. In the meantime, the loss does not trouble those whom it concerns, and there is no desire on the part of the Corporation or of the ratepayers to lease the undertaking to a company. If there were Sunday traffic the tramways would, in the opinion of the manager, be a financial success, but those who are in favour of this are in the minority. The wages paid by the Corporation compare very favourably, it is stated, with those of similar classes of labour in the district, but do not exceed the fair market rate.(1) A witness representing the drivers and conductors in the service of the Corporation, stated that they were very well satisfied with their conditions of labour, and that it was an undoubted advantage to the employed that such undertakings should be worked by the local authorities rather than by a company. The employment is very exhausting, but the pay is considered sufficient for the number of hours worked. The men have no desire for longer hours and higher wages.(2) The system of control of tramways by the municipality, as at Huddersfield, was advocated by the president and secretary of the Amalgamated Omnibus and Tram Workers' Union. The former stated that the plan of leasing to a company had "no support in any class of "labour." He was in favour of State regulation of labour, and was of opinion that capital should receive no interest. It was stated that the members of the Union generally were in favour of the municipalisation of tramways and omnibuses.(3) A witness representing the Northern Counties Amalgamated Tramways and Hackney Carriage Employés Association was of opinion that local authorities owning tramways should be prohibited by law from leasing them to companies. The local authorities would be satisfied with a lower dividend, and would thus be able to reduce the hours of labour.(4) On the other hand, the general manager of the North Metropolitan Tramways Company, and the President of the Tramways Institute of Great Britain and Ireland, opposed the principle of direct control by a municipality, the latter stating that he was entirely in favour of municipal ownership, provided the tramways were leased to companies, a plan which has been successful at Birmingham, Glasgow, and Manchester. He alluded to Huddersfield in support of the view that corporations yield more readily than companies to the demands of agitators, and have not the same interest in keeping down expenses and leakages.(5) The general manager of the North Metropolitan Tramways Company shared the opinion that the balance sheet of the Huddersfield Corporation Tramways committee showed the experiment of municipal control to be a failure. He stated that the receipts per running mile were 3*d.* more in the case of Huddersfield than in the case of his company, although the former showed a loss, while the latter earned an average dividend of a little over 8½ per cent., notwithstanding the comparatively disadvantageous position of a private company in respect of Parliamentary and other initial expenses. The witness also pointed out that the wages paid by the Huddersfield Corporation were only a little more than half the amount of those of the servants of the North Metropolitan Tramways Company, the hours of the latter being of course longer.(6) An instance of a tramway system owned by a corporation and leased to a company is afforded, as already stated, by the Glasgow Corporation Tramways. The chairman of the tramways committee of the Town Council stated that the lines, extending to about 31 miles of double rails, were laid by the Corporation at a cost of about 360,000*l.*, and leased to a company for a period of 24 years. The lease expires on the 30th of June 1894, and the Corporation have finally decided that they will then work the tramways themselves, and have obtained the necessary Parliamentary powers. It is considered that the Corporation incurs no risk whatever by this step, since the company have been making a very considerable profit for many years. In accordance with the original conditions, negotiations were entered into in 1889, five years before the termination of the lease, with a view to agreeing, if possible, on the terms of a new lease, to run for five years, but the ideas of the company and the Corporation were so strongly opposed that no arrangement could be made. At that time there was a great deal of dissatisfaction among the tramway men with regard to hours of labour and other grievances, and since it was also found that the existing conditions were not such as to attract a desirable class of men, the town council determined to insert a proviso, fixing the week's work at 60 hours, in any new lease that might be agreed on between the company and the Corporation. The company objected to this, and to almost every condition that the Corporation laid down, and no lease was effected. The company's profits for a number of years have been, it is stated, about 15 per cent., and the tramways carry about a million passengers weekly. The employment of the population is favourable to the use of tramcars, and the gradients, as a rule, are very moderate.(1) A witness (Mr. Sutherst) who had been concerned in the hours movement among the omnibus and tramway men in London, proposed a scheme for the municipalisation of tramways and omnibuses, and handed in a copy of a letter in which he had represented his views to the London County Council. He contended that under this scheme a remedy would be found for such evils as the present overcrowding of the streets, the want of connection between different lines, and the overwork and underpayment of the men employed; all of which conditions he attributed to the existence of competing companies, whose sole object is to earn a dividend at the expense of the public and the employed. The existing businesses should be bought up, with or without the rolling and live stock, at a fair and reasonable rate. The capital required would be from 3½ to 4½ millions sterling. The property should then be leased to a company at a rental equal to 3½ per cent. on the cost of purchase. The County Council and the workmen should be represented on the board of management. Interest on capital should be fixed by the conditions of the lease at a maximum of 3½ per cent., and all profits in excess, after providing for an adequate depreciation fund, should be divided in the proportion of one half to the County Council, one-fourth to the company, and one-fourth to the workmen. The lease should also contain conditions providing that the men should not work more than 12 hours a day, including two hours for meals, and that a fair subsistence wage should be paid, which the witness estimated at 2*l.* a week. The witness maintained that no loss could be anticipated, except through bad management, and that if there were any loss, the fares should be raised, on the principle that the passengers ought to pay a sufficient sum to work the business on fair and reasonable lines, and that unless this is possible, the undertaking ought not to be continued. He was convinced that the public would be found willing to pay increased fares for the benefit of public servants, and he did not admit the possibility of the business disappearing altogether. The municipality should have power to decide whether they would permit competition or not. If they had a monopoly, they would be more likely than a private company to act in the interest of the ratepayers.(2) The treasurer of the Amalgamated Omnibus and Tram Workers' Union entirely approved of the proposed scheme of municipalisation. Under the municipal authorities the tramway men could secure reduced hours at the present rate of wages, and a pension fund could be established, to which both the municipality and the men should contribute. Under the present system the great majority of the men have no means of providing for the future.(3) The manager of the London Road Car Company stated that that company would be prepared to discuss a proposal for disposing of their undertaking to the municipality.(4) The secretary of the London Cab Drivers' Society proposed that cabs should be owned and worked by the municipality, and believed that this state of things would ultimately prevail. In the meantime, the municipality should regulate the price of cabs.(5) The conditions of labour of the carmen employed by vestries, and local boards in London have already been referred to. It was stated that direct employment by these authorities was much more advantageous to the men than employment through a contractor, and that there was a growing tendency to abolish the contract system. The vestry elections afford a means of bringing pressure to

[§ 273.] bear on the employers.(1) It was stated that the Bradford Corporation employed horse and cart contractors at 5*s*. 9*d*. a day, who paid their carters 18*s*. or 20*s*. a week for 100 hours' work.(2) The evidence with regard to State employment was confined to certain statements with regard to the carmen in the employment of the Post Office mail cart contractors. The secretary of the London Carmen's Trade Union stated that these carmen were underpaid and overworked to a greater extent than any others in London; that they were not paid for loss of time while being examined for employment and supplied with uniform; that the contractors refused to employ unionists, or discharged them at a minute's notice, and that they employed a large number of boys, sometimes in the place of old hands.(3) A member of the Metropolitan Cabdrivers' Trade Union stated that cabdrivers who had forfeited their licenses through some offence, were frequently employed as mail cart drivers.(4) A memorandum supplied by the Post Office contained a detailed reply to these statements. The facts with regard to the hours and wages of mail cart drivers appeared from this memorandum to differ considerably from the conditions described by the secretary of the Carmen's Trade Union. On each of the remaining points of his statement this document furnished a substantial contradiction, except on that of the non-employment of unionists. It was stated that one of the contractors refused to employ union men, but that men were never discharged at a minute's notice, except for gross negligence or misbehaviour. The Secretary of the General Post Office, in forwarding this information, pointed out that the mail cart drivers were not the servants of the Post Office, but that their conditions of employment were regulated entirely by the contractors.(5)

4. INSPECTION AND REGISTRATION, AND LEGISLATION RELATING THERETO.

ROAD TRANSPORT.

Government regulation of road transport relates to traffic rather than to workers.

274. Properly speaking, there is no Government regulation of the conditions of labour in these industries, inasmuch as the body of law on the subject relates to the relations between the trade and the public rather than to interference between the employing and the working class. In the case of cabs, indeed, it is more than doubtful whether between proprietor and driver the relation is not one of bailor and bailee rather than of master and servant, and it is certain that a person driving his own cab is subject to precisely the same set of regulations as a person in charge of a vehicle belonging to another. At all events, the law relates rather to the traffic than to the persons conducting it.

Regulations: (*a*.) *Respecting drivers and conductors.*

275. (*a*.) Certain regulations, however, are personal to the drivers and conductors of public conveyances. Such are the rules laid down in section 8 of the Metropolitan Public Carriage Act, 1869, to the effect that "no hackney carriage shall ply for hire within the "limits of this Act unless under the charge of a driver "having a license from the Secretary of State, and no "stage carriage shall ply for hire within the limits of "this Act unless the conductor and drivers of such "carriage have respectively licenses from the said "Secretary of State," the rule to the effect that the Secretary of State may delegate the duty of issuing licenses to the Commissioners of Police, the rule to the effect that such licenses are to be in force for a year unless revoked or suspended, the rule detailing the conditions under which such licenses are granted, and the rule limiting the liability of the driver to the proprietor for damage to his property to 3*l*. In connection with these regulations, several witnesses representing those employed in this industry proposed to limit the issue of licenses in accordance with the requirements of the traffic and the state of the labour market, while Mr. T. Crabbe, a non-unionist driver, objected to the proposal.(6) It was also proposed by the secretary of the United Cab Proprietors' Protection Association to substitute the issue of provisional licenses for three months as a third alternative to either giving a full license or refusing the application altogether. The same witness desired to raise the liability of drivers in respect to damage to the proprietors' property to 10*l*., and to reduce the fees charged for licenses.(7) It was further proposed by the secretary of the London Improved Cab Company, and by representatives of the London Cabdrivers' Society and the Metropolitan Cabdrivers' Union, to regulate by law the price paid by drivers to proprietors in the same way as the fares paid by the public to the drivers, but it was the opinion of witnesses representing various associations of cab proprietors that the adoption of such a proposal would be injurious to the interests of the trade and the public alike.(1) The secretary of the London Cabdrivers' Society considered that the examiners of drivers in respect of efficiency should themselves be subjected to a similar practical examination, and that the licensing authority should fix the maximum hours of labour.(2) A witness representing the Metropolitan Cabdrivers' Union, wished to prohibit men deprived of their licenses from acting as "watermen."(3) [§ 275 (*a*.)]

(*b*.) Other proposals concerning the regulations affecting the control of the traffic were to municipalise all public conveyances, to provide more and better stand accommodation for cabs, to abolish the privilege accorded by railway companies to certain cabs, to enable cabmen to proceed against fraudulent customers elsewhere than in county courts, and to abolish the distinction of fares between cabs hired within and cabs hired outside the radius. It was further proposed to make special provision for the summary conviction of cab stealers, to limit a proprietor's at present unlimited liability for lost luggage, to deprive the police of their power of summoning a proprietor to produce an offending driver, to prohibit the practice of carrying bogus fares, to collect statistics of cab accidents, to relax the law relating to plying for hire off cab-stands, in favour of the drivers, and, finally, to consolidate and revise the whole body of the law dealing with the subject.(4) Mr. Ballard, organising secretary of the London Carmen's Trade Union, proposed that a system of licences should be established for carmen, with a view to prohibiting boy-labour and thus reducing the number of accidents, and also with a view to excluding incompetent or untrustworthy men from the trade.(5) (*b*.) *Respecting traffic.*

RAILWAYS.

The Railway Regulation Act, 1871

276. The subjects dealt with under this head, with reference to railways, are three in number, viz., inquests, inspection, and the proposed issue of certificates of competency to engine-drivers.

(*a*.) *Inquests.*

(*a*.) Inquiries into the causes of accidents are provided for by section 7 of the Railway Regulation Act of 1871, which authorises the Board of Trade to institute an inquiry in the case of any accident of which notice is required to be sent to the said Board, that is, any accident, either attended with loss of life or personal injury to any person whomsoever, or arising from a collision between two or more trains, one of which is a passenger train, or due to a passenger train leaving the rails, or being of a character likely to cause loss of life or personal injury. This Act applies to Scotland as well as to England, but the law which provides for a compulsory and public inquiry into the causes of all accidents that prove fatal does not, and it was the opinion of a witness representing the Amalgamated Society of Railway Servants for Scotland, that the law of Scotland should be assimilated on this point to the law of England. The witness cited two cases in support of his contention. The first was one where the guard of a mineral train was killed in a collision with a passenger train at Kirkcaldy in December 1891, and where the only means of gettting a public inquiry was to charge the driver of the passenger train with culpable homicide. The second was one where a shunter on the Caledonian Railway was thrown from the footboard of an engine by contact with the balance balls of a signal, and killed on the spot, and where an inquiry would have shown that he had been on duty an excessive time, and that the signal was in a very dangerous position, where, in fact, it still remains.(6) It was stated however, by the manager of the Caledonian Railway, that the latter accident occurred through the man leaping from the engine while in motion, and that it could not be ascertained whether he fell or was knocked down by the balance lever of the signal arm. The signal post is at the required distance from the rails, and its position was fixed in the usual manner by the officers of the company and the Board of Trade Inspector.(7) It was said to be the practice in Ireland also to arrest any railway servant concerned in an accident, whether there is or is not any evidence to show that he is responsible for it. The secretary of the Amalgamated

(1) Digest, Vol. III., pp. 37-9, 41-3. (2) Digest, Vol. III., p. 38. (3) Digest, Vol. III., p. 39. (4) Digest, Vol. II., pp. 67-9. Vol. III., pp. 37-41, 43-4. (5) Digest, Vol. III., p. 45. (6) Digest, Vol. III., p. 63 (7) Digest, Vol. III., p. 79.

[§ 276 (a).] Society of Railway Servants for Ireland, and the Chairman of the Belfast and Northern Counties Railway Company, both referred to the injustice of this practice, and stated that the police authorities had been communicated with on the subject.(1)

(b.) *Inspection.* (b.) Inspection is provided for by section 3 of the Railway Regulation Act, 1871, which gives the Board of Trade power to appoint inspectors as occasion requires, to examine any railway and to make inquiries with a view to enabling the Board to administer the various Acts of Parliament relating to railways. But, except in the event of a serious accident, the visits of the Board of Trade Inspectors are ordinarily reserved for newly constructed lines and for new stations about to be opened. There is no regular periodical inspection of railway stations and workshops, such as takes place under the Factory Acts. It was the opinion of representatives of the General Railway Workers' Union, and of the Amalgamated Society of Railway Servants, as well as of some of the witnesses examined before the Select Committee on Railway Servants (Hours of Labour), that such periodical inspection should be provided for by the appointment of working men as sub-inspectors to inquire into defects and issue reports to the Board of Trade.(2) On the other hand, the late Sir G. Findlay, general manager of the London and North-Western Railway, Mr. J. Thompson, general manager of the Caledonian Railway, in their evidence before the Commission and the representatives both of the railway companies and of the Board of Trade, examined before the Select Committee, objected to the adoption of such a scheme on the ground that it would be subversive of discipline, and would have the effect of transferring the responsibility for the safe working of the lines from the companies to a Government Department, thereby introducing State control into every branch of railway administration.(3)

(c.) *Engine-drivers' certificates.* (c.) It was further proposed by Mr A. Ballantyne, representing the Amalgamated Society of Railway Servants for Scotland, that it should be made compulsory for engine-drivers to pass an examination and obtain certificates of competency from the Board of Trade. It is necessary, he contended, in the interests of the travelling public, that all drivers of locomotive engines should be thoroughly efficient. At present, the only judge of their fitness is the locomotive superintendent of the line. An engine-driver, moreover, cannot show any proof of his qualification when seeking a fresh situation, and therefore loses his standing in the railway service on changing from one employer to another, and has to serve a second apprenticeship, for railway companies do not give certificates of character, but expect the men to refer their future employer to them, and the men do not know the result of the inquiry.(4) On the other hand, the general manager of the Caledonian Railway contended that the suggestion preferred by Mr. Ballantyne was superfluous. All engine-drivers, he explained, go through the preliminary stages of cleaners and firemen, and thus have all the training required to make them thoroughly competent. A cleaner must have at least a year's experience as such before he can be examined as to his fitness for promotion to the grade of fireman, and a fireman must serve as such for five years before he can be promoted to the rank of engine driver.(5)

5. ACCIDENT FUNDS AND EMPLOYERS' LIABILITY, AND LEGISLATION RELATING THERETO.

OMNIBUSES AND TRAMWAYS. 277. The evidence with regard to accident funds and employers' liability referred almost exclusively to railway employment. It was merely stated with regard to omnibuses and tramways in the North of England, that accidents were very common, and that none of the companies gave voluntary compensation, even to men injured in "full attention" to duty.(6)

RAILWAYS. Extent and causes of accidents. 278. With regard to the extent and causes of accidents to railway servants, no definite statement was made, but it was pointed out by the Amalgamated Society of Railway Servants, in their answers to the Schedules of Questions, that the manipulation of traffic, especially shunting, was attended with great risk, which might be considerably diminished by the adoption of improved couplings and other appliances.(7) [§ 278.] It was stated by witnesses representing the Amalgamated Society of Railway Servants that the danger of shunting had been much reduced in England and Scotland by the use of the coupling pole, which however had not long been introduced into Ireland, and was not much used, except on the Great Southern and Western Railway; and further, that except on that line, very few shunting yards in Ireland were properly lighted. Owing, however, to the comparative smallness of the traffic on Irish railways, accidents are less numerous than in England.(1) The insufficient lighting of station yards, and faulty construction of points, were mentioned by another witness as causes of personal accidents on the London and South Western Railway. It was stated that in several cases there were points which were unconnected with the signal-box, and had to be held in position while the engine passed over.(2)

Accident funds. (a.) *History.* 279. (a.) Evidence was given before the Select Committee on Railway Servants (Hours of Labour) and also before the Commission, on the subject of accident insurance funds in connection with railway employment. Among these the chief prominence was given to the London and North Western Assurance Society. It was stated before the Commission, by the general manager of the London and North Western Railway, that in 1871 another insurance fund existed, which provided for a payment of 35*l.* or 40*l.* to the representative of any man killed by accident in the discharge of his duty, and 25*l.* or 35*l.* for complete disablement, or in less serious cases, a sick allowance of 12*s.* to 18*s.* a week for six months. On the passing of the Employers' Liability Act, the London and North Western Company, regarding it as "a great misfortune" for the discipline of the staff that they should engage in litigation with the company, proposed to the men that an improved form of the insurance society should be substituted for the operation of the Act. With the exception of about 100 dissentients, all the men in the service accepted this suggestion, and the insurance society was reconstituted, with an increased scale of benefits. Membership was optional for those already in the service, but was made compulsory for those afterwards entering it. It was stated that the men were all perfectly satisfied with this arrangement. In 1892, at the time of giving evidence, the society was flourishing, and had a balance of 25,000*l.* in hand. The sum that had been paid in compensation for accidents since its first institution was 370,000*l.*(3) Similar societies exist on the Lancashire and Yorkshire, and the London, Brighton, and South Coast Railways. Membership of the Lancashire and Yorkshire Railway Insurance Society was made compulsory on all the servants of that company and of the East Lancashire Railway Company, by an order of the united board of directors in November 1857.(4) It was stated that in the case of the London, Brighton, and South Coast Railway it was left optional, on the passing of the Employers' Liability Act, for the company's servants to remain under the Act or to join the company's insurance fund; but after full discussion at several meetings the men decided almost unanimously to accept the insurance scheme. The company then made it compulsory on men entering the service to join the fund, and contract out of the Act.(5) Evidence was given before the Select Committee, with regard to an accident fund on the Great Eastern Railway, which everyone entering the service, except as a clerk, is required to join. It does not appear that the members contract out of the Employers' Liability Act.(6) Two witnesses before the Commission referred to the hardship of compulsory membership of such societies, and the deduction of subscriptions from wages. One of these stated that on the reconstitution of the insurance society on the London and North Western Railway he was told that he must join it or leave the company's service. It was stated on the part of the company that this complaint was probably groundless, since membership was not compulsory on those already in the service, and several men, as a matter of fact, declined to sign the form of contract, though they afterwards voluntarily did so.(7) In some cases where there is a sick fund instituted by the company, cases of accident are treated as cases of illness, and relieved by the fund in the same manner. The Midland Railway Friendly Society gives allowances for accidents, and the Great Southern and Western Railway Superannuation Fund

279 (a.)] for enginemen and firemen specially provides an increased scale of pension in the case of disablement in the discharge of duty.(1)

) Management. (b.) No evidence was given with regard to the management of the insurance fund on the London, Brighton, and South Coast Railway. The three other societies mentioned divide among them the three available methods. The London and North Western Assurance Society is under the same management as the provident society on that line, namely, a committee of twelve delegates of the men and three nominees of the company.(2) The Lancashire and Yorkshire Insurance Society is managed entirely by the members, who elect a committee of 24, the committee then electing a chairman and vice-chairman from their own number.(3) The accident fund on the Great Eastern Railway is managed entirely by the company, the committee consisting of the chairman, the deputy-chairman, and one other director, the secretary, the general manager, and the solicitor of the company.(4)

) Contributions and benefits. The evidence with regard to the contributions payable and benefits granted in connection with these societies has been tabulated as follows:—

TABLE of CONTRIBUTIONS and BENEFITS in connection with ACCIDENT FUNDS.

—	London and North Western Assurance Society.(5)	Lancashire and Yorkshire Railway Insurance Society.(6)	Great Eastern Railway Accident Fund.(7)
Contributions:—			
Company	15,000*l.* a year.	—	Half the annual contribution of the members, and a sum of 15*l.* or 30*l.* on the death of a member in the discharge of his duty.
Members	—	1*d.* to 4*d.* a week.	1*d.* or 2*d.* a week.
Benefits:—			
(1.) Temporary injury.	14*s.* or 21*s.* a week for a year.	5*s.* to 1*l.* a week, according to class, for 25 weeks.	10*s.* or 20*s.* a week for 25 weeks; afterwards at the discretion of the committee.
(2.) Fatal injury or	80*l.* or 100*l.*	12*l.* 10*s.* to 62*l.* 10*s.*	65*l.* or 130*l.* if notice is not given of intention to proceed under the Employers' Liability Act; 33*l.* 6*s.* 8*d.* or 66*l.* 13*s.* 4*d.*, if such notice is given.
(3.) Permanent disablement.	80*l.* or 100*l.*	18*l.* 15*s.* to 50*l.*	

voluntary compensation by employers. 280. In the case of the North Eastern Railway it was stated before the Select Committee that voluntary compensation for accidents was given by the company.(8) In the answers to the Schedules of Questions received from Associated Employés, it was stated that compensation was seldom given voluntarily by railway companies.(9)

mployers' iability ct.) Operation. 281. (a.) With regard to the operation of the Employers' Liability Act of 1880, the chief ground of complaint was the effect of the doctrine of common employment, which was only modified and not abolished by the Act. Representatives of the General Railway Workers' Union and of the Amalgamated Society of Railway Servants were strongly of opinion that the doctrine of common employment should be abolished altogether, and that railway servants and passengers should be on the same footing with regard to compensation for injury. The companies, it was stated, would then adopt means to reduce accidents among their staff to a minimum.(10) On the other hand, it was stated by the general manager of the London and North Western Railway, that a law making railway companies liable for all accidents except those caused by the negligence of the injured man, and prohibiting the plea of common employment, together with contracting out of the Act, would be most unjust in its operation, and would probably involve the London and North Western Company in a much larger expenditure than the annual sum which they pay under the insurance scheme. In his opinion, however, the representatives of the workmen would not go so far as to insist on this demand.(1) It was pointed out by the secretary of the Amalgamated Society of Railway Servants for Ireland, that certain classes of railway servants were unaffected by the Act, and came under the unqualified common employment doctrine. The clause by which the Act is made to apply specially to railway servants, refers only to those engaged in the working of the traffic, not to men employed on platforms or in goods warehouses.(2) [281 (a.)]

(b.) "Contracting out." (b.) The practice of contracting out of the Act was strongly condemned by witnesses representing the Amalgamated Society of Railway Servants for Scotland and Ireland respectively, who stated, however, that no Scotch or Irish railway company had adopted that course. It was contended that the purpose of the Act was defeated by the permission to contract out of its provisions, since it was intended as a protection for the lives of workmen, and not as a means of obtaining compensation. If employers of labour, it was urged, contract themselves out of the Act, and pay the same sum every year to an accident fund, they have no inducement to take any extra precaution against the occurrence of accidents. It was stated further by a witness formerly employed by the London and North Western Company, that the company's servants were practically coerced into contracting out of the Act.(3) On the other hand it was stated by the general manager of the London and North Western Railway, that since the Assurance Society had been formed, there had been no evidence, either by resolution or memorial on the part of the men, to show that they objected to contracting out of the Act. On the contrary, when the question came before Parliament, a memorial in favour of the present system was signed by thousands of the London and North Western Company's staff. Further, in 1886, when a Select Committee was sitting on a proposal to abolish contracting out, representatives of the staff gave evidence to the effect that they were perfectly satisfied, and the Committee ultimately reported in favour of the principle on which the North Western Assurance Society is conducted. The advantages of the Act, it was further pointed out, are merely contingent, while the insurance scheme secures compensation or sick allowance on a liberal scale for all injuries sustained in the company's service, independently of the negligence or otherwise of the company or the workman. It was stated that under the provisions of the Employers' Liability Act, the company would probably save 10,000*l.* or 12,000*l.* a year, but that they preferred to pay that amount to avoid litigation with their staff, and in order to secure to the men a certain instead of an uncertain advantage.(4)

(c.) Suggested amendments. (c.) Amendments were proposed in the sections of this Act relating to the limit of time for giving notice of a claim and for bringing the case into court, and to the limit in the amount of compensation. It was stated by representatives of the General Railway Workers' Union, and of the Amalgamated Society of Railway Servants for Scotland, that the limit of six weeks for giving notice of a claim was too short a period, and the latter witness proposed that it should be extended to at least six months. It was stated that in many cases of serious injury the injured man was unable to instruct a solicitor before the lapse of six weeks, or was readily deterred from lodging a claim by a promise of employment. Moreover, if the notice were delayed, the claim might be settled out of court. It was urged that in cases of fatal accident time should be given for the Board of Trade Inspector to report, before steps are taken to obtain compensation. It was also contended that a longer period than six months should be allowed before entering the case into court, though a certain limit of time was necessary. These witnesses, as well as the secretary of the Irish branch of the Amalgamated Society of Railway Servants, were of opinion that the amount of compensation allowed under the Act, namely, three years' wages, was totally inadequate, and that the limit should be abolished altogether, and the amount left for the decision of the jury. The greater the negligence of the employers, the greater should be their responsibility, without reference to the wages earned by the workmen. It was contended that in the case of a youth earning 26*l.* or 30*l.* a year, the

[§ 281 (c).] maximum amount obtainable under the Act would be quite inadequate compensation for permanent disablement.(1)

6. OTHER CONDITIONS OF LABOUR.

Subject matter dealt with.

282. Certain subjects with regard to the conditions of labour, to which reference was made in the evidence, remain to be noted. These relate mainly to the "ticket system" among omnibuses and tramways, the price of cabs and the "privilege system" among the hackney carriages, and the rules of railway service.

Omnibuses and Tramways. The ticket system.

283. It appears from the evidence given on the subject of the relative merits of the ticket system and the way-bill system that the more general adoption of the ticket check is regarded as an improvement from a moral point of view. Mr. Kingham, secretary to the London General Omnibus Company, stated that "the "introduction of the ticket system enabled us to detect "a great many men who were taking money which "otherwise we should not have been able to find out,"(2) and an omnibus driver of 20 years' standing was of opinion that it was "a great check on what used to go "on." "We have worked, I must admit, for many "years under a very dishonest system. It was not our "fault, but the fault of the system that has been in vogue "for 40 years or more now."(3) Two other witnesses, in the employment of the London General Omnibus Company, held that "the company did a grand thing "when they started the ticket system."(4) In addition to these statements of both employers and employed, indirect evidence of the extent of the peculations under the old system is supplied by the assertion that neither drivers nor conductors were satisfied with the advance of 1s. a day, given at the introduction of the ticket system by the London General Omnibus Company, and by the fact that the strike of June 1891 was attributed by several witnesses to the change of system, although the long hours were given as the ostensible reason.(5) The monetary advantage of the change would appear to be on the side of the companies, even taking into account the advance of wages rendered necessary.(6) The London Road Car Company, which, like the London Omnibus Carriage Company, had adopted the ticket system at the outset, has no doubt that by so doing it avoided considerable losses, and instances the experience of the London General Omnibus Company. "As to abolishing ticket inspectors," said Mr. Duff, "it can be successfully shown by figures that the Road "Car Company could not have existed but for the "system which renders those inspectors necessary."(7) Given, then, that the ticket system is better than the previous system of "way-bills," the further question that arises is whether it is perfect, or, failing that, the best system workable. That it is not regarded as perfect seems clear from several statements that were made. One witness pointed out that it was no safeguard in the case of collusion between passenger and conductor, and stated that this collusion sometimes existed; "the ticket system appeals to the honesty "of the public and of the conductor, but it is "not an absolute check, not with the most strin-"gent regulations."(8) The same opinion was even more emphatically advanced by Mr. Hammill, also representing the employed, who said, "I know that at "the present time there are men, even under the ticket "system, who are still paying horsekeepers and drivers "money; and I believe that the companies know it, "and if they do know it they certainly must know "that there is a system still being worked and prac-"tised which is not honest. Neither do I think that "the ticket system will ever work."(9). One witness, the President of the Tramways Institute of Great Britain and Ireland, who had had considerable experience in the management of tramways both at home and abroad, while admitting that the ticket system without the bell-punch "leaves a great deal to be desired," gave as his view that this system with the bell-punch "is not "absolutely perfect, but it is as near perfection as we "can get."(10) Mr. Hammill, on the other hand, urged the necessity of devising a system similar to that in practice in Paris, or to the railway system, *i.e.*, that on the routes there should be offices where tickets might be purchased by the dozen, so that "the men would "never be allowed to handle the money at all. I "believe," he added, "that by that course we should "be able to crush out a demoralising system, which is "so detrimental to the men.(1)

[§ 283.]

Hackney Carriages. Price of cabs.

284. Trade disputes in the hackney carriage business are chiefly concerned with the question of the price to be paid by the driver to the proprietor for the hire of a cab.(2) Under the existing system in London, the price varies with the season of the year, the number of horses let out with the cab (one, two, or sometimes three), and the quality of the "lot." There are, it appears, about four classes of cabs in the streets of London; the fares paid by the public are in each case identical, but it is worth while for a driver to pay a larger hire for a superior cab, because the public are "sufficiently discriminating" to give more custom to the better vehicle.(3) The hire money is paid every night, and the engagement is then terminable on either side. It is stated that where a proprietor belonged to an association, if a driver failed to pay the hire he could not get re-engagement with any member of the association so long as the debt was against his name. This, however, was denied to be the case in more than one or two societies: while in others, if short money is paid, the proprietor uses his discretion as to the re-letting of his cab. Much conflicting evidence was given on the subject of the profits of proprietors. They themselves assert that these profits are far from large, and that in view of the cost of cabs and the rate of depreciation, the prices charged are as low as they can afford.(4) The drivers, on the other hand, contend that the proprietor gets an unfair share of the returns of the business; it was, however, admitted by one of their own number that the men have generally taken an exaggerated view of the profits of the proprietors, partly through neglect of the item of depreciation, and partly through their persistence in "basing their arguments on the price charged for a "superior cab and the cost of an inferior one." Masters, on their side, according to the same witness, have exaggerated the earnings of the cabmen.(5) The discrepancy between the statements of masters and men is to a certain extent explained by the evidence given on the subject of yard money; under the system which prevails in most cab yards the driver has to pay numerous small sums to the men in the yards, in addition to the regular hire of his cab, and it is this which in the opinion of one witness, "leads to all the "complications. The drivers state that they pay "one thing and the proprietors represent that they "receive another, and it is this indefinite quantity, "this yard money, that comes between us, and we can "never find out what it really is."(6) Another point on which proprietors and drivers hold different views is the question as to which side bears the heaviest burden of liability. The extent of this difference of opinion is shown by the two following statements:— "The liability of the cab proprietor in the exercise of "his business is an unknown quantity, that of the cab "driver is practically nil." "We (the drivers) are "liable for all kinds of things, and they (the proprie-"tors) escape scot free. They have no responsibility "whatever to the public, except for accidents."(7) The demand of the drivers is for a fixed scale of prices for the different times of the year: they maintain that when the Hackney Carriages Act was framed it was anticipated that the proprietor would be the person to deal with the public, and that in the existing state of things, with the cabmen as middlemen, it is both unfair and unreasonable to fix the charges for the public and not those for the drivers.(8) The London Cab-drivers' Association, the Metropolitan Cab-drivers' Trade Union, and the London Improved Cab Company are all agreed in urging this claim.(9) One driver, however, who spoke on behalf of a large number of non-union cabmen, was of opinion that "there cannot be a uniform price"; and the proprietors maintain that, owing to the varying quality of cabs and the varying conditions of London life, it is quite impossible for them to agree to a fixed price or a fixed time for raising price.(10) One witness on behalf of the drivers, while condemning the present state of things, admitted that the price "could not very well be settled by outside "authority, simply because the value of the cab varies "at different seasons." He was of opinion, however, that friendly agreement between proprietors and

[§ 284.] cabmen might effect the desired regulation, and that periodical consultations between representatives of the two sides would succeed in keeping prices fairly adjusted.(1) This proposal received no support from the proprietors, and Mr. Chapman, representing various proprietors' associations, made the unequivocal statement, "We certainly are not prepared to meet the men "to arrange a scale of prices.(2)" An argument on which great stress was laid was that a fixed price would inevitably bring about a deterioration in cab property, since proprietors would have no inducement to vie with one another in running a good class of vehicles. "It "would be very detrimental not only to the cab "interest, but to the public.(3)" An alternative, suggested by one witness, was that London cabmen should be placed upon the same footing as those in the provinces, and should receive a definite wage.(4)

The Privilege System.

285. The complaint against the railway privilege system is one in which proprietors and drivers are agreed. "The majority of the cab trade," according to one proprietor, "have agitated for the past quarter of "century against the railway companies giving pre- "ference to certain proprietors to ply for hire at "railway stations, and excluding the rest."(5) It was stated that there are at present 9,500 unprivileged drivers, and 3,500 unprivileged proprietors, and that Waterloo and Vauxhall stations are the only "open" ones out of the 18 within the radius.(6) No extra conditions as to cleanliness or repair are imposed upon the privileged cabs,(7) and the system is complained of as injurious to the cab trade in general. It is urged that its abolition would be a great gain to the public "both cab-riding and non-cab-riding"; traffic would be facilitated, and the railways better supplied; under the present arrangement the railway companies could not be served at all times if it were not for the ordinary cabs.(8) The demands of the witnesses before the Commission were substantially a re-statement of those embodied in a petition presented to the House of Commons in 1887, and another to the Home Secretary in 1892.(9) They desired the abolition of the privilege system, and the creation at railway stations of cab standings under control of the usual authorities; failing this, the prohibition of privileged cabs to ply for hire elsewhere than at railway stations.(10) They maintain that the railway companies are acting illegally in creating cab standings elsewhere than where appointed by the Home Secretary or the Commissioner of Police. In 1891, however, Mr. Matthews stated that "in the absence "of stipulation to the contrary, the stations of railway "companies are not places at which cab-drivers have a "right to stand, and the excluded cab-drivers have no "cause for complaint in the absence of public incon- "venience."(11) Letters were written in 1890 by the cabmen to the managers of the chief railway companies in London, requesting that cabs bringing a fare to a station might be allowed to take one away; but the answers received were all to the effect that no alteration would be made in the existing arrangement.(12) Even if this compromise had not been rejected it would not have satisfied the petitioners, since the privileged cabs would still have the preference.(13) It was made clear by the witnesses that the cabmen were willing to pay the railway companies for admission to the premises. The arrangement at the London and South Western station, where all cabs alike pay 1*d.* on entering, was asserted to be most satisfactory; another suggestion was made that each should pay 4*d.* a week, and so provide the 10,000*l.* which the railway companies now receive. "The cabmen," Mr. Crabbe stated, "do not "care what they pay for the privilege, so long as they "have fair play."(14)

RAILWAYS. Rules of Railway Service. (*a.*) *Prohibition of railway servants from carrying on another employment.*

286. (*a.*) Protest was made against the rule of railway service whereby anyone employed on the line is prohibited from carrying on any other business either "directly or indirectly."(15) The wages of railway servants, it was asserted, are insufficient to support a family, and the men maintain that the companies have no right to control a man's actions when off duty.(16) To this the companies rejoin that they have every right if those actions are "interfering with the performance of his "duty to them next day."(17) The reasons given for the enforcement of the regulation are that a man's whole attention is required in the railway service, and that if he engages in other business and occupations in his hours of rest he will not be fit to do his work.(1) A representative of the Amalgamated Society of Railway Servants for Ireland objected to the regulation as unfair, on the ground that the companies, while they demand the exclusive use of a man's services, do not guarantee him a week's wages unless a week's work has been provided for him.(2) This statement was contradicted by a manager of the Great Southern and Western Railway of Ireland, who said, referring to the above complaint, "This is quite inaccurate so far as it "affects my line, and also, I believe, all the other "principal lines in Ireland,—every man is provided "with a week's work, or is paid for the full week."(3). [§ 286 (*a.*)]

(*b.*) Another grievance brought forward by the railway servants, especially those on Scotch lines, was with regard to the tenancy of cottages belonging to the railway companies. The evidence on this point was contradictory with regard to the reasons for the men's occupying these houses. Witnesses representing the Amalgamated Society of Railway Servants spoke as if it were a condition of service on the Caledonian Railway, and stated that "the general feeling of "the men is that they would rather go elsewhere "for their houses," while a witness employed on the same line represented that not only was occupation of the company's houses not compulsory, but that there was great competition for them, sometimes a dozen applicants for one vacant cottage.(4) Corroboration of the last-mentioned evidence was received from railway managers in both England and Scotland, who spoke moreover of continual applications for the erection of more houses for the accommodation of the men on the lines.(5) The fact would seem to be that the companies' servants can get from the companies at a moderate rent superior houses, conveniently situated with regard to their work, but that in some cases these advantages are considered to be counterbalanced by the disadvantageous terms of occupancy.(6) These terms provide that the tenant shall occupy the house only during employment in the company's service, and this regulation is objected to as putting the railway servants entirely in the power of the companies; "the men are thus practically tied hand and foot "to their employers."(7) It was stated that the men "are prohibited from taking other and better situa- "tions on many occasions because of the necessity "to move from the house at other than the customary "removal terms, when houses are not to be had."(8) References, both condemnatory and explanatory, were made to the evictions at Motherwell during the strike of 1890–1.(9) It was admitted that under ordinary circumstances there was no hardship in the regulation, and that it was sometimes even an advantage for a man to get his house taken off his hands at once when removing to another district; but objection was taken to the companies enforcing the rule during strikes, "not to install a new tenant, but to defeat the move- "ment."(10) It was urged as desirable that the companies should let their houses from month to month, or according to one proposal, that there should be three months' notice necessary on either side, unless by mutual consent.(11). *(b.) Occupancy of the companies' houses.*

(*c.*) The inaccessibility of the railway directors to the grievances of the employed was made a cause of complaint in some cases, but upon this subject the evidence was of a conflicting nature. It would appear that all the companies recognise the right of the men to represent their wishes to the directors by deputation. In the case of a few of the smaller companies these deputations are allowed to consist of the official representatives of the Amalgamated Society of Railway Servants, but the majority prefer to receive requests only from the persons directly concerned.(12) The chief dispute which has arisen in this matter of deputations was in connection with the refusal of the North British Company in 1890 to meet the men, except in separate grades; this was the immediate cause of the strike, since the Union deprecated any sectional action.(13) Individuals, again, have the right of appeal to the *(c.) Petitions from the staff to the directors.*

[§ 286 (c.)] directors, through the heads of departments. In the evidence taken before the Select Committee on Railway Servants this regulation was referred to with general approval, but a witness examined before the Commission spoke of the "exasperation" of the men at the companies' reiterated enunciation of this rule in 1890, and another was of opinion that the right of appeal under these conditions was practically valueless, since the subordinate officials could refuse to forward complaints. (1) It was stated that under such circumstances it would be open to the aggrieved person to apply directly to the manager or directors, but this does not appear to be always the case. (2) The efficacy of such an appeal, where the right does exist, was the subject of considerable difference of opinion, as was also the question as to whether the men are deterred from making complaints from fear of consequences. (1) [§ 286 (c.)

(d.) Attention was called by one witness to the unfair behaviour of the companies in requiring at least three characters from applicants for posts in their service, and yet refusing to give written certificates to their servants on leaving. (2) It was stated that it was the general practice of railway companies to tell a man to refer his future employer to them, and that sometimes the men failed to obtain employment, through having no written character ready to show. A case was mentioned of a man who had a Government certificate from a previous situation, and could not get it returned to him on leaving the railway service. (3) (d.) The granting of characters

B. ORGANISATIONS.

1. ORGANISATIONS OF EMPLOYERS, ORGANISATIONS OF EMPLOYED, AND JOINT BOARDS.

ROAD TRANSPORT. Organisations of employers. (a.) History

287. (a.) The only organisations of employers in connection with these industries, with regard to which any details were furnished, are the Improved Cabs Club, London, which was formed in 1882, and the Liverpool Cart-owners' Association, Limited, which was registered under the Companies Acts in 1891. Several organisations of cab proprietors in London were referred to, such as the Metropolitan Cab Proprietors' Strike Fund Association, and various others which are constituted into what is termed an Insurance Association. The rules of the two societies first-mentioned have alone been supplied to the Commission. (3)

(b.) Constitution and government.

(b.) The Improved Cabs Club is managed by a chairman, vice-chairman, and secretary. The Liverpool Cart-owners' Association is managed by a Committee which elects from its own number a president, vice-president, and treasurer. There are also four trustees who are members of the Committee, a secretary, and two auditors. General meetings are held in the former case monthly, and in the latter annually. All questions at a general meeting are decided by a majority of votes, the president having a casting vote in the case of the Liverpool Cart-owners Association. No change in the rules can be made without the approval of a general meeting. All disputes arising within the Cart-owners' Association are referred to an Arbitration Sub-Committee appointed annually by the Committee.

(c.) Entrance fees, conditions of membership, and control of funds.

(c.) Membership of the Improved Cabs Club is confined to proprietors "working at least six numbers," and there is an entrance fee equal to three months' subscription. Subscriptions are in both cases calculated on the extent of property worked by each member; in the Improved Cabs Club, on the number of cabs, and in the Liverpool Cart-owners' Association, on the number of horses. In both associations members who are a certain number of weeks in arrears are fined or suspended from benefits, and if still in arrears after a certain further period are excluded from the society. In the case of the Improved Cabs Club, no money may be voted away for any purpose except by a special meeting of the association. The expenditure of the funds of the Liverpool Cart-owners' Association is controlled by the Committee.

(d.) Dispute and other regulations.

(d.) The Improved Cabs Club has no regulations affecting disputes between employers and employed. The rules of the Liverpool Cart-owners' Association provide that in case of a strike or threatened strike, no member may concede the demands of the men without the consent of the Committee, who decide all questions arising out of such a situation. Both organisations have rules with regard to conditions of employment, and maximum wages or minimum cab-hire to be paid or charged by members. Members of the Improved Cabs Club are liable to a penalty for employing a driver whom they know to be a defaulter. They are also expected to notify to the owner the numbers of any cabs of a fellow member which are seen at any race meeting near London. Members of the Liverpool Cart-owners Association are prohibited from underselling fellow-members, or interfering with their employment, and from working for or employing non-members.

(e.) Objects

(e.) The object of the Improved Cabs Club is the mutual protection of proprietors and drivers. The associations of cab proprietors which form the Insurance Association are intended primarily to indemnify members for claims brought against them on account of personal injury or loss of luggage in the streets. They also take up questions affecting the trade, but do not combine to keep up the price of cab hire. (4) The objects of the Liverpool Cart-owners' Association are to protect and advance the common interests of tram-owners and cart-owners, particularly by procuring the promotion or repeal of legislation affecting those interests, and also by regulating rates of cartage, terms of hiring, and conditions of labour; and further, to secure the proper condition of the highways, to arrange for insurance of property, and to collect debts and obtain legal advice for members.

(1) Digest, Vol. III., pp. 49. 62. 98. Ballantyne, 25,054. 25,932. (2) Appendix to Minutes of Evidence, Vol. III., pp. 502–3. Digest, Vol. III., p. 49. Clark, 23,654-6. (3) Tabulated Rules. Nos. 192, 193. Digest, III., p. 41. Chapman, 19,230. (4) Digest, Vol. III., p. 41.

288. The Cabdrivers' Association, Edinburgh and Leith, the London Carmen's Trade Union, the National Municipal and Incorporated Vestry Employés' Labour Union, the Amalgamated Carters' Society, Glasgow, and the National Scottish Horsemen's Union have supplied copies of their rules. Organisations of employed.

(a.) It was stated that until quite recently no effective organisation had been formed among the tramway and omnibus workers in London. All early attempts in the direction of unionism had been baulked by the direct and indirect opposition of the companies. The Tram and 'Bus Union, which was formed in 1889, lasted two years, and then collapsed, partly, it was stated, through the discharge of members by the companies, and partly through the incompetence of its officials. In 1891 it was succeeded by a far more efficient organisation, formed with the help of the London Trades Council, namely, the Amalgamated Omnibus and Tram Workers' Union. (1) This association, it was stated by the secretary, arose out of the strike in June 1891, and in 1893 its members numbered about 2,500, of whom four-fifths were metropolitan members, the estimated total of omnibus men in London being 7,000. The men, it was stated, had been deterred from joining the Union by the action of the companies, who had opposed its formation. It had a few members in provincial towns, such as Birmingham, Leeds, Bradford, and Keighley. (5) It was stated, however, by the manager of the London Omnibus Carriage Company, that the formation of the Union took place some considerable time before the strike of 1891, and was not in any way opposed by that company. In his opinion the object of the Union was at first merely the provision of out-of-work benefits, and many men joined it on that account. (6) Two other witnesses confirmed the statement that the Amalgamated Omnibus and Tram Workers' Union was formed before the strike, and added that by November 1892, the time of giving evidence, that organisation had ceased to exist, and that in their opinion there was no need for a union among the omnibus men in London. Another witness referred in a letter to the fact of the dissolution of the Union. (7) The Northern Counties Amalgamated Tramways and Hackney Carriage Employés Association has a membership of nearly 3,500. The headquarters of the association are at Manchester, and it includes also numerous towns in East Lancashire and Yorkshire. The date of its formation was not stated. The dismissal of representative delegates in Manchester had failed to crush the association. It was alleged that in Liverpool no organisation could even be formed, owing to the "intimidation" practised by the employers. (8) The Dublin and District Tramway Union was formed in June 1890, and at one time had 609 members, nearly the largest number available. In May 1892, 500 men were on the books, and of these 325 were paying members. The Union is connected with the Dublin Trades Council. It was stated by the secretary that the Union had conducted no strikes. (9) A non-unionist driver in the employment (a.) Histor

(1) Digest, Vol. III., pp. 49, 53. Appendix to Minutes of Evidence, Vol. III., pp. 502, 503, 505. Clark, 23,751. 23,543. (2) Digest, Vol. III., p. 49. Clark, 24,059–60. (3) Digest, Vol. III., p. 49. (4) Digest, Vol. II., pp. 64, 68. (5) Digest, Vol. II., p. 67. Digest, Vol. III., p. 29. (6) Digest, Vol. III., p. 24. (7) Digest, Vol. III., p. 29, (Footnote), p. 36. (8) Digest, Vol. III., p. 18. (9) Digest, Vol. III., pp 53, 34.

[§ 288 (a.)] of the Dublin United Tramways Company stated that he and other non-unionists had been annoyed and intimidated by members of the society, to which the majority of the company's servants belonged. This witness did not approve of the object of the Union, which he believed was to encourage strikes, though he did not object to combination for the purpose of mutual protection. (1) The Edinburgh Tramway Servants' Association was referred to only in the Replies from Associations of Employés. The date of its formation was not stated. In 1891 it had 209 members out of 240 men employed by the Edinburgh Street Tramway Company. (2) The first organisation which is said to have existed among cabdrivers in London was the Amalgamated Cabdrivers' Society, which was formed about 1876. For some years it was very strong and had large funds, and during that time, it was stated, no dispute occurred, and the price of cabs was very reasonable. In 1882, however, the Union funds became low, and at the same time the price of cabs was raised. The Society conducted a strike, and was shortly afterwards dissolved. (3) In consequence of the strike of 1883 another organisation was formed, called the Society of Cabdrivers, which lasted about two years. (4) Before the strike of 1891, though the precise dates are not stated, two Unions were formed which are still in existence—the London Cabdrivers' Society and the Metropolitan Cabdrivers' Trade Union. In 1892 the London Cabdrivers' Society had between 1,000 and 2,000 members out of an estimated total of 13,000 licensed drivers. There had been no serious difficulty between unionists and non-unionists. (5) The Cabdrivers' Association, Edinburgh and Leith, was referred to in the written evidence only. It was formed in 1885, and in 1891 had about 350 members out of an available total of about 720. (6) The London Carmen's Trade Union was formed in 1889. Its membership was stated in 1891 to be about 8,000 out of 40,000 men employed in the trade in London, and in 1892, 5,000 to 6,000 out of 30,000 to 40,000. Though not federated with any dockers' union, it took a sympathetic part in the Hay's Wharf strike in 1890, and about 30 of its members came out. The Union in 1892 was in course of forming a federation with other "vehicular traffic" unions. (7) The National Municipal and Incorporated Vestry Employés Labour Union was formed in 1890. It was stated in 1892 that the membership was about 4,000, and was continually increasing. Rather less than one-fourth of the members were carmen, the total number of carmen employed by public bodies in London being estimated as 1,800 or 2,000. The members reside chiefly in the metropolitan district. The organisation does not wish to encourage strikes, and aims at enforcing its requirements through the vestry elections. (8) The Manchester and Salford and District Lorrymen and Carters' Union was formed in 1890, and in 1892 had about 1,400 members, including coal carters, railway lorrymen, brewers' draymen, and others. There are about five unions in the district which admit horsemen, and their total membership is about 3,700 out of an available total calculated at 14,700. There is, it was stated, a great deal of jealousy between the different organisations. The Lorrymen and Carters' Union has a working agreement with the Northern Counties Tramway Employés Association, and works harmoniously with the Amalgamated Society of Railway Servants, but not with the General Railway Workers' Union or the Gas Workers' and General Labourers' Union. (1) The Amalgamated Carters' Society, Glasgow, was formed in 1873, and in 1891 had 710 members. In 1889 it conducted a partially successful strike for an advance of wages and reduction of hours. In 1892 it was stated that this organisation was federated with the National Scottish Horsemen's Union and was about to be amalgamated with it. Their united membership was said to amount to 2,000 out of 6,000 carters in Glasgow. The National Scottish Horsemen's Union was formed in 1889. In 1892 it had branches at Glasgow, Greenock, Port Glasgow, and Ayr. There had been branches in several other towns, but they had been dissolved, owing, it was stated, to the existence of a condition of things unfavourable to organisation. (2) [§ 288 (a.)]

(b.) Constitution and government.

(b.) Each of the societies which have forwarded copies of rules is governed by an Executive Council or Committee, consisting of a president, and in some cases a vice-president, a general secretary, treasurer, and three trustees, with other members. The Vestry Employés' Union, the London Carmen's Trade Union, and the National Scottish Horsemen's Union have a delegate meeting, which takes place annually, or quarterly in the case of the Vestry Employés' Union. The Amalgamated Carters' Society, Glasgow, and the Cabdrivers' Association, Edinburgh and Leith, hold a general meeting, in the former case quarterly, and in the latter half-yearly. In the Amalgamated Carters' Society, Glasgow, and the National Scottish Horsemen's Union, the president has a deliberative and also a casting vote, apparently both at Executive and other meetings. The chairman of the Vestry Employés Union has a casting vote only. Rules may be added or altered only with the consent of a majority of members present at a general or delegate meeting. Branches are governed, generally speaking, by a body of officials similar to those of the central organisation; but in the Vestry Employés Union, by a chairman, secretary, and treasurer only. This society and the London Carmen's Trade Union elect annually an Arbitration Committee to hear appeals and settle disputed points.

(c.) Income and expenditure.

(c.) The entrance fee varies from 6*d.* in the case of the London Carmen's Trade Union, to 3*s.* in the case of the Amalgamated Carters' Society, Glasgow. In all cases where there are sick benefits, an extra entrance fee or contribution is required to entitle members to receive them. In the case of the Cabdrivers' Association and the National Scottish Horsemen's Union, no member may join the sick fund, or in the latter case any of the benefit funds, when over 50 years of age. The Vestry Employés' Union admits all who are in the employment of municipal bodies. The other societies admit as members all persons employed in the trades which they represent, subject to certain limits of age. The subscriptions vary from 2*d.* to 6*d.* a week. Members who are a certain number of weeks in arrears are suspended from benefit or fined, and if still in arrears after a certain further period, are excluded from membership. Of these societies the London Carmen's Trade Union grants funeral benefit only, the Vestry Employés' Union grants dispute and funeral benefits only, while in the remaining cases sick benefits are granted in addition, with either accident, distress, or superannuation benefit.

TABLE of ENTRANCE FEES and CONTRIBUTIONS in ASSOCIATIONS of EMPLOYED.
Tabulated Rules, Nos. 143, 152–155.

Entrance Fee and Contribution.	National, Municipal, and Incorporated Vestry Employés' Labour Union. No. 143.	London Carmen's Trade Union. No. 152.	Amalgamated Carters' Society, Glasgow. No. 153.	Cabdrivers' Association, Edinburgh and Leith. No. 154.	National Scottish Horsemen's Union. No. 155.
Entrance fee	1*s.*	6*d.*	3*s.*	1*s.* to the trade fund. To the sick fund as follows: 3*s.* for members from 18 to 30 years of age. 4*s.* for members from 30 to 40. 5*s.* for members from 40 to 50. Members over 50 may join the trade fund only.	To be fixed by each branch. Entrance to the benefit funds, 2*s.* 6*d.*
Contribution	2*d.* a week. The General Council may impose a levy of not more than 2*d.* a week on each member.	2*d.* a week, or 2*s.* 2*d.* a quarter. A levy of 6*d.* a member is made on the death of a member of the society. An annual levy of 2*s.* a member is made to pay for the services of a firm of solicitors.	6*d.* a week for members who reside within a radius of three miles from the society's meeting place, and 3*d.* a week for members who reside beyond that radius.	3*d.* a week to the trade, funeral, and benevolent funds. 2*d.* a week to the trade fund only. 3½*d.* a week to the sick fund for honorary members not less than 2*s.* 6*d.* a year.	6*d.* a fortnight. To the benefit funds, 3*d.* a week.

Benefit.	National, Municipal, and Incorporated Vestry Employés' Labour Union. No. 143.	London Carmen's Trade Union. No. 152.	Amalgamated Carters' Society, Glasgow. No. 153.	Cabdrivers' Association, Edinburgh and Leith. No. 154.	National Scottish Horsemen's Union. No. 155.
Accident	—	—	Assistance in obtaining legal compensation from employers.	—	—
Dispute	Members discharged through taking part in a dispute receive such compensation as the executive thinks fit.	—	10*s.* a week. Victimised members the same, except delegates, who receive their usual wages. Legal expenses are paid if the committee approve of the case.	Victimised members have their wages paid while out of employment. Legal expenses are paid if the committee approve of the case.	15*s.* a week at the discretion of the branch. 10*s.* a week until the end of the dispute.
Distress and Superannuation.	—	—	—	Assistance may be given to aged and distressed members, as decided by a meeting of the association.	Members permanently incapable of following their employment may receive sick pay for 6 months, and then quarter pay, with the right of working at any employment.
Funeral	6*l.* on member's death. 3*l.* on wife's death.	10*l.*	5*l.* on death of member; 3*l.* on death of member's wife; 1*l.* on death of member's child; 2*l.* on death of unmarried member's father or mother.	6*l.* on member's death. 3*l.* on wife's death.	7*l.* 4*l.* on death of wife.
Sick	—	—	10*s.* a week for 13 weeks; 5*s.* a week for 13 weeks; and 2*s.* 6*d.* until recovery.	For members between 18 and 40 years of age, 10*s.* for 13 weeks, 7*s.* 6*d.* for 13 weeks, and 5*s.* for 26 weeks. 1*s.* less for members over 40, and 2*s.* less for members over 45.	7*s.* a week for 13 weeks; 5*s.* a week for 13 weeks; 3*s.* a week for remainder of illness.

In the case of the Cabdrivers' Association, the funds must be invested in the names of the trustees, in Government or other approved securities.

(d.) Dispute and other regulations.

(*d.*) The Amalgamated Carters' Society, Glasgow, alone among these organisations, has a rule with regard to disputes between employers and employed. It provides that the members concerned shall in all cases attempt to settle the dispute themselves, but that on their failure to do so the Committee shall endeavour to settle it by arbitration or otherwise. If the Committee is unsuccessful it must summon a special meeting of the society, but a cessation of work can only take place with the consent of three-fourths of the members. In the event of a strike or lock-out, members are forbidden to commit acts of intimidation or violence, or to use abusive language towards employers or non-union men. Any member who boasts of his independence towards his employer on account of membership of this society is liable to a fine of 1*s.* This is also the only society which has a rule affecting non-unionists. It forbids members to be "troublesomely solicitous" towards any man to join the society, and provides that all requests to join be made in a reasonable and friendly manner, outside the employers' premises, and out of work hours.

(e.) Objects.

(*e.*) These associations have several objects in common, such as the protection of the general interests of the trade, the increase of wages and reduction of hours of labour. The Vestry Employés' Union has the special object of reforming the system of employment, and the London Carmen's Trade Union, that of giving immediate legal aid in any matter affecting the trade interests of its members. The preamble to the rules of the Amalgamated Carters' Society states that the claims of the society will be based on justice, and enforced with moderation; and further, that it looks forward to a time when more general principles of co-operation will be acknowledged, guaranteeing to every man the full enjoyment of the produce of his labour.(1)

Joint boards.

289. There are no permanent Joint Boards in connection with these industries, but several witnesses representing the employed recommended the formation of such boards, consisting of an equal number of employers and employed, as a means of adjusting disputes and promoting mutual understanding. A witness representing the Dublin and District Tramway Union stated that a scheme of this kind was under consideration by both the Corporation and the Trades Council of Dublin.(2) The same method was advocated by Mr. Sutherst on behalf of tramway and omnibus servants, by a representative of the Hyde Park Cab Company, and by the general secretary of the London Cabdrivers' Society.(3) The President of the Tramways Institute of Great Britain and Ireland recommended the constitution of Joint Boards on the lines laid down in the Act of 1867–8, entitled "An Act to establish equitable "Councils of Conciliation to adjust differences between "Masters and Workmen."(4) Other witnesses representing the employed recommended, instead of a permanent committee, the recognition of unions by the employers for the purpose of mutual discussion of points in dispute. Mr. Sutherst regretted that the London omnibus and tramway companies refused to meet the men who represented their fellow-workmen on friendly terms Various statements were made to the effect that employers in these industries refused to recognise organisations, and dismissed men on account of being unionists.(5) On the other hand it was stated on the part of several employers, including the North Metropolitan Tramways Company and the London Omnibus Carriage Company, that no dismissals had taken place on the ground of union membership alone, and that the required recognition would willingly be given to any organisation thoroughly representative of the whole body of employés.(6) The general manager of the London General Omnibus Company was of opinion, however, that recognition of unions and mutual discussion between representatives would not improve the relations between employers and employed, and the President of the Tramways Institute of Great Britain and Ireland stated that he had always declined to enter into negotiations with any trade union, preferring to deal directly with the men in his employment, and to be guided in his treatment of them by "facts and not advocacy."(7) The secretary of the Dublin and District Tramway Employés' Union stated that though the tramway company had opposed the union, the tension between them had decreased with stronger organisation. The company refuses, however, to receive deputations from the Union in its official capacity, on the ground that it is not composed solely of the company's servants.(8)

290. There is no mention in the evidence of any organisation of employers in this industry.

RAILW Organi tions of employ Organi tions of employ

(a.) His

291. (*a.*) The oldest as well as the largest organisation of railway servants is the Amalgamated Society of Railway Servants of the United Kingdom. It was formed in 1872, and extended over England, Wales, Ireland, and a small part only of Scotland, but in the year 1892 the Scotch society, which had been a separate organisation up to that time, was amalgamated with it. In 1891 it was stated before the Select Committee on Railway Servants that the members of the Amalgamated Society numbered over 35,000, but in 1892 a witness who represented the Society before the Commission estimated its total membership at about 30,000.

(1) Tabulated Rules, Nos. 143, 152–5. (2) Digest, Vol. III., pp. 131–2. (3) Digest, Vol. II., pp. 100, 101. Digest, Vol. III., p. 132.

(1) Digest, Vol. III., p. 132. (2) Digest, Vol. II., p. 65. Digest, Vol. III., pp. 25, 29, 30, 33–6, 38–9, 44, 47. (3) Digest, Vol. III., pp. 20–4, 35, 41, 132. (4) Digest, Vol. III., pp. 21, 33. (5) Digest, Vol. III., pp. 33–5.

[§ 291 (a.)] and the whole number of railway men eligible for admission at 150,000. The manager of the Great Western Railway, however, in his evidence before the Select Committee, estimated the latter number at about 260,000, but it was suggested that this calculation might include grades which were not eligible.(1) The general manager of the London and North Western Railway pointed out to the Commission that the Amalgamated Society, though an influential body, could not be regarded as thoroughly representative, since the total number of railway servants of all grades in Great Britain and Ireland was about 350,000 or 360,000.(2) The society is chiefly designed for men directly engaged in dealing with the traffic, but all grades are admitted except mechanics and artizans. It was stated before the Select Committee that ever since its formation the Amalgamated Society had put forth continual demands for the shortening of hours of labour on railways.(3) The Amalgamated Society was introduced into Ireland in 1885. The secretary of the Irish branch stated before the Commission that it did not make much progress until 1889 or 1890, when several movements took place for improvement in the conditions of service. It was stated that some difficulty had been experienced in retaining the men in the society when the period of agitation was over, but that the tendency to secede had been successfully checked. The aim of the secretary, it was pointed out, was organisation rather than agitation. It was stated on the other hand by the representative of an Irish railway company that the Amalgamated Society's policy since its introduction into Ireland had always been aggressive. The society chiefly represents five of the seven principal lines in Ireland, namely the Great Northern, the Great Southern and Western, the Midland Great Western, the Belfast and Northern Counties, and the Belfast and County Down Railways. On these lines, it was stated, the society represents two-thirds of the engine-drivers, nearly two-thirds of the firemen and passenger guards, three-fourths of the goods guards and brakesmen, over two-thirds of the signalmen, and nearly half the shunters. The number of members was stated to be nearly 4,000 out of an estimated total of 8,000 railway men in Ireland eligible for membership.(4) The Amalgaamted Society of Railway Servants for Scotland was formed in 1872. It was stated by the assistant secretary that at the time of the strike of 1890 the membership of the society was about 8,000, but that in August 1892, it was between 4,000 and 5,000. The manager of the Caledonian Railway pointed out, however, that at that date the Scotch and English societies were amalgamated, and that according to the statement of the general secretary the number taken over from the Scotch society was only 1,250.(5) At the time of the formation of the society the conditions of labour on Scotch railways, according to the statement of the organising secretary, were most unfavourable. The railway servants at length found it necessary to combine, "not in any spirit of warfare," but to secure fair and reasonable terms of service. The efforts of the society in this direction were at first only sectional, owing to imperfect organisation, but in the year 1889 a general movement began, the membership of the society having considerably increased.(6) The organising secretary of the Amalgamated Society referred to the whole movement, including the strike of 1890, as an instance of the total failure of combination to attain its object.(7) Certain witnesses in the service of the Caledonian Railway Company expressed disapproval of the combative purposes to which the society had been turned, and of its attitude towards the railway companies.(8) The General Railway Workers' Union was formed in 1889. In 1891 it was stated before the Select Committee that the members of the society numbered between 20,000 and 25,000; but in 1892 its representative before the Commission estimated the membership at 14,000. It extends over the greater part of England, and represents all grades of railway labour, but chiefly the artizan class and the goods porters and platelayers, and especially such as are not eligible for membership of other trade organisations. The union works very amicably with the Amalgamated Society of Railway Servants, and other unions. It took part in the hours movement originated by the Amalgamated Society on the North Eastern Railway, and in the negotiations which resulted in the Newcastle settlement in 1890. The Union has from the first devoted its efforts mainly to reducing the hours of labour, and has made public demonstrations on the subject at most of the large railway centres.(1) Reference was made in the written evidence to the following additional unions of railway workers; the Signalmen's United Aid and Sick Society, Bradford and Halifax, established in 1883; the Waterford and Limerick Railway Company's Engine-drivers' and Firemen's Trade Union, established in 1885; the Associated Society of Locomotive Engineers and Firemen, United Kingdom; the United Pointsmen's and Signalmen's Mutual Aid and Sick Society, Great Britain and Ireland; and the Railway Servants' Society, Aberdeen and District. This last society, it was stated in the Answers to Schedules of Questions, has 200 members out of an available total of 700; the Waterford and Limerick Company's Engine-drivers' and Firemen's Union has 53 members out of an available 84; and the Signalmen's United Aid and Sick Society has 44 members out of an available 58. No details were furnished as to the history of any of these societies. The rules of all the above organisations have been received with the exception of the Railway Servants' Society.(2) [§ 2 1(a.)]

(b.) Constitution and government.

(b.) The General Railway Workers' Union, the Amalgamated Society of Railway Servants, and the Amalgamated Society of Railway Servants for Scotland, resemble each other in form of government. There is in each case an Executive Council. In the General Railway Workers' Union and the Amalgamated Society of Railway Servants, the general secretary, and in the latter Association the president also, are included in the Executive Council. The General Railway Workers' Union has a sub-committee elected from the Executive Council to assist the general secretary in cases where prompt action is necessary, and the Amalgamated Society of Railway Servants for Scotland has a Standing Committee similarly elected, to which all the powers of the Executive Council are entrusted for the time being. There is in each case a Finance Committee elected annually at the general meeting, or, in the Amalgamated Society of Railway Servants for Scotland, elected by the Executive Council. Except in this last society, the supreme government is in the hands of an annual general meeting. Special general meetings may be called by the Executive Council, or at the request of a majority of the branches, which in one case must be at least two-thirds. The Amalgamated Society of Railway Servants for Scotland has no regular general meeting, but if any large number of members, exceeding one-sixth of the whole, disapprove of the aciton of the Executive, they may require the chairman to summon special meetings of the branches, and the action of the society is determined by the majority of votes. Rules may be added, altered, or rescinded, only by a majority of the members present at a meeting of the supreme governing body, which is in this case the Executive Council. Branches are invariably governed by a chairman (or president), vice-chairman, secretary, treasurer, committee, and usually three trustees. They hold quarterly general meetings, and ordinary meetings more frequently. Three of the four other societies of which the rules have been received are governed by an Executive Committee, consisting of the president or chairman, vice-chairman, secretary, treasurer, three trustees, and seven or eight members elected by the general meeting. In the United Pointsmen's and Signalmen's Mutual Aid and Sick Society, the treasurer and trustees are not members of the Executive Committee. The Committee meets as a rule only when summoned by the president or secretary. In the case of the Signalmen's United Aid and Sick Society, and the United Pointsmen's and Signalmen's Mutual Aid and Sick Society, there is an annual general meeting. This meeting has sole power to make any change in the rules. In the Waterford and Limerick Engine-drivers' and Firemen's Trade Union, a special general meeting is called when necessary. In the Associated Society of Locomotive Engineers and Firemen, a delegate meeting assembles at the desire of the branches, and is alone entitled to make any change in the rules. Any proposals made by the branches as to alteration of rules are forwarded to the Executive Committee, which submits them to the branches in order to decide on the necessity for calling a delegate meeting. Branches, which are provided for only in the rules of this society and of the United

[§ 291 (b.)] Pointsmen's and Signalmen's Mutual Aid Society, are governed by a chairman, secretary, treasurer, three trustees, and a committee. Ordinary branch meetings are held monthly, or more often if required, and there are quarterly or annual general meetings.

(c.) Conditions of membership, income and expenditure.

(c.) Membership of these four societies is confined to the grades specified. All persons employed on railways in Great Britain and Ireland are eligible for membership of the Amalgamated Society of Railway Servants and all persons employed on or in connection with such railways are eligible for membership of the General Railway Workers' Union. The entrance fee varies from 6*d.* to 1*s.*, with in some cases an extra payment for membership of the sick fund; in the two societies for engine-drivers and firemen it varies from 2*s.* 6*d.* to 10*s.* The weekly subscription varies from 2*d.* to 6*d.*, with in some cases an extra contribution to sick and funeral funds. Members who are a certain number of weeks in arrears are suspended from benefits or excluded from the society. Dispute benefit is granted by all these societies, and is the only benefit provided by the General Railway Workers' Union. All the other societies pay sick benefit, and the majority funeral benefit also. Out-of-work benefit is paid by the Amalgamated Society of Railway Servants (both English and Scotch) and by the United Pointsmen's and Signalmen's Society. The Amalgamated Society of Railway Servants (England) grants also emigration, travelling, superannuation, and orphan benefits, and except this last, these are also granted by the Associated Society of Locomotive Engineers and Firemen. The funds are usually invested through the trustees in Government or other approved securities. [§ 291 (c.)]

TABLE of ENTRANCE FEES and CONTRIBUTIONS in ASSOCIATIONS of EMPLOYED.

Tabulated Rules, No. 164–70.

Entrance Fee and Contribution.	General Railway Workers' Union, Great Britain and Ireland. No. 164.	Amalgamated Society of Railway Servants, England, Ireland, Wales, and a small part of Scotland. No. 165.	Amalgamated Society of Railway Servants for Scotland. No. 166.
Entrance fee	6*d.*	1*s.* to the Union and 1*s.* to the sick and funeral fund.	1*s.* to the Union and 2*s.* to the sick fund. Honorary members, 10*s.*
Contribution	2*d.* a week A levy can be made by the Executive Council when necessary.	To the trade, superannuation, and orphan fund, 5*d.* a week. The optional contribution to the sick and funeral fund is according to the age of the member on joining. From 19 to 30 years of age, 3*d.* or 5*d.* a week. From 31 to 38 years of age, 3½*d.* or 6*d.* a week. From 39 to 45 years of age, 4*d.* or 7*d.* a week. From 46 to 50 years of age, 5*d.* or 8½*d.* a week. The lower scale applies to Class A, the higher to Class B. Honorary members must contribute at least 10*s.* 6*d.* a year.	2*d.* a week to the Union, paid every three weeks. To the sick and funeral funds, 4*d.* a week for members under 30; 5*d.* a week for members between 30 and 35; and 6*d.* a week for members between 35 and 40. Honorary members, 2*s.* 6*d.* a year. The Executive Council has full power to declare a levy if necessary.

Entrance Fee and Contribution.	Waterford and Limerick Railway Company's Engine Drivers' and Firemen's Trades Union. No. 167.	Signalmen's United Aid and Sick Society, Bradford to Halifax. No. 168.	United Pointsmen's and Signalmen's Mutual Aid and Sick Society, Great Britain and Ireland. No. 169.	Associated Society of Locomotive Engineers and Firemen, United Kingdom. No. 170.
Entrance fee	10*s.* for drivers; 5*s.* for firemen.	1*s.*	1*s.* for candidates under 35, and 2*s.* for candidates over 35.	2*s.* 6*d.* for candidates from 18 to 25 years of age, and an additional 2*s.* 6*d.* for every additional five years up to 40 years of age. Candidates over 40 may enter as "protection" members only, on payment of 2*s.*
Contribution	1*s.* a fortnight. The general meeting has power to raise the contribution to meet any special pressure on the funds.	2*d.* a week The Committee may make a levy of not more than 6*d.* a member each quarter. There is a special levy of 2*s.* a member on a member's death. Honorary members pay at least 10*s.* 6*d.* a year.	3d. a week for members entering under 35, and 3½*d.* a week for members entering over 35. There is an annual levy of 3*d.* a member to defray the expenses of the general meeting, and special levies may be made to provide legal assistance. Honorary members pay 10*s.* 6*d.* a year.	1*s.* a week for full-benefit members; 6*d.* a week for half-benefit members; and 4*d.* a week for members of the protection fund only. Members who have left the railway service may continue to belong to the sick, pension, and funeral funds, on payment of 8*d.* a week. Honorary members must pay at least 10*s.* 6*d.* a year. The Executive Committee may declare a levy if the funds are found to be insufficient.

[§ 291 (c.)]

TABLE of BENEFITS granted by ASSOCIATIONS OF EMPLOYED.
Tabulated Rules, Nos. 164–70.

[§ 291 (c.)]

Benefit.	General Railway Workers' Union, Great Britain and Ireland.	Amalgamated Society of Railway Servants, England, Ireland, Wales, and a small part of Scotland.	Amalgamated Society of Railway Servants for Scotland.
Dispute	10*s.* a week during a dispute. Victimised members 15*s.* a week for the first 10 weeks, and 7*s.* 6*d.* a week for the second 10 weeks.	12*s.* a week, or 2*s.* a day, with an additional 1*s.* a week for every child under 12 years of age. Victimised members, 15*s.* a week till they obtain employment of equal value, or a lump sum of 50*l.* if they fail to do so. Legal expenses may be paid if the case is approved by the Executive Committee.	Victimised members, 12*s.* 6*d.* for 4 weeks, and 20*l.* compensation if the Standing Committee is satisfied that the claim is bonâ fide. Legal expenses of prosecuted members may be paid if the Standing Committee approve.
Emigration	——	10*l.* to any member receiving dispute benefit, who wishes to emigrate.	——
Funeral	——	For Class A, 3*l.*, or 6*l.* if death is the result of accident. For Class B, 5*l.* or 10*l.* respectively.	10*l.* on death of member; 5*l.* on death of member's wife or unmarried member's widowed mother.
Orphan	——	For the first child, 3*s.* a week, for the second and third, 1*s.* a week, and for the fourth, and every other up to the seventh, 6*d.* a week. Payment is only made for children under 13 years of age.	——
Out-of-work	——	10*s.* a week for 10 weeks, and 5*s.* a week for 10 more weeks.	12*s.* 6*d.* a week for 9 weeks, and 7*s.* 6*d.* for 9 more weeks.
Travelling	——	4*s.* a week for 10 weeks, and 2*s.* 4*d.* a week for 10 weeks.	Members suspended from work by employer receive 12*s.* 6*d.* for 4 weeks, which the Standing Committee may extend to 12.
Sick	——	For Class A, 6*s.* a week for 20 weeks, and then 4*s.* a week, for 20 weeks. For Class B, 10*s.* a week for 20 weeks, and then 6*s.* 6*d.* a week for 20 weeks.	10*s.* a week for 26 weeks, and then 7*s.* 6*d.* for 26 weeks, and 5*s.* for the rest of the illness.
Superannuation	——	A grant of 20*l.* for disablement by old age or accident.	——

Benefit.	Waterford and Limerick Railway Company's Engine-drivers' and Firemen's Trades Union.	Signalmen's United Aid and Sick Society, Bradford to Halifax.	United Pointsmen's and Signalmen's Mutual Aid and Sick Society, Great Britain and Ireland.	Associated Society of Locomotive Engineers and Firemen, United Kingdom.
Dispute	10*s.* a week for 6 months.	Victimised members receive 5*s.* a week for 20 weeks, or 3*l.* to assist them to emigrate.	Legal assistance may be afforded to members, when, in the opinion of the branch, it is necessary for their protection.	12*s.* a week, and 2*s.* extra for each child under 14. Legal assistance is provided in all cases not criminal in themselves, and fines unjustly imposed by employers may be wholly or in part refunded by the Society. Discharged delegates receive 100*l.* compensation, and 15*s.* a week for 12 months if out of employment. Members whose wages are reduced on account of their being delegates have them made good. Members unjustly suspended from work receive 18*s.* a week.
Emigration	——	——	——	Discharged members going abroad may receive 5*l.*
Funeral	5*l.* on member's death, 3*l.* on wife's death.	3*l.*	——	12*l.* on member's death after 12 months' membership. 20*l.* after 18 months' membership. 5*l.* on death of member's wife.
Out-of-work	——	——	Members discharged or suspended from work for no fault of their own may receive a grant according to circumstances.	——
Travelling	——	——	——	12*s.* a week for 12 weeks, and 6*s.* a week for 14 weeks.
Sick	10*s.* a week for 3 months; 6*s.* a week for 3 months.	5*s.* a week for 26 weeks.	10*s.* a week for 10 weeks, and 5*s.* for next 10 weeks. A further grant may be made by a branch meeting.	10*s.* a week for 26 weeks. 6*s.* a week until recovery.
Superannuation	——	——	——	For incapacity to work through accident, 7*s.* 6*d.* a week; for incapacity through old age, 5*s.* a week after 10 years' membership, 6*s.* after 15, and 7*s.* 6*d.* after 20 years.

[§ 291 (*d.*)] (*d.*) *Dispute and other regulations.*

(*d.*) Four of these societies have regulations with regard to disputes between employers and employed. The course of action to be taken by the society is determined by the Executive Council or Committee, but in the case of the Associated Society of Locomotive Engineers and Firemen, members must not be withdrawn from work without the consent of four-fifths of the members employed on the railway system on which the dispute has arisen. The rules of the Amalgamated Society of Railway Servants provide that the Executive Committee must seek to settle disputes by arbitration, and only on the refusal of the railway company to consent to this mode of settlement, may the Committee consider the expediency of a withdrawal of labour. None of these societies have rules affecting the attitude of members towards non-unionists, but the secretary of the Irish branch of the Amalgamated Society of Railway Servants stated that in his opinion the man who participated in the advantages gained by an organisation which he refused to join was a parasite on organised labour, and should be educated into better principles, or induced by any fair means to leave his employment. It was stated, moreover, by a representative of the Great Southern and Western Railway Company, that he had noticed a want of tolerance on the part of members of the society towards those who did not wish to join it.(1) The Waterford and Limerick Railway Company's Engine-drivers' and Firemen's Trade Union alone has a rule fixing a standard of hours and wages. It was stated however on the part of this Union, that these rules were in no way recognised by the company.(2)

(*e.*) *Objects.*

(*e.*) The objects of these societies are stated in most cases to be the general advancement of the interests of members and the improvement of conditions of labour, especially in the matter of hours; the adjustment of relations between employers and employed, the settlement of disputes by arbitration or other lawful means, and the provision of funds for the assistance of members. The Amalgamated Society of Railway Servants for Scotland has the special object of securing compensation for accidents for which the employer is responsible, and two other societies provide legal advice when necessary. Among the objects of the two organisations of signalmen is that of contributing as far as possible to the safety of the travelling public, and the Associated Society of Locomotive Engineers and Firemen proposes to regulate the speed of trains and promote the adoption of modern improvements for the safe working of railways.

Joint Boards.

292. There are no Joint Boards in connection with railway employment, and only one witness, who represented a number of Great Western Railway employés before the Select Committee, proposed the establishment of such a board, in the form of a committee simply representative of employers and employed. Other schemes suggested before both the Select Committee and the Commission, by witnesses representing the Amalgamated Society of Railway Servants and the General Railway Workers' Union, included in each case the appointment of an outsider as an umpire, thus admitting the principle of arbitration.(3) Objections to both proposals were expressed on the part of several railway companies, apparently on the ground that such a plan would amount to the constitution of an authority over the directors, in whose hands the entire management of the railway ought to rest.(4) Less formal methods of negotiation between the companies and the official representatives of the men's organisations were advocated by several witnesses on behalf of the Amalgamated Society of Railway Servants and the General Railway Workers' Union, as a means of preventing strikes by the timely settlement of disputes. It was urged that the Scotch strike of 1890 would have been averted if the companies had from the first consented to treat with the Union, and it was stated that such negotiations had been the means of preventing the threatened strike on the North Eastern Railway in 1890, and another on the Irish Great Northern Railway, and of improving the conditions of service on the Midland Great Western Railway of Ireland. The Secretary of the Irish branch of the Amalgamated Society of Railway Servants was of opinion that there was a prospect of continued labour conflicts so long as the societies which workmen have a legal right to form were denied a full and respectful recognition.(5) It was stated that such recognition was granted only by a few, and those not the principal, railway companies in the United Kingdom, and that in most cases the employers showed actual hostility to unionism, and discharged men on the sole ground of their connection with an organisation.(1) On the other hand, it was stated both before the Select Committee and the Commission, on the part of the great majority of railway companies, that they had no objection to the existence of a union among their servants, and had never discharged men on the ground of their membership, but that they declined most emphatically to treat with any third party not in their employment, on matters connected with the conditions of service of their staff. The general manager of the London and North Western Railway was of opinion that the intervention of union officials in the affairs of a company would be fatal to the high state of discipline which it is necessary to maintain in the railway service, with a view to the proper conduct of the traffic and the safety of the public. It was also pointed out that the responsibilities and complications of railway working are so great, that no one is qualified to intervene between employers and employed. It was stated at the same time in each case that the directors and officers of the company were perfectly willing to receive deputations from their servants, and to meet all fair demands with respect to the conditions of labour in different grades.(2) This position is illustrated by the policy pursued by the North Eastern, Caledonian, and North British Companies, who during recent agitations steadily refused to concede demands expressed in general terms by the Amalgamated Society of Railway Servants, and treated the questions raised as matters of detail affecting the working of the several departments, to be discussed in each case with the persons directly concerned.(3) The only exceptions to the general tolerance of organisation expressed by the representatives of railway companies were in the case of the Dublin, Wicklow, and Wexford, and the Londonderry and Lough Swilly Railway Companies, whose directors have a special aversion to the Amalgamated Society of Railway Servants, which they regard as a dictatorial and combative body. In the latter case the general manager stated that he had specific instructions to employ no one belonging to the society.(4)

[§ 292

2. CONCILIATION, ARBITRATION, AND MEDIATION.

Conciliation.

293. There appears to be a very general desire among those employed in the industries under consideration for some system of conciliation, though there is little evidence of the existence of anything of the kind at present. It was advocated on all hands as the best means of promoting a good understanding between employers and employed, of ending "periodical bickerings," of settling trade grievances, and hence of avoiding strikes. The desirability of some such system was strongly urged by the representatives of the tramway and omnibus workers and cabdrivers on the one hand, and the Amalgamated Society of Railway Servants in England, Scotland and Ireland on the other.(5) It appeared to be recognised that boards of conciliation could only be established where the organisations were strong on both sides. The unwillingness of the employers in some cases to acknowledge the men's unions was mentioned as one of the difficulties in the way of this method of settlement. Thus, Mr. Sutherst was of opinion that "the companies "make a very great mistake indeed in not meeting "upon friendly terms and upon terms of equality the "men who represent their fellow workmen," and that the omnibus strike of 1891 might have been prevented had this course been adopted.(6) The secretary of the Amalgamated Society of Railway Servants for Ireland stated that "if workmen and employers could meet "together more frequently and in an official way through "the agency of their societies to discuss grievances, I "have no hesitation in saying that strikes would be "reduced 90 per cent." At the same time he added, "it is no use talking of conciliation and arbitration "until we have strong organisations. Experience has "proved that an employer of labour never thinks of "offering arbitration and conciliation unless they "have an organisation strong enough to command "respect."(7) This assertion was, however, denied by a railway manager, who stated that in 1889, when a

[§ 293.] dispute arose, the directors of his company met the men and settled the matter by mutual discussion.(1) No argument appears to have been advanced against conciliation either on the part of the employers or the employed.

294. (*a.*) Opinions differed with regard to the advisability of arbitration. Some system of arbitration, such as the addition of an umpire to a board of conciliation, was advocated by various representatives of those employed in tramways, omnibuses and cabs, and by the secretaries of societies of railway servants.(2) One difficulty in the way of such a step appeared to be the unwillingness of employers to have recourse to this measure, and it was stated that the offer of the men to submit the dispute on the Scotch railways in 1890–91 to arbitration was refused by the North British Company on the ground that there was no question on which to arbitrate.(3) A similar complaint was made by the men with regard to the cabdrivers' strike of 1891, but the proprietors declared that the first intimation of arbitration was received by them when the strike was at an end.(4)

(*b.*) On the other hand, very strong opinions were expressed against the principle of arbitration by some witnesses, both before the Select Committee on Railway Servants and the Commission, especially by the railway managers. The President of the Tramways Institute of Great Britain and Ireland expressed his belief that "the intervention of outsiders in trade disputes with "which they are probably not thoroughly acquainted "sometimes does a considerable amount of harm,"(5) and several witnesses who had been in the service of the Caledonian Railway Company stated that they "had "had a long trial of a third party, and had found out "their mistake."(6) In neither case was any evidence in support of these views offered, but it was intimated that discussion between employers and employed without the intervention of an arbitrator would meet all difficulties. The representatives of railway companies expressed a still more decided objection to any system of arbitration. It was contended that the intervention of any outside authority would, in consequence of the particular circumstances of this industry, be "an anomaly," since the directors and managers alone are responsible for the commercial success and safe working of the railways.(7) Moreover, such a system, it was stated, would be fatal to the discipline which is so necessary among railway servants. "I do not know "anything that would be more deplorable," said the general manager of Caledonian Railway Company, "every man who had a grievance would be constantly "wanting arbitration—it would be never-ending. There "is so much at stake in working a line . . a railway "is so vast, and the duties so varied, that no man in "my judgment should be allowed to come in as an "intermediary between employer and employed."(8) So strong were the objections to the proposal that several railway managers affirmed that the risk of a strike would be preferable to the settlement of a dispute by outside arbitration.(9)

(*c.*) There is a good deal of controversy in the evidence under consideration as to the best methods of arbitration and conciliation and the difficulties involved therein. Various proposals are made which range from suggestions for purely voluntary boards to those in which the State institutes the court, appoints the umpire, and enforces the award. A middle course, which is advocated by some witnesses, is that the State should institute the court, but leave the question of the appointment of an umpire and enforcement of awards to voluntary regulations. The witnesses do not all touch upon this question, and the voluntary method appears to be usually implied. The proposals for State boards come principally from railway servants, but Mr. Sutherst desired Parliament to give the sanction of law to the decisions of a court of arbitration composed of employers and men with an umpire chosen by both sides so that it should be binding upon both parties. How this was to be effected was not clearly explained, but it was asserted that "if a man makes a contract he must abide by it."(1) No less than five schemes, differing slightly in detail were proposed by representatives of railway servants. A joint board was suggested, presided over by an umpire appointed by Government, with compulsory powers over wages and other conditions of labour. One witness suggested that to provide for the enforcement of awards fines should be inflicted, another relied rather on moral than legal pressure.(2) Among the witnesses before the Select Committee on Railway Servants, Mr. Tait, the general secretary of the Amalgamated Society of Railway Servants for Scotland, advocated a conciliation board, with an umpire chosen by the arbitrators, or, if they failed to agree, by the Board of Trade. This board would be called into requisition by the collective vote of the men on a particular line, and its functions would be to make general regulations as to the hours of labour of each grade of railway servants. Mr. Harford, representing the Amalgamated Society of Railway Servants, suggested that in disputes affecting the hours of labour alone, the Board of Trade or the Railway Commissioners should arbitrate between the companies and the men, and that their decision should be final. Sir H. G. Calcraft, the Permanent Secretary to the Board of Trade, offered a similar but further developed scheme. He suggested that the Board of Trade should act as a conciliation board in the case of such complaint on the part of railway servants with regard to hours of labour as would be likely to lead to a strike, and that the result should be reported to Parliament. In that case the publicity given to the men's statement, and also the refusal or the agreement of the company to do anything, would probably have a great effect. The witness observed, however, that disputes involving the matter of hours alone are not likely to occur, and that the Board of Trade could not usefully intervene in a wages dispute. All the objections urged by railway managers and others to the principle of arbitration apply equally to these proposals. The former contended that all these schemes amounted to the constitution of an authority over the directors, in whose hands the entire management ought to rest.(3) [§ 294 (*c.*)]

295. It does not appear from the evidence that resort has been often had to mediation in disputes in these industries. An instance, however, occurred in the London omnibus strike of 1891. Mr. Sutherst stated that the Lord Mayor, Sir Joseph Savory, wrote asking him to meet him at the Mansion House. According to the secretary of the General Omnibus Company, "various "negotiations then took place between Mr. Sutherst, "the Lord Mayor, Cardinal Manning and Lord Aber- "deen; they resulted in the men accepting the offer "which had been made by the directors on the pre- "ceding Monday . . . and on the Friday night "the strike was declared at an end." In consequence of the employers not carrying out the terms agreed upon, the Lord Mayor, it was stated, was obliged to intervene again.(4) The only other case of attempted mediation was the intervention of the Archbishop of Dublin and Mr. Davitt in the Great Southern and Western Railway strike of April 1890. "As friends of "the men, they did their best to bring about an understanding," and though the directors of the company refused to see them, terms for the resumption of work were arranged in an interview with the traffic manager.(5) Mediation.

C. TRADE DISPUTES.

1. GENERAL RELATIONS BETWEEN EMPLOYERS AND EMPLOYED.

296. It appears from the evidence that the relations between employers and employed on railways are, in general, very satisfactory. The service is popular, and strikes are very rare. The companies are usually willing to meet the employed in a conciliatory spirit.(10) The manager of the London and North Western Railway Company was of opinion that there had been fewer conflicts in the railway service than in any other industry.(6) Among men employed in connection with tramways, omnibuses, and cabs, however, disputes have been more frequent, and there is, besides, an almost constant source of friction arising from the comparative want of organisation; and in the

[§ 296.] cab trade especially, from the "contradictory state" of cab law, and from the indiscriminate issue of licenses.(1) The effect of organisation in preventing disputes was questioned in some instances by both employers and employed. A railway manager considered unionism "totally incompatible" with the railway service. "You might as well expect to have "trade unionism in Her Majesty's army."(2) Other witnesses deprecated the encouragement of unionism on the grounds that the leaders only "sought to create for themselves a position,"(3) and that when strong enough the Union "would endeavour to dictate to the company."(4) It was asserted also that in two cases the Union had done harm in forcing on strikes which were not really in accordance with the wishes of the majority of the men.(5) Several witnesses, on the other hand, held that with the increase of organisation more disputes would be amicably settled or altogether avoided.(6) It was asserted that besides striking less frequently, unionists served their employers better than non-unionists (7), and that a sound organisation of the men would sometimes be even more in the interests of the employers than of the men.(8) Instances were given of the intervention of a powerful organisation having averted strikes.(9) It was stated that "there was a "very strong Union (of cab-drivers) in existence some "years ago, and during the existence of that Union "there was never but one dispute, and that was in "1882, when the Union became very weak."(10) Besides increased organisation, various other means of preventing or settling disputes were suggested, to which reference has already been made. A large proportion of the strikes in these industries have arisen from questions connected with wages. Disputes between cab drivers and owners, as already stated, "generally centre on the question of price,"(11) and demands for a rise, or refusals to submit to a threatened reduction of wages were said to have caused strikes among carters and railway servants. (12) Other strikes of men employed on omnibuses, tramways, and railways were attributed to long hours of work, (13) and the omnibus strike of 1891 was caused by the introduction of the ticket system, in addition to a demand for a reduction of hours.(14) The frequent refusal of employers to recognise the unions has been a plentiful source of strife, and in a few cases disputes have arisen from the employment of non-union labour.(15)

2. SPECIAL STRIKES.

Shrewsbury and Talbot Yard cab strike, 1891.

297. "The greatest strike that has occurred in the cab trade" (16) began at the Shrewsbury and Talbot Yard, in April 1891. The Earl of Shrewsbury and Talbot raised the price of his cabs to 16*s.* 3*d.* when the weather was very bad, and the men found it was impossible to earn the money. Letters were sent to him by the Union, but he refused to take less for the cabs, and the men in his yards therefore struck. On seeing this, and finding that other proprietors were raising their prices, the men in other yards struck in different parts of London. A meeting was held at Victoria Hall, at which an almost unanimous desire was expressed for a general strike. The leaders of the Union, however, "were "very desirous that no general strike should take "place so as to cause any inconvenience towards the "public." They resolved, therefore, that "the strike "should go on as it had, that was by striking at different "yards at different times." (17) It lasted for 13 weeks. Arbitration was offered by the men, but "the Pro- "prietors' Association refused to meet them in any "form, and what arrangements were made were "made with the proprietors themselves." (18) The communications of the men were not answered at all by the Association; and in consequence the strike continued until the autumn was coming on, "when the "cabs came down in price without the proprietors "reducing them." (19) It was stated that the Earl of Shrewsbury and Talbot called a sale of his horses a few days after the strike began; and proposed to let out his cabs and harness. His yard was, however, picketed for 13 weeks; and at the end of that time "he opened "one of his yards, and let the cabs out at the price "that the men were asking." (20)

[§ 298.] London omnibus strike, 1891.

298. The London omnibus strike occurred in June 1891. It was stated by Mr. Sutherst on behalf of the employed that "if the men had had reasonable "hours they never would have struck. It was not "a question of wages at all, it was a question of over- "work." (1) The secretary of the London General Omnibus Company considered, however, that, "the "introduction of the ticket check was the sole cause "of the strike"; (2) and pointed out that in 1889, when Mr. Sutherst made his first attempt to induce the omnibus men in London to strike, the Road Car Company's men, who had just had the ticket system imposed upon them, were willing to do so, and only agreed to defer proceedings because the General Omnibus Company's men, who were in other respects on the same footing, would not join them. A representative of the Omnibus and Tram Workers' Union, while admitting that the statement that the men came out for a reduction of hours was "practically true," added that "truly the strike was caused by the introduction "of the ticket system." (3) One of the employed stated that "one great objection that the men had, and which "practically led up to the strike, was the introduction "of the sliding scale." (4) The ticket system was imposed on the London General Omnibus Company's men in the beginning of 1891, and immediately "agitation was commenced amongst the men." (5) It was stated that the men were, moreover, influenced by the successful tramway strike in Paris. (6) On June 3rd Mr. Sutherst wrote to the company stating that he wished to have an interview with the Board to prefer certain demands of the men. His letter was laid before the Board on June 4th, and an answer was sent to the effect that the directors would see him on June 8th. He replied, however, that if they would not see him on the 6th the strike would be proclaimed; and it accordingly began on Sunday, June 7th. The directors had at this time "no means of knowing what the demands of the men were."(7) Mr. Sutherst, it was stated, addressed the men and "proceeded to lay down what he styled "my orders" as to striking, picketing and other matters.(8) He ended by declaring that the Road Car men would have to come out. The manager of the Road Car Company stated that their men, having no grievance with regard to the introduction of the ticket system, had no intention of joining the strike, but were induced to do so by the strikers. They struck out of "sympathy with the men of the London General "Omnibus Company, and for the purpose of getting "their hours reduced."(9) On Sunday, June 7th, the majority of the drivers and conductors in the General Omnibus Company's service ceased work; and those that did take their omnibuses out "were followed by "a howling mob and eventually forced to go back."(10) The Road Car Company's men, it was stated, took out 121 out of 235 cars which it was intended to work, and the whole would have been turned out to work but for the intimidation which was practised by the strikers. The utmost difficulty was experienced in getting the horses fed; "if Mr. Sutherst's orders had been carried out they might have been literally starved."(11) They also suffered a good deal from the enforced rest and want of exercise; and with regard to those which were sent out with relief men, it was stated that these inexperienced drivers "overdrove and worried the horses, and did them a good deal of harm."(12) On Monday, June 8th, a meeting of the directors of both companies was held, and deputations received from the men who were willing to work, and from the strikers. The result was a manifesto issued jointly by the directors to the effect that not later than July 13th the average day's work for drivers and conductors should be 12 hours. A scale of wages was drawn up, but the other demands of the men, including the dismissal of those who brought out the omnibuses on Sunday, were not conceded.(13) Negotiations then took place between Mr. Sutherst and the then Lord Mayor, Cardinal Manning and Lord Aberdeen, which resulted in the men's acceptance of this offer, and on Friday night the strike was declared at an end. The settlement was not, however, altogether satisfactory. The Union considered that Mr. Sutherst "had certainly carried out the strike on a dictatorial policy and closed it without consulting any of the Executive of the London Trades Council."(14) Charges were, moreover, brought against the companies that they had been using means to coerce the men to break the agreement; that they had

[§ 298.] discharged or removed from regular work men who had been in their service for years, on no particular grounds; that they recruited their numbers by incompetent men, and that they had themselves in several cases violated the 12-hours agreement (1). Most of these charges were refuted either by officials of the companies or by independent witnesses; and it was alleged that the men themselves had frequently asked to be restored to the old conditions of work; and that where fresh arrangements had been made they had been faithfully adhered to.(2) The cost of the strike was stated to be, to the London General Omnibus Company, 20,000*l.*; to the Road Car Company, 8,000*l.*; and to the men 9,000*l.*(3)

Great Southern and Western Railway strike, 1890

299. The strike on the Great Southern and Western Railway of Ireland, which was described in the evidence as "the greatest strike that ever took place in Ireland"(4) began in April 1890. It originated in the refusal of two porters at Cork to accept for conveyance goods tendered to the company by a firm some of whose servants were at the time on strike. On the dismissal of these men, who had, it was alleged, been previously cautioned for a similar offence, the strike spread over the whole of the line. It was stated, however, that there were other grievances which had helped to inflame the men against the company. In March 1890 the Dublin men had sent a petition to the company asking for an amendment in the new conditions of labour which had been obtained by the strike of December 1889. It was sent through the secretary of the local branch of the Union, but the company addressed their reply to the man whose name appeared first among the signatures; and this "gave very great "offence to the men, for it was a direct ignoring of the "Society which the men had formed amongst themselves."(5) There was, moreover, a complaint that the company were employing men beneath the standard rate of wages(6), and these two grievances, combined with the dismissal of the Cork porters, resulted in the general strike which began on April 25th. According to Mr. Foreman, the secretary of the Irish branch of the Amalgamated Society of Railway Servants, 1,000 men were affected, "every man joined in that strike with "the exception of about 20"(7), but the traffic manager of the railway denied this, and stated that the number who remained on duty was 200.(8) The men, he complained, went out without giving any official notice. The "paralysis of the country" caused by the strike became so serious that Mr. Michael Davitt and Archbishop Walsh approached the men with a view to effecting a settlement. Mr. Foreman stated that the men were willing that they should endeavour to bring the strike to an end, but that they were not allowed to see the directors. An interview was held with the traffic manager, and terms were arranged by which the men were to resume work for the purpose of relieving the public distress, and the company promised that within a limited period they would receive a deputation and discuss the matters in dispute. The men therefore resumed work on May 5th. Mr. Foreman complained that the answer which the company subsequently gave was "anything but satisfactory," as they "refused the whole of the claims that had been sent in with the exception of a very slight concession indeed to the passenger guards"(9), and added that the men have had many reasons to "regret that they did not consider "their own interests instead of the interests of the "public and fight the matter out to the end." It was stated that the strike cost the company 100*l.* a day in loss of traffic, and cost the Amalgamated Society 800*l.*(10)

Scotch Railway strike, 1890-1.

300. In 1883 a strike took place on the Caledonian Railway for a reduction of hours. It lasted a week, and at the end of that time the men "only partially obtained what they struck for";(11) hence the settlement was only temporary. Agitation for shorter hours was re-commenced in 1889 by the Amalgamated Society of Railway Servants, and included this time all the other Scotch railways. A programme was drawn up of which the principal item was "a universal 10-hour day to be the maximum for all grades of the service," but which also included the abolition of the custom of reckoning the hours of labour by the aggregate fortnight's work, and of the running of trains upon the "trip" system; higher pay for overtime and Sunday labour, and an eight-hours' day for certain classes of th [§ 300.] employed. (1) This was submitted to the Boards of directors of the various railways, with a request that should they take exception to any of its clauses, a conference of equal numbers of directors and representatives of the men might be held to discuss them. The reply of the directors was considered "merely an evasion of the overtures" of the men.(2) They were required to treat separately with the heads of departments; and the Glasgow and South Western and Caledonian Railways granted certain advances of wages which were not regarded as by any means equivalent to a reduction of hours. An offer was made, however, by the companies to meet the delegates of the men; and this was finally accepted, though with the stipulation on the men's side that they "could not go as depart-"ments, but as railway men all having an unbroken "interest in each other's welfare."(3) At this conference the directors requested the delegates to be divided into grades, according to the different classes of labour. From the men's point of view this appeared to be a device "for the purpose of mitigating the just, "reasonable, and fair claims of the men."(4) It was, however, pointed out by a witness that "engine-drivers "and signalmen, for instance, are quite on a different "level . . . and there is no other possible way of "redressing grievances than taking each grade and "treating it according to its merits."(5) The whole question was, in consequence of this requirement, placed in the hands of the Executive Committee of the Amalgamated Society. Through it, on September 10th, 1890, another request was made to the various companies for a conference with the men, but the replies given only demanded that the men should approach them through the heads of the respective departments. This the men, "having from painful experience in the past no faith in it," steadily refused to do; "believing," they said, that "their interests were so "interwoven that it was impossible to dissociate the "interests of each."(6) They then sent an offer of arbitration; to which the companies replied that "they had no question on which to arbitrate";(7) and the Executive Committee felt that this justified them in advising a strike. They were, however, "determined that no partial stoppage should take place with their sanction."(8) By December 12th, 4,173 resignations had been handed in to the Committee, but the number was considered insufficient to warrant a strike. Meetings were held at various stations outside Glasgow, and at these 600 voted for a strike and 875 for delay. "The Executive Committee," however, it was alleged, "kept "up the agitation until December 21st, when, at a "meeting held in the Albion Hall, Glasgow, it was decided by 660 votes (to 81) to strike."(9) It was asserted that the Executive and the Secretary "had power at the time to prevent the strike . . . . All that they would have had to do was to clear the meeting of the non-members and take the voice of the society"(10), but other witnesses held that the men "acted against the opinion of the Executive deliberately "expressed." "The men became exasperated and "would wait no longer on the Executive."(11) No notice was given, and the strike began on December 22nd. This course was ascribed by some to a desire on the part of the Amalgamated Society to "do what they "possibly could to paralyse the traffic and bring the "companies to their knees"(12); but it was argued on behalf of the society that the companies having broken their part of the agreement by ignoring the men's claims, the men felt that their own side of the compact was no longer binding; and, moreover, that the companies knew that a strike was likely to occur. "It "had appeared through the press at meetings that "were held of he men, that unless their demands "were conceded they would go on strike . . . . "on the 22nd December."(13) It was decided to confine the strike to the three principal lines, viz., the North British, the Caledonian, and the Glasgow and South Western, on the understanding that the other lines would be guided by the results they obtained. The men on the Glasgow and South Western returned to their work in the second week of the strike, those on the other two lines remained out for six weeks. It was stated that between 8,000 and 9,000 were out at one

[§ 300.] time. Most of the signalmen on the Caledonian Railway remained loyal to the company, and the line was kept open for traffic during the whole of the strike. Attempts at conciliation were made by various persons. Chambers of Commerce and other public bodies tried to induce the companies to submit to arbitration, but without success. It was stated by one witness that during the running of the strike no direct overtures were made by either of the contending parties. It was stated, on the other hand, by the general manager of the North British Railway, that from December 27th onwards, repeated offers were made by Mr. Walker, then general manager, to meet a deputation from the men on strike, but that it was not till January 29th that these overtures were accepted. Mr. Walker then met the representatives of the men, and an agreement was made with regard to that line. The men returned to work on January 30th. On the 31st negotiations were opened with the Caledonian Railway Company, and the strike terminated on the understanding that the directors of both companies should meet a deputation of their men within a limited period. These meetings were held on February 18th and March 26th respectively. On both the Caledonian and North British Railways arrangements were made whereby 10 hours were to be "as far as practicable" the maximum of actual work; overtime was to be paid after 72 hours a week; the minimum time of rest before a man was called on to resume work was increased from eight to nine hours; and time and a half was to be paid for Sunday labour.(1) With regard to this settlement considerable difference of opinion appears to exist. It was stated by the Assistant Secretary of the Amalgamated Society that "since the strike great improvement has been "made in the hours on the Glasgow and South Western; "the Caledonian have also improved considerably, but "the improvement on the North British is very slight "indeed, the hours in all centres being still too long. ". . . Also, while the Caledonian Railway has made "an endeavour to improve the hours, long hours are "still worked." "The agreement entered into between "the deputations and the management of the North "British line had" it was alleged "in less than a "fortnight been flagrantly abused."(2) These statements were, however, denied on behalf of the North British Railway Company,(3) and with regard to the Caledonian Company the manager stated that he "had "every reason to believe that the staff on the line was "well satisfied;"(4) and that "there is not the slightest "truth in the allegations that the Caledonian Company "have victimised men who took part in deputations."(5) This statement was corroborated by two men employed by the company who had been among the strikers; who added that "where men have not been taken on, or "have not been advanced in proportion to others, it is "not owing to their action in the strike, but because "of some personal action of theirs."(6) The Amalgamated Society considered, nevertheless, that the concessions were "of a very meagre character indeed," and declared that the "agitation must continue until the "principle of a 10-hour day is unconditionally "conceded."(7)

3. PICKETING AND INTIMIDATION AND LEGISLATION RELATING THERETO.

301. Picketing appears from the evidence to have been extensively carried on during the strikes that have occurred in these industries, and several cases of intimidation were reported in connection with them. During the cab strike of 1891 it was stated that the strikers made a practice of collecting money from those drivers who continued work; and in a few instances those who refused to pay were followed and assaulted. It was suggested that "it should be made illegal for "men in an open place like the Strand to get on the "back spring of a hansom cab and ask for a subscrip-"tion from the driver, and if he does not subscribe to "their Union to abuse him."(8) During the omnibus strike it was stated that "picketing was carried on in a most disgraceful manner."(9) The horsekeepers were not allowed to feed the horses, and those drivers and conductors who did go out were, as before stated, "followed by a howling mob and eventually forced to "go back. The harness in some cases was cut and the "omnibus damaged, and some of the men were very "seriously hurt."(1) In the case of the strike on the Dublin, Wicklow and Wexford Railway it was alleged that threats were employed and the "loyal men terrorised." On the other hand, a representative of the employed complained that they "found it somewhat "difficult to get on with picketing work in Ireland," and were "very much harassed by the police." Cases were quoted of charges of intimidation which had been dismissed by the magistrates on the ground of illegal arrest.(2) With regard to the Scotch railway strike much evidence was adduced on behalf of the employers, and of those men who did not strike, as to intimidation practised by the strikers.(3) One witness asserted that the strike "was only carried on by means of the picket system."(4) Representatives of the Amalgamated Society of Railway Servants stated, however, that "those who had charge of the strike counselled the "men from time to time not to violate the law," and that the companies had pickets which "unduly interfered with the pickets of the men."(5) Some of those who had been prevented from working added, moreover, that so far as their personal experience went, no physical force had been used, though the pickets had carried weapons.(6)

[§ 301.]

Conspiracy and Protection of Property Act

302. With respect to the Conspiracy and Protection of Property Act, Mr. Kingham stated that "so far as "picketing and silent or verbal intimidation is con-"cerned, he did not think the law touched it,"(7) and recommended that the men should be compelled to move away from the premises they were picketing, and should be punished if they failed to do so.(8) Another witness thought that Government ought to interfere to see that no man shall prevent another man, either by force or by any other means, from going to his work if that man is inclined to do so.(9) On the other hand, Mr. Campbell, solicitor to the Amalgamated Society of Railway Servants for Scotland, arguing from the case of a man against whom eight charges had been made under the 7th section of the Act, raised several objections to the section. He complained that the statute was "elastic in its terminology and was com-"prehensive. A man who commits one act may have "it described and specified as a violation of more than "one and possibly two or three sub-sections . . . . "The same *species facti* might be formulated in two or "three possible charges."(10) This he asserted was peculiar to the Act. The word "intimidate" has, he alleged, been interpreted by some judges "very peculiarly."(11) He complained further that though the words "liable to a penalty for each of the offences" are not in the Act, it has been so read, and hence the penalties may amount to much heavier punishment than was intended by the Act, and again, that judges, knowing that fines are usually paid by the society to which the accused belongs, are disposed to impose imprisonment, without the alternative of a fine, though it is "by no means clear" that they have this power.(12) As a remedy to these evils the witness recommended that cumulative penalties under the Act should be disallowed. If a man were guilty of violence to several persons, he should be considered outside the statute and indicted at common law for the assaults, but if he were proceeded against under this statute the penalty should not exceed 20*l.* or three months' imprisonment. The common law of Scotland meets nearly everything provided for in the 7th section. The witness further advised that the terms used in the section should be defined, and that the words used in the Act "in default of payment" should be given effect to, in order that the judge should not have power to withhold the option of a fine, except for an aggravated offence tried before a jury.(13)

GEOFFREY DRAGE,
Secretary.

GROUP C.

SUMMARY of the EVIDENCE, oral and written, received by GROUP C. of the ROYAL COMMISSION ON LABOUR.

PART I.—TEXTILE AND CLOTHING INDUSTRIES.

A. CONDITIONS OF LABOUR:

Page.

1. WAGES.—(i.) *Statement of Wages* - - - - - 235
(ii.) *Profit-Sharing and Co-operation* - - - - 240

2. HOURS.—(i.) *Statement of Hours* - - - - - 242
(ii.) *Limitation of Hours; e.g., by Law, the Eight Hours' Day* - - - - - - - - 244

3. STATE AND MUNICIPAL EMPLOYMENT - - - - - 245

4. INSPECTION AND REGULATION OF FACTORIES AND WORKSHOPS, AND LEGISLATION RELATING THERETO - - - - - - 245

5. ACCIDENT FUNDS AND EMPLOYERS' LIABILITY, AND LEGISLATION RELATING THERETO - - - - - - 246

6. OTHER CONDITIONS OF LABOUR - - - - - - 250

B. ORGANISATIONS:

1. ORGANISATIONS OF EMPLOYERS, ORGANISATIONS OF EMPLOYED, AND JOINT BOARDS - - - - - - - - 251

2. CONCILIATION, ARBITRATION, AND MEDIATION - - - - 271

C. TRADE DISPUTES:

1. GENERAL RELATIONS BETWEEN EMPLOYERS AND EMPLOYED - - 273

2. SPECIAL STRIKES - - - - - - - - 273

3. PICKETING AND INTIMIDATION, AND LEGISLATION RELATING THERETO - 275

NOTE.

IN accordance with a Resolution of the Commission, the Secretary was directed to prepare Summaries of the Evidence (oral and written) received by the Committees. This Evidence includes:—

1. The Minutes of Evidence with Appendices.
2. The Answers to the Schedules of Questions.
3. The Rules of Associations of Employers and of Employed, and of Joint Boards.
4. Certain other Documents handed in or forwarded to the Commission, but not printed with the above.

Under the head of Textile and Clothing Industries these include:—

Leeds Rivetters' and Finishers' Statement of Wages approved by the Board of Conciliation and Arbitration for the Wholesale Manufacturing Boot and Shoe Trade of Leeds, 1881; handed in by Mr. Judge.

5. Further Correspondence on certain subjects.

N.B.—The following official publications have also been consulted:—

(i.) Statistical Tables and Report on Trade Unions, Fifth Report, 1891.

(ii.) Report of the Chief Inspector of Factories and Workshops for the Year 1892.

(iii.) Return on Hours of Labour, ordered by the House of Commons on the motion of Mr. Broadhurst; (375, 1890).

PART I.—TEXTILE AND CLOTHING INDUSTRIES.

TABLE OF CONTENTS.

A. CONDITIONS OF LABOUR.*

PART I.—TEXTILE AND CLOTHING INDUSTRIES.

A. CONDITIONS OF LABOUR.*

I. WAGES.

(i.) STATEMENTS OF WAGES.

[§ 303.] TEXTILE. ature of formation textile dustries.

303. The difficulty which attends any attempt to summarise the evidence received with regard to wages, is rendered peculiarly great in the textile trades by the complexity of the processes involved in them, and the consequent great division of labour and multiplicity of classes of workers. Amongst these classes it is only with regard to the wages of weavers and spinners in the cotton and woollen industries that the information received is sufficiently full to form the basis for any general statements. And even in these cases it must be borne in mind that, as pointed out by the witnesses themselves, the averages given are merely more or less rough approximations, since the wages earned by each operative depend not only upon his or her own skill and industry, but also upon the size and number of the machines tended, and the speed at which they run; upon the quality of the material supplied and the nature of the goods to be produced, and upon the number of assistants required and the wages paid to them. So far as information with regard to the wages of these four classes of workers can be obtained from either the oral or the written evidence, it is shown in the four following tables.

TABLE I.

Wages of Cotton Weavers.

304. In obtaining the average wages of weavers in the various districts of the cotton industry, it has been generally necessary to accept the statement of an individual witness with regard to the rate current in a particular locality, but it must be noticed that such statements were to a certain extent supported by the tacit assent to them of other witnesses examined at the same time or immediately afterwards. The Burnley district is the only one for which the average wages were given by more than one witness, and in this case the divergence in the rates quoted by the representatives of the employers and the employed was very slight. Mr. Rawlinson computed the weekly average earnings of a single loom at 5*s.* 3*d.*, and the average earnings of the workers (including both adult weavers and their assistants) at 21*s.* (1); whilst Mr. Holmes computed the weekly average earnings of a single loom at 5*s.*, and the average earnings of an adult weaver, after deducting the wages paid to his assistants, at 22*s.* (2) The rates of 17*s.* 4*d.* for the district of Haslingden (3) and 20*s.* for the whole of North-East Lancashire (4) are the average wages as computed by the witnesses, but in the case of Blackburn the maximum and minimum rates were quoted,(5) and the average wage given in the table is the arithmetic mean of these rates, and therefore probably not an exact average. It was stated by another witness that wages for adult male weavers in the Ashton-under-Lyne district range from 22*s.* to 30*s.*, but the average rate for male and female weavers in this district was not given. (1)

[§ 304.] Wages of Cotton Spinners.

305. Very little evidence was given with regard to the wages of spinners in the cotton industry, and it will be noticed in the following table that when rates of wages have been quoted for spinners in the oral or written evidence, these were for districts other than those for which the wages of weavers have been quoted.

TABLE II.

MEAN OF RETURNS OF WAGES OF SPINNERS IN THE COTTON INDUSTRY.

References.	District.	Wages per Week.	Class for which Mean is given.
	LANCASHIRE.	s. d.	
Minutes of Evidence, Vol. I., 712. Oldham Wages List. Answers to Schedules of Questions, Appendix VIII., p. 895.	Lancashire and parts of adjoining counties.	35 0	Minders, men only.
Answers to Schedules of Questions, p. 769.	Bolton	37 6	Minders, men only.
Answers to Schedules of Questions, p. 99.	Preston	31 0	Minders, men only.

These rates also depend upon single statements of witnesses or associations, as in no case has the information been received from more than one source with regard to the wages prevailing in one locality. Mr. Mawdsley computed the average gross weekly earnings of an average sized machine (representing 85 dozen spindles) throughout the district of the Amalgamated Association of Operative Cotton Spinners (*i.e.*, the whole of Lancashire up to Lancaster, and the adjoining districts of Cheshire, Derbyshire and Yorkshire) at 63*s.*, out of which the assistants would receive about 27*s.*, and the minder 35*s.*(2) According to the Oldham list of wages for self actor minders, sent in by Mr. Mawdsley as an average list for the district, the weekly gross earnings of a machine of 85 dozen spindles are 61*s.* 8*d.*, of which the assistants receive 28*s.*, and the minder 33*s.* 8*d.*;(3) but certain extra allowances are mentioned, which go to the minder only, and these may raise his average wages to the sum computed by Mr. Mawdsley. According to the Bolton Master Cotton Spinners' Association, the gross earnings of a spinner range from 42*s.* to 90*s.*, according to the size of the mules.(4) If the arithmetic mean of these amounts, 66*s.*, be taken as the average gross earnings of a spinner, and this is divided according to the proportions adopted by Mr. Mawdsley in his calculation, it would allow about 28*s.* 6*d.* for the assistants, and about 37*s.* 6*d.* for the minder himself. It may be noticed that according to the Oldham wages list gross earnings of 65*s.* 6*d.* are divided between the assistants (or piecers) and the minder, in the proportions of 30*s.* and 35*s.* 6*d.*; but as it was stated in the evidence that Bolton is the district in which piecers' wages are lower than anywhere else in Lancashire,(5) the proportions adopted above are more likely to be correct. That 37*s.* 6*d.* is not far from a true average for minders' wages in Bolton seems to be shown by the fact that Dr. Giffen gave 34*s.* 5*d.* as the average rate in this district in 1886, and that wages are said to have risen 10 per cent. since that date,(6) according to which the present average rate would be about 37*s.* 11*d.* The Preston Operative Cotton Spinners' Association quotes 31*s.* as the average weekly wage of a spinner.(7) This also seems to receive a certain amount of verification from the fact that Dr. Giffen quoted the average wages in this district in 1886 as 28*s.* 11*d.*, and that if a rise of 10 per cent. be allowed for, this would make the present average about 31*s.* 10*d.*

* The few suggestions with regard to the publication of statistics, given in the oral and written evidence, have been dealt with in the Summary of the Evidence given before the Commission Sitting as a Whole, under the head of "Labour Department."

[§ 306.] Wages of Card and Blowing Room Operatives.

306. A third important branch of the cotton industry is that of the card and blowing-room operatives, who prepare the cotton for the spinners. Wages in this branch throughout the cotton districts are said to range from 19*s.* to 30*s.* for men, and from 14*s.* to 26*s.* for women, subject to local variations, but the work done by men and women is different in kind.(1) In the district of Oldham the average wages of men employed in the carding and blowing-rooms are said to be 26*s.* 4*d.*, and the extreme variations 17*s.* to 32*s.*, but it is stated that very few male hands receive less than 20*s.* or more than 30*s.*(2)

Recent advances in Wages

307. The representatives of both employers and operatives agreed that wages in the various branches of the cotton trade had advanced considerably during the last 30 years, both directly and indirectly. This is attributed partly to improvements in machinery, but the operatives consider it mainly due to their improved organisation, and the continued efforts of their unions to gain an advance whenever the state of the trade renders it possible. The representatives or the employers, on the other hand, stated that the unions had served to steady wages, but not directly to raise them, and pointed out that the wages of those operatives who have not been organised have risen in a greater degree than the wages of the organised operatives.(3)

Wages of Woollen Weavers.

308. The following table shows the information that has been obtained with regard to the wages of weavers in the Yorkshire district engaged in the woollen and worsted industries. The Bradford district is almost entirely confined to the worsted industry, but so far as weaving is concerned there does not appear to be any marked difference in wages between this and the woollen industry.

TABLE III.

MEAN OF RETURNS OF WAGES OF WEAVERS IN THE WOOLLEN INDUSTRY.

References.	District.	Wages per Week.	Class for which Mean is given.
	YORKSHIRE.	*s. d.*	
Minutes of Evidence, Vol. I., 7984.	Guiseley - -	17 6	Adult males and females.
Answers to Schedules of Questions, pp. 107, 469. Minutes of Evidence, Vol. I., 7079.	Huddersfield -	17 0	Adult males and females.
Minutes of Evidence, Vol. II., 11,381, 11,424-9. Answers to Schedules of Questions, p. 684.	Bradford - -	13 4	Adult males and females.
Minutes of Evidence, Vol. I., 5707. Answers to Schedules of Questions, p. 107.	Batley and the "heavy woollen" district.	10 0	Adult males and females.

With regard to this table it must be noticed that in the Guiseley and Huddersfield districts wages were quoted separately by the employers for male and female weavers, and it was stated that in the Huddersfield district there were separate lists for men and women, that for the men being about 20 per cent. higher than the women's list.(4) When the arithmetic mean of the men's and women's rates is taken as the average rate for adults, this is probably rather too high, as more women than men are usually employed in weaving, although Mr. Thomson stated that in his own mills 56 per cent. of the weavers were men.(5) The earnings of a weaver in full employment in the Guiseley district were said to be from 22*s.* to 35*s.* a week for men and from 18*s.* to 28*s.* a week for women, but Mr. Peate considered that, allowing for irregularity of employment, the average earnings of a male weaver would be 20*s.* 6*d.*, and of a female weaver 14*s.*(6) Mr. Yates considered that 19*s.* to 20*s.* would be a fair average for all weavers in the Leeds district, disregarding irregularity of employment, but could not say what effect this had upon the earnings.(7) The Huddersfield Weavers' Association gives the average wage of adult weavers in full employment as from 18*s.* to 24*s.*, and during slack time as from 10*s.* to 16*s.*(8) The average of these various rates has been taken as the average rate of earnings of an adult weaver during the year. The arithmetic means of the wages quoted for fully employed male and female weavers in this district by Mr. Thomson and Messrs. Armitage and Cleland, are 20*s.* and 21*s.* 10½*d.* respectively (9), and this seems to show that the arithmetic mean of the rates quoted above for weavers in full employment, viz. 21*s.* is a fair average. The most conflicting evidence given with regard to the rate of wages had reference to the Bradford district. It was stated by Mr. Drew that the average rate of a weaver's earnings in this district was 9*s.* a week, but according to the returns from 118 employers in response to an inquiry issued by a Joint Committee appointed by the Bradford Chamber of Commerce to investigate this question, the average earnings of a weaver for the year 1891 were 13*s.* 3·840*d.*(1) Two other witnesses representing the Bradford Power Loom Weavers' Association stated, however, that this average was too high, and this society stated in the written answers to the schedule of questions that wages range from 5*s.* to 15*s.* weekly, according to the state of trade.(2) A representative of the West Riding of Yorkshire Weavers' Association stated that 10*s.* would be a fair average for weavers' wages throughout the year in the Batley and heavy woollen weaving district, but this average is probably rather too low, as the Weavers' Association for this district quotes 12*s.* as "a common rate of earnings".(3)

[§ 308.]

309. The evidence given with regard to the wages of spinners in the woollen and worsted industries is less satisfactory than that with regard to any of the three classes already dealt with. So far as any information has been obtained, it is contained in the following table:— Wages of Woollen Spinners.

TABLE IV.

MEAN OF RETURNS OF WAGES OF SPINNERS IN THE WOOLLEN INDUSTRY.

References.	District.	Wages per Week.	Class for which Mean is given.
		s. d.	
Minutes of Evidence, Vol. I., 7080.	Huddersfield -	25 0	Spinners, men only.
Minutes of Evidence, Vol. I., 5745.	Batley and the "heavy woollen" district.	23 6	Spinners, men only.
Minutes of Evidence, Vol. I., 6745, 10,348.	Bradford - -	9 6	Spinners, chiefly women and girls.

It must be noticed that the rate of wages quoted here for spinners in the Huddersfield district is not an average but the rate of fixed weekly wages paid by Mr. Thomson to his spinners. As Mr. Thomson stated that these wages were offered to the spinners on condition that they should not receive piece wages, it may, perhaps, be assumed that they are above the usual rate of time wages and below the average piece wages in the district, and, therefore, approximate to an average rate for the district.(4) The average rate for piece work in the Batley and heavy woollen district was given by Mr. Turner as 24*s.*, and this witness stated that time wages for spinners ranged from 17*s.* to 30*s.*, according to the amount of responsibility involved. The average of time and piece wages for the district is, therefore, probably not higher than 23*s.* 6*d.*, the arithmetic mean of the extremes here quoted for the time rates.(5) With regard to the wages of worsted spinners in the Bradford district, similar rates were quoted by two witnesses, an employer and an overlooker, viz., from 7*s.* 6*d.* to 8*s.* 6*d.* for two sides, 10*s.* for three sides, and 11*s.* 6*d.* for four sides, giving an average of about 9*s.* 6*d.* It must, however, be noticed that these rates, which are time wages and for work performed chiefly by girls, cannot be properly compared with the wages of woollen spinners in the districts quoted above, since the work in the latter is performed entirely by men, and the wages are partly time and partly piece wages.(5)

Wages o Wool Combers Wool Sorters, and Wa Dressers

310. Rates of wages were quoted by representatives of the associations of wool combers, wool sorters, and warp dressers in the Bradford district as follows:— The average wages for male wool combers were said to be 17*s.* 6*d.* a week, and for female 12*s.*, whilst about 40 per cent. of those engaged in the industry are females. The average weekly time wages for wool sorters were said to be 29*s.*, and the average piece wage earned in a week to be 20*s.*, only men being engaged

[§ 310.] in this industry. Male warp dressers, when in full employment, earn from 25*s.* to 28*s.* a week, but female warp dressers not more than 13*s.* a week; few females are, however, employed in the industry. A representative of the employers in the Bradford district computed the average earnings of a wool sorter as 23*s.* or 24*s.* a week, and of a warp dresser in full employment as from 26*s.* to 30*s.* a week (1).

Wages in the Jute industry.

311. In the jute industry at Dundee two manufacturers quoted the average wages paid to their spinners as 15*s.* to 17*s.* a week and 10*s.* to 13*s.* 9*d.* respectively, and the president of the Dundee Factory Operatives' Union stated that the wages of jute spinners were higher at Dundee than at Barrow, where they earn 10*s.* 6*d.* a week. Weavers' wages in the jute industry were said by one manufacturer at Dundee to average 16*s.* 9*d.*, whilst a representative of the Forfar Factory Workers Union gave the average wages for weavers as 18*s.* for four looms, 15*s.* for three looms, and from 13*s.* to 20*s.* for two looms according to the size of the machines. Only women are employed in weaving jute (2).

Wages in the Silk industry.

312. With regard to wages in the silk industry, it is stated by the Silk Dressers' Trade Society that the average wages of dressers in all the silk manufacturing districts are about 35*s.* a week, and a silk dresser in Halifax stated in his evidence that his own average earnings were about 30*s.* a week. Mr. Hadwen, a silk manufacturer near Halifax, stated that in his factory a dresser earns 35*s.* a week; a spinner, 36*s.*; a twiner, 35*s.*; and a weaver, 30*s.* He stated, however, that the firm to which he belongs pays higher wages than some others (3).

Wages in the Carpet industry.

313. Evidence was given by only one representative of the carpet industry, a manufacturer at Bridgnorth, who stated that in his own factory the wages of male weavers averaged from 32*s.* to 35*s.* a week, and those of female weavers from 12*s.* to 15*s.* a week. The Aberdeen Carpet Weavers' Association states that the average wages are 17*s.* 6*d.* a week, fluctuating from 33*s.* to 10*s.* (4).

Wages in the Dyeing industry.

314. The representatives of the Bradford Society of Dyers stated that the average wages in that industry were now from 14*s.* to 16*s.* or 18*s.* a week, although experienced hands earned about 24*s.* a week. Formerly, however, 24*s.* was a general average. An employer engaged in the dyeing and finishing industry in Leicester stated that the average wages of the men employed by him during the last year had amounted to 30*s.* a head (5).

Mode of payment.

315. In the cotton industry both spinners and weavers are usually paid by the piece, but in the card and blowing rooms the male operatives, as a rule, receive time wages, though the females are paid by the piece. In the woollen industry weavers are paid by the piece, but wool spinners in some cases, and worsted spinners always, receive time wages. Wool sorters and warp dressers are generally paid by the piece, and wool combers, willeyers, and fettlers by time. Cotton spinners and weavers and wool weavers sometimes employ assistants, whom they pay out of their own gross earnings (6).

Sub-contracts.

316. The Huddersfield Weavers' Association mentions "commission weaving" as the only form of sub-contracting existing in the industry, though it is not what is usually understood as sub-contracting. In "commission weaving" the work is performed under a middleman, who hires unemployed looms from different firms, and undertakes to weave the raw material with which they supply him for a certain sum minus the rent due for the plant; and the wages paid to the weavers are considerably below the scale adopted in the district(7).

Variations in wages.

317. In the cotton industry the wages of the operatives vary greatly in the different districts of Lancashire. This is sometimes due to the different character and quality of the goods produced, but in other cases it is said to be "the same class of work, but different rates of wages obtain."(8) In those industries in which the workers' organisations are weak the rates of wages are said to vary from one establishment to another. Thus weavers' wages in the West Riding of Yorkshire vary in different mills from 12*s.* to 16*s.* for the same work. Mr. Gee stated that in the Huddersfield district there was a nominal standard scale of wages for both men and women, the women's wages being from 15 to 30 per cent., and sometimes still more, below the men's rates. The terms of this scale, however, had been practically dictated by the Masters' Association, which now considered it as representing only the maximum wages which might be paid, and at least 60 per cent. of the employers in the district were paying below these rates. The lowness of the rates of wages of even the male weavers in the woollen trade was attributed to the large proportion of women employed. The employers feel that the men's work is not worth above 6*d.* or 1*s.* at the outside per piece more than women's, and use the cheapness of the latter to depress the price of the former. The employment of women in the woollen trade also tends indirectly to keep wages low, by hindering the organisation of the workers, since the women do not care to join the unions. In this respect there is a great difference between this industry and the Lancashire cotton trade, in which the majority of female workers are organised. A further complaint from the woollen weavers relates to the decrease of wages which has followed upon the increased speed of the looms. The rate of payment has been reduced by one-third on the ground that the fast looms produce proportionately more in a given time. This would be true if the work produced were in proportion to the speed of the loom, but in consequence of the more frequent stoppages, and the time lost in breakdowns and changing the caps and shuttles, &c., in the case of fast looms, the work is not in proportion to their speed, and actual wages have therefore been diminished. Several witnesses considered that it would be a great benefit if there were a uniform minimum rate of wages for woollen weavers(1). The wages of wool sorters and wool combers in the Bradford district were also said to vary from one employer to another. In some firms, especially those of wool staplers, who sell the wool to the spinners after it has been sorted, the wool sorters do not know from day to day what the rate of pay will be, or what quantity of work they are expected to perform for it. They are now endeavouring to obtain a minimum standard rate of wages.(2) The willeyers and fettlers in the Leeds district complain that some employers pay below the rate agreed upon by them with the Union, and that non-union men are paid 10 per cent. less than unionists.(3) The wages paid by different employers to the linen factory operatives at Brechin vary, as do also wages in the tweed factories at Hawick and Galashiels. The variations in the last industry are, however, slight, and are accounted for by the fact that the trade is a fancy one, and each firm has some speciality in the work it produces.(4) The linen lappers in Belfast complain that the variations in their wages in different establishments are as great as from 15*s.* to 30*s.* or even 35*s.* a week. Their organisation is therefore endeavouring to obtain a standard minimum rate of 7½*d.* an hour(5). [§ 317.]

Irregularity of employment.

318. Complaints of fluctuations in wages due to irregularity of employment come chiefly from the woollen trade. Thus, in the Leeds district, "slack times" are said to be frequent owing to foreign tariffs and changes of fashion, and in the Bradford district the work fluctuates according to the season. Wool sorters are very irregularly employed, in consequence of the wool being bought at one particular season of the year; and the weavers in the Huddersfield district and the wool combers in the Bradford district state that the irregularity of their employment is due to the fact that they contract to do a certain job, and are liable to be thrown out of employment as soon as it is completed. Wages in the Dundee jute factories fluctuate with the season of the year as much as from 2½ to 5 per cent., since the jute works better in winter(6).

Fines and other deductions.

319. Fines are said to be very seldom imposed upon cotton spinners, since they are disapproved of by both the operatives' and the employers' associations. Fines for unpunctuality and for careless or bad work are, however, commonly imposed upon weavers in both the cotton and woollen industries, and are said by the employers to be a necessary check upon the workpeople, whilst the amount of the fines bears a very small proportion to the loss occasioned by damaged work. The operatives, on the other hand, state that the damage is often caused by a defective loom, or by bad

[§ 319.] warp or weft, and that the weaver should not be charged for it. Excessive fining is especially a grievance with the woollen and worsted weavers who complain that the whole week's wages are sometimes swallowed up by fines.(1) Other deductions from wages of which complaint was made are "in respect of oiling "machinery, getting hot water for breakfast, carrying "pieces up to the warehouse, broken and worn-out "machinery;" but the employers maintained that the grievance with regard to oiling was manufactured rather than real, and that the deductions made for this and the provision of hot water were not in excess of the advantages to the workpeople or the expense to the employers(2).

Bonuses or other allowances.

320. Bonuses were said to be sometimes given to overlookers on the production of the hands working under them. This system was objected to by the operatives' representatives on the ground that it leads the overlookers to "drive" or put over-pressure upon the workers. A bonus on production was said to be given in rare cases to the weavers, and was objected to on the ground that it is given in order to ascertain the maximum amount of production possible from a given loom, after which wages are reduced. Mr. H. Foster stated that in his mill bonuses are given only in the sorting and dressing departments, and to stimulate the industry of apprentices, and are paid on the quantity of work performed(3).

Period of contract.

321. In the cotton industry the period of contract appears to be generally for a week or fortnight, but in the woollen industry of the West Riding of Yorkshire, it was said that the operatives are subject to dismissal on finishing the piece on which they are engaged, and their representatives considered that contracts of service should be for the week or fortnight and not for the piece(4).

CLOTHING.

Nature of information in the clothing industries.

322. The three branches of the clothing trades which have been chiefly represented, are the hosiery, the boot and shoe manufacturing and the tailoring trades. Numerous statements of wages have been received, especially in the two last of these trades, in both oral and written evidence; but as these, in the case of evidence given by employers, generally refer to the rates of wages paid by one particular firm, or in a somewhat restricted area, whilst in the case of the evidence given by the employed, the average or range of variations quoted sometimes refers to so wide an area that it does not represent any local rate, it has not been possible to base any general statements upon them. Moreover, when both employers and employed have quoted rates of wages for the same district, these have generally been widely divergent.

Wages in the Hosiery trade.

323. Thus, with regard to wages in the Leicester hosiery trade, a representative of the employed stated that the earnings of men employed on old machines varied from 15*s.* to 16*s.*, and of those employed on new machines from 20*s.* to 30*s.* a week, whilst a manufacturer stated that the operatives earned from 25*s.* to 40*s.*, according to the machinery on which they were employed, and the part of the stocking made by them(5). Two other hosiery manufacturers quoted the wages paid by them, in one case as from 20*s.* to 40*s.* in a factory at Foleshill, and in the other as from 20*s.* to 38*s.* in a factory at Hawick(6). The Nottingham Rotary Power Framework Knitters' Society states that the wages received by its members range from 12*s.* to 50*s.* a week, whilst those received by the members of the Hand Framework Knitters' Federation are said to average from 15*s.* to 20*s.* a week, but with very few of the last-named sum(7).

Wages in the Boot and Shoe making industry.

324. With regard to wages in the boot and shoe trade in Leeds, Mr. Ingle, representing the Boot Manufacturers' Association, stated that average wages for riveters were 26*s.*; for clickers, 26*s.*; for finishers, 27*s.*; and for machinists, 13*s.* These averages were confirmed by the evidence of another manufacturer, who computed the average earnings of the men employed by him to be 26*s.* to 29*s.* a week, and of the women from 13*s.* to 16*s.*, and by that of the president of the Leeds Boot Manufacturers' Association, who quoted a certificate furnished by an accountant who had examined the wages table of ten Leeds firms. He found the average wages to be for riveters, 26*s.* 5½*d.*; for clickers, 26*s.* 11½*d.*; for finishers, 28*s.* 6*d.*; and for machinists, 14*s.* 6*d.*(8) Mr. Judge, [§ 324.] however, representing the Leeds branch of the National Union of Boot and Shoe Operatives, considered that the average earnings of men in Leeds were less than 25*s.* a week, and gave, as a result of an investigation made by himself into the wages paid by the ten firms referred to, the average for riveters as 20*s.* 7*d.*; for clickers, 23*s.* 7*d.*; and for finishers, 23*s.* 6*d.*(1) Mr. Inskip, representing the Boot and Shoe Operatives Union, stated that the average earnings of an operative shoemaker throughout the year at Leicester were 23*s.* or 24*s.*; and the Aberdeen branch of the National Union of Boot and Shoe Operatives, states that the wages of its members average 24*s.* a week(2). Two boot and shoe manufacturers, however, one at Leicester, and the other at Carnoustie in Scotland, state that the wages paid to their male operatives range from 20*s.* to 35*s.* a week(3). The wages of clickers in London were said to range from 16*s.* to 34*s.*, and those of rough stuff cutters from 16*s.* to 28*s.* Jewish firms only work five days a week, or four and a half in winter, but pay the same rate of wages as English firms. They require, it is true, the same amount of work to be produced as is turned out in the longer period in an English firm, but are satisfied with an inferior quality. Mr. Inskip stated that wages in Ireland are nominally the same as in England, but the material is given out in a rougher state, "and "a man who could make six dozen pair as it is prepared "in England would not probably be able to make "above four dozen, or four dozen and a half in a week "in Ireland," so that the actual rates of weekly wages are lower(4).

Wages in the Tailoring trade.

325. The Amalgamated Society of Tailors states that the weekly wages earned by its members vary in different districts from 15*s.* in parts of Ireland and Scotland, to 45*s.* in London. Mr. Keir, representing the same society, stated that the average weekly wages in Liverpool did not exceed 25*s.*, though an operative tailor might earn from 40*s.* to 50*s.* in any particular week if in full employment, and a firm of employers in the same town quote the weekly wages as 40*s.* to 60*s.*, but probably this refers to full employment only(5). Mr. Gordon, a master tailor in Manchester, stated that the weekly wage men in that town receive from 35*s.* to 42*s.*, whilst piece workers in a busy season may earn 40*s.* to 60*s.* a week; and another firm of manufacturing tailors at Manchester state that wages range from 30*s.* to 50*s.*(6) Other weekly rates of wages quoted by individual employers in various districts are as follows:—At Reading, 28*s.* is the average throughout the year; at Plymouth, men's wages range from 20*s.* to 35*s.*; at Dundee, from 20*s.* to 40*s.*; and at Glasgow, the average is 28*s.* or 30*s.*(7) The following table, showing the rates per hour paid in various branches of the Amalgamated Society of Tailors, is taken from a more extensive table contained in the Statistical Tables and Report on Trades Unions for the year 1891, published by the Board of Trade.(8) As is shown below, various other elements besides that of hourly rates enter into the computation of the actual weekly wages earned by tailors, which are not therefore always strictly proportional in their local variations to the variations in the rates given in the table.

TABLE showing RATES of WAGES per hour for the year 1891, in various branches of the AMALGAMATED SOCIETY OF TAILORS.—(Taken from the Annual Report of the Society.)

Mode of payment.

326. In the hosiery trade wages are said to be generally paid by the piece, except in the case of men employed on a few special machines, who receive weekly wages. It was also said that the middlemen in country districts pay their machine men by the day, which is considered a bad system as the operatives do not receive the statement price.(1) In the boot and shoe making trade also piece wages are general, though the Leeds Boot Manufacturers' Association states that machinists, clickers, and rough stuff cutters are usually paid by the day. Mr. Green stated that there was no uniform mode of payment of wages to the clickers and rough stuff cutters in London, but they were paid by the piece, task, or week, according to the custom of the particular employer. When paid by the task the men sometimes do not know till the pay day what that task is. "When that day comes you will soon be told if you "have not done enough, but if you have done over you "will not be paid for it".(2) Tailors are usually paid by piece work according to a "time-log," *i.e.*, they are paid a certain sum for an entire garment, calculated at certain rate per hour for the number of hours fixed by the time log for that garment. This time basis is, however, a fictitious one, as an ordinary workman can make a garment in less time than that allowed by the log. The representatives of the master tailors stated that they would prefer to pay weekly wages, but the men objected to this on the ground that it would put the inferior workmen at a greater disadvantage. Clothiers' cutters are said to be sometimes paid by task work, so many garments having to be cut in a day.(3)

Sub-contractors and sweating.

327. The sub-contract system was said to exist to some extent in all three branches of the clothing trades, and in each case was considered to lead to sweating the workpeople, and to the employment of "out" or "home" work, and of foreign labour. Thus, in the hosiery trade, the Hand Framework Knitters' Federation states that the "trade is unfortunately in the hands of middle-"men, who bring out the work from the warehouses "and give the same out to the workmen," and the representatives of this society stated in their evidence that by means of the sub-contract system the manufacturer pays from 3*s.* to 3*s.* 2*d.* per dozen less than the statement prices. The sub-contractors are also generally opposed to the trade union. The Rotary Power Framework Knitters' Society also mentions payment "through a sub-contractor, which ought to be abo-"lished." Two witnesses, however, considered that the work given out by the manufacturers directly to women to do at home was "cruelly sweated," and that all home-work was a form of sweating.(1) In the boot and shoe trade, Mr. Inskip gave evidence with regard to the sub-contract and sweating systems. He stated that middlemen fetched the work from the factories at less than the statement prices, and employed alien labour at starvation wages, thus displacing the English workman. Some of the Poles who had recently come to England would work 100 hours a week for 6*s.* or 8*s.* Evidence was also given by Mr. Ingle with regard to the sweating system in connexion with the Russian Jews and other foreigners in Leeds. He stated that the slipper trade was now entirely in their hands, and that they worked under most unsanitary conditions and paid very low wages. Mr. Beckworth gave similar evidence with regard to the low wages of foreign Jews employed in the cheap slipper trade, but he did not consider that their labour was necessarily sweated, or that it had been detrimental to the clothing trades generally in Leeds.(2) They had rather been the means of building up a certain part of the ready-made clothing trade which had been left to them by the English workmen. He believed that Jewish tailors made about the same wages in the same number of hours as English tailors, although the rate of wages for a certain amount of work was less. Mr. Keir, on the other hand, considered that the employment of Germans and Russian Jews tended to reduce wages in the tailoring trade.(3) It is stated by the Amalgamated Society of Tailors that the sub-contract system exists only in the case of sweaters, and is not recognised by the men. The representatives of the operative tailors considered that the sub-contract system was equivalent to the sweating system, since the sub-contractor took work from a shop or factory and paid his workpeople a low rate of wages, whilst "he lived himself out of the difference between what is "paid from the employer and what he pays to his "workpeople." One witness knew of cases in which the middleman paid only half or a quarter of the log prices to his workpeople. The representatives of the master tailors, whilst acknowledging that a good deal of the work done amongst clothiers was sweated, considered that the workpeople were unjust in calling all out-work sweating. Out-work was not necessarily badly paid, and the middleman did not intercept a larger portion of the earnings than would go as salary to a foreman if all the work were done on the employer's premises. The workshops to which work was given out were, moreover, often superior to the regular ones.(4)

[§ 327.]

Variations in wages.

328. There were said to be local variations in wages in all these trades. In the hosiery trade much discontent prevailed on account of the different prices paid. Formerly the trade had a statement price which was maintained by the Board of Arbitration, and after the dissolution of this Board a list of prices was drawn up by mutual agreement. The employers, however, had not kept to them, and the list was now practically a dead letter.(5) With regard to the boot and shoe trade it was stated that the lowness of wages in the Bristol district compared with those in Leeds enabled the former district to compete successfully with the latter. On the other hand, wages in this trade are lower in Leeds than in Leicester, though this was said to be the result of a difference in the class of work. Lists of standard wages for different classes of workers have been drawn up by mutual agreement in several towns, in some cases, as in London and Northampton, in connexion with boards of conciliation and arbitration, and have been generally adhered to. A difficulty has arisen in Northampton in connexion with the manufacture of "lasting shoes." The uppers come from Germany ready made, and the shoes are made up in a very cheap form for export. "Lasting" work is included in the lowest class of the statement of wages, but the manufacturers state that this price is prohibitive of the manufacture, and that when the lists were compiled it was understood that there should be a special consideration of this material at an early date. As this had not been done the manufacture was actually carried on at prices 50 per cent. below those on the statement, and the manufacturers wished that a special class should be added to the statement to provide for this work. The workmen, however, would not agree

(1) Digest, Vol. II., p. 15. Answers to Schedules of Questions, p. 50. (2) Digest, Vol. II., p. 24. Answers to Schedules of Questions, p. 765. (3) Digest, Vol. II., pp. 29, 30. Answers to Schedules of Questions, p. 5.

[§ 328.] that this was necessary, and although the question had been referred to the board no decision had been come to when the evidence was given.(1) The London statement prices govern the wholesale home trade and the export trade. Two higher statements are also recognised in the better classes of trade, but the men who work under them are not subject to the Board of Arbitration. There had been a standard price list in Leeds before the Arbritation Board was broken up there.(2) The local variations in wages in the tailoring trade were said to be very great, as the rate per hour varies in different districts from 4½*d.* to 7*d.*, whilst there are also different time logs in different localities. The representatives of the master tailors stated that the adoption of a national uniform time log was one of the chief objects of their association, and that they had asked the operatives to assist them in drawing one up. The operatives had, however, refused to do so, and the master tailors believed that the reason of their refusal was that they did not wish to give up the various time logs to which they were accustomed in different districts. The operatives' representatives, on the other hand, asserted that they had for years tried to get a national time log, but could not get the masters to consent. They admitted that they had refused the proposal to assist the masters in drawing one up, but stated that their reason was that the masters had already practically fixed the terms of the log before consulting them. This was, however, denied by the employers. The men had in the meantime made a log of their own, which they had introduced with great difficulty into several towns, and with which the masters appeared satisfied. Two, or in some towns three, logs are recognised according to the class of work done, and it was stated that although wages did not vary greatly between different establishments of one class in the same district, there were wide differences between those in the first and second, and the second and third classes. A further cause of local variations in wages in the tailoring trade is said to be the different methods of classifying the materials; "what is a first-class material in one town " is reckoned as second-class in another, and third in another."(3)

Irregularity of employment.

329. All the clothing trades are, to some extent, seasonal, and wages in them therefore subject to fluctuations due to irregularity of employment. This is least the case in the hosiery trade, which is said to offer fairly regular employment, though "there is three months short work generally in the year." Both the tailoring and boot and shoe trades are greatly affected by seasonal causes and subject to slack times. This is said to be particularly the case in those towns which are engaged in a particular branch of the boot and shoe trade.(4)

Fines and other deductions.

330. Mr. Holmes, representing the Midland Counties Hosiery Federation, stated that fines for unpunctuality were sometimes levied in this industry, and also mentioned a custom of some employers who arranged with their workpeople to leave a certain portion of their wages upon the pay table. This form of indirect stoppage was adopted in order to avoid openly paying below the statement price, and when the union succeeded in getting it stopped wages were reduced. An employer at Fleckney was also said to take back so much a week for expenses, in lieu of the old frame rent which was rendered illegal by the Hosiery Act of 1874. At Hinkley the statement prices of Nottingham and Leicester were said to be paid, minus a percentage for the cost of carriage, but this had been agreed to by both parties with the consent of the union.(5) The Nottingham Rotary Power Framework Knitters' Society mentions stoppages for broken needles, varying from 3*d.* to 2*s.* a week, according to the machine and the quality of the yarn. The Hand Framework Knitters' Federation states that "there " are still middlemen stopping as much as 2*s.* a week " from the workmen for 'frame rent,' contrary to Act " of Parliament," and that there are also middlemen who pay their workmen in kind, chiefly in "bags of " flour, out of which the middleman gets a large " commission, and stops so much money weekly from " the workmen until the whole is paid."(6) In the boot and shoe trade it is stated that "grindery" or furnishings must be purchased by the workpeople from the employer, and that sometimes 5*s.* or 6*s.* for rivets is deducted from a rivetters' wages in a week. This is considered a grievance when the rivets are sold to the workpeople above the cost price. It was further stated that when finishers work in a factory they are charged 1*s.* a week for room, and for the gas used for heating their irons.(1) In the Leeds Rivetters' and Finishers' Statement of Wages, it was provided that " sitting room for finishers will be charged at the rate " of 1*s.* per week for men, and 9*d.* per week for boys " under 18." It was further laid down that "all " grindery is to be found by the workmen, which is " allowed for in the wages," and that "grindery is to " be sold at prices to be fixed by a Joint Committee " of the Manufacturers' and Workmen's Associa- " tions."(2) The operatives tested the legality of the stoppages for room and gas in Bristol, but the case was decided against them by the county court judge, who held that the custom of the trade overruled the provisions of the Truck Amendment Act. Mr. Bradlaugh stated at the time that this decision practically made the amended Truck Act of no avail.(3)

[§ 330.]

Period of contract.

331. With regard to the period of contract a complaint was made by the representative of the National Union of Boot Clickers, that owing to the overplus of labour men are obliged to sign unequal contracts, as, for instance, that the workman must remain in his situation for a certain period, but that the master could dismiss him at a moment's notice. The witness recommended that it should be made illegal for a man to "contract himself out of being a weekly servant."(4)

(ii.) PROFIT SHARING AND CO-OPERATION.*

Profit-sharing.

332. Very few instances were given in the evidence of the existence in the industries under consideration of any system of profit-sharing, though opinion was, on the whole, favourable to such a system among the representatives of the various trades. The only important case mentioned was the firm of Thomson and Co., of Huddersfield,(5) the establishment of which was spoken of by a representative of the West Yorkshire Power Loom Weavers as "one of the best things that has occurred in this district."(6) The profit is credited to the operatives at the end of the year, and is kept till it amounts to the price of a share, *i.e.*, 1*l.* Eighty per cent. of the employés of the firm are shareholders, and the aggregate value of the shares they hold is about 600*l.* Three of the directors are workmen employed in the firm, and three are representatives of outside workmen. Mr. Thomson stated that though the system has been generally successful, it has during the last few years been possible to distribute only about 3*d.* for every 1*l.* of wages. He added that there is a much better chance at the present day than formerly of successfully conducting a system of profit-sharing, because "it requires rather a higher education " on the part of the workpeople to realise its value. " They want somehow or other to feel the importance " of being as it were, a part of the concern, and I " think it requires a little education to do that. You " would not have found that so generally ten years " ago."(7) Reference was also made to a bonus system in the cutting-out department of the firm of S. T. Midgley and Sons, Leeds.(8) With regard to the industries in which profit-sharing has not been attempted, the secretary of the Master Tailors' Association was of opinion that such a system would "tend " to settle the workman and to prevent many of the " arbitrary strikes" which now occur, but added that the Association "had not yet advanced to that point."(9) Mr. Thomson stated that it would be difficult to apply to trades which are subject to constant changes of taste and fashion.(10) Mr. Tyler said that it would be impossible in a piecework industry, such as the hosiery trade of Leicester,(11) and Mr. Judge considered it unsuited to the Leeds trade.(12) The majority of the Leeds manufacturers were men of small capital, "merely men of straw;" "to talk to such people about any system of profit-sharing would be impossible."(13) He added that the feeling of the Union would probably

(1) Digest, Vol. II., p. 25. (2) Digest, Vol. II., pp. 20, 21, 25, and 28, (3) Digest, Vol. II., pp. 31 and 32. Digest, Vol. III., p. 9. (4) Digest, Vol. II., pp. 13, 17, 19, 20, 30, and 31. (5) Digest, Vol. II., p. 13. (6) Answers to Schedules of Questions, pp. 50 and 51.

* It appeared advisable to deal with the subjects of profit sharing and co-operation at this stage, inasmuch as they are methods of industrial remuneration.

[§ 332.] be in favour of co-operation rather than profit-sharing. "The employer is, amongst a great number of working "men, a bogey, and they would rather have "co-operation without the bogey than with it."(1)

Co-operative production.

333. It appears from the evidence given in connexion with these industries that the majority of the representatives are in favour of a system of co-operative production. "The adoption and fully carrying out of "the true principle of co-operation (2) "was recommended in one case as the best means of avoiding "strikes; and several witnesses gave it as their opinion "that its establishment would remove or lessen all "labour troubles." (3) "It would produce a better "feeling between master and man, between capital "and labour. (4)" These views appear to be borne out by the actual experience of co-operation in the industries in question. Mr. Mitchell, of Dundee, stated that he "thinks it just, and that it will ultimately be general; "it would tend greatly to prevent waste both of material and labour, and would largely increase the "productive power of the country." (5) It was urged, moreover, that the effect of co-operation on the character of the men was good. Mr. Ballard stated that it "seemed to encourage a habit of thrift and temperance "among them," and that it "led them to take a deeper "interest in general subjects as affecting the working "classes especially." (6) "We consider it is making "our men better citizens . . . We believe these "productive societies are training our men so that "they will be able to deal with other questions in the "future, which they would not otherwise be able to "do."(7) On the other hand, various arguments were brought forward against the co-operative system. Mr. W. Mullin argued *à priori* that it "would create jealousy "among the workers, one would watch the other, and "the best results would not be obtained." (8) Mr. Rawlinson stated that the system was, at any rate, unsuitable to the cotton trade, on account of the absence of the mercantile qualities which are required in the buying and selling branch and the interference of the operatives in the management.(9) Mr. Salter urged further that it was unsuited to any trade subject to all the conditions of competition. "In respect to the co-"operative societies, they are affiliated with each other, "and thereby they do a trade which is positively secure "to them. They are not trading in an open market."(10) The experience of co-operative production appears from the evidence to be fairly extensive. Experiments of this nature have not been uniformly successful, but there are on the whole more instances of success than of failure.

(a.) Successful instances.

(*a.*) The most conspicuous instance of successful co-operative production is a society for the manufacture of boots and shoes, which was started at Kettering (11) in 1889 by 140 workmen. The amount of each share was 1*l.*, and each workman was bound to take up not less than five or more than twenty-five shares. The profits were divided between shareholders, workmen, and consumers; the workmen were paid at the current rate of wages in the trade, and obtained bonuses in addition. The society was independent of all others, but had been helped at the beginning by the Kettering General Co-operative Society, which took up a 25*l.* share. It encouraged all its men to belong to a union, because it had been found that unionists were the best workmen. It was stated that the relations of all classes interested in the concern were harmonious (12); that strikes had been entirely avoided; (13) and that the business of the society was extending (14). A similar society exists at Leicester (15) for the manufacture of boots and shoes. It began business in July 1887, with a capital of 200*l.*, and had from that time been uniformly prosperous. It was stated that the wages paid were higher than the district rate, and that the work is "the most regular of "any firms in the kingdom." (16) The bonus paid to workers had averaged 1s. 2*d.* in the £ on the amount of their earnings. All the adult male workers were members of the union; "yet the society has not cost "the union a penny during the whole time it has been "in existence."(17) It may be noted that in the case of both the Kettering and Leicester societies the sole customers are co-operative societies (1), and there is, therefore, very little competition. Mr. Ballard considered, however, that they "would be able to enter "into competition with the general trade so long as "they could be secure against bad debts." (2) Three co-operative societies have been started among tailors in Sheffield, Southport, and Nottingham (3) as the result of disputes with employers. The Sheffield society was "the parent one," and was stated to be "a great success." (4) The men employed were all unionists. The capital, which now amounted to 500*l.* or 600*l.*, was subscribed in 1*l.* shares; all the workmen were shareholders, and a good many shares were held by outsiders. The workmen were paid according to the regular log of the town, and received a bonus in addition to their wages. The profits were divided between labour, capital, and the consumer. The Southport society employs at present only five or six men, but was said to be "likely to be a success." (5) Reference was also made in the evidence to sucessful systems of co-operative production among the hosiers of Leicester (6) and the weavers of the Halifax, Huddersfield and Dewsbury districts. (7)

[§ 333 (*a.*)]

(b.) Unsuccessful instances.

(*b.*) Several instances were given in the evidence of unsuccessful co-operation. In the cotton trade of Lancashire, as early as 1857, a co-operative mill was started in Burnley under the name of the "Harle Syke "Commercial Company." (8) The company built a shed, and worked 400 to 500 looms. It was not a commercial success, and came to an end in 1860. Mr. Rawlinson stated, however, that several of the most successful firms in Burnley sprang from it. "They "date their start from the breaking up of the com-"pany, and began the business on their own account "through the division of the machinery." (9) The Burnley Self-Help Cotton Spinning and Manufacturing Society, (10) which was started in 1886, ran from 500 to 600 looms, and possessed capital to the value of 4,880*l.* "The gentleman who went to them as manager in the "first instance proved to be a very successful man. "He had offers to begin business on his own account "... he left them ... After he left them "they got other managers, but none of them could "succeed in making a profit. The company looked "very like going to pieces ... They approached "their old manager, who was in business on his own "account, with a view of asking him to take charge of "the concern again ... He went back, and "turned what had been previously unsuccessful into a "success again." "A principle that depends for its "success, apparently (as in this case) upon the efforts "of one man cannot be said to be successful." (11) The Burnley Industrial Manufacturing Society (12) started in 1885 with a "competent manager," "new machinery," and "a very good class of workpeople, the best of the "class which we have, everything which, if the system "was sound, ought to have made it a success, but it "failed in about 18 months, losing half its capital." The "Whittlefield Self-Help Manufacturing Society" and the "Calder Vale Self-Help Society" (13) both failed. The failure of a co-operative boot factory at Northampton was attributed by Mr. Ballard to want of capital and experience of management. (14) One case was mentioned where the system proved a failure and was disliked by the operatives (15), and the African Mill Company stated that "what few instances there "are of co-operative production have been failures "and must be so in a trade where the profits are "so small ... as there is no room to turn "round." (16)

Co-operative distribution.

334. The experience of co-operative distribution appears, though the evidence on the subject is scanty, to be, on the whole, very successful. Mr. Mullin (17) stated that in Oldham co-operative stores are fairly supported, but not so much as might be expected, because the workmen are of opinion that they have a better choice by going to individual tradesmen. Both at Burnley (18) and at Halifax (19), however, they were stated to be "very successful." Mr. Beever considered that great advantages are gained from distributive co-operation, for provisions can thus be

[§ 334.] obtained "pure" and cheaper than otherwise. (1) Numerous co-operative societies were mentioned as purchasing goods from the co-operative boot factories at Kettering and Leicester. (2) It may be noted, with regard to the Provident Societies Act, that Mr. Ballard considered that it would be a great advantage if the law were amended so as to admit of the funds of trade unions being invested in co-operative production. (3)

2. HOURS.

(i.) STATEMENTS OF HOURS.

TEXTILE. Ordinary hours in the textile trades.

335. Throughout the main branches of the textile trades the hours of ordinary work are returned by both employers and employed as 56 a week, or 56½ including an additional half-hour for cleaning. This uniformity is due to the fact that the majority of the workers in these industries are women, and their hours of labour are limited by the Factory Act.

Overtime.

336. On the part of the operatives, however, there are complaints of overtime being worked in contravention of the Act. In the cotton industry this takes the form of what is called "cribbing" time, *i.e.*, the habit of managers and overlookers of insisting upon the operatives beginning work a few minutes before the time fixed, and leaving off a few minutes later, by which some three or four hours' work may be added to the week's total, or according to the calculation of another witness it might amount to 15 or 20 minutes a day. This is especially a grievance for those operatives who are paid by the day and receive no extra payment for such overtime, whilst the piece workers receive their share of the extra production which results. (4) The employers considered that this complaint about cribbing time was much exaggerated, although they did not deny that the machinery did occasionally start a few minutes early and stop a few minutes late. Mr. Rawlinson, however, in an experience of 57 years, had only known of one case in which so much as 20 minutes' overtime was thus worked in a day, and stated that the fines inflicted under the Factory Act are usually for three, four, or five minutes. Mr. Allen Russell, a cotton manufacturer, stated, moreover, that when time was thus "cribbed" it was generally done by the managers without the consent of the employers. (5) According to Mr. Henderson, Superintending Inspector for Scotland and the North of England, the operatives of Lancashire might stamp out the system of cribbing time in three months if they chose, but it has been his experience that the inspectors receive no assistance from the work-people in proving a breach of the law of this nature. (6) The practice of cribbing time was said by Mr. Prior, Inspector for the Halifax and Huddersfield District, to be confined almost entirely to the cotton trade, and this evidence was confirmed by that of Mr. Yates, a worsted coating manufacturer, who expressed astonishment at hearing of the custom, which he did not think was ever known in the West Riding of Yorkshire (7). The operatives in the woollen and worsted industries, however, had complaints to make with regard to overtime, which they said was occasionally worked by women and children, in spite of the prohibition of the Factory Act, as much as two hours a day. The men are also employed overtime in case of pressure, sometimes to 8 or 9, or even 10 o'clock at night, but if the pressure lasts for more than a short time a separate set of men are generally employed on a night shift. (8) A worsted manufacturer at Leicester stated that overtime was not usual, but that during pressure "there are cases in which a spinner may, for "the convenience of his business, wish to run the "cards and the combs overtime, in which case he "would be obliged to put men on to do the work for a "few hours extra at night." Mr. Prior stated that the complaints with regard to overtime which reached him from the worsted trade generally referred to the machinery not being stopped "sharply for the half-"past 12 or the 1 o'clock for cleaning on Saturdays." There was said to be very little overtime worked in the silk, jute, and linen industries. (9)

[§ 337.] Complaints with regard to length of hours in certain industries.

337. There are, however, certain industries connected with the textile trades which are confined chiefly or entirely to male labour, and are therefore not subject to the limitation of hours in the Factory Act, and in some of these the length and the irregularity of the hours is a serious grievance.

(a.) Willeyers and fettlers.

(*a.*) The class of operatives who appear to have the most to complain of in this respect are the willeyers and fettlers, especially those in the Leeds district. The average number of hours worked by them is said to be 66 a week, of which six hours are considered to be overtime, but without extra payment. In the busy season, however, one set of men has worked as much as 90 hours in the week, exclusive of meal times, in only four shifts. The hours are not fixed, and "when "a man goes to the mill in the morning he scarcely "knows what time he is going to give over at night." Men may be required to work all day, all night, and up to six o'clock the next day. "One firm has worked "now for over 20 years, with very short intermission "till nine o'clock at night, and 10 and 10.30." "It is "called the ordinary time when men are at work till "nine o'clock at night." The Leeds and District Willeyers and Fettlers' Union gives the following table of hours worked by one firm for 88 weeks consecutively, and adds that "the young men feeders and minders "average eight hours a week more" than those given in the table.

2	weeks	from	6.0 a.m.	to	7.0 p.m.
12	,,		6.0 ,,	,,	8.0 ,,
6	,,		6.0 ,,	,,	8.30 ,,
42	,,		6.0 ,,	,,	9.0 ,,
26	,,		5.0 ,,	,,	9.0 ,,

Moreover, the willeyers and fettlers have to take the place of women feeders at meal times, so that they may have to wait till four o'clock in the afternoon before they can get their own meals. Fettlers are also employed in cleaning the machinery on Sundays. (1)

(b.) Dyers.

(*b.*) The operatives employed in dyeing have also grievances with regard to long hours. In Leicester adult males engaged in this trade are said to work 59 hours a week, and the women and young persons 55 hours. In Halifax, however, it was stated that overtime is very common in the dye works; 70 and 80 hours a week are said to be the average working time, and instances have occurred in which men have worked 90 hours. The representatives of the "Bradford District Society of Dyers" stated that boys, as well as adults, are occasionally employed overtime in defiance of the law, and that some boys are now working until 10 or 11 p.m. They considered that overtime ought to be abolished in all cases, and that employment would thereby be made more regular. The Amalgamated Society of Dyers, Crabbers, Singers, and Finishers complains that the hours of work are "very irregular; "some weeks 20 hours, other weeks 80, or more," and believes that this irregularity is rendered unnecessarily great by the habit of keeping some part of the machinery idle whilst the rest is working overtime. "We have known 45 out of 99 men in one department "have to return home for the day without starting "work, the 54 remaining men working among them "564 hours, or an average of 16 hours per man." (2)

(c.) Wool combers.

(*c.*) The representatives of the Bradford and District Machine Wool Combers' Association stated that there were two distinct sets of workers in this industry engaged on day and night shifts. About 40 per cent. of those engaged on the day shift are females, and the regular factory hours are worked. At night only adult male labour is employed, and the hours are very long, lasting from 5.15 p.m. to 6 a.m. without a break, no meal times being allowed. Also in times of pressure, the men on the night shift are required to begin work on Saturday at 1 p.m. and to work until 10 or 11 p.m. that night, and to start again at 12 p.m. on Sunday night. (3)

(d.) Wool sorters.

(*d.*) The representative of the Bradford Wool Sorters' Association stated that it "has become the custom "now to work overtime amongst wool sorters," but that no night work is done by them. The overtime generally prevails after the great wool sales, and the men would like their employment to be more evenly distributed throughout the year, as they consider the alternation of overtime and idleness is quite unnecessary.

(1) Digest, Vol. II., pp. 9, 10. Answers to Schedules of Questions p. 106. (2) Answers to Schedules of Questions, pp. 108 and 183. Digest, Vol. I., pp. 26, 30. Digest, Vol. II., p. 18. (3) Minutes of Evidence, Vol. I., 5848-52, 5878-91.

337 (d.)] Mr. G. P. Arnold Foster, however, stated that it would be very difficult to avoid irregularity in the work of wool sorters, as an employer cannot buy wool all the year round.(1)

CLOTHING.

Hours of labour in the clothing trades.

338. In the three branches of the clothing trades, with regard to which most information has been obtained, viz., the hosiery, boot and shoe, and tailoring trades, the hours of work tend to become shorter and more regular than was formerly the case, this change being due chiefly to the gradual removal of the workers from their own homes and workshops into factories or workshops owned by, and under the control of, the employers.

Hours in the Hosiery trade.

339. The introduction of machinery worked by steam-power has almost entirely transformed the hosiery trade from a domestic to a factory industry; and as the majority of the operatives are females their hours are limited by the Factory Act. In some cases the hours worked are even less than those prescribed by the Act. Thus, Mr. Tyler, a hosiery manufacturer at Leicester, stated that the hours were nominally the factory hours, but really about 54 a week, and the Leicester and Leicestershire Hosiery Union states that they have been "reduced to eight hours." There are, however, several complaints from the operatives with regard to the amount of overtime which is worked, and which the Rotary Power Frame Work Knitters' Society considers "the greatest curse in the trade; no extra pay for it." The witnesses representing the Midland Counties Hosiery Federation stated that overtime was frequently worked, and one witness had known cases in which women worked for 15 hours a day for three months in succession. Night work was also said to be prevalent, especially at Sutton, Mansfield, and Ilkeston. The members of this society consider that the overtime worked is unnecessary and tends to increase the irregularity of the trade. Mr. Tyler, however, stated that as the trade is a seasonal one it is necessary to work overtime during the busy season, and that at Leicester for a month or two in the year the men worked 15 hours a day with the sanction of the union. The men themselves preferred working overtime to adopting the double-shift system, as night work on fine gauge machinery is bad for the eyesight, and the machines suffer from being handled by two different workers. The members of the Hand Frame-Work Knitters' Federation still carry on their work in small or domestic workshops, and are said to have "no "standard hours; the men will work 10, 12, or from "14 to 16 hours a day according to the urgency of the "work."(2).

Hours in the Boot and Shoe trade.

340. The representatives of the National Union of Boot and Shoe Operatives stated that as the factory system now prevailed the hours of labour were uniform in some branches throughout the trade, but as the Workshops Act only applied to women and young persons, the hours of rivetters and finishers, who could work without their assistance, were not limited by law. The union has, however, succeeded in obtaining a 54 hours' week for clickers and machinists, and is endeavouring to extend it to rivetters and finishers. The hours worked in some districts appear to be still less. Thus, the average hours worked by different classes of workmen in 10 representative Leeds firms, as found by the accountant who had examined their books on behalf of the Leeds Boot Manufacturers' Association, were for rivetters 50½ hours a week, and for clickers, finishers, and machinists, 53 hours. Another manufacturer stated that his factory at Leeds worked 52½ hours, whilst one owned by him at Pudsey worked 56 hours, and that the shorter time in Leeds was adopted partly because people in towns did not rise quite so early as they did in the country. Two shoe manufacturers at Stafford gave the hours of their work-people as 52½ and about 50 respectively. The average hours for clickers in London were given by Mr. Green as 54 in English firms and 48 in Jewish firms, but the London Society of Clickers and Rough Stuff Cutters quotes the hours for English and Jewish firms as 56 and 51 respectively. Overtime is said to be frequently worked, as the trade is a seasonal one, and Mr. Green considered that the overtime might be better regulated than is the case. The National Union of Boot and Shoe Operatives is also said to disapprove of overtime and to be in favour of some arrangement between masters and workmen which would regulate work and make it steady throughout the year. They acknowledge, however, that the nature of the trade places several difficulties in the way of such an arrangement. Complaints are made both in London and in Leeds of the long hours worked by the foreign Jews who have recently entered the trade, especially in the slipper-making branch(1). [§ 340.]

(1) Digest, Vol. I., pp. 24, 27. (2) Answers to Schedules of Questions, pp. 49, 50, 51. Digest, Vol. II., pp. 13, 15, 16.

Hours in the Tailoring trade.

341. In the tailoring trade there is no uniformity in the hours at present, although the men's unions are endeavouring to secure it, but different hours are customary in various districts. Thus the Amalgamated Society of Tailors states that the hours "vary in different districts from 9 to 16 hours per day," and Mr. Keir, who represented this society, stated that no regular system of hours obtained. In the North of England a nine hours' day is general, but in London, Manchester, Birmingham, Dublin, and other large centres there are no fixed hours. The trade is seasonal, and as piece-work prevails, a man's hours last as long as the garment upon which he is engaged. In summer men may have to work 12 or 14 hours a day. Several of the employers state that the length of the hours is left entirely to the men. Thus, Messrs. Morris and Davis, tailors at Reading, state that their men "work as much "or little as they please; the workshop is open to "them from 2 a.m. to any hour they desire up to "10 p.m," and Messrs. H. Verity and Sons, tailors at Manchester, state that their rules are for work to continue "from 6 a.m. to 7 p.m. with two hours off for "meal-times in summer, and from 7 a.m. to 6 p.m., "with same meal-times, in winter; but the men come "in when they have a mind to, viz., 8, 8.30, and "9 o'clock in the morning." The International Tailors, Machinists, and Pressers' Union gives the hours recognised by it as from 8 a.m. to 8 p.m., with one and a half hours off; and the London Clothiers' Cutters' Union states that the hours for its members are 48 a week.(2) The following table of the hours worked by tailors in nine towns in Scotland is taken from a table of hours and wages in various districts in Scotland compiled by the Scottish National Operative Tailors' Society from the returns of its branches, published in the Board of Trade Statistical Tables and Report on Trade Unions for 1891:—

TABLE showing the NUMBER of MEN in the TRADE in the DISTRICT, the WEEKLY HOURS of LABOUR, and PARTICULARS of the OVERTIME WORKED, taken from a table compiled by the Scottish National Operative Tailors' Society.

(Arranged in ascending order of hours.)

District.	Estimated Number of Men.	Weekly Hours of Labour.	Overtime, if worked, and to what extent.
Aberdeen	350	57	Partially observed.
Dumfries	95	57	Very little: 9 or 10 hours per week in summer in some shops.
Hawick	50	57	A good deal in non-union shops.
Kirkcaldy	55	57	Not worked.
Perth	100	57	—
Stirling	110	57	—
Airdrie	59	60	To a great extent in busy season.
Ayr	85	60	When required.
Dundee	455	63	In busy season.

With regard to the question of overtime, Mr. Allen, representing the Master Tailors' Association, stated that this was unavoidable in a seasonal trade, and that the men are themselves glad to be able to make up the time lost during slack periods of trade.(3)

Recent reduction in the hours of labour.

342. It has been already pointed out that the change which has recently taken place in these industries from domestic trades to those carried on in workshops or factories has been accompanied by a gradual diminution in the hours of labour, and this statement appears to be verified by the following table, showing the

(1) Digest, Vol. II., pp. 20, 23, 24, 25, 26. Answers to Schedules of Questions, pp. 48, 397. (2) Answers to Schedules of Questions, pp. 51, 52, 399, 401. Digest, Vol. II., p. 30. (3) Digest, Vol. II., p. 30.

[§ 342.] average weekly hours of labour in the clothing trades during the years 1850, 1860, 1870, 1880, and 1890:—

TABLE showing MEAN of RETURNS of WEEKLY HOURS obtained from Returns on Hours of Work ordered by the House of Commons, 1890.

Class of Work.	1850.	1860.	1870.	1880.	1890.
Tailoring, England	68·11	61·31	60·64	57·54	56·58
Tailoring, Scotland	66·00	63·2	57·16	56·85	54·66
Boot and shoe making	66·00	59·46	56·07	54·78	54·48
Hosiery	62·75	59·25	58·33	55·83	55·83

It must be noticed in connexion with this table that the domestic character of the industries during the earlier years rendered it difficult to estimate the length of the hours worked, and that the averages for the years 1850 and 1860 are therefore obtained from a very much smaller number of returns than is the case in the last two decades. It must also be pointed out that the large majority of these returns are from employers, and that the hours given in the returns from trade unions are, as a rule, above the average which has been obtained.

(ii.) LIMITATION OF HOURS BY LAW.

"The Eight Hours' Day."

Arguments in favour of eight hours' day. (*a.*) *Non-economic.*

343. (*a.*) In the clothing and textile trades very little stress was laid upon non-economic arguments in favour of an eight hours' day, although it was taken for granted by many of the opponents of such limitation in hours that it would in itself be desirable apart from the attendant economic disadvantages. It was, however, suggested by some of the operatives that "eight hours "out of 24 is sufficient for any man to toil," (1) and that an eight hours' day "would be the means of "keeping up a better physical state of the workers." (2) The employers also admitted that the reduction of hours in the past had led to an improved moral and intellectual condition of the workers, who had, it was stated, made good use of their leisure. (3)

(*b.*) *Economic.* (i.) *That it would tend to absorb the unemployed.*

(*b.*) The principal argument brought forward by the advocates of an eight hours' day is that the restriction of the hours of labour, and, consequently, of the output of the workers already employed, would lead to a demand for additional workers, and hence to the employment of what is at present surplus labour. Thus the representative of the Brechin Factory Workers' Union believed that the ultimate effect of a legislative eight hours' day would be to raise wages, because a large amount of surplus labour would be taken up, and he knew of no more potent factor to raise wages than the dearth of labour. This witness regarded the provision of work for the unemployed as a sufficient reason for passing an Eight Hours' Act, irrespective of any further consequences attaching to it:—"I consider that every man has a right to earn a "living, if possible, and by any means, by shortening "the hours of labour, or anything else, and that if we "can devise some means whereby that man will earn a "living which he cannot otherwise, then I think we "ought to adopt that scheme, whatever it is." (4) This same object, of employing surplus labour, was put forward by the representatives of the Leeds Willeyers and Fettlers' Union, the Bradford and District Power Loom Overlookers' Society, the National Union of Boot Clickers, and the Midland Counties Hosiery Federation. Mr. Bower, a member of the last-named society, believed that the curtailment of the hours would reduce the number of paupers, and consequently lower the rates, and that this would counterbalance any economic loss involved. (5) Some witnesses were asked to explain whether they would advocate a further reduction of hours, if in the course of a few years "fresh crops of unemployed" had arisen, but they declined to give any very decided opinion on this point, although they considered that it might then be advisable to reduce the hours from eight to seven or even six. It would, however, be better to try the effect of the eight hours' day first, "and then they would see." (6) Another argument brought forward in advocacy of a reduction in hours is in direct opposition to that given above. This is the statement made on behalf of the jute workers in Dundee and the hosiery workers, that the output of those now employed would not be diminished if they worked a shorter day. (1) The representative of the Brechin Factory Workers' Union also stated that he believed the production of the workers would not be reduced in proportion to the reduction in hours, although it would suffer some diminution. (2) Several witnesses expressed a conviction that shorter hours would not involve lower wages, or that such a result would be temporary only. This opinion was, however, said in some cases to be founded upon past experience, when reduction in hours had not been attended by any reduction in wages, and not upon a consideration of present economic conditions. (3) One witness believed that any increase in the cost of production might be avoided because "all the inventive genius has not yet "been expended upon machinery," but that if this were not the case the increased cost would not fall upon the workpeople (4). Several witnesses also stated that they had no fear of being placed at a disadvantage with regard to foreign competition, and others that they were prepared to risk any danger that there might be in this direction. Two witnesses believed that other countries would soon follow if England took the lead in introducing the eight hours' day, but others, again, were prepared to support the movement in England irrespective of the action taken in other countries. (5) The president of the Midland Counties Hosiery Federation thought it would be better to have an international understanding and international reduction of the hours, but was certain from his own observation of workmen abroad and at home, that Englishmen would be able to maintain their own whilst working less hours than they do in France or Belgium. (6)

[§ 343 (*b.*)] (ii.) *That the output would not be diminished.* (iii.) *That the rate of wages would not be reduced.* (iv.) *That there is no fear of foreign competition.*

344. To sum up briefly, therefore, the arguments in favour of an eight hours' day are as follows:—(1) That a restriction of hours, whilst likely to conduce to the physical and moral welfare of those employed, is especially desirable for the purpose of providing work for the unemployed, although, on the other hand, other advocates assert that the output of the present workers will not be decreased; (2) that it will not reduce wages nor cause trade to suffer from foreign competition, because any increase of cost of production may be avoided by improvements in machinery or the improved efficiency of the workers, or at any rate will not fall upon wages, since it has not done so in the past; and (3) that even if these dangers were incurred, they must be risked, on the ground that reduced hours would mean "the greatest good of the greatest number."

Summary of arguments in favour of an eight hours' day.

345. (*a.*) It has already been stated that the majority of the witnesses appeared to consider a shorter working day desirable from a non-economic standpoint. One employer, however, stated that there was no need for a reduction of hours on the ground of physical exhaustion in the textile trades, since the introduction of so much machinery had made the work very light, and that he did not think further leisure would conduce to the moral welfare of the operatives.(7)

Argument against an eight hours' day.* (*a.*) *Non-economic.*

(*b.*) All the opponents of an eight hours' day agreed in stating that a reduction of hours must increase the cost of production. For, in the first place, the efficiency of the workers cannot be increased. In worsted spinning three-fourths of the women are employed on piece-work, and are therefore working already at the greatest speed possible for them; no time is lost between taking off one piece of work and putting on another, and it would be impossible to get more out of the machinery in the same number of hours than is obtained at present.(8) In the jute trade also it was said that the output within a given time could not be increased, "it goes by clockwork, and "if there is a quarter of an hour of a stoppage there is a "quarter of an hour loss at the end of the week exactly, "it can never be made up." It was further pointed out that there are standing charges in the jute industry that cannot be reduced when the hours are reduced, so that a reduction of hours from 56 to 48 a week would involve a loss of 275,000*l.* to the trade per annum, which must fall either upon wages or upon profits.(9). The witnesses who represented the operatives in the cotton

(*b.*) *Economic.* (i.) *That the cost of production would be increased.*

That it ld not be ported iew of eign com- ition.

trade also asserted that shorter hours would mean an increased cost of production, which could not be compensated for by improved machinery or methods of work.(1) It was further stated that owing to the severity of foreign competition, the English textile and hosiery trades would not be able to stand this increased cost of production. The cotton industry is especially exposed to competition from India, and an advance of one-fifth in the price of cotton goods would probably mean a stoppage of the trade to India, China, and Japan.(2) On the other hand, the operatives are aware that the margin of profit left to the employers by the present conditions of the trade will not bear further reduction.(3) Statistics were quoted to show how great the competition of other countries with Great Britain is in the jute industry. Whilst the United Kingdom had in the year 1841 a practical monopoly of this industry, at the present time it manufactures only about one-third of the total production. During the last 20 years the consumption of the raw material in Great Britain has increased only 72 per cent., whilst that of the continent has increased 556 per cent., that of America 200 per cent., and that of India 550 per cent. An increase in the cost of production would therefore ruin the trade, and the manufacturers would probably remove their works to India.(4) In the worsted trade manufacturers are already severely handicapped by the longer hours worked and the tariffs imposed by foreign nations, and the trade would pass over to Germany if the hours were reduced in England.(5) Germany is also the chief competitor of England in the hosiery trade, and any reduction of hours which was not accompanied by a similar change in Germany would prove very injurious to the English trade.(6) Another objection to a legal restriction of hours was brought forward by the representatives of the clothing trades. These trades are all seasonal in character, and cannot therefore work a uniform number of hours throughout the year. If the working hours were restricted to eight, this would debar the workers from making up in the busy season for time lost during slack periods, and would necessitate the employment of temporary hands during part of the year, which would add to the irregularity of employment.(7)

.) Diffi- ty of sonal des.

346. The arguments against an eight hours' day are therefore briefly:—(1) that a further reduction of hours is not necessary for the physical and moral wellbeing of the workers; (2) that it would inevitably increase the cost of production, and so render English manufacturers unable to compete successfully with their foreign rivals; and (3) that an arbitrary limitation of hours is inapplicable to trades which are subject to alternating busy and slack periods.

mmary of uments inst an ht hours' .

347. Opinions in favour of an eight hours' day have been expressed by the operatives in the Dundee jute trade, the Forfar linen trade, the hosiery trade, the boot and shoe trade, some branches of the woollen and worsted industries, the carpet weaving trade, and a minority of the operatives in the cotton industry, and also by the President of the Leeds Chamber of Commerce. The methods by which they wish shorter hours to be adopted are not always stated, but when stated they fall into three different classes.

thods of pting an ht hours' .

) Legis- ive. Uni- sal and mpulsory.

(a.) The majority of the witnesses are in favour of the restriction of the hours by legislation, which is to be compulsory upon all trades alike. An Act should be passed placing the maximum limit of hours at 48 a week, though men should not be compelled to work up to this limit, and this restriction should be imposed even in cases where a large body of workers after due and careful consideration are convinced that it would be injurious to their trade. It would be necessary to enforce obedience by the infliction of a fine or other penalty upon those who violated the Act, both parties to an infringement, the employer and the employed, being subject to the punishment. One witness expressed a belief, however, that such infringements would not often occur, as when once the law was passed men would conform to it as readily as to other laws.(8) It was admitted that it might be necessary to insert clauses providing for longer hours of work in exceptional cases. The trades which thus advocate a universal and compulsory limitation of hours are, as a rule, those in which the number of workers is comparatively small or their organisation weak; and the reasons brought forward in support of it are that small societies could not effect such a change by their own strength, that the trade unions have as much as they can do in looking after wages, without arranging hours,(1) and that "legal enactments prevent driving back to the old conditions" as sometimes happens after the award of a board of arbitration.(2) The President of the Bradford Power Loom Overlookers' Society advocated an international agreement to reduce the hours of labour in the textile trades, on the ground that the workers in these trades were chiefly women, and therefore badly organised and unable to effect a reduction of the hours for themselves.(3) Only one witness advocated a legal eight hours' day, subject to trade option. This was a member of the Midland Counties Hosiery Federation, who considered that an Act should be passed giving the majority of the operatives in each trade power to decide for or against the adoption of an eight hours' day. In whatever trade it was thus adopted, the Eight Hours Act would become binding upon both employers and employed.(4)

[§ 347 (a.)]

(ii.) *Subject to trade option.*

(b.) Four other witnesses were in favour of a reduction of hours, but not of legislative interference in the matter, which they considered should be arranged by mutual agreement between the employers and the employed. As trade unions have been successful in the past in effecting a considerable reduction in the hours of labour, they believed that the question might be left in their hands for the future,(5) and they urged that in each trade the operatives should seek by combination to procure the limitation of the hours to eight, or to such other length as would best suit the requirements of that trade.(6)

(b.) *Voluntary, by mutual agreement.*

3. STATE AND MUNICIPAL EMPLOYMENT.

Complaints with regard to State and Municipal employment.

348. Very little information is contained in the evidence on the subject of State and municipal employment. In the answers to the schedules of questions issued to associations of employés, complaints were made by the International Tailors', Machinists, and Pressers' Union (London and Provinces), and by the Clothiers' Cutters' Union (London) to the effect that Government employés were paid lower wages, and in one instance worked longer hours than those employed by private firms.(7) With regard to Government contracts, all persons who tender for them in the hosiery and boot and shoe industries must, it was stated, guarantee the payment of the "current" rate of wages. This rule appears in some instances to be broken, and evasion is also to some extent made possible, because the term "current rate" is not sufficiently definite.(8) Under this rule Government contracts may be executed in the lowest paying districts, and it was asserted that the contracts in the hosiery trade had by this means resulted in the reduction of the prices paid for all other classes of work.(9) This latter statement, made by Mr. Holmes, President of the Midland Counties' Hosiery Federation, was corroborated by the Leicester and Leicestershire Hosiery Union; "Government "orders given out . . . are made on competitive "terms of such a nature that employers cannot make "it pay them by working it honestly. Have to put "common yarn in, make them on different machines, "and employ boy or girl labour. The result is that "instead of the Government work being any good to "the town or country, it is an evil, for all other classes "of work are reduced in price through the same. "Tenders should not be accepted from firms who "tender so low that they have to take the loss from "work-people's wages." A similar statement was furnished by the Nottingham Rotary Power Framework Knitters' Society, who added that "nearly all the "Government orders for hosiery go to the firms who "pay less than the statement price to their work-"people." Mr. Holmes even went so far as to say that Government contracts "instead of being a blessing to "the men were a curse."(10)

4. INSPECTION AND REGULATION OF FACTORIES AND WORKSHOPS, AND LEGISLATION RELATING THERETO.

Present condition of the law with regard to inspection and regulation.

349. In the report of the Chief Inspector of Factories and Workshops for the year ending October 1892, Mr. Whymper states that "the principal objects of the "Factory and Workshop Act of 1891 are to render the "inspection of workshops more efficient, especially as "regards sanitation, and in factories to provide for a

(7) Introduction to Answers to Schedules of Questions, p. xvi (8) Digest, Vol. II., pp. 14, 15, 27. (9) Digest, Vol. II., pp. 14, 15. (10) Introduction to Answers to Schedules of Questions addressed to Trade Unions, pp. xvi., xvii. Digest, Vol. II., p. 14.

[§ 349.] "more thorough protection of machinery. It is "attempted to reach these ends," Mr. Whymper continues, "by two means in particular. The one hands over "to the local authorities the sanitary charge of those "workshops in which it was hitherto undertaken by the "factory inspector. By the other means, the Secretary "of State is enabled to make special rules, as regards "both sanitation and danger, to be administered by "factory inspectors, and to apply in any factory or work-"shop where he may certify them to be necessary."(1) The manner in which the transfer of the sanitary supervision of workshops to the local authorities, and the regulations in the Act which refer to questions of safety and other conditions of employment, have been already dealt with in the summary of the evidence given in connexion with the iron, engineering, shipbuilding and cognate trades.(2) With regard to the other clauses of the Act of 1891, Mr. Whymper adds that, "except in two matters (they are) devoted to such "minor changes as experience has suggested. The "two matters alluded to are the raising of the com-"mencing age from 10 to 11 years from 1893, and the "prohibition of work by women for four weeks after "child birth."(3)

Proposed amendments in the existing law.

350. Frequent complaints were made by the witnesses with regard to those amendments in the principal Act by which the responsibility of the administration of the clauses which refer to sanitation is divided between the government and the local sanitary authorities, and by which the inspectors have no power to order structural alterations. Mr. Watson and Mr. Sutcliffe, representatives of the Bradford Managers' and Overlookers' Society, held that the inspector ought "in every "department . . . to be armed with power to "enforce his orders";(4) Mr. James Reid stated that "in the matter of sanitation, the inspector should "possess stronger powers."(5) "Between the two laws," said Mr. Keir, general secretary of the Amalgamated Society of Tailors, "between the Sanitary Acts "and the Factories and Workshops Acts, the whole "thing is left alone. It is left to the discretion of the "employer, and so long as he can get men to work in "unhealthy and low-rented places, he is quite satisfied "to get his work done there . . . There are "many generous minded employers who like to see "their workmen in comfortable workshops, but, "unfortunately, it is a fact that there are some who "do not, and the Sanitary Acts and the Factories and "Workshops Acts are not able to cope with those."(6) Statements to a similar effect were made by other witnesses.(7) With regard to the evidence given on this point by the inspectors themselves, Mr. Prior stated that in his opinion the working of this section of the new Act was "doubtful," especially "as far as the "country districts . . . are concerned"(8), and Mr. Beaumont, added "I do not know how it will work."(9) "I do not think we are much nearer the solution of the question," was the opinion expressed by Mr. Bignold. "Up to 1872 . . . the Workshops "Regulations Act was entirely in the hands of the "local authorities . . . They did nothing, and "it was carried over to the factory inspectors . . . "Now, at the end of another 18 years, it is handed "back again to the local authorities to do as they like, "and if they do not do it, we are to keep them in "check in some way, I do not quite understand how."(10) The Act of 1891 came into force at the beginning of the year 1892, and, to judge from the reports of the inspectors for that year, appears to have proved not altogether satisfactory on this point. Mr. Cramp, Her Majesty's Superintending Inspector of Factories, states that "the handing over of the sanitary supervision of "workshops to local authorities has, so far, increased "the work of factory and workshop inspection rather "than decreased it. In a few towns, such as Birming-"ham and Nottingham, the work has been undertaken "by the city councils and officers appointed to visit "the workshops, but in the vast majority of towns and "villages nothing has been done by the local autho-"rities." And Mr. Hine asserted that "with the "exception of Leeds and one or two small places, he "had as yet found no signs of any action having been "taken at all." "In more than one instance," he added, "have I been told by the medical officer of health "... that they have drawn their sanitary com-[§ 350. "mittee's attention to the new Act, but have received "no instructions to put it into operation."(1)

Present condition with regard to sanitation in spite of the law.

351. Nevertheless, in certain districts in the textile and clothing industries, the complaints with regard to the sanitary condition of the factories and small workshops pointed to the need of some rigid system of inspection, and, in some cases the witnesses themselves claim that the remedy lies partly in granting the factory inspectors power to enforce sanitary improvements. No complaint was made with regard to sanitation in the textile industry in Lancashire by the West Riding of Yorkshire Power Loom Weavers' Association in the textile industry, Dundee, except by the Secretary of the Tenters' Association, in the hosiery factories in Leeds and Leicester, nor in the spinning departments in the district of Bradford.(2) The inspectors themselves stated that great improvements had taken place in the sanitary condition of factories, but acknowledged that grave cause for complaint exists in many of the older factories which could only be remedied by structural alterations which they have no power to enforce.(3) Thus, Mr. Beever, President of the Halifax Trade and Labour Council, stated that "a good many" of the old corn mills in his district "are very low rooms" and contain no facilities for getting rid of the dust. "In "18 months, betwixt 1890 and 1891, there were several "fatal cases of chest disease."(4) Complaints with regard to the sanitary conditions were also urged by the representatives of the Bradford Wool Combers and Warp Dressers, the dyers from Bradford and Halifax, the tenters from Dundee, the willeyers and fettlers from Leeds, and the Forfar factory workers.(5) With regard to the boot clickers in London, Mr. Green stated that the sanitary condition of the workshops in which most of the clickers were engaged is "very bad indeed." The employers in London, this witness explained, are mostly "small employers" who have no "proper factories," and start work in their own houses. In some cases, the state of the sanitary arrangements is "something deplorable." The inspectors, Mr. Green urged, "do not do their duty." It may be noted, however, that no complaint on this ground has ever been made to them.(6) Similar complaints with regard to sanitation were brought forward by the general secretaries of the Boot and Shoe Operatives' Union and the Amalgamated Society of Tailors.(7) "The men," Mr. Inskip stated, "are put in cellars where no day-"light penetrates, and in sheds not fit for horses or "dogs,"(8) and Mr. Keir asserted that "our men are "compelled . . . to live under conditions that are "really not, in many cases, fit for human beings to live "in.(9) On the whole, the witnesses appear to regard this state of things as mainly due to insufficient inspection, but Mr. Keir considered that it was largely owing to the difficulties involved in the joint working of the Sanitary Acts and the Factory and Workshop Acts.(10)

Condition of employment under the Act of young persons and children.

352. The chief complaints, however, urged in connexion with these Acts had reference to the sections which dealt with the conditions of employment of young persons and children. Under section 96 of the Act of 1878, an operative ceases to be a child at the age of 14, and becomes a "young person," and, under section 26 of the same Act, children between the ages of 13 and 14 may be employed full time" as "young persons" on passing the educational standard, fixed by the Home Secretary, with the consent of the Educational Department. This standard is the fourth for England and Wales and the fifth for Scotland. The employment of children under 10 years of age was altogether prohibited in a factory or workshop by the Act of 1878, and the amended Act of 1891, as before stated, has raised the age to 11. The Scotch Education Act requires in addition that all candidates for employment should have passed the third standard, but the English Education Acts leave the standard to be fixed by the bye-laws in the various districts. The hours of employment for women and young persons are 12 on five days of the week, minus two hours on each day for meals. On Saturday the hours are seven and a half, minus one hour for meal times, or six and a half, if less than one hour is granted for refreshment. The net working hours are therefore 56½ a week. A relaxation

[§ 352.] of the law in respect of overtime is granted, subject to certain conditions laid down in section 66 of the Act of 1878.

oposed mend- ents in isting law this atter.

353. It was urged with reference to these clauses that the fourth standard is not sufficiently high as a qualification in England and Wales for "full-time" employment between the ages of 13 and 14;(1) "that the Factory Act might be so altered that it would allow" women, with the permission of the inspector, to be engaged overtime at light work "where machinery was not employed";(2) and that overtime for girls between the ages of 13 and 14 should be abolished.(3)

Half-time" stem.

354. But the main criticism in connexion with these clauses was directed to the general question of the employment of half-timers. In Lancashire, 89,234 children; in Yorkshire, 47,775; in Cheshire, 9,639; and in the rest of England and Wales, 24,038 are employed as half-timers, some under the Factory, some under the Education Acts.(4) In fact, about two out of every three children over 10 years of age in Lancashire, in Yorkshire, Cheshire, and Leicestershire, one out of every four; in Staffordshire, one out of every 14, and in the rest of England and Wales, about one out of every 31 are half-timers. "Practically," Mr. Waddington stated, "our upper standards are composed of about "60 per cent. of half-timers, even in the very best "schools, except in the higher grade schools.(5)

.) Argu- ents ainst.

(*a.*) Witnesses from the West Riding of Yorkshire, Bradford, Halifax, Forfar, and Brechin, and from the National Union of Teachers were opposed to the half-time system, and desired the age to be raised to 12 or higher. Messrs. Turner and Drew, representatives of the West Riding of Yorkshire Weavers' Association, Mr. Bean, representative of the Brechin Factory Workers' Union, and Messrs. Waddington and Jones, members of the National Union of Teachers, claimed that the half-time system exercises a bad influence over the children, physically, mentally, and morally. From an educational point of view, Mr. Waddington stated that the "parent being very "desirous to get the child to work, puts all possible "energy into the child up to the passing of the standard "..... and as soon as they have passed they come to "us and ask us not to give them any lessons at all. "..... The education of the whole school," he added, "suffers through the presence of the half-timer," for "all our curriculum has to be so arranged as to suit" his convenience. Section 12 of the Act of 1878 enacts that half-timers shall be employed either during the morning of one week and during the afternoon of the next, or on alternative days. Consequently, Mr. Jones stated, "we have children attending school in five "different ways, mornings and afternoons, alternate "weeks; some come every morning, some come every "afternoon, some come alternate days, two days one "week and three days the other, and some come "spasmodically. We cannot possibly make a time-"table that will fit" all these cases.(6) But apart from the difficulty of arranging the school work for half-timers, these witnesses were of opinion that the children at work in the factories are physically unfit for school. "When children have been working in the morning," added Mr. Waddington, "we find very "often they are drowsy, very sleepy, their receptive "power is impaired." Moreover, some of the work performed by children tends to immorality, and children employed as half-timers, it was said, "give up the "childlike ways of a child too early." That the system is necessary owing either to the poverty of the parents or the interests of the trade was regarded by some witnesses as doubtful. "I find in my own school," Mr. Waddington asserted, "that the poorer parents are "not the persons who send their children to work, and "it is not only my own experience, but the experience "of the teachers in the half-time districts that poverty "and half time have very little connexion." Mr. Bean was also of opinion that the abolition of the half-time system would not prove "hard on the parents." "I consider," he observed, "that the half-time system has "caused to a great extent the low wages of adults." Neither Mr. Waddington nor Mr. Noble attached any importance to the argument based on the necessity of commencing the training of the children at a very early age.(7)

.) Argu- ents in vour of.

(*b.*) On the other hand, a large number of witnesses, including Mr. Beaumont, inspector of woollen and worsted trades at Bradford, and Mr. Osborn, inspector of cotton cloth factories, were strongly in favour of the half-time system, and Mr. Beaumont, Mr. Osborn, Rev. H. Williamson, and others doubted the necessity of raising the age to 11. The main reasons urged in support of this position are that the family earnings need to be increased by those of the children; that the children themselves become more skilled by beginning work at an early age, and that, if half-times were excluded, it would be oftener necessary for the mothers to work in the factories. With regard to the effect of the system upon the children themselves, Mr. Osborn was of opinion that the combination of work and schooling produced good effects, and the Rev. H. Williamson added, "I am convinced that a large "number of children in Dundee will suffer more "through being kept from working half-time at that "age than they would by entering the mills."(1)

[§ 354 (*b.*)]

Certain other pro- posed amend- ments in connexion with the Act.

355. The other amendments to which reference was made in the evidence given in connexion with the Factory and Workshops Act related mainly to the questions of sanitation, safety, and accidents, medical certificates of fitness, domestic workshops, the employment of women, and the desirability of extending the Acts. With regard to sanitation, Mr. Hatton desired that it should be made compulsory upon each employer to see that damaged and diseased wool does not come into the hands of the wool sorter,(2) Mr. Bannister proposed that women should not be employed in "willeying" on account of the dangerous character of the occupation,(3) and Mr. Bignold was of opinion that the exact cubic space for each worker should have been laid down in the Act.(4) To provide for the greater safety of the workers, Messrs. Turner, Drew, Arnold-Forster, and Beaumont urged that the use of shuttle guards should be enforced by law(5) and Messrs. Henderson and Mullin desired that power should be granted to the inspector to order the fencing of any portion of the machinery which he may deem to be dangerous.(6) Under the present law the inspector can enforce the fencing of what is called the "mill gearing" only. He can not enforce the fencing of the machinery, because it is regarded, not as part of the freehold, but as the personal property of the occupier of the factory. It was further suggested by Mr. Gee, Mr. Turner, and Mr. Drew that the Act should specify the time at which the machinery should be stopped and cleaned.(7) With regard to medical certificates, it was proposed that the certifying surgeons should be independent of the mill, and on the same basis as the factory inspector;(8) that the children employed in the mill should be subjected to supervision at intervals;(9) that the certifying surgeon should be required to make an annual report of the cases which came under his notice;(10) and that, in the case of women, a medical inspector should judge whether they were capable of doing the work alloted to them, without injury to themselves.(11) According to the sections of the present Act, relating to the inspector's power of entry and the registration of workpeople, "an inspector "before entering, in pursuance of the powers conferred "by this Act, without the consent of the occupier, "any room or place actually used as a dwelling as well "as for a factory or workshop, shall, on an affidavit "or statutory declaration of facts and reasons, obtain "written authority so to do from a Secretary of State, "or such warrant as is herein-after mentioned from a "justice of the peace." "The occupier of every "factory and workshop (including any workshop "conducted on the system of not employing any "child, young person, or woman therein) and every "contractor employed by any such occupier in the "business of the factory or workshop shall, if so "required by the Secretary of State by an Order made "in accordance with section 65 of the principal Act*, "and subject to any exceptions mentioned in the Order, "keep in the prescribed form and with the prescribed "particulars, lists showing the names of all persons "directly employed by him, either as workman or as "contractor, in the business of the factory or workshop, "and the places where they are employed, and every "such list shall be open to inspection by any inspector "under the principal Act or by any officer of a sanitary "authority." Mr. Keir, Mr. Inskip, and Mr. Simmons desired that these clauses should be amended, and that it should be made compulsory on all employers to find

[§ 355.] workrooms for all persons in their employ, and that all premises used as workshops for purposes of manufacture of any kind whatever should be registered. Mr. Keir further proposed that the factory inspector should have power to enter any home, if used as a workshop, and report thereon, and that the "occupier of every "factory and workshop, &c.," should be required by the Secretary of State to keep the lists of his employed, and the places where they are employed, to which reference is made in the Act, such lists to be open to public inspection.(1) With regard to the employment of women, Dr. Tatham desired that an occupier of a factory or workshop shall not knowingly allow a woman to be employed therein within six months after she has given birth to a child instead of the period of one month fixed by the present Act, and Mr. Holmes urged that the employment of married women should be prohibited after the birth of their first or second child.(2) Finally, it was desired that the terms of the Act should be extented to all workshops, to public houses, laundries, and to the rag industry.(3)

Government inspection.

356. The number of factories and workshops liable to inspection under the Factory and Workshop Acts is between 120,000 and 130,000. In the year 1891, the total number of visits paid to factories was 72,807, to workshops 52,259. In the same year, the number of prosecutions was 935, of convictions 859. The district of Huddersfield and Halifax contains 1,947 factories and 1,870 workshops. Mr. Prior (the inspector for the district) stated that "as far as possible," he visits every factory and workshop once in three years, apart from special visits. Mr. Beaumont is sole inspector for the district of Bradford, which includes 2,103 factories and 590 workshops, and has a total population of 530,000. During the year 1890, the inspector made 2,000 visits to factories and 250 to workshops. He also made 150 special visits in cases of accident, and attended 20 inquests. Every factory and workshop in the district is visited about once in every two years.(4)

Inadequacy of present system of Government inspection.

357. The present system of Government inspection under the Act appears, however, to be inadequate. Complaints to this effect were made by the representatives from the textile industry in Lancashire and the West Riding of Yorkshire, from the Bradford and District Wool Combers' Association, the Managers' and Overlookers' Society, the Power-Loom Overlookers' Society, and the Society of Dyers in the district of Bradford, the Halifax Trade and Labour Council, the Dundee Trades Council, and the Mill and Factory Operatives' Union, from the Forfar Factory Workers, the Union of Upholsterers, the East London Ropeworkers' Union, and the Confectioners' Union. A similar complaint is also urged by witnesses from the Willeyers and Fettlers' Union, Leeds, and the Brechin Factory Workers' Union, and from the Midland Counties' Hosiery Federation, the Amalgamated Society of Tailors, the Master Tailors' Association, and the Boot and Shoe Operatives' Union.(5) The evidence given by the inspectors themselves is to the same effect. The Acts now in operation, stated Mr. Whymper, require "a well considered increase in the staff of inspectors." Mr. Prior, factory inspector for the Huddersfield and Halifax District, stated, that although "every factory "and every workshop ought to be visited at least once "in 12 months," the most he could "possibly . . . do" was to "make a point of visiting every factory once in three years." "My own desire for an increased staff," Mr. Prior added, "is to a very great "extent on behalf of people who, I am afraid, will not "come fully before this Commission. I speak of the "people in the small workshops, and in the country "districts." Mr. Bignold, factory inspector in Devon and Cornwall, was of opinion that the amount of work demanded from the inspectors is "utterly absurd." Mr. Henderson, superintending inspector for Scotland and the North of England stated, however, that "before giving an opinion" on this matter he was "inclined to wait" until the amended Act came into operation.(6) It may, therefore, be noted that in the Report of the Chief Inspector for the year 1892, to which previous reference has been made, Mr. Oram states that "the increase in the "population, especially in the large centres of industry, "naturally leads to a proportionate increase in the "number of factories and workshops, and the staff [§ 357.] "which was able to some extent to meet the require- "ments of the former number is insufficient to deal "adequately with the increased demands made upon "it . . ." "The additions to the staff made during "the year," he added, "have strengthened the depart- "ment, but I think it will be necessary to add to the "number of assistants who would aid Her Majesty's "inspectors of factories in clerical work . . . as "well as in the general visitation of the workshops, "including those of the outworkers.(1) Complaints were rarely made with regard to the efficiency of the present staff of inspectors. Mr. Mullin asserted that about two-thirds of the present staff might with advantage be discharged, and their places taken by more efficient men.(2) "I think," Mr. Mawdsley stated, "factory "inspection now, on the whole, as carried out in "Lancashire, is pretty fair," but, he added, "two- "thirds of them do not do half the work they ought to "do." There is "a deliberate intention" on the part of the inspectors not to get the employers convicted. Mr. Holmes, a representative of the Midland County Hosiery Federation, complained that the inspector in that district "suffers from a lack of practical knowledge "of how he can be 'bested.'" "Unless they have what I should term practical knowledge of factory work," he added, "they are not so well able to be efficient factory "inspectors. . . . I think there should be more "practical men." Similar views with regard to the desirability of the appointment of working men inspectors were urged by other witnesses. Mr. Wilson, Mr. Inskip, and Mr. Marston proposed that additional or sub-inspectors should be appointed to act under and conjointly with the present staff, and who should be practical men acquainted with the requirements of the operatives. The appointment of this class of men was also desired by Messrs. Holmes, Bower, and Keir, and Mr. Whymper was of opinion that "the suggestion that "working men should be appointed as assistant "inspectors" might be very serviceable, but more particularly in certain districts and for certain industries.(3) On the other hand, Mr. Henderson and Mr. Mawdsley were opposed to the proposal. "I quite believe," said Mr. Mawdsley, "in the educational test, "It is very essential, I think, that there should be an "educational test, and a moderately high one," and Mr. Henderson added, that "what is wanted is dili- "gence, common sense, and discretion." "I do not "think that the practical knowledge of a trade really "affects the value of the inspector much."(4) In connexion with this subject of inspection it was also proposed that assistant inspectors, not known in the district, should be appointed to pay "surprise" visits, and that a publication of a few of the regulations of the Act should be made, and the inspectors of the district appoint places of meeting where people who desired information might come and apply for it.(5) The majority of witnesses further held that where a large number of women were employed, a staff of female inspectors should be appointed, because, in the first place, they would "know where to go, and what to look for"; and, in the second place, women will make statements to one of their own sex which they would not make to men. It was urged, on the other hand, that the need for their appointment is diminished by the fact that, under the present system, attention is paid to anonymous communications, and the law does not provide for that class of grievance which women would prefer to confide to one of their own sex. The majority of the inspectors considered that the advantages of their appointment were over-estimated, and the difficulties under-estimated. It was, however, proposed that their work should be confined to that class of duties for which they are specially suited, or that one female inspector should be appointed by the Home Office, with whom the women workers could communicate, and if necessary, the chief inspector of factories should request her to investigate any given case locally.(6)

The Cot Cloth F tories A

358. The Cotton Cloth Factories Act, Mr. Osborn stated, was passed in order to regulate the "steaming" of the cotton weft necessitated by the development of the art of "sizing." The Act provides a table of the degrees of temperature and humidity to which every manufacturer is obliged to conform, and enforces an improved method of ventilation in the mills to which it

[§ 358.] applies. In the opinion of Mr. Osborn, Her Majesty's inspector under the Act, the operation of the Act is "most valuable." It has, he stated, proved beneficial in its effect on the health of the operatives, and Mr. Wilcock, a representative of the cotton spinners, Preston, was also of opinion that the Act had been of great benefit to working men. On the other hand, Mr. Henderson, inspector for Scotland and the North of England, complained that the Act had caused much "inconvenience, and trouble, and expense" to employers. "The Act, I think," he observed, "has been passed very hastily." The fact of introducing steam at all, even for a limited time and for a special purpose, brings a factory under the Act. "I think the Act "itself was passed under a very grievous misapprehen- "sion as to the consequences of steaming; I think they "were very grossly exaggerated." Mr. Noble, a member of the United Cotton Manufacturers' Association, also complained that the Act had been "injurious" to manufacturers. The warps, he stated, "are greatly "affected by the changing conditions of the atmo- "sphere; and to admit 600 cubic feet of air when an "east wind is prevailing, would seriously interfere, "and does interfere with the work." "We have no "objection to the ventilation if it were under the "control of the operatives." Mr. Osborn himself acknowledged that the clause which referred to ventilation "is certainly a very strong one" (1). Mr. Birtwhistle and Mr. Barker, representatives of the Lancashire textile industry, complained, however, that on account of insufficient inspection the Act has not been properly enforced. "Mr. Osborn has the whole country, "so far as that Act is concerned, to deal with himself ". . . . It is impossible for him to attend to it," said Mr. Birtwhistle. "The inspector cannot attend "to the business he has in hand," Mr. Barker added, "it is too much." This opinion was shared by Mr. Whymper, Chief Inspector of Factories, and by Mr. Osborn himself. Every mill in which "steaming" takes place must be visited four times a year. This involves, Mr. Osborn stated, 2,400 visits annually, and each inspection may take 1½ hours or longer. The work of the inspector, he added, is "in excess of what "one man can do effectively" (2).

5. ACCIDENT FUNDS AND EMPLOYER'S LIABILITY, AND LEGISLATION RELATING THERETO.

Number of accidents.

359. It was represented in the evidence that, as compared with other occupations, employment in textile factories is not especially dangerous (3). Testimony was borne by the inspectors to the willingness of employers to take proper precautions to prevent the occurrence of accidents, and Mr. Walker, an employer in the jute trade at Dundee, was of opinion "that the "accidents are much fewer than they formerly "were" (4). This view was shared by Mr. Beaumont, one of the Government inspectors examined before the Commission, who spoke of "a decided decrease" (5). On the other hand, one representative of the Lancashire Cotton industry stated that "the number of accidents "seems to be on the increase" (6). The question as to the direction in which the number of accidents in the textile industries is tending is one which cannot easily be answered from the evidence of individual witnesses. Whichever view be correct, it may be noted that Mr. Henderson, Her Majesty's superintending inspector, in his report for the year ending October 1892, speaks of the "very valuable and far-reaching results" of the amendments in connexion with safety and accidents made by the Factory Act of 1891. He takes occasion, however, to point out that "it may be some time before "the influence of the additional precautions now "enforced for the protection of dangerous machinery "shows itself in any sensible reduction in the number "of accidents reported from factories, because the "much greater attention which has been given to the "question has warned employers of their responsibility, "and induced them to be more careful in reporting "accidents when they do occur. An increase in the "number of accidents reported to the department "under these circumstances does not necessarily point "to the fact that the number of such accidents have "increased, but simply that the law itself is being "more stringently enforced or observed" (7).

(7) Report of Chief Inspector of Factories and Workshops, 1892, p. 81.

[§ 360.] Causes of accidents.

360. Among the causes assigned for the occurrence of accidents was the increased speed at which machinery is worked, and the consequently greater strain on the workman (1). Another cause insisted upon by witnesses was the carelessness of workmen, especially with regard to the children employed under them. It was stated that accidents frequently happen through the cleaning of machinery while in motion, and although in many cases the workmen have a legitimate grievance in respect of the insufficient time allowed for cleaning, in consequence of which they are compelled to do it at odd times as well, employers complain that they cannot induce the operatives to "clean at the proper time," when the machinery is stopped (2). Another common source of injury is the escape of shuttles from fast looms, and accidents were stated to be often traceable to the overcrowding of machinery, and among the Bradford District Wool Combers to the fact of the workshops being allowed to get so very much out of repair (3). The matter of fencing machinery is generally spoken of as having more attention paid to it than formerly; the Amalgamated Society of Operative Cotton Spinners report that machinery is very adequately fenced as a rule, and the same satisfactory account is given by the Brechin Branch of the Factory Workers' Union (4). A complaint was, however, made by the Willeyers and Fettlers of the Leeds District that in some cases machines are fenced with strap-guards, which are not found to be a sufficient protection (5).*

The Employers' Liability Act.

361. The effect of the Employers' Liability Act on the number of accidents appears to be more indirect than direct. Very few prosecutions take place under the Act, but Mr. Henderson states that "the additional "responsibility placed upon occupiers of factories "under the Employers' Liability Act adds much "weight to the representations of an inspector in "regard to unfenced machinery." (6) The chief hindrance to the claiming of compensation under the Act was pointed out to be the cost of an action; even if a workman wins his case and gets compensation, "the "obtaining of it costs the worker more than the "compensation obtained." (7) With regard to the working of the Act, the operatives complain that sometimes considerable difficulty is experienced in securing convictions for neglect, because the magistrates are selected from the class of employers; also that a workman who brings an action against his employer incurs danger of dismissal. (8) Moreover, since employers are liable only where notice has been given of a defective machine, there is no incentive to vigilance on their part. (9) Several witnesses stated, however, that compensation was sometimes paid without going to law, and though this was said to be done reluctantly in some cases, it was not invariably so; indeed, one witness spoke of the "very considerate view" taken by the employers in a case which had come under his observation. (10)

Proposed amendments in the Act.

362. Several amendments to the Act were urged as desirable, of which the most important was the abolition of the contributory negligence clause, which, it was asserted, at present renders the Act practically inoperative. In support of this plea the Unions maintain that the negligence of the workman is not the primary cause of accidents, and generally only remotely contributes to them. With regard to an employer's liability for accidents caused by defective machines, one witness referred to a case which went to the Court of Appeal, in which, he stated, the ruling of the Judges was, that if a machine was as originally sent out by the manufacturer it was not a defective machine. The opinion of Sir Frederick Pollock has been taken on this point, and is to the effect that the decision in the case in question was "that the defect in the condition of the "machinery must be such as to show negligence on "the part of the employer," but that "the Court of "Appeal certainly did not decide any such absurdity "as suggested" above. (11) An objection was also made to the doctrine of common employment. (12) The practice of contracting out of the Act was disapproved of, but there were no actual complaints under this

[§ 362.] head; the witnesses who condemned the practice stated that it was not met with in the districts and industries with which they were acquainted, and that in desiring its prohibition that were only speaking in the interests of the working classes in general.(1) A further recommendation was that some steps should be taken to insure that the cost of a prosecution under the Act should not absorb the whole of the compensation adjudged.(2)

Insurance against accidents.

363. Insurance against accidents (apart from the Union benefit funds), is provided in one form or another in certain factories. One firm was reported as insuring its employés at its own expense; the workmen paid no contribution, and in case of accident received half wages during the period of incapacitation.(3) Some firms have recently begun a "co-operative" system of compensation for accidents, by which the men pay a regular subscription in proportion to their wages, and this plan is said to work well.(4) Oftener, however, there is no definite system of insurance, but employers compensate at their discretion, or according to custom.

6. OTHER CONDITIONS OF LABOUR.

Subjects dealt with under this head.

364. Three questions with regard to the conditions of labour to which reference has been made in the evidence still remain to be considered. These are the general effect of the introduction of machinery and the attitude of the workmen towards it, the system of apprenticeship, and some complaints which have been made with regard to employers as landlords.

The introduction of machinery.

365. Some of the effects of the introduction of machinery have been indirectly noticed in the statements of wages and hours, but they may be briefly recapitulated. In the textile trades no objection has been made to the introduction of labour-saving machinery. On the contrary, both the employers and the employed agree that any improvements in machinery are "gladly accepted," (5) and that they have been the cause of a considerable advance in wages during recent years in some branches of the cotton trade.(6) The representatives of the Wool Combers' Association, on the other hand, complained that the improvements in machinery which had been introduced into their trade had tended to the advantage of the employers at the expense of the employed. They made no objection to the introduction of machinery as such, but considered that its benefits should be equally shared between the employers and the workmen.(7) The introduction of new kinds of machinery has had a very important effect upon the hosiery trade, having, in fact, entirely revolutionized this industry. The representatives of the hand-loom weavers pointed out the decay into which their trade had fallen through the introduction of steam-power machinery, and the consequent impoverishment of many of the older workers. Very few hand-looms are now made, and these are chiefly for gloves, not for stockings.(8) Another witness stated that an increasing number of women are now employed in the hosiery trade, both in circular weaving and on the rotary frames and "Cotton's patent," and that the effect had been to force down men's wages.(9) The employers, however, stated that the introduction of new machinery had resulted not only in the employment of more labour, but in an advance of wages, although they admitted that the change had involved hardships in the case of the old hand-loom weavers.(10) Several of the employers in the boot and shoe trade complained of the opposition offered by the workmen to the introduction of machinery. It was stated that although the men's union does not now formally sanction opposition to machinery, it places so many restrictions upon its use that this is practically hindered, and the competition of the American trade is thus rendered more severe. In support of this statement it was said that in America to produce 100*l.* worth of boots, costs 17*l.* 10*s.* in labour, and in Leeds 33*l.*, the difference being attributed to the American labour-saving machinery.(11) One employer states that his men have done all they could to oppose the introduction of machinery. "The Union insisted "upon weekly wages, and the men worked the machines "so that no gain accrued over hand labour," and, in consequence of this, and the friction caused with the Union, a great part of the machinery is standing idle.(1) The employers, however, consider that the machinery would benefit the workmen as much as the masters, if it were allowed a fair trial, and the following facts are cited by Messrs. Butlin and Son:—"When we introduced heeling machinery our men, as usual, were "concerned very much about the difference it would "make to them in loss of wages, but before the "machine had run six months we had men leave rather "than put the heels on by hand. The deduction is "1½*d.* to 2*d.* per pair, according to quality, but it is "worth much more to them. In the finishing machinery lately introduced we are paying higher "wages to the men running them by the week than "they can earn by the dozen in their homes at statement wages, and working longer hours." (2) The workmen, however, deny that they are opposed to the introduction of machinery as such, and state that their objection has only been to the use made of it by the employers as a means of oppressing their workpeople.(3) [§ 365.]

Apprenticeship.

366. The question of apprenticeship plays a very small part in the textile trades, since it is only in the smaller and subsidiary industries, such as those of the wool sorters, warp dressers and linen lappers, that any system of the kind exists. Some importance has, however, been attached to it in the evidence from the boot and shoe and tailoring trades in both of which the system has fallen more or less into disuse. Both the employers and the employed have expressed a desire to revive the system, but whilst the motive put forward by some employers has been the provision of a sufficient supply of competent workmen, that of the employed is generally said to be the limitation of the number of learners, and hence of skilled workers. Complaints of the "overcrowding" of boy labour were made by the representatives of the National Union of Boot Clickers and the Boot and Shoe Operatives' Union, and both these societies endeavour to impose restrictions upon the number of boys employed. The former society also aims at enforcing a five years' apprenticeship, but the Boot and Shoe Operatives' Union is making no attempt to revive the old system, as the process of manufacture has completely changed. (4) With regard to the tailoring trade a desire is expressed by the Clothiers' Cutters' Union to revive the old system of apprenticeship, so that no one may be able to obtain employment who has not served five or seven years to the trade.(5) The employers in this trade complain, on the other hand, that the men's unions have so limited the number of apprentices that they are obliged to employ women to take the place of boys. They consider that every shop which employs a dozen men ought to have always two apprentices in course of training, because according to the average death rate of tailors it may be expected that in 30 years' time the twelve men would die and twelve apprentices would be required to take their places. (6)

Employers as landlords.

367. The remaining question, that of employers as landlords, has been brought forward only in the evidence from the textile trades, and even in this has been very slightly touched upon. Representatives of the operatives both in the cotton and the woollen industry, however, expressed their disapproval of the system of housing workpeople in dwellings built or owned by the employers, and the reasons given are (1.) that it gives the employer undue power over the workpeople, and (2.) that the houses thus provided are more highly rented in proportion to their value than other houses in the same locality. It was stated that the employers sometimes made it obligatory upon the workpeople to live in their houses, and that it was not necessary to provide accommodation near to the mills in this manner (7). The two employers who referred to this question agreed in stating that the cottages owned by their firms were let at a lower rent than similar houses in the neighbourhood, and that they would personally prefer not to be in the position of landlords. (8) No evidence was brought forward, however, with regard to the view taken of the matter by the employers generally.

B. ORGANISATIONS.

1. ORGANISATIONS OF EMPLOYERS, ORGANISATIONS OF EMPLOYED, AND JOINT BOARDS.

[§ 368 (a.)]

TEXTILE TRADES. LANCASHIRE. Organisations of employers. (a.) *Their extent.*

368. (*a.*) The United Cotton Manufacturers' Association extends over the cotton manufacturing districts of Lancashire, Derbyshire, Yorkshire, and Cheshire, and is a federation of about 32 local associations. It represents about 200 firms, which own some 200,000 looms, and include about 75 per cent. of all the cotton manufacturers in the districts. The association was established in 1890. (1) The North and North-east Lancashire Cotton Spinners' and Manufacturers' Association is a federation of the local associations of employers in Blackburn, Preston, and Burnley. The district covered by the association contains about 6,000,000 spindles and 200,000 looms, and not quite two-thirds of the employers are members. The association has existed in its present form since 1872. (2) The United Cotton Spinners' Association extends over the whole of the cotton manufacturing districts. (3)

(*b.*) *Constitution and government.*

(*b.*) The government of each association is in the hands of an Executive or Central Committee, consisting of representatives of the local associations. In the North and North-east Lancashire Cotton Spinners' and Manufacturers' Association the number of representatives is limited to 11 members from Preston, 11 from Burnley, and 13 from Blackburn; in the United Cotton Spinners' Association 2 delegates, in addition to the local chairman and secretary, may be chosen by each district, and in the United Cotton Manufacturers' Association one representative is chosen for every 10,000 looms. The Committee of the latter association has power to appoint Sub-committees if necessary, and Sub-committees to inquire into disputes with workmen may be appointed in the former. Committee meetings must be held at least once a quarter in the North and North-east Lancashire Cotton Spinners' and Manufacturers' Association, and monthly in the United Cotton Manufacturers' Association, in which there are also general meetings held annually, and at such times as the Committee may determine. The Committee of this society may not make any final decision affecting the trade as a whole without referring to the local associations, and that of the North and North-east Lancashire Cotton Spinners' and Manufacturers' Association must postpone its decision on any matter at the request of five members who are desirous of consulting their local associations. The rules of the United Cotton Manufacturers' Association, and of the United Cotton Spinners' Association, may be altered at any general meeting after one month's notice has been given, but in the North and North-east Lancashire Cotton Spinners' and Manufacturers' Association, the rules may be altered only at a special meeting of the Committe, after notice of the proposed alteration has been given at a previous Committee meeting, and the alterations must be submitted to, and confirmed by the local associations.

(*c.*) *Conditions of membership and contributions.*

(*c.*) Any cotton spinners or manufacturers approved by the Committee are eligible for membership in the United Cotton Spinners' and Manufacturers' Associations, and all members of the federated local associations, or of other associations if approved by the majority of members, are eligible for the North and North-east Lancashire Cotton Spinners' and Manufacturers' Associations. Neither society requires its members to pay an entrance fee. Members of the United Cotton Spinners' and Manufacturers' Associations pay an annual subscription of 1*l.* 1*s.*, in addition to which the Committee of the latter may raise levies not exceeding 3*d.* a loom, when necessary. In the North and North-east Lancashire Cotton Spinners' and Manufacturers' Association there is no annual subscription, but levies of 3*d.* for each loom and ½*d.* for each spindle are raised by the local associations whenever funds are required. The Central Committee in each case has the control of the funds, but in the North and North-east Lancashire Association four treasurers are appointed, in whose names the funds are banked. [§ 368 (c.)]

(*d.*) *Dispute regulations.*

(*d.*) With regard to the action of these societies in trade disputes in which their members are engaged, it is a rule of the United Cotton Manufacturers' Association that such disputes must first be brought before the local association, wherever one exists, and this body may refer them to the Central Committee. Where no local association exists, disputes may be referred directly to the central association. The Cotton Spinners' and Manufacturers' Association allows its local associations to settle any disputes which do not involve alterations of the local standard list, but statements of applications for assistance, and of settlements or attempted settlements, must be forwarded to the Central Committee and the majority of those who meet to discuss the question must not represent the district interested. This association gives no assistance to members who do not pay wages up to the standard list of the district, or to members who reduce their wages to the standard list, unless they can offer a satisfactory explanation.

(*e.*) *Objects.*

(*e.*) The objects of these associations are the regulation of wages and the promotion of the general interests of the trade, in addition to which the United Cotton Manufacturers' Association wishes to consider Parliamentary legislation and to defend cases affecting individual members, and the North and North-east Lancashire Cotton Spinners' and Manufacturers' Association to take cognizance of cases of combination, strikes, and intimidation by workpeople. The United Cotton Spinners' Association only wishes to watch over and promote the interests of the trade generally and of the members in particular. (1)

Organisations of employed. (*a.*) *Their extent.*

369. (*a.*) The organisation of the employed in the various branches of the cotton industry in Lancashire and the adjoining counties is very complete. The principal associations with regard to which evidence has been given are the Amalgamated Association of Card and Blowing Room Operatives, the Amalgamated Association of Operative Cotton Spinners, the Northern Counties Amalgamated Association of Weavers, the North-east Lancashire Weavers' Association, and the United Textile Workers. The Amalgamated Association of Card and Blowing Room Operatives, which has existed in its present form since 1886, extends over the whole of the cotton trade district, and is a federation of 20 local societies, most of which are again subdivided into districts. The Amalgamated Association of Operative Cotton Spinners embraces the whole of Lancashire up to Lancaster and the cotton spinning districts of the adjoining counties of Cheshire, Derbyshire and Yorkshire, and the Northern Counties Amalgamated Association of Weavers extends over the same area. The latter association, which was established in 1884, is divided into 28 districts. When Mr. Birtwistle gave evidence, the North-east Lancashire Weavers' Association included all the towns between Colne and Chorley, with the exception of Blackburn, Preston, and Darwen. Since Mr. Birtwistle resigned his secretaryship, however, several of the larger districts have withdrawn, and appointed secretaries of their own, and the association now covers only Church, Oswaldtwistle, Great Harwood, Haslingden, Clitheroe, Clayton-le-Moors, Walton-le-Dale, and Rishton. It was established in 1858. The United Textile Factory Workers is an association formed to include card and blowing room operatives, spinners and weavers throughout the four counties engaged in the cotton trade (2). The numbers of male and female members of the various societies, together with the percentages of females and of unionists in the whole number of workpeople employed, are given in a table below.

(1) Digest Vol. I., pp. 13, 16. (2) Digest Vol. I., p. 13. (3) Minutes of Evidence, Vol. III., Appendix CXXII.

(1) Tabulated Rules, Nos. 440 and 442. Minutes of Evidence Vol. III., Appendix CXXII. (2) Digest, Vol. I., p. 10. Letter received from E. J. Holmes, Esq., Secretary of the North-east Lancashire Amalgamated Weavers' Association, June 24, 1893.

(1) The number given in the oral evidence was "about 19,000," but the exact number was given in the Answers to the Schedules of Questions. (2) and (3) These numbers are exclusive of half-timers. (4) This percentage is given in a letter from the secretary of the society, dated June 24, 1893. The percentage given in the Answers to the Schedules of Questions is 90. (5) The percentage of non-unionists is given in the Answers to the Schedules of Questions as "probably 40," which would give 60 per cent. of unionists. The total, 8,000, includes children who would perhaps be left out of account in calculating the percentage of unionists. (6) 28,000 was the number of members given in the oral evidence. The numbers quoted in the table are given by the secretary of the society in a letter received June 24, 1893. (7) This number was given as 14,000 or 15,000. The arithmetic mean has been taken in order to find the percentage of unionists. (8) This total includes overlookers, twisters, and others connected with weaving, besides the weavers proper.

(b.) Constitution and Government.

(*b.*) The government of these societies varies chiefly in matters of detail. There is, usually speaking, a General Council or representative meeting, composed of delegates from the local branches, in which the supreme power is vested, and a smaller Executive body, termed the Committee or Council, which carries on the general business of the society. In the United Textile Factory Workers, the larger body is termed the United Council, and the smaller one the Legislative Council, and the latter has power to elect by co-option a Sub-legislative Council, to which it may delegate any of its powers. The principal officers are a president, vice-president, secretary, and treasurer, who are generally appointed by the Executive body, though in some cases by the representative meeting, and there are usually two auditors and three or more trustees. The officers receive fixed salaries, the amounts of which are as a rule decided at a representative meeting, which has also power to remove any officer. They are elected for varying terms of office. The secretary and the trustees often hold office during the pleasure of the majority of the members, whilst the other officers are appointed for a year or six months. Representative meetings are held every quarter in some societies and annually in others, and a special representative meeting must generally be summoned at the request of the Committee, or of a certain number of members. These societies are sub-divided into districts and branches, and in the case of the Amalgamated Association of Card and Blowing Room Operatives, and the Amalgamated Association of Operative Cotton Spinners, the districts are grouped into "provinces." These divisions generally draw up their own rules, and fix the contributions of members, and the nature and amounts of the benefits; they are governed by representative and executive bodies and officers in the same manner as the Central Associations, with the general rules of which their regulations must be in conformity. Members are generally allowed to appeal from any decision of a provincial or district government to the Central Executive, and a final appeal is allowed from this body to the general representative meeting. Alterations of the rules may be made only at a general representative meeting, and a certain length of notice of such alterations is required both to the Central Executive and to the various local sub-divisions of the society.

(c.) Contributions and benefits

(*c.*) The amounts of the entrance fees and weekly or other contributions from members, and the benefit funds granted by the various associations, are given in the tables below. Members, or districts, in arrears with their contributions are generally suspended from all benefits when their arrears have reached a certain amount, and if this is not cleared off within another fixed period, such members or districts are excluded from the association.

TABLE of Contributions to Associations of Employed, Lancashire. (Tabulated Rules, Nos. 369, 372, 378, 380, 381, and 382.)

—	Amalgamated Association of Card and Blowing Room Operatives. No. 369.	Amalgamated Association of Operative Cotton Spinners. No. 372.	Northern Counties Amalgamated Association of Weavers. No. 378.	Blackburn Power Loom Weavers' Protection Society. No. 382.	Ashton-under-Lyne and District Power Loom Weavers' Association. No. 381.	North-East Lancashire Weavers' Association. No. 380.	United Textile Factory Workers. No. 368.
Entrance fee.	—	—	1*d.* a member	—	3*d.* a member	Each society pays a sum varying with the number of its members and the value of the assets of the association.	—
Contributions.	Amount determined at a representative meeting. Levies are raised when necessary.	Each district and province pays 1½*d.* a member weekly, and fixes its own local contributions. Levies are raised when necessary by the representative meeting.	Local societies pay a varying contribution (1). An emergency fund is raised by levies and kept up to the amount of 5,000*l.*	2*d.*, 3*d.*, 4*d.*, 5*d.*, or 6*d.* a week according to the benefits desired. Members over 50 years of age on entry pay 3*d.* a week. Levies may be raised by the Committee.	2*d.* or 3*d.* a week for weavers, and 1*d.* or 1½*d.* for tenters, according to the benefits desired. A levy may be raised when the funds are reduced to 200*l.*	1*d.*, 2*d.*, 3*d.*, or 4*d.* a week according to the benefits desired. Branches may increase the local contribution. Levies may be raised by the Council.	A levy may be raised by the Legislative Council with the sanction of the United Council. Societies of cardroom workers and weavers are levied only on two-thirds of their members.

(1) The secretary stated in oral evidence that at present the contribution from local societies was 5*s.* per 100 members a fortnight, but that it might be so high as 1*l.* per 100 members a fortnight. (Minutes of Evidence, Vol. I., 1726.)

369 (c).] TABLE of Benefits granted by Associations of Employed, Lancashire. (Tabulated Rules, Nos. 369, 372, 378, 380, 381, and 382.) [§ 369 (c).]

Benefit.	Amalgamated Association of Card and Blowing Room Operatives. No. 369.	Amalgamated Association of Operative Cotton Spinners. No. 372.	Northern Counties Amalgamated Association of Weavers. No. 378.	Blackburn Power Loom Weavers' Protection Society. (Affiliated to Northern Counties Amalgamated Association of Weavers.) No. 382.	Ashton-under-Lyne and District Power Loom Weavers' Association. (Affiliated to Northern Counties' Amalgamated Association of Weavers.) No. 381.	North-East Lancashire Weavers' Association. No. 380.
Accident benefit	30*l.* if permanently disabled. Legal assistance in obtaining compensation under the Employers' Liability Act(1).	50*l.* if permanently disabled (2).	—	—	—	—
Dispute benefit:— *1. Ordinary members.*	8*s.* a week	10*s.* a week, and 1*s.* for each child under 13, until 13 weeks after end of dispute, if necessary. Members locked out through a dispute caused by another branch of cotton operatives receive 6*s.* a week, and 1*s.* for each child under 10, unless dispute is sanctioned by an Executive or representative meeting, when they receive as above.	A district receives support as determined by three-fourths of the General Council, in proportion to its membership (3). No district may increase the amount of its dispute benefit without the consent of the General Council.	3*s.*, 6*s.*, 10*s.*, 13*s.*, and 16*s.* a week, according to the rate of contributions paid. Legal assistance is also provided.	—	—
Victimised members.	The same as ordinary members for 13 weeks.	12*s.* a week, and 1*s.* for each child under 13, for 20 weeks.	—	—	Such assistance as the Committee may determine.	Three-fourths of their average wages for the last month up to four looms. Legal assistance if necessary.
Emigration benefit	—	Members receiving dispute benefit may receive nine weeks' full pay in order to emigrate. Victimised members who wish to emigrate receive half the pay to which they are entitled.	—	—	—	—
Funeral benefit	4*l.* or 10*l.* if death is the result of an accident.	20*l.* if death is the result of an accident.	—	6*l.* or 4*l.* for members aged from 45 to 50 on entry.	5*l.*	Amount not stated.
Out-of-work benefit	—	—	—	Same as dispute benefit, according to contribution, for six weeks only, if out of work through fire, failure, breakdown, expiration of lease, or dissolution of partnership.	Members who pay 3*d.* a week receive 7*s.* a week for six weeks, and those who pay 2*d.* a week receive 5*s.* a week for four weeks, if out of work through fire, failure, breakdown, or repairs. Tenters receive half these sums.	Payments varying with the scale of contributions are made to members out of work by failure or bankruptcy, fire, breakdown, or repairs of engines, boilers, and mill gearing, but not for stoppages caused by depression in trade, running short time, or playing for beams, weft or twist.

(1) Weekly payments in case of temporary disablement from accident are made out of the local branch funds. (2) Weekly payments in case of temporary disablement from accident are made out of the local branch funds, from which additional grants may be made in case of permanent disablement. (3) The secretary stated in oral evidence that the dispute benefit granted was 5*s.* a member. (Minutes of Evidence, Vol. I., 1640.)

(d.) Funds. (*d.*) The funds of the associations are usually invested by the trustees when authorised to do so by the Executive or the representative meeting. Orders for withdrawal must, as a rule, be sanctioned by the Committee or representative meeting, and receive the signatures of the principal officers.

(e.) Dispute regulations. (*e.*) With regard to the conduct of trade disputes, all these associations require that the members should lay any grievance or difficulty that may arise before the local Committee in the first instance, and this body must investigate the matter and endeavour to effect an amicable settlement. If it fails to do so the general secretary must be informed of the particulars, and in his turn investigate them thoroughly with a view to a settlement, and in case of failure summon a meeting of the central Executive. In the Amalgamated Association of Card and Blowing Room Operatives and the North-East Lancashire Amalgamated Weavers' Association, the Executive Council has power to sanction a strike, and also to close the dispute when it sees fit. In the latter association, however, a full report of all particulars must be sent to each local association before a strike is undertaken. In the Amalgamated Association of Operative Cotton Spinners a representative meeting, and in the Northern Counties Amalgamated Association of Weavers, a meeting of the General Council, must be summoned to give the final decision with regard to a strike, and the regulations of the latter Association are very strict on this point. No strike may be undertaken without the sanction of three-fourths of the members of the General Council, and this may not be granted unless 50 per cent. of the workpeople in the mills affected are members of the association, and 3 per cent. of the members of the district are directly affected by the dispute.

(f.) Minor regulations. (*f.*) The organisations under consideration cover so large a district and contain so many members that the Central Association, as a rule, lays down provisions of a very general character, leaving all the details of government to the provinces or districts, and it is expressly stated in the preface to the rules of the Amalgamated Association of Card and Blowing Room Operatives that this society considers it advisable to deal chiefly with districts, and to leave the latter free to make provisions for their individual members. Thus no regulations for the conditions of employment are laid down in the rules of the Central Associations, except in the North-East Lancashire Weavers' Association, in which the general secretary is said to arrange the prices for weaving, winding, and warping.

[§ 369 (g.)] (g.) Objects.

(g.) The objects of these associations are generally very similar, although the United Textile Factory Workers confines itself to that of removing "any "grievance from which members may be suffering by "means of parliamentary or Government inter-"ference." The Amalgamated Association of Card and Blowing Room Operatives and the Amalgamated Association of Operative Cotton Spinners have identical objects, which are the provision of benefits for their members, the securing of a fair and uniform rate of wages, the conciliatory settlement of disputes with employers, and the enforcement of the Factory Acts and other legislative enactments for the protection of labour. The Northern Counties Amalgamated Associations of Weavers and the North-East Lancashire Amalgamated Weavers' Association also aim at securing a fair and uniform rate of wages, and the former society wishes to prevent unnecessary reductions and fines. The North-East Lancashire Amalgamated Weavers' Association provides benefits for its members, and undertakes to protect them from injustice.(1)

Joint Boards.

370. In North and North-East Lancashire there is a Joint Committee of the employers and operatives in the weaving industry, which considers all questions of wages and trade disputes, and endeavours "to preserve "good feeling between employers and operatives." It is not, however, authorised to come to a final conclusion upon any of the matters brought under its notice. The Committee consists of 12 members, six of whom are chosen by the Association of each side. Either party may convene a meeting by giving 10 days' notice to the secretary of the other party, but meetings may not be held more often than once a month, except in the case of adjournment. The employers' and operatives' sections must respectively report to their constituents as to the general results of the various discussions, but otherwise all proceedings of the Joint Committee must be secret.(2) This Committee is said to have been very successful. Since its establishment in 1881, some 20 or 30 cases have come before it, and it has only once failed to effect a settlement. Before a Standing Joint Committee was appointed, the Central Committees of the employers' and operatives' associations were accustomed to meet together in order to settle disputes, and this is the method still adopted in the carding and spinning branches of the industry.(3) The representatives of the operatives in the latter departments expressed their satisfaction with the results of the method, and it was stated that in 19 cases out of 20 disputes were settled by conferences between the Committees or secretaries of the two associations.(4) Mr. Rawlinson, however, pointed out that there was a want of system in the methods of settling disputes adopted by the carding and spinning branches of the industry, as compared with that adopted in the weaving branch. Although general questions of advances or reductions may be settled thus, there is no machinery for the settlement of individual disputes, and there are many local strikes in consequence. The employers would prefer to have a Standing Joint Committee, but they believed that the difficulty in the way of such an arrangement lay in the incomplete organisation of both sides, rather than in any disinclination upon the side of the operatives.(5)

General relations between employers and employed.

371. The representatives of both employers and operatives in the cotton industry agreed in attributing the improved relations between capital and labour which had distinguished recent years to the more efficient organisation on the two sides, and the closer intercourse which had resulted from it. The operatives stated that their difficulties in obtaining redress arose with employers who were not members of the Employers' Association, and they believed that if all the employers joined their association it would materially conduce to the settlement of disputes. The employers, on their part, consider it easier to discuss the causes of disputes with the union officials than with the operatives, and attribute the improved relations in a great measure to the frequent intercourse which takes place between the officials of the associations on both sides.(6) It was, however, asserted by two employers, one of whom, Mr. A. Simpson, was especially emphatic, both in his evidence and in further correspondence, that "the attitude taken up by the trades unions is "already having a great influence upon the future of "the cotton trade," and that "the determination "of the workpeople to extract every penny of profit "for themselves is gradually driving capitalists out of "the trade." They consider that the unions force the employers to pay higher wages than they can afford, even though the rates are settled by the joint action of the employers' and operatives' associations.(1) One witness stated that the union acted unfavourably upon the operatives with regard to the quality of the work produced, and the spirit of antagonism and insubordination to which it gave rise. The operatives are said practically to compel the masters to produce what suits them, without regard to the requirements of the market, and to be less afraid of producing bad work when they receive an out-of-work allowance from the union in case of dismissal.(2) The witness admitted, however, that a stronger organisation upon the side of the masters would give them more power in the arrangement of wages, and that the operatives would always get the better of a bargain so long as the Masters' Association was in his opinion "a veritable rope of sand." He further stated that he had no personal objection to the trade unions, but would only suggest that the rule with regard to out-of-work allowance should be abrogated, and that all picketing should be stopped.(3) [§ 371.]

II. YORKSHIRE. Organisations of employers.

372. Evidence has been received with regard to only one association of employers in the Yorkshire woollen and worsted manufacturing district. This is the Huddersfield Woollen Manufacturers' and Spinners' Association, which was mentioned by Mr. Gee as having been established in 1881 in opposition to the association of the employed which began at about the same time.(4) No further information has been received with regard to the rules or constitution of this association of employers.

Organisations of employed.

373. The most important associations of employed in this district with regard to which either oral or written evidence has been received are the West Riding of Yorkshire Power Loom Weavers' Association, the Bradford Warpdressers' Association, the Bradford Overlookers' Provident Society, No. 3, the Bradford Managers' and Overlookers' Society, No. 2, the Bradford and District Power Loom Overlookers' Society, the Bradford Amalgamated Society of Dyers, Crabbers, &c., the Bradford Wool Combers' Association, the Bradford Wool Sorters' Association, and the Leeds and District Willeyers' and Fettlers' Union. The rules of only a few of these societies have been laid before the Commission, and therefore these are the only ones of the constitution of which any account can be given. In so far, however, as any information was procurable with regard to the numbers of members, and the rates of contributions, in the other associations, or the benefits given by them, it has been incorporated in the tables below.

(a.) Their extent.

(a.) The West Riding of Yorkshire Power Loom Weavers' Association, which was established in 1881, has its head quarters at Huddersfield, and is divided into three districts, viz., those of Huddersfield, Bradford, and Batley. Its membership was formerly restricted to weavers, but since 1891 it has admitted any factory operatives in the woollen and worsted industries, who have no organisation of their own.(5) The Bradford and District Overlookers' Provident Union, No. 3, which was established in 1862, is the smallest of three associations of overlookers in the Bradford district, which are rather more of the nature of friendly societies than of trades unions proper. This society is said in the written answers to the schedules of questions issued by the Commission to contain 350 members; whilst in the oral evidence it was stated that the Bradford and District Power Loom Overlookers' Society, which includes the district within a radius of four miles from Bradford, has 697 members, and the Bradford Managers' and Overlookers' Society, No. 2, which has branches in Halifax, Keighley, and Wakefield, has 668 members.(6) The Bradford and District Warpdressers' Association, which was established in 1888, was said to be federated with the warpdressers' associations in Lancashire, but not to be connected with any other organisation of operatives in the woollen industry.(7) The numbers of

(1) In the oral evidence it was said that "roughly speaking" there were 5,000 members, 5,200 is the number obtained by adding together the totals given for the three districts of the union. (2) In the oral evidence it was said that "at least 60 per cent." of the members were females. According to the totals obtained, 66 per cent. of the members of the union are females, and 72 per cent. of the operatives employed. (3) The total number employed was quoted in the oral evidence as 32,000, but the numbers of male and female workers given in the Answers to the Schedules of Questions gives a total of 30,000. (4) In the oral evidence the total number of members was said to be 1,000; the number of male members 190 or 200, and the number of female members 750 or 800. The numbers quoted in the table are those given in the Answers to the Schedules of Questions. (5) In the oral evidence the total number of operatives employed was said to be about 13,000. The Answers to the Schedules of Questions give it as 15,000. (6) The number of dyers belonging to the Gasworkers' Union is quoted in the Answers to the Schedules of Questions as 1,200. In this case the percentage of unionists is 30 per cent. (7) This number was given by the witness as "3,000 to 4,000." The arithmetic mean has been taken in order to find the percentage of unionists.

(b.) Constitution and government.

(*b.*) The supreme authority in the West Riding of Yorkshire Power Loom Weavers' Association is in the hands of a General Committee of Management, which consists of one representative for each hundred or fraction of one hundred members, elected from the branch Committees. This body meets every quarter, and at its annual meeting appoints an Executive Council consisting of the principal officers and 10 other members. The Bradford Overlookers' Provident Union, No. 3, and the Bradford Warpdressers' Association are both governed by a Committee, appointed in addition to the principal officers, and by half-yearly and monthly or weekly general meetings of members. The committeemen in the Bradford Overlookers' Provident Union, No. 3, are appointed in rotation as their names appear in the contribution book, but in the Warpdressers' Association they, like the other officers, are elected by ballot. The principal officers in all three societies are a president, secretary and treasurer, and trustees, and in two there are also auditors. The rules of the West Riding of Yorkshire Power Loom Weavers' Association provide for the government of branches on the same plan as the central government, but the rules of the other societies make no provision for branch government. The Committee of the Warpdressers' Association finally decides all cases of appeal, but members of the Overlookers' Provident Union, No. 3, may appeal from the Committee to a monthly general, meeting. The rules of the West Riding of Yorkshire Power Loom Weavers' Association may be altered by a two-thirds majority of the General Committee of Management, if notice has been given to each branch Committee 21 days beforehand. No alteration, however, is valid until registered. The rules of the Overlookers' Provident Union, No. 3, may be altered at a special general meeting, if the proposed changes have been read at three previous monthly meetings, and those of the Warpdressers' Association may be altered with the consent of the majority of the members at any general meeting.

(c.) Contributions and benefits.

(*c.*) The amounts of the entrance fees and contributions and of the benefits provided for members, are given in the tables below. All three societies contain regulations with regard to arrears of contributions. After these have reached a certain amount, the member in question is suspended from the benefits of the society, and in the Overlookers' Provident Union, No. 3, and the Warpdressers' Association the member is excluded if his arrears are not paid off, in the former case before they reach 24*s.*, and in the latter before they have accumulated for 12 months.

TABLE of Contributions in Associations of Employed, Yorkshire.

(Tabulated Rules, Nos. 386, 388, and 389. Digest, Vol. I., p. 23. Digest, Vol. II., p. 9, and further Correspondence.)

—	West Riding of Yorkshire Power Loom Weavers' Association. No. 386.	Bradford Overlookers' Provident Society, No. 3. No. 388.	Bradford Warpdressers' Association. No. 389.	Bradford and District Machine Wool-Combers'. Association.	Leeds and District Willeyers' and Fettlers' Union.
Entrance fee - -	——	Age under 26 years, 10*s.* Age 26 to 30 years, 15*s.* Age 30 to 34 years, 21*s.*	3*s.* 6*d.*	1*s.* 3*d.* for men. 6*d.* for women.	Age on entry :— 18 to 25 years, 2*s.* 6*d.* 25 to 30 years, 4*s.* 30 to 35 years, 5*s.* 6*d.* 35 to 40 years, 7*s.* 6*d.* 40 to 44 years, 10*s.*
Contribution - -	1½*d.*, 2*d.*, 2½*d.*, or 3*d.* a week, according to the benefits desired, subject to alterations during a strike.	Age under 26, 2*s.* a month. Age 26 to 30, 2*s.* 2*d.* a month. Age 30 to 34, 2*s.* 4*d.* a month. Also 3*d.* a year to the contingent fund. A levy of 6*d.* is raised when the funds are less than 3*l.* a member.	3*d.* a week. The committee can raise a levy in case of need.	3*d.* a week for men. 2*d.* a week for women.	6*d.* a week for members under 40 years of age on entry. 7½*d.* a week for members over 40.

TABLE of BENEFITS granted by Associations of Employed, Yorkshire.

[§ 373 (c.)] (Tabulated Rules, Nos. 386, 388, and 389. Digest, Vol. I., p. 28. Digest, Vol. II., p. 9., and further Correspondence.) [§ 373 (c.)]

Benefits.	West Riding of Yorkshire Power-Loom Weavers' Association. No. 386.	Bradford Overlookers' Provident Society, No. 3. No. 388.	Bradford Warpdressers' Association. No. 389.	Bradford and District Machine Woolcombers' Association.	Leeds and District Willeyers' and Fettlers' Union.
Accident benefit.	—	In case of disablement through loss of sight or of a limb, a grant of not less than 20*l.*, as determined by a special general meeting.	—	7*s.* a week, or legal assistance in obtaining compensation.	—
Dispute benefit	5*s.*, 7*s.*, 9*s.*, or 11*s.* a week according to the contribution, and 6*d.*, 8*d.*, 10*d.*, or 1*s.* for each child under 11. The Executive may alter these amounts. Victimised members the same.	—	—	10*s.* a week until the end of the dispute. In case of a general strike the Committee may reduce the benefit if necessary. Victimised members receive 10*s.* a week until they obtain employment.	Half the amount of the wages received by members.
Distress benefit	—	—	Grants at the discretion of Committee.	—	—
Emigration benefit.	—	After five years' membership a grant of 5*l.*, if out-of-work benefit has been received for not more than 25 days.	—	—	—
Funeral benefit	—	10*l.* on death of member. 6*l.* on death of member's wife.	—	3*l.* on the death of a member. 2*l.* on the death of a member's wife.	10*l.*; half of which benefit may be drawn on the death of the member's wife.
Out-of-work benefit.	3*s.*, 4*s.*, 5*s.*, or 6*s.* a week for one month (according to contribution), when out of work, through fire, failure, or breakdown.	1*s.* 9*d.* a day for 72 days. 1*s.* 1*d.* a day for 72 days.	5*s.* a week for six weeks. 2*s.* 6*d.* a week for six weeks.	—	9*s.* a week for ten weeks. 4*s.* 6*d.* a week for eight weeks. Six months must pass before the member can be again entitled to this benefit.
Sick benefit	—	10*s.* a week for six months. 5*s.* a week for six months. 2*s.* 6*d.* a week until recovery.	—	—	6*s.* a week for 13 weeks. 3*s.* a week for 13 weeks. Six months must pass before the member can be again entitled to this benefit.

(*d.*) *Funds.* (*d.*) The funds of these associations may be invested by the treasurer or trustees, at the direction of the executive or of a general meeting, or may be deposited in a bank. In the Overlookers' Provident Union, No. 3, investments and withdrawals must be signed by six members of the Committee and the secretary, but in the other societies the signatures of the trustees and the secretary are sufficient for this purpose.

(*e.*) *Dispute regulations.* (*e.*) The rules of the Overlookers' Provident Union, No. 3, contain no regulations with regard to trade disputes; but those of the Warpdressers' Association provide that the members concerned in a dispute with their employer must inform the secretary, and he must summon the Committee to consider the matter if necessary. In the West Riding of Yorkshire Power Loom Weavers' Association, the branch Committee must if possible effect an amicable arrangement of any dispute that arises, but in case of failure the general secretary must give his assistance. If the dispute cannot be settled by these means, the General Committee may sanction a strike after carefully investigating the matter.

(*f.*) *Minor regulations.* (*f.*) No support is given to members of the Overlookers' Provident Union, No. 3, and the Warpdressers' Association, who lose their employment through their own neglect or misconduct. Members of the former society are punished by a fine if they boast of their independence towards their employers on account of their membership of the society; and members of the latter society who leave work for which they have been paid unfinished, are subject to a fine and must return and finish the work or refund the money they had received. Members of the Overlookers' Provident Union, No. 3, are forbidden to inform non-members of vacant situations, and no member of the Warpdressers' Association may teach the trade to anyone without the sanction of the Committee. Both these societies keep "vacant books" in which are registered the names of members out of work, and all members are expected to inform the secretary or vacant book-keeper of any vacant situation of which they may hear.

(*g.*) *Objects* (*g.*) The objects of these societies fall under three main heads, viz., the provision of benefits, the maintenance of fair wages, and the regulation of the relations between the employers and the employed. The first two of these objects are common to all three associations, but the third is not mentioned by the Overlookers' Provident Union, No. 3, which aims at regulating the relations between the managers or overlookers themselves. This society also reminds its members that excellence of workmanship is required in order to maintain the supremacy of the trade of the district. The West Riding of Yorkshire Power Loom Weavers' Association desires to protect its members from unjust stoppages, or other injustice on the part of employers, and the Warpdressers' Association wishes to effect an amicable settlement of all disputes with employers by arbitration or otherwise [1].

Joint Boards. 374. Evidence was given by the representatives of the West Riding of Yorkshire Power Loom Weavers' Association with regard to a Joint Committee which their association was then (November 1891) endeavouring to establish in conjunction with the Huddersfield Woollen Manufacturers' and Spinners' Association. It was stated that it had actually been agreed that such a Board should be formed consisting of six workmen and six employers, and that their first duty should be to draw up a minimum wages scale for the district. No decision had been arrived at with regard to a reference to arbitration in case the two sides of the Board should fail to agree [2]. No other Joint Committee in the woollen or worsted industries has been mentioned in either the oral or the written evidence, but it was said that in a few cases the employers allowed "mill committees" to be formed, which act as mediators between the operatives and the firm. Any grievance is then brought before the mill committee and investigated, and disputes are often avoided by this means. In such cases the operatives elect their own representatives on the committees, and pay them for the time thus employed by means of a voluntary yearly levy for the purpose. When women are employed in the mill they are often allowed proportional representation upon the mill committee [3].

[1] Tabulated Rules, Nos. 386, 388, 389. Minutes of Evidence, Vol. III., Appendix CXXV. [2] Minutes of Evidence, Vol. I., 4947–4952, 5135–5138. [3] Digest, Vol. I., p. 19.

[§ 375.] General relations between employers and employed.

375. It has been pointed out that there is only one organisation of employers in the woollen industry, and that is merely a local one, whilst from the table of members in the associations of the employed it will be seen that the only organisation of any great importance or extent is the West Riding of Yorkshire Power Loom Weaver's Association, and that in this the percentage of unionists amongst all the employed in the industry is very small. In the oral evidence great stress was laid upon the defective organisation of the employers and operatives in the woollen industry as compared with those in the cotton industry, and the low wages in the former industry compared with those in the latter were attributed in great measure to this cause. The representative of the Batley district of the West Riding of Yorkshire Weavers' Association expressed a desire that the employers in that district should become organised, as those in the Huddersfield district had done, as he thought it would then be possible to promote joint action in securing a uniform rate of wages. It was suggested that one reason of the defective organisation of the operatives in this district was the preponderance of women, who do not care to subscribe to a union because they expect to give up work in the mills when they are married. The poverty and want of education of the workers generally, and the want of fellow-feeling amongst the various grades of operatives were other reasons assigned. Amongst the wool sorters it was said that organisation exists only where the men are ill-treated, and that those who are in regular employment will not join the association (1).

III. SCOTLAND AND IRELAND. Associations of employers.

376. Evidence has been received with regard to three associations of employers in connexion with the jute and linen industries of Scotland and Ireland. These are the Dundee Jute Trade Employers' Trade Committee, the Belfast Linen Merchants' Association, and the Flax Spinners' and Power Loom Linen Manufacturers' Association of Belfast. Only oral evidence has been received with regard to the first of these, and only written evidence with regard to the other two.

(a.) Their extent.

(a.) There is said to be no true association of employers in the jute trade, but the principal employers in the town of Dundee have appointed 16 of their number to form a Trade Committee, which considers all questions of general importance before they are referred to the general body of employers (2). No further evidence has been received with regard to the constitution or regulation of this Committee. The Linen Merchants' Association, which was established in 1872, represents 76 firms of linen merchants and manufacturers in Belfast and throughout the province of Ulster; and the Flax Spinners' Association represents 18 establishments in Belfast and the counties of Antrim, Armagh, Down, and Tyrone, which own about half of the entire machinery engaged in the industry (3).

(b.) Constitution and government.

(b.) Copies of the rules of the Linen Merchants' and Flax Spinners and Power Loom Linen Manufacturers' Associations have been sent to the Commission. In each case the government of the association is in the hands of a Council, a certain proportion of the members of which are elected annually. A chairman or president, secretary and treasurer are the chief officers, and in both societies the Council has the right of appointing Committees for special purposes. The Council meets quarterly or oftener if necessary, and a General Meeting is held annually, and at other times at the discretion of the Council. In the Linen Merchants' Association each firm has only one vote, but in the Flax Spinners' and Power Loom Linen Manufacturers' Association members are entitled to one vote for every 1,000 spindles and one for every 50 looms belonging to them or to the Company which they represent. The rules of the former association may be altered with the approval of two Council meetings, if the change is ratified by a general meeting, and in the latter association rules may be made or altered only at a general meeting after at least three days' notice has been given.

(c.) Conditions of membership and contributions.

(c.) The only necessary qualification for membership in each case is to be an employer or member of a firm engaged in the branch of the linen trade in question, and members are required to give a written notice of withdrawal, which in one case must be of three months' length. There is an annual subscription of 1*l.* 1*s.* and upwards, at the discretion of the Council, to the Linen Merchants Association, whilst members of the Flax Spinners and Power Loom Linen Manufacturers' Association contribute on every spindle and loom in their works, at a rate settled each year by the annual meeting (1). [§ 376 (c.)]

(d.) Trade regulations and disputes.

(d.) Neither of these associations makes any provision in its rules for the regulation of the conditions of employment or for action with regard to trade disputes. It is stated, however, in the Answers to the Schedules of Questions issued by the Commission that the Flax Spinners and Power Loom Linen Manufacturers' Association does take action with respect to regulating wages and the conditions of labour and in dealing with matters of difference arising between employers and workpeople, but in such cases is guided in its action by the special circumstances of the case, and not by any fixed system or method. The Linen Merchants' Association has not hitherto taken any official action with regard to wages or the conditions of employment but is ready to arbitrate in case of disputes between members and their workpeople (2).

(e.) Objects.

(e.) The settlement of disputes by arbitration or otherwise is mentioned as one of the objects of the latter association, which also desires to promote the interests of the linen trade by bringing Bills before Parliament or by other means. The objects of the Flax Spinners and Power Loom Linen Manufacturers' Association are to serve as a medium of communication between the members of the trade, and to promote uniform action amongst them so far as is possible without restricting individual liberty (3).

Organisations of employed.

377. The principal associations of employed in the jute and linen industries in Scotland and Ireland with regard to which oral or written evidence has been received are the East of Scotland Power Loom Tenters' Association, the Dundee and District Yarn Dressers' Association, the Dundee and District Mill and Factory Operatives' Union, the Scotch Mill and Factory Workers' Federal Union, and the Brechin and Forfar branches of the same, the Irish Linen Lappers' Trade Union, the Belfast and North of Ireland Power Loom Tenters' Trade Union, and the Belfast Flax Roughers' Trade Union. The rules of all these societies, with the exception of the Irish Linen Lappers' Trade Union, have been laid before the Commission, and any information which has been procurable with regard to the membership, contributions, or benefits of the latter society has been incorporated in the tables below.

(a.) Their extent.

(a.) The Dundee and District Mill and Factory Operatives' Union extends over the district of Dundee, Montrose, Arbroath, Blairgowrie, Barrow-in-Furness, and Perth. All its members are engaged in the jute trade, with the exception of 500 persons at Perth, who are linen operatives. This society was established in 1885 through the agency of the Rev. H. Williamson, a minister of the Unitarian Church of Dundee, who has since held the office of honorary president in the society. His object in organising the workers, the large majority of whom are women, was to enable them to withstand any further reduction in their wages, and since the formation of the union wages have advanced 25 or 30 per cent., as the result of "solicitation" and without strikes. Mr. Williamson had founded similar unions in the districts of Arbroath, Montrose, Brechin, and Kirkcaldy, but in these places counter-movements had been set on foot (4). The Brechin Factory Workers' Union, which was at first united with the Dundee and District Mill and Factory Workers' Union, separated from it in 1888, and in the following year became federated with the Scotch Mill and Factory Workers' Federal Union (5). The latter society comprises the local unions of mill and factory workers at Arbroath, Brechin, Forfar, Kirkcaldy, and Kirrimuir, the Scottish Bleachfield Workers' Union, the Aberdeen Workwomen's Society, and the Ayr Woollen Workers' Society. The Forfar branch of this society was established in 1885 (6). The numbers of male and female members of the various societies, together with the per-centages of females and of unionists in the whole number of workpeople employed are given in a table below.

(1) Digest, Vol. I., pp. 18, 19, 20, 23, 25. (2) Digest, Vol. I., p. 31. (3) Answers to Schedules of Questions, p. 771.

(1) It was stated that of the 5,945 members of the Union, about 12 per cent. were men. (2) It was stated in the oral evidence that from 65,000 to 70,000 operatives are employed in the jute trade in Great Britain. In a letter dated July 7th, 1893, Mr. Walker gave the total as 65,000, of whom 50,000 belong to Dundee, 8,500 to the district, and 6,500 to other parts of England, Scotland, and Ireland. He stated that 65 per cent. of this total were females. (3) It was stated that the number of members on the roll was 346, but of these only 200 were "financial" members, the remainder being in arrears. (4) There were said to be from 150 to 160 non-unionists. If the exact arithmetic mean, 155, were taken, therefore, it would give a total of 501. (5) The number of members was said to be from 420 to 450. The arithmetic mean of these two numbers has therefore been taken.

(b.) Constitution and government.

(b.) The form of government is very similar in all those societies whose rules have been obtained. In most cases the Executive consists of a president, vice-president, secretary, treasurer, and a Committee of from three to 22 members, and there are also two or three trustees, and two or more auditors. The officers are generally elected at general meetings of the society, and hold office for a year or for six or three months. The Executive Committee meets every week or month, or in one case fortnightly, and general meetings of members are held in the different societies every month, quarter, or half-year. Special Committee or general meetings may also be summoned when necessary at the desire of the president or of a certain number of members. The Executive of the Scottish Mill and Factory Workers' Federal Union is a Federal Council, consisting of representatives from the local unions, in the proportion of one delegate for every 500 members, appointed annually. Disputes between members of the East of Scotland Power Loom Tenters' Protective Federal Association and of the Belfast and North of Ireland Power Loom Tenters' Trade and Benevolent Trade Union may be referred to the arbitration of three members, and in the latter society and the Flax Roughers' Trade Union members may appeal from a decision of the Committee to the next general meeting. Alterations in the rules may be made by the majority of the members present at a special or ordinary general meeting. In the East of Scotland Power Loom Tenters' Protective Federal Association the majority must consist of two-thirds of the members present and notice of the proposed alterations must have been given at the previous quarterly meeting, and in the Belfast and North of Ireland Power Loom Tenters' Trade and Benevolent Trade Union propositions for alterations of the rules must be signed by 12 members and laid before the Committee, which must summon a special general meeting to decide them. All alterations in rules of unions federated to the Scottish Mill and Factory Workers' Federal Union must be submitted to the Federal Council for approval.

(c.) Contributions and benefits.

(c.) Particulars with regard to the entrance fees, contributions, and benefit funds of the various associations are given in the tables below. Members who fall into arrears with their contributions are in three societies subject to a fine which increases with the amount of the arrears. In other cases members are suspended from all benefits after their arrears have reached a certain amount; and in all the societies there is a fixed maximum limit of arrears, and members who exceed this are excluded.

A levy of 1*s.* is raised on the death of a member. If the funds fall below 1*l.* a member a levy may be raised which may not exceed 3*s.* a member in three months.	4*d.* a week.

377 (c.)] TABLE of Benefits granted by various Trades Unions in the Linen and Jute Industries in Scotland and Ireland. [§ 377 (c.)]

Benefit.	Dundee and District Yarn Dressers' Association. No. 402.	Dundee and District Mill and Factory Operatives' Union.	East of Scotland Power Loom Tenters' Association. No. 400.	Scotch Mill and Factory Workers' Federal Union.	Brechin Factory Workers' Union.
Accident benefit	—	Amount fixed by the Committee, but not more than 4*s.* a week for five weeks.	Grants may be made to members incapacitated from work by accident.	—	—
Dispute benefit	10*s.* a week to full members; 5*s.* a week to assistants. Victimised members receive the amount of their wages, if not more than 25*s.* a week until they obtain work or assistance in leaving the district.	The Committee fixes the amount payable to members on strike or locked out. Members who pay 2*d.* or 3*d.* contributions receive double or treble benefit. No benefit is allowed if the funds of the union fall below 50*l.* Victimised members receive legal or other assistance.	Victimised members receive the amount of their wages, if not more than 25*s.* a week, until they obtain work, or assistance in leaving the district.	6*s.* or 12*s.* a week according to contribution. 3*s.* a week for half-timers.	6*s.* a week for every 1*d.* of weekly contribution. Victimised members are protected.
Distress benefit	—	—	—	—	—
Emigration benefit	—	—	Grants may be made to members who wish to emigrate.	—	—
Funeral benefit	—	An allowance is made to the friends of a deceased member of 10*s.* for the first year, and 5*s.* for each year of membership, up to 3*l.*	—	—	—
Out-of-work benefit	—	An allowance is made to members out of work through a break-down of machinery.	7*s.* a week for 13 weeks; 5*s.* a week for 13 weeks, but not more than 7*l.* 16*s.* in 12 months.	—	—
Sick benefit	—	—	—	—	—
Superannuation benefit.	—	—	Grants may be made to members incapacitated from work by old age or infirmity.	—	—
Travelling benefit	—	—	—	—	—

TABLE of Benefits granted by various Trades Unions in the Jute and Linen Industries in Scotland and Ireland—*continued.*

Benefit.	Forfar Factory Workers' Union.	Irish Linen Lappers' Trade Union.	Belfast and North of Ireland Power Loom Tenters' Trade Union. No. 401.	Belfast Flax Roughers' Trade Union. No. 403.
Accident benefit	—	—	40*l.* if permanently disabled.	—
Dispute benefit	Amount fixed by Committee.	15*s.* a week.	14*s.* a week, as long as the society thinks fit.	12*s.* a week.
Distress benefit	—	—	—	—
Emigration benefit	—	—	—	—
Funeral benefit	1*l.* on death of member contributing 1*d.* a week. 2*l.* on death of member contributing 2*d.* a week.	—	Full members 7*l.* and levy of 1*s.* on each member, and 5*l.* on death of wife. Trade members 5*l.* and levy of 1*s.* on each member, and 3*l.* on death of wife.	6*l.* on the death of a member; 4*l.* on the death of a member's wife.
Out-of-work benefit	—	10*s.* a week for length of time varying with length of membership.	10*s.* a week for 13 weeks. 7*s.* 6*d.* a week for 13 weeks. 5*s.* a week until work is obtained.	—
Sick benefit	—	—	10*s.* a week for 13 weeks. 7*s.* 6*d.* a week for 13 weeks. 5*s.* a week until recovery.	—
Superannuation benefit.	—	—	If unable to work at the trade:— 7*s.* a week after 20 years' membership. 8*s.* a week after 25 years' membership. 10*s.* a week after 30 years' membership.	—
Travelling benefit	—	—	—	—

[§ 377 (d.)]

(d.) *Funds.* (d.) The funds are in most cases banked by the treasurer in the names of the trustees, the name of the particular bank in which they are to be deposited being generally mentioned in the rules. The rules of the Dundee and District Mill and Factory Operatives' Union mention various modes of investment, which may be adopted, but expressly exclude investments in building or loan societies, joint stock banks, or any personal securities.

(e.) *Dispute regulations.* (e.) Members of the Flax Roughers' Trade Union, who are engaged in a dispute with their employer, must inform the president and Committee, whose duty it is to investigate the matter and endeavour to effect an amicable settlement. A strike may not be authorised unless by the consent of a general meeting or the vote of the trade taken by circulars. Members of the Dundee and District Yarn Dressers' Protective Association and the Dundee and District Mill and Factory Operatives' Union may not strike without the consent of the Committee. The rules of the latter society require that an effort shall be made to refer any dispute about wages or hours to arbitration, and that the Committee shall protect any victimised members. The Scottish Mill and Factory Workers' Federal Union may only support strikes which have been entered upon by the vote of two-thirds of the Federal Council, but the federated unions may take part in local strikes independently of the Federal Union.

(f.) *Minor regulations.* (f.) A fine is imposed upon members of the East of Scotland Power Loom Tenters' Protective Federal Association who boast of their independence towards their employers, and no support is given to those who lose their employment through misconduct. Members of this society, of the Dundee and District Yarn Dressers' Protective Association, and of the Flax Roughers' Trade Union are subject to a fine if they assist non-members to obtain work, and must try to persuade their fellow workmen to become members. Members of the Belfast and North of Ireland Power Loom Tenters' Trade and Benevolent Trade Union who take charge of more than an average number of looms without the sanction of the society, are expelled, and those of the Flax Roughers' Trade Union who do overwork or transgress the shop regulations are subject to a fine. Members of the East of Scotland Power Loom Tenters' Protective Federal Association and of the Dundee and District Yarn Dressers' Protective Association are required to inform the secretary as soon as possible, or within 24 hours, of any vacancy of which they may hear.

(g.) *Objects.* (g.) The provision of benefit funds and the protection of the members' interests are the main objects of these societies. The East of Scotland Power Loom Tenters' Protective Federal Association and the Dundee and District Yarn Dressers' Protective Association also wish to promote a friendly feeling among members, and the Flax Roughers' Trade Union desires to regulate the dealings between members and non-members, and the relations between workmen and masters in the trade[1].

General relations between employers and employed.

378. No joint committee or board of conciliation was mentioned in connexion with these industries. It was stated, however, that the formation of the Jute Trade Employers' Trade Committee in Dundee had made it very much easier for the operatives to approach their employers than it had been before, and that friendly and courteous relations had now been established between the two organisations, although at first the employers had endeavoured to boycott the union[2].

IV. MINOR TEXTILE INDUSTRIES. Organisations of employers.

379. The minor textile industries, with regard to which oral or written evidence has been received, are the carpet, silk, lace and rope manufacturing industries.

(a.) *Their extent.* (a.) Copies of the rules of the Silk Association of Great Britain and Ireland, which was founded in 1887, and of the Nottingham Lace Manufacturers' Association, founded in 1869, have been sent to the Commission, but no further evidence has been given with regard to these associations of employers[3]. It was stated, in the oral evidence, that two associations of employers existed in the carpet manufacturing industry, one of which regulates prices and other matters outside the interests of the workmen, whilst the other fixes the rate of wages and considers any difficulties which may arise with the workmen. The latter association was said to be practically in abeyance, because no occasion had arisen for it to meet during several years, but it still exists as an institution, and would be called together in case of necessity[4]. No further evidence has been received with regard to the constitution and rules of these associations, and no mention has been made of any association of employers in the rope making trade.

[§ 379 (a.)]

(b.) *Constitution and government.* (b.) The executive of the Nottingham Lace Manufacturers' Association consists of a Committee of 13 members, together with the principal officers, and that of the Silk Association of a Council of at least 25 members with the principal officers. The latter association is divided into districts or sections each of which is represented by five councilmen, with one additional representative for every ten members in the district or section. Any Chamber of Commerce affiliated to the Association may also annually appoint a representative upon the Council. The Council has power to appoint Committees to transact special business when necessary. In both associations an annual general meeting or Conference is held, and special general meetings may be summoned by the secretary on the request of the Committee or Council, or of a specified number of members, a few days' notice of such meetings being required. Members of the Nottingham Lace Manufacturers' Association have at general meetings one vote for every five machines for which they subscribe, but at Committee meetings only one vote each, and only one partner in any firm may vote at a Committee meeting. The chief officers in both associations are a president, vice-president, treasurer and secretary, in addition to whom the Silk Association appoints one auditor, and the Nottingham Lace Manufacturers' Association two auditors and three trustees. Alterations in the rules of either association may be made only at an annual or special general meeting after a certain length of notice has been given. In the Silk Association such alterations in the rules must obtain the sanction of a two-thirds majority of the members present, and in the Nottingham Lace Manufacturers' Association they must have been proposed by five members.

(c.) *Conditions of membership and contributions.* (c.) Any silk manufacturers, merchants, dyers, finishers and others who have a *bonâ fide* interest in the silk industry may become members of the Silk Association on payment of an annual subscription of from 1*l.* 1*s.* to 5*l.* 5*s.*, each 1*l.* 1*s.* subscribed giving a right to one vote. The subscription of members of the Nottingham Lace Manufacturers' Association is fixed annually at so much for every machine worked, but any member who does not wish to pay on all his machines may send a registered number to the secretary, indicating for which machines he pays. A majority of two-thirds at a special general meeting may levy an additional rate on each machine if necessary. Plain net manufacturers pay only half contributions, and are entitled to half benefits. A specified length of notice of withdrawal is required from members of either association.

(d.) *Benefits and funds.* (d.) Members of the Nottingham Lace Manufacturers' Association may claim pecuniary assistance if their case is approved by the Committee, and sanctioned by a majority of two-thirds at a special general meeting. The Council of the Silk Association has power to apportion part of the funds to form and support libraries and technical museums, or lectures and scientific classes.

(e.) *Dispute regulations.* (e.) The Silk Association makes no provision for disputes with workpeople, but the Nottingham Lace Manufacturers' Association requires that no lock-out shall take place unless there is a majority of two-thirds in favour of it, and that when a strike occurs against any member, the names of the men on strike must be sent to the association, and no member may employ men on strike belonging to any factory in respect of which the funds of the association have been voted. In order to prevent disputes between employers and operatives, this association endeavours to work harmoniously with the Lace Trade Board of Conciliation and Reference.

(f.) *Objects.* (f.) The objects of these two associations are very dissimilar in character. The Silk Association wishes "to promote and maintain the silk industry of Great "Britain and Ireland in all its branches, and encourage "the production of raw silk in India and our colonies; "to collect and disseminate amongst its members "useful information and statistics affecting manufacture "and commerce in silk; and to promote technical, "commercial and linguistic education, and any ne-"cessary Parliamentary legislation." The Nottingham Lace Manufacturers' Association, on the other hand, restricts its action to the regulation of the relations between employers and operatives, and wishes "to "promote the trade interests of members by the "introduction and settlement of the best trade rules "and rates of wages, by taking common action on all

[§ 379 (*f.*)] "questions affecting the relations between employers "and employed, and resisting unjust demands on the "part of the employed "(1).

[§ 380 (*a.*)]

380. Written evidence has been received with regard to the United English and Scotch Carpet Weavers' Association, the Kidderminster Power Loom Carpet Weavers' Mutual Defence and Provident Association, the Silk Dressers' Trade Society, the Amalgamated Society of Silk Twisters, the Associated Trimming Weavers' Society of Leek, the Aberdeen Rope and Twine Spinners and Hemp Dressers' Union, and the East London Rope Makers' Union, and the rules of all these societies, with the exception of that last-named, have been laid before the Commission. This same society is also the only one with regard to which oral evidence was given.

(*a.*) The United English and Scotch Carpet Weavers' Association extends over Heckmondwike, Dewsbury, Wakefield, Leeds, Durham, Kendal, Holme, and Barnard Castle in England, and Ayr, Kilmarnock, Aberdeen, and Bannockburn in Scotland, and contains a very large proportion of the operatives in these districts (1). The Silk Dressers' Trade Society extends over Rochdale, Macclesfield, Horbury, Congleton, Galgate, Brighouse, Halifax, Nottingham, Longway Bridge, and Bentham; but the Amalgamated Society of Silk Twisters, established in 1886, and the Associated Trimming Weavers' Society, established in 1871, are both small societies confined to Leek only (2). The East London Rope Makers' Union is composed entirely of women engaged in the jute and rope-making industries in the East End of London, and will be dealt with in the Summary on the Employment of Women. [See §§ 763 (p. 543, 1st col.) and 769, &c.] It was established in 1889 (3).

The numbers of male and female members of these societies, together with the percentages of females and of unionists in the whole number of workpeople employed, are given in a table below.

TABLE showing the Number of Members of various Trades Unions in the minor Textile Industries, the Number of Workpeople employed, and the Percentages of Females and Unionists.

(1) In the oral evidence this number was given as 250. (2) In the oral evidence this number was given as 2,500. } According to these numbers the percentage would be 10 per cent. of women only.

[§ 381 (*b.*) *Constitution and government.*

(*b.*) The government of the various societies is very similar. In all cases there is an executive body, styled Committee, Managing Trade Committee, or General Committee of Management, which consists of the principal officers and generally from five to seven other members. In the Amalgamated Society of Silk Twisters the Managing Trade Committee contains one member from each twisting shed, and an additional member for every 20 members in the shed. The principal officers in all the societies are a president, secretary, and treasurer, two auditors, and from two to five trustees; these societies have also a vice-president, and two an assistant secretary. The five committeemen in the United English and Scotch Carpet Weavers' Association are elected by the district in which the General Committee of Management is located, and this must not be in the same country for more than two consecutive years, unless it is so decided by the vote of a three-fourths majority at the annual delegate meeting. There is a governing branch also in the Silk Dressers' Trade Society which has the right of appointing the seven committeemen. The three largest societies of which the rules have been received have annual delegate meetings, which are attended in the United English and Scotch Carpet Weavers' Association by six representatives from England and four from Scotland, chosen by the various districts; in the Kidderminster Power Loom Carpet Weavers' Mutual Defence and Provident Association by one or two representatives from each factory according to the number of members, and in the Silk Dressers' Trade Society by one delegate from each branch. In the three smaller societies meetings are held annually, half-yearly, or in one case weekly. Special general or delegate meetings may usually be summoned by the chief officers, or on the request of a certain number of members. Regulations for the government of districts or branches according to the same method as the central government are laid down in the rules of the United English and Scotch Carpet Weavers' Association, and the Silk Dressers' Trade Society, whilst in the Kidderminster Carpet Weavers' Mutual Defence and Provident Association the members at each factory appoint a local Committee, secretary, and auditors. Members of the Silk Dressers' Trade Society who have any dispute with the branch Committee may appeal to a general branch meeting, and from this to the central Executive Committee, whose decision is final. In the Amalgamated Society of Silk Twisters, the Associated Trimming Weavers' Society, and the Aberdeen Rope and Twine Spinners' and Hemp Dressers' Union, members may appeal against a decision of the Committee to that of a general meeting, and in the last-named society a further appeal is allowed to arbitration. In this case the member concerned must appoint one arbitrator and the Committee another, and their decision, or that of an umpire chosen by them, must be final. Alterations in the rules of these societies may generally be made only by a special general meeting, or by the annual general meeting if a specified length of notice of such alterations has been given. The rules of the Silk Dressers' Trade Society may be altered at the annual delegate meeting only if three months' notice has been given, and the proposed alterations have been voted on by each branch. If the alterations are proposed by the Executive Committee, two months' notice is sufficient.

[§ 382 (*c.*) *Contributions and benefits.*

(*c.*) Particulars with regard to the entrance fees, contributions, and benefit funds of the various associations are given in the tables below. Members who allow their contributions to run into arrears are usually suspended from all benefits when the arrears have reached a certain amount, and are excluded from the society if they are allowed to run on for a further specified period. In three societies members are subject to a fine of 1*s.* or 6*d.* if they have not paid up all contributions upon the half-yearly or annual meeting night. Any district or branch of the United English and Scotch Carpet Weavers' Association which has not paid its contributions within two months of the time when they are due, is charged 5 per cent. interest upon such contributions.

The Executive Committee may increase the contribution when the funds are below 25*s.* a member. Special levies may be raised during strikes.	6*d.* a week. The contribution may be increased when the funds are below 500*l.*	6*d.* a week, or as determined by the society.	3*d.* a week.

TABLE of Benefits given by various Trades Unions in the Minor Textile Industries.

Benefits.	United English and Scotch Carpet Weavers' Association. No. 395.	Power Loom Carpet Weavers' Mutual Defence and Provident Association, Kidderminster. No. 396.	Silk Dressers' Trade Society. No. 397.	Amalgamated Society of Silk Twisters, Leek. No. 398.	Associated Trimming Weavers Society, Leek. No. 399.
Accident benefit	—	25*l.* is granted to members permanently incapacitated.	—	—	—
Dispute benefit	Victimised members are supported from the funds.	Victimised members receive not more than 20*s.* a week.	10*s.* a week until the end of the strike. Victimised members receive 24*s.* a week until they obtain work.	Amount determined by trade committee in case of strikes. Victimised members receive 20*s.* a week.	—
Distress benefit	—	A grant may be made to any member who is obliged to go into a poor house or lunatic asylum.	—	—	—
Emigration benefit.	—	After 4 years' membership, 3*l.* to go to America, or 5*l.* to go to Australia or Cape of Good Hope. After 7 years' membership, 7*l.* to go to Australia or New Zealand.	—	—	—
Funeral benefit	—	Full members :— After 1 to 4 years' membership, 5*l.* After 4 to 8 years' membership, 7*l.* 10*s.* After 8 to 16 years' membership, 10*l.* Over 16 years' membership, 12*l.* Half may be received on the death of a wife. Members who have been superannuated 5 to 8 years, 2*l.*, and more than 8 years, 3*l.* Trade members :— After 1 or 2 years' membership, 1*l.* or 2*l.* After 5 years' membership, 3*l.* After 8 years' membership, 4*l.* After 10 years' membership, 5*l.*	6*l.* on death of member. 4*l.* on death of member's first wife. 2*l.* on death of member's second wife.	After 6 months' membership, 5*l.*, and for every additional year an additional 10*s.* to a maximum of 10*l.* If a member has left the society and re-enters, 10*s.* for each re-admission is deducted from the amount payable.	After 1 year's membership, 8*l.*, and for every additional year an additional 10*s.*, up to a maximum of 10*l.* 3*l.* of these amounts may be paid on the death of a wife.
Out - of - work benefit.	—	—	10*s.* a week for 13 weeks; 5*s.* a week until work is obtained.	—	—
Sick benefit -	—	8*s.* a week for 20 weeks. 4*s.* „ „ „ 2*s.* 6*d.* a week until recovery. The services of a doctor are provided.	8*s.* a week for 13 weeks. 6*s.* „ „ „ 5*s.* „ until recovery.	—	—
Superannuation benefit.	—	Members over 50 years of age who are incapacitated from regular work receive :— After 20 years' membership, 2*s.* 6*d.* a week. After 25 years' membership, 3*s.* 6*d.* a week.	—	After 20 years' membership, 2*s.* a week.	—

380 (d.)] *Funds.*

(*d.*) The funds are, as a rule, to be banked in the names of the trustees or principal officers, or to be invested in such securities as a general meeting may decide, or as are enumerated in the rules of the society. The rules of the Silk Dressers' Trade Society forbid any money being deposited in the hands of private tradesmen or firms.

Dispute ulations.

(*e.*) In both the associations of carpet weavers any trade dispute must, if possible, be settled locally by the branch Committee or secretary, but if they fail it must be referred to the General Committee, which may not sanction a strike, except with the consent of the majority of the trade. In the Kidderminster Power Loom Carpet Weavers' Mutual Defence and Provident Association such consent may be given only by the votes of two-thirds of the members present at a special delegate meeting, taken by ballot. According to the rules of the Amalgamated Society of Silk Twisters no strike may take place until the Managing Trade Committee has requested the employers to submit the question at issue to a board of arbitration chosen by themselves and the members of the Society. If they refuse, the matter must be referred to a special general meeting. The rules of the Aberdeen Rope and Twine Spinners' and Hemp Dressers' Union also require the Committee to attempt a settlement by arbitration or other lawful means, before a strike is entered upon.

) *Minor ulations.*

(*f.*) All these societies, with the exception of the Amalgamated Society of Silk Twisters, lay down some regulations with regard to apprenticeship. The United English and Scotch Carpet Weavers' Association and the Associated Trimming Weavers' Society only allow one apprentice to be employed for every seven journeymen or seven looms, and apprentices to carpet weaving, trimming weaving, and rope and twine spinning must serve for six years, and those to hemp dressing for four years. The members of the Silk Dressers' Trade Society are required to keep the number of apprentices within due bounds, and no member of the Kidderminster Power Loom Carpet Weavers' Mutual Defence and Provident Association may permit any ineligible person to be taught weaving or to do the work of a weaver. No member of the latter society may work overtime, or may pay for having his work repaired after it has left the loom, under penalty of a fine or suspension from benefits. In two societies a fine is imposed upon any member who boasts of his independence towards his employer, and two refuse support to members who are discharged from their employment for neglect of work or other misconduct. The branch secretaries of the two associations of carpet weavers are required to keep lists of the looms in their districts which are working or not at work, and the general secretary of the Silk Dressers' Trade Society is required to send a list of unemployed members every month to each branch secretary, and all members to report any vacancy of which they may hear to their branch secretary within 24 hours.

) *Objects.*

(*g.*) The rules of the United English and Scotch Carpet Weavers' Association contain no list of objects, but the provision of benefits is mentioned as an object by all the other societies, with the exception of the Aberdeen Rope and Twine Spinners' and Hemp Dressers' Union, which mentions as its only object the protection and improvement of the conditions of work. The Associated Trimming Weavers' Society and the Kidderminster Power Loom Carpet Weavers' Mutual Defence and Provident Association desire to maintain a fair rate of wages, and the latter society aims at regulating the supply of labour, the hours of work, and the relations of workmen and their employers. The Amalgamated Society of Silk Twisters wishes to promote the equitable settlement of all disputes.(1)

int ards.

381. The rules of the Board of Conciliation and Reference for the Lace Trade, Nottingham, have been sent to the Commission. This Board, which was established in 1868, consists of 13 representatives of the Lace Manufacturers' Association and 13 of the Amalgamated Society of Operative Lace Makers. On each side, six representatives are from the levers, four from the curtain, and three from the plain net trade, and all members serve for one year. The board elects annually a president, vice-president, treasurer, and two secretaries, and a Committee of Inquiry, which consists of four employers and four workmen, of whom two must represent the levers, one the plain net, and one the curtain branch on each side. All disputes referred to the Board are in the first instance investigated by this Committee, which may use its influence in settling them, but may not make any award. Should no settlement be thus effected, the dispute must be submitted to that section of the trade with which it is concerned, and if the section is unable to recommend a settlement it must be laid before the full Board, which must proceed to vote upon the question within a period of one month. In case of equal voting, the question must be referred within 14 days to two referees, one chosen by each side, who must appoint an assessor; and if the referees fail to give a decision within seven days, the assessor must be asked to give one within a similar period. The decision of either the referees or the assessor is final and binding upon both parties. If any member of either the employers' or the operatives' association is found guilty, after a careful inquiry, of not complying with the decisions of the Board in respect to the price per rack, &c., he must pay the whole or part of the expenses incurred in such inquiry, and, if an employer, the difference in wages from the time the complaint was made. The associations are held responsible for such payments on the part of their members, and the Amalgamated Society of Operative Lace Makers has full power to withdraw the workmen from the service of an employer who refuses to conform to this rule. The ordinary expenses incurred by the Board are borne equally by the operatives and the employers. It is a regulation of the Board that it will not investigate any dispute unless the operatives are at work.(1) This board is said to have been generally successful in preventing strikes and lock-outs, and for the last 10 years all disputes have been amicably arranged. It is regarded favourably by the more intelligent of the workmen as well as by the manufacturers as a body.(2) No information has been received with regard to any Joint Boards or Committees in the carpet, silk, or rope making trades, nor with regard to the general relations of the associations of employers and of employed in these industries. [§ 381.]

CLOTHING TRADES. Organisations of employers.

382. Evidence has been received with regard to three associations of employers in the clothing trades. These are the Leeds Boot Manufacturers' Association, the Boot and Shoe Manufacturers' Association and Leather Trades Protection Society, and the Master Tailors' Association, all of which have sent copies of their rules to the Commission.

(*a.*) *Their extent.*

(*a.*) The Leeds Boot Manufacturers' Association represents 44 employers or establishments, who together employ a total of 4,500 workpeople, or about two-thirds of the whole number of operatives employed in Leeds.(3) The Boot and Shoe Manufacturers' Association and Leather Trades Protection Society was founded in 1882, and now consists of all the boot manufacturers of any importance in London, and of certain leather merchants and boot manufacturers throughout the country.(4) The Master Tailors' Association, which was founded in 1890, includes some 800 firms amongst its members, and has established branches in all the principal towns in the United Kingdom from Perth and Inverness to Plymouth and Brighton, with the exception of London, where there is an independent association of master tailors.(5)

(*b.*) *Constitution and governmen*

(*b.*) The government of the association is in each case in the hands of an executive body, consisting of a Committee or Central Board of a certain number of ordinary members in addition to the principal officers. The officers are a president, one or more vice-presidents, a treasurer, one or more secretaries and auditors, and they are, as a rule, elected annually. The Committee of the Boot and Shoe Manufacturers' Association and Leather Trades Protection Society is permitted to delegate any of its powers to a Sub-committee. There are annual or half-yearly general meetings of the members of these associations, and special general meetings must be summoned on the request of a specified number of members. The Master Tailors' Association is the only one which lays down any provisions for branch government, and these are on the same principles as those of the central government. Branches may be established in such centres as the local members and the central board may determine, or existing local associations may become branches by affiliation. Disputed questions which cannot be settled by the Committee or Central Board in any association

(1) Tabulated Rules, Nos. 395-9, and 405.

(1) Tabulated Rules, No. 557. (2) Memorandum on the Rules o Boards of Arbitration and Conciliation, p. xxxvi. (3) Answers to Schedules of Questions, p. 765; Digest, Vol. II., p. 21. (4) Digest, Vol. III., p. 12. (5) Digest Vol. II., pp. 29, 32.

[§ 382 (b.)] must be referred to a general meeting, and alterations of the rules may only be made by a general meeting, though the Committee generally has power to make bye-laws.

(c.) Conditions of membership and contributions. (c.) Members of the Boot and Shoe Manufacturers' Association and Leather Trades' Protection Society may be merchants, manufacturers, or wholesale and retail traders in the leather, boot and shoe trades, or dependent industries, but members of the Leeds Boot Manufacturers' Association must be *bonâ fide* boot manufacturers. The annual subscription in the latter society is 10*s.* for each firm, and in the former there is a minimum annual subscription of 10*s.* 6*d.*, which may be increased by the Committee. The branches of the Master Tailors' Association pay 10*s.* 6*d.* for each of their members to the central fund, and have power to levy local subscriptions. Each branch controls its own funds, and may not draw on the central fund except for special purposes, but the central board may pay the expenses of organising or extending any branch. The Committees of the Leeds Boot Manufacturers' Association, and Shoe Manufacturers' Association and Leather Trades Protection Society have the control of the funds, which in the latter association must be applied solely to the promotion of the objects mentioned in the rules.

(d.) Dispute regulations (d.) Each branch of the Master Tailors' Association must appoint an Arbitration Committee, to which all disputes between a member and his workmen must be at once reported. If this Committee fails to effect a settlement, the matter must be undertaken by a branch general meeting, or finally by the Central Board. Disputes between members of the Leeds Boot Manufacturers' Association and their workmen must also be referred to the Committee for settlement by arbitration, if possible. Lists of men out on strike are furnished to all members of this society, and any member who employs such a workman is subject to a penalty of 2*l.*

(e.) Minor regulations. (e.) Each branch of the Master Tailors' Association fixes a statement of maximum prices payable to workmen, and members of the Leeds Boot Manufacturers' Association who adopt new machinery or systems of work are urged also to adopt the rate of wages usually paid by the firms who use such machinery or systems. If no firm in the town already uses the same, a special committee meeting must be called to consider the question. Members of this association are also urged to make inquiries through the secretaries as to the antecedents of persons applying for work, and are forbidden to offer any inducement to a workman to leave his present situation. Members of the Master Tailors' Association who are guilty of breaking any rule or of not complying with any decision of the association are subject to a penalty, and the Central Board may make it a condition of settlement with the operatives' unions that their members shall cease to work for such members until they comply with the regulations of the Board. The members of the Boot and Shoe Manufacturers' Association and Leather Trade Protection Society are required to give notice to the secretary of any information they may receive concerning the affairs of an insolvent debtor, attempts to obtain goods on false pretences, or other matters affecting the interests of members.

(f.) Objects. (f.) The objects of the Boot and Shoe Manufacturers' Association and Leather Trades Protection Society, are chiefly directed to the protection of the commercial interests of members, whilst those of the Master Tailors' Association are mainly concerned with the relations of employers and workmen or the conditions of employment. Thus the former society wishes to prosecute fraudulent debtors, to obtain the appointment of officers of the association as receivers or trustees of the estates of bankrupt persons who are indebted to members, to keep a register of indebted persons, and to communicate with mercantile and public bodies and with the law officers of the Crown, in order to suggest measures for the protection of trade, and the improvement of commercial law. The Master Tailors' Association desires to adopt a national time-log, to prevent the continued deterioration of workmen by classifying them and arranging a rate of payment such that the best workmen shall receive the highest wages, and by altering the system of apprenticeship, so as to provide a sufficient supply of well instructed and skilful journeymen tailors; to defend members in case of arbitrary strikes, and to provide for the friendly settlement of disputes or grievances in the trade. The Leeds Boot Manufacturers' Association mentions no objects except the general ones of promoting the interests of the trade, and securing uniformity of action among manufacturers. [§ 382 (f.)]

Organisations of employed. 383. Oral or written evidence has been received with regard to 15 associations of employed in the various clothing trades. Three of these, viz., the United Clickers' and Rough Stuff Cutters' Trade Union, the National Union of Boot and Shoe Operatives, and the Amalgamated Society of Boot and Shoe Makers, belong to the boot and shoe making trade, and four, viz., the Amalgamated Society of Tailors, the Scottish National Operative Tailors' Trade Protection and Benefit Society, the International Tailors' Machinists' and Pressers' Union, and the Bristol Clothiers' Cutters' Trade Association, to the tailoring trade. Four societies are connected with the hosiery trade; these are the Midland Counties Hosiery Federation, the Leicester and Leicestershire Amalgamated Hosiery Union, the United Rotary Power Framework Knitters' Trade and Friendly Society, and the Amalgamated Hand Framework Knitters' Federation. The remaining societies connected with minor clothing industries, are the Amalgamated Society of Journeymen Felt Hatters, the Felt Hat Trimmers and Wool Formers' Association, the Operative Glovers' Society, and the Leicester and District Elastic Web, Garter, Strand, Tabb and Textile Brace Weavers' Trade Protection Association. The rules of all these societies, with the single exception of the Midland Counties Hosiery Federation, have been been laid before the Commission.(1)

(a.) Their extent. (a.) The United Clickers' and Rough Stuff Cutters' Trade Union extends throughout the United Kingdom and to some foreign countries, but the majority of its members belong to London and the district, where they form about two-thirds of the whole number of workpeople employed. The clickers of the Midland counties shoe towns are not yet members of this society. They formerly belonged to the National Union of Boot and Shoe Operatives, but as "it did nothing for them" they gradually left it, and are now practically without any association.(2) The National Union of Boot and Shoe Operatives, which was formed in 1874, extends over the whole of the United Kingdom. Its principal centres in England are Leicester, London, Northampton, Kettering, Leeds, Norwich, Bristol, Stafford, and Higham Ferrers; in Scotland, Glasgow, Edinburgh, Arbroath, Dundee, and Kilmarnock; and in Ireland, Belfast, Dublin, and Cork. It now includes 45,000 members, of whom only about 600 belong to Dublin as some firms there do not recognise it. The number of members is larger in Belfast, although the firms are smaller in that town than in Dublin. Women form only about 5 per cent. of the union, because until recently no attempt was made to organise them. Since the society was formed it has spent 47,922*l.* 3*s.* on strike payment, 8,486*l.* 10*s.* 4*d.* on compensation for loss, 2,430*l.* 15*s.* 3*d.* on the management of disputes, 4,500*l.* on travelling benefit, 46,321*l.* 8*s.* 4*d.* on sick and funeral benefits, and 6,427*l.* 0*s.* 3*d.* on the expenses of management. These sums, together with the estimated branch expenditure of 50,000*l.*, make a total of 166,086*l.* 17*s.* 3*d.*, and the sum available when evidence was given (February 24th, 1892) was 30,026*l.* 1*s.* 5*d.*(3) The Amalgamated Society of Tailors was established in 1866, and extends over England, Ireland, and some towns in Scotland, but the majority of Scottish towns form branches of the Scottish National Operative Tailors' Trade Protection and Benefit Society. The Amalgamated Society of Tailors has 19,000 members, of whom 3,000 are in London, and they form about one-tenth of the whole number of working tailors in the United Kingdom.(4) The Midland Counties Hosiery Federation extends over the counties of Nottinghamshire, Leicestershire, and Derbyshire, and includes about half of the entire number of workpeople who are eligible for membership.(5) The Amalgamated Hand Framework Knitters' Federation also extends over the counties of Nottinghamshire, Derbyshire, and Leicestershire in England, and has, moreover, branches at Roxburgh and Dumfries in Scotland, but only contains a small proportion of the men engaged in hand framework knitting, and not any of the women.(6) The numbers of male and female members of the various societies, together with the percentages of females and of unionists in the whole number of workpeople employed, are given in the following table:—

(1) Tabulated Rules, Nos. 240-52, 404. (2) Digest, Vol. II., p. 23. (3) Digest, Vol. II., p. 26. (4) Digest, Vol. II., p. 30. Tabulated Rules, Nos. 249 and 252. (5) Digest, Vol. II., p. 18. (6) Digest, Vol. II., p. 15.

(1) These figures are taken from a letter from the secretary of the society, received July 24th, 1893. In addition to the 32,071 full members there are 10,437 members serving their probation, making a total of 42,508 members. In the oral evidence the total was given as 45,000. (2) The unionists were said to form about 10 per cent. of the total. (3) The membership was said to be from 4,500 to 5,000 persons. The arithmetic mean of these numbers has been taken. (4) The whole number of persons employed in the trade, including children, is about 30,000, of whom about 10,000 are eligible for membership of the union. (5) The number of male non-unionists was said to be 400 or 500. The arithmetic mean of this number has been taken. (6) The number of female non-unionists was said to be 6,000 or 7,000. The arithmetic mean of these numbers has been taken. (7) This number was given in the oral evidence with regard to the whole federation. The number returned in the answers to the Schedule of Questions is 678, but this may refer to the counties of Nottinghamshire, Derbyshire, and Leicestershire only. (8) This total represents only the male workers in the Midland counties. The witnesses stated that they had "no cognizance of the great number of women who are employed," and that the statement of the number of men was approximate only. (9) These figures are taken from a letter from the secretary of the society, dated July 25th, 1893. The total numbers employed include those too young to join the union as well as adult non-unionists.

(b.) Constitution and Government.

(*b.*) With regard to the form of government there is a good deal of difference between the rather complicated regulations laid down by the extensive and highly organised societies, such as the National Union of Boot and Shoe Operatives, the Amalgamated Society of Boot and Shoe Makers, and the Amalgamated Society of Tailors, and the very simple constitution of the small societies, like the Operative Glovers' Society, or the Amalgamated Hand Framework Knitters' Federation. In all the societies the transaction of the ordinary business is in the hands of an Executive, which consists of certain officers and a Committee or Council, whilst the supreme authority is vested in a larger body, which, in the case of the larger unions, is usually a conference or delegate meeting, and in the smaller ones is often a general meeting of the members. In a few societies one branch is fixed upon as the permanent or temporary locality of the head office, and hence as the seat of government, and this branch has sometimes a peculiar importance in the society. Thus, in the National Union of Boot and Shoe Operatives the president and treasurer are elected by the votes of branches which are situated within five miles of the seat of government. The principal officers are usually a president, general secretary, treasurer, two or more trustees, and one or more auditors. In the Amalgamated Society of Tailors all the members of the Executive Council act as trustees. Some societies have vice-presidents, and some have assistant secretaries, in addition to the other officers. In the National Union of Boot and Shoe Operatives and the Amalgamated Society of Boot and Shoe Makers, each district or section elects an official termed an investigator, whose duty it is to inquire into and attempt to settle all trade disputes. As already stated, in some of the larger societies Conferences or meetings of delegates are held either in place of, or in addition to, the general meetings. Thus, in the Amalgamated Society of Tailors a Conference is held once in three years, which is composed of delegates from the branches and districts, and to which foreign societies of tailors and the women's societies in the trade are also invited to send representatives, and triennial Conferences are also held in the Amalgamated Society of Journeymen Felt Hatters, whilst in the Amalgamated Society of Boot and Shoe Makers a vote of the union on the propriety of holding a Conference is taken every three years. In the National Union of Boot and Shoe Operatives a Conference is held every two years, and in all other cases the delegate or general meeting is held annually or more frequently. Special Conferences, or delegate or general meetings may, as a rule, be summoned on the initiative of the Executive or of a certain number of members or of branches. Regulations for branch government are laid down by several societies, and in the larger ones the branches are grouped into districts, and these again have a separate government, which, however, follows more or less closely the form of the central administration. Members who are aggrieved by, or dissent from the decision of, one administrative section of the society may as a rule appeal from it to a higher one. Thus there is generally a right of appeal from a branch Executive to a branch general meeting, and from the latter to the district or central Executive, and in some cases there is a further appeal from this body to a general or delegate meeting, of which the decision must be final. Generally speaking, new rules may be added, or existing rules altered or rescinded, only by a general meeting or Conference of the society. In the majority of cases a certain length of notice of the proposed alterations must have been given before they can be discussed, and in the National Union of Boot and Shoe Operatives, the Amalgamated Society of Boot and Shoe Makers, the Amalgamated Society of Journeymen Felt Hatters, the Amalgamated Society of Tailors, and the Scottish National Operative Tailors Trade Protection and Benefit Society, such propositions must first be published in the quarterly report of the society.

(c.) Contributions and benefits.

(*c.*) The amounts of the entrance fees and contributions, and of the benefit funds granted by the various associations, are given in the tables below. Members

[§ 383 (c.)] who are in arrears with their contributions for a certain length of time, which varies in different societies from one to six months, are suspended from benefits until they have paid off their arrears and been a certain length of time "clear upon the books." If, however, they allow their arrears to run on for another stated period they are excluded from the society. In some societies members are subject to a fine if in arrears upon the annual meeting night, and in some cases a fine is imposed when the arrears reach a certain amount. [§ 383 (c.

TABLE of Contributions in the various Trades Unions in the Clothing Trades.

Contribution	6*d.* a week; women, 3*d.* or 2*d.* When funds are below 1*l.* a member a levy can be raised. Extra levy can be laid on members of the out-of-work fund.	1*s.* a week. Boys earning 10*s.* a week pay 6*d.* Superannuated members 6*d.* a quarter, which entitles them to funeral benefit only.	1*d.* a week. A levy may be raised if the funds sink to 100*l.*	6*d.* a week. Sick fund, 2*d.* a week. Apprentices and members 60 years old after 20 years' membership pay 4*d.* a week, or 3*d.* for all except sick benefit. Members leaving trade may contribute 2*d.* for funeral, or 4*d.* for sick and funeral benefits. If the funds are below 10*s.* a member a levy can be raised.	3*d.* a week. Members leaving trade pay 1*d.* a week, and are entitled to funeral benefit.	1*s.* a month. If the funds are too low to meet the claims upon them a levy can be raised.	Not less than 1*s.* 6*d.* a quarter.

[§ 333 (c.)] Table of Benefits in the various Trades Unions in the Clothing Trades. [§ 333 (c.)]

(Tabulated Rules, Nos. 240 to 252 and 404.)

Benefits.	United Clickers' and Rough Stuff Cutters' Trade Union. No. 240.	National Union of Boot and Shoe Operatives. No. 241.	Amalgamated Society of Boot and Shoe Makers. No. 242.	Amalgamated Society of Tailors. No. 249
Dispute benefit	Such sum as the funds allow is granted by the Committee.	If remaining in the branch after 13 weeks' membership, 1s. a day, after 26 weeks, 2s. a day, or 3s. a day if all the men are not ordered out. If member leaves his branch his wife receives 1s. a day and 3d. for each child under 13 for two weeks, after that 6d. a day, and 2d. for each child. Widowed members receive the same allowance for children, and single members supporting invalid parent, brother, or sister receive same as married members. Victimised members receive such amount as branch decides.	If member remains in town, 12s. a week for 10 weeks. If out of town, his wife receives 5s., and 2s. a week for 10 weeks for each child under 13 years of age. Victimised members receive not more than 2l.	Under one month's membership, 10s. a week. Under six months' membership, 12s. a week. After six months' membership, 15s. a week. Superannuated members, 15s., including superannuation benefit. Victimised members, standard rate of wages till employment is found.
Emigration benefit.	—	—	—	—
Funeral benefit	—	3l. on a member's death; 2l. on the death of his wife, or widowed mother if unmarried. No member may receive benefit for a second wife within three years from the death of the first.	5l. on a member's death; 3l. on the death of a member's wife or widow, if the latter has contributed 8d. a quarter. No member may receive benefit for second wife till five years after death of first.	After six months, 6l., and 4l. on the death of one wife. After 12 months, 10l., or 4l. on the death of a wife, and the remaining 6l. on the member's death. Members over 45 after six months receive 6l., or 2l. on death of one wife, and 4l. on their own death. No member can receive benefit for more than one wife.
Out-of-work benefit.	—	—	—	Members thrown out of work through infectious sickness in their homes, if not sick themselves, receive the same benefit as for dispute.
Sick benefit	—	10s. a week for 12 weeks in one year. No member may receive more than 35l. altogether. Women must not exceed 17l. 10s. except as a special grant.	10s. a week for 12 weeks; 5s. a week for six weeks more.	10s. a week for 13 weeks. 8s. " " " 6s. " " " 4s. " " " 3s. 6d. until recovery. Members who have received 18l. 0s. 4d. in two years, get 3s. 6d. until recovery, and are not entitled to further sick benefit till two years have elapsed since their recovery.
Superannuation benefit.	—	—	—	If 60 years of age after 20 years' membership, 5s. a week. After 12 years, 2s. 6d. a week until death.
Travelling benefit	—	A single man leaving branch during dispute, 10s. Married man 5s., or 10s. if his wife goes too, and rail or boat fare not exceeding 6s. Travelling books are issued which entitle members to receive 1s. 6d. a day. No member may receive more than 1l. 10s. a year.	A married man travelling during dispute gets 5s., or with family three weeks pay is advanced to him. A single man receives 1l. Travelling books are issued which entitle members to 20 reliefs of 1s. 6d. in provincial towns, and 2s. in London. Superannuated members receive 6d. in society towns.	Travelling cards are issued which entitle members to receive 1s. 4d. from any branch for 45 days between August 1st and March 31st. No benefit granted April, May, June, July, or November, unless by special order. Benefit not granted twice in the same town within six weeks.

Victimised members receive 12s. a week for 12 weeks, after which their case is considered by Committee.
Emigration benefit.	—	—	—	After one year's membership, 10s. After two years' membership, 1l. After four years' membership, 1l. 10s.	—
Funeral benefit	—	6l., and 4l. on the death of a member's wife. Members may receive benefit for a second wife, if registered for 5s. within six months after marriage. Members' widows entitled to funeral benefit on payment of 1d. a week.	4l.	—	—
Out-of-work benefit.	—	10s. a week, and 1s. for each child under 12 for 13 weeks, if out of work through fire, failure, or retirement of employer. 6s. a week and 1s. for each child under 12 for 13 weeks, if through slackness of trade, temporary stoppages, or breakdown.	6s. a week for 13 weeks.	10s. a week. No member may receive benefit for more than 12 weeks in 12 months.	—
Sick benefit	—	8s. a week for 13 weeks. 4s. „ „ „ 2s. 6d. „ 26 „	—	—	—
Superannuation benefit.	—	—	—	If permanently disabled after three years' membership, not more than 2l. at any one time, at discretion of Committee.	—
Travelling benefit	—	—	—	Travelling expenses granted at discretion of Committee. No member can receive benefit more than once a year. After five years' membership 5s. is given in addition to the travelling expenses.	—

[§ 383 (d.)] (d.) Funds.

(d.) With regard to the investment of funds, the mode to be adopted is usually left to the discretion of the executive, or of a general or delegate meeting. The rules of several societies direct that the funds shall be deposited in the Post Office Savings' or other banks, generally in the names of the trustees.

(e.) Dispute regulations.

(e.) Members involved in a dispute with their employer are generally required to lay the case at once before the secretary or Committee of the branch, or in societies which have no sub-divisions, before the general secretary or Executive Committee. These officials must investigate the matter, and endeavour to effect an amicable settlement, but if they are unable to do so, a general branch meeting, or a general or delegate meeting of the society, must be summoned to consider the question. Before a cessation of work may take place the consent of the central Executive must be obtained, or, if the strike is a general one, the vote of the whole union must in some cases be taken. If the Council of the Amalgamated Society of Boot and Shoe Makers refuses to sanction a strike in any section, that section may refer the matter to the arbitration of three arbitrators, one of whom is chosen by the Council, one by the section concerned, and one by the section nearest to it. The Council of this society and that of the National Union of Boot and Shoe Operatives may at any time appoint fresh investigators to inquire into the conduct of a strike, and to take further measures in order to bring it to a close. Each branch of the latter society must endeavour to form a board of conciliation and arbitration, and when such boards are formed branches must arrange with the employers to give or take three months' notice before enforcing an advance or a reduction of wages. The Council and members of the Amalgamated Society of Boot and Shoe Makers are required by their rules to submit any dispute to arbitration, if requested to do so by the employer, and members or branches of the Amalgamated Society of Tailors receive no support from the Society if they have refused to submit to arbitration. The Council of the Amalgamated Hand Framework Knitters' Federation claims a right of mediation in all disputes, subject to the decision of the delegate meeting. The rules of the Amalgamated Society of Journeymen Felt Hatters state that all picketing is under the control of the Executive Council, to which the general and district secretaries must submit weekly reports of the dispute, and which can declare a strike closed at any time.

(f.) Minor regulations.

(f.) Amongst the minor regulations laid down in the rules there are several which concern apprentices. Thus six societies endeavour to restrict the number of apprentices who may be employed in one shop; the Amalgamated Society of Journeymen Felt Hatters do not allow apprentices to be employed by firms which have journeymen under agreement; and the United Rotary Power Framework Knitters' Trade and Friendly Society requires members to engage their own lads, and not to take anyone of whom they do not approve, but forbids them to entice away boys from their previous employers under penalty of a fine. No objections are made to the system of piece-work by these societies, but in the National Union of Boot and Shoe Operatives members who work for employers who use lasting and finishing machines are required to work on day wages. Members, both of this society and of the Amalgamated Society of Tailors are, however, forbidden to introduce work on day wages into shops where piece-work is the custom. The members of the latter society are also forbidden to work for middlemen or sweaters. The rules of four societies refuse any support to members who lose their employment through misconduct, and members of the English and Scotch societies of tailors who leave unfinished work for which they have been paid are suspended from all benefits until they have refunded the amount. Several societies inflict some penalty upon members who find work for non-members whilst there are any members unemployed. The maximum number of working hours is fixed by two societies, and a standard rate of wages is mentioned in a few cases. Female labour is mentioned only in the rules of the Scottish National Operative Tailors' Trade Protection and Benefit Society, which forbids its members to teach, or prepare or finish work for women, and allows them to refuse to work with women if female labour has been introduced into a shop against their will. The Executive Committee of this society must, however, assist in organising the women employed in the trade. The majority of these societies have some regulations with a view to providing work for unemployed members, and as a rule a register of unemployed members is kept, which must be signed by them daily, or at stated intervals. In the larger societies the branch secretaries are required to send periodical reports to the general secretary, of the state of trade and the number of unemployed in their districts, and the general report of the whole union is furnished to each branch. Fares are in several instances paid for members who remove to a branch where there is a prospect of their obtaining work. [§ 383 (f.)]

(g.) Objects.

(g.) The objects of these associations are various, but those which occur most frequently are the provision of benefit funds, and the maintenance or advance of wages. The establishment of an uniform rate of wages throughout the trade is an object of the United Clickers' and Rough Stuff Cutters' Trade Union, the National Union of Boot and Shoe Operatives, and the Felt Hat Trimmers' and Wool Formers' Association. The second of these societies, the International Tailors' Machinists' and Pressers' Union, and the Bristol Clothiers' Cutters' Trade Association also aim at obtaining uniform hours of labour. The abolition of the sweating system is mentioned amongst the objects of the National Union of Boot and Shoe Operatives, and the International Tailors' Machinists' and Pressers' Union, and three societies of boot makers, and one of tailors, desire the establishments of workshops, or the improvement of those that exist. The regulation of the system of apprenticeship or of boy labour is mentioned by a few societies, and the United Clickers' and Rough Stuff Cutters' Trade Union wishes to abolish piece-work, and to abolish the custom of a week's notice on either side. A few societies also desire to regulate the relations of employers and workmen, and the Felt Hat Trimmers' and Wool Formers' Association endeavours to settle disputes amicably and without strikes. Several societies put forward objects of a more general character, such as the furtherance of the interests and welfare of the members, socially, morally, and intellectually, and the advancement and prosperity of their trade; and in some instances stress is laid upon the necessity for the mutual assistance and co-operation of trades unions in the same or in different trades.

Joint Boards. (a.) Their history

384. (a.) Boards of conciliation and arbitration exist at present, or have been in existence, in connexion with the three chief branches of the clothing trades, viz., hosiery, boot and shoe making, and tailoring. The Nottingham Board of Arbitration and Conciliation for the hosiery and glove trade, which was established in 1860, was the first permanent and systematic board of the kind in England. The trade in question had for some years suffered from constant strikes and lock-outs, and it was in order to avert a proposed general lock-out that Mr. Mundella in 1860 persuaded the manufacturers to meet some of the workmen in a friendly conference. Great difficulty was at first experienced in overcoming the mutual suspicion and hostility of the two sides, but the result of this action was the formation of the Board of Arbitration and Conciliation, which worked with the greatest success for some 20 years. More recently, however, difficulties have arisen, and the Board has fallen into disuse and become practically extinct (1) It was stated, by a representative of the Midland Counties Hosiery Federation that the alleged cause of the breaking up of the Board was, that with the new machinery the men got excellent wages up to a certain time, and then refused to adhere to the Board; but that the real cause of failure was, that the interests of the three or four classes of workmen represented on the Board were not identical. The workmen were said to be in favour of reviving the Board, but the employers are opposed to it.(2) A Conciliation Board for the hosiery trade on the model of the Nottingham one was formed in Leicestershire in 1868, and has had a very similar history, both as regards its great success during many years, and its subsequent failure.(3) It was stated that the periodical meetings of this Board had been dropped since 1884, and that when there had been occasion to refer to it in 1886, it was "in such a state of decomposition" that it could not be got together. The reason of the failure was alleged to be that "the "employers had lost confidence in themselves, and the "workpeople had lost confidence in the employers, and "in themselves, and consequently the board of arbitra- "tion, though it existed, was not called into operation, "because they had no faith in it."(4) A Board of Arbitration and Conciliation for the boot and shoe trade

(1) Memorandum on the Rules of Boards of Arbitration and Conciliation, p. xxxvi. (2) Digest, Vol. II., p. 87. (3) Memorandum on the Rules of Boards of Arbitration and Conciliation p xxxvi. (4) Digest, Vol. II., p. 87.

[§ 384 (a.)] at Leicester has been in existence since 1875, and is said to have been, on the whole, successful, and similar Boards in this trade were established in Northampton some four or five years ago, and in London in 1890, and are also in existence at Kettering and Bristol.(1) A Board of Arbitration and Conciliation, which existed in the Leeds boot and shoe trade, was broken up by the action of the workmen in 1881, in consequence of a reduction in wages following upon an arbitration. A Joint Committee of six manufacturers and six workmen was then formed, which worked satisfactorily in the settlement of disputes, and made what was known as an addendum or addition to the wages list for classes of work of recent introduction. This Committee was, however, broken up in 1890 in consequence of a lawsuit, in which Mr. Judge was engaged, when the employers were believed by the workmen to be acting against him, although "apparently on terms of the greatest "friendship."(2) It was stated by Mr. Lilley, Chairman of the Boot and Shoe Manufacturers' Society, that the London Board of Conciliation had been brought into existence by the Manufacturers' Association, and at first in opposition to the wishes of the workmen. A Board of Conciliation and Arbitration for this trade had indeed been formed in 1884, in conformity with an agreement which closed a five weeks' strike in that year, and sat for several weeks. The London "third-"class statement of wages," which was drawn up by this board was rejected by the men that same year, but the members who belonged to the first and second sections of the Board continued to meet until the autumn of 1887, when further negotiations took place with a view to forming a general Board, but these fell through as the men declined to accept the principle of arbitration. Negotiations were resumed on several occasions, until after a strike of 17 days' duration, a joint conference took place between the representatives of the employers and workmen early in 1890, at which it was finally agreed that a Board of Arbitration and Conciliation should be constituted. This Board has worked satisfactorily since then.*(3) A general arbitration board for the tailoring trade of Great Britain and Ireland was established in 1891, and consisted of six employers elected by the Master Tailors' Association of Great Britain and Ireland, and six workmen, of whom two belonged to the Scottish National Operative Tailors' Society, and four to the Amalgamated Society of Tailors.(4) This Board, however, proved to be quite ineffectual in settling the first disputes submitted to it, and before the end of the year the operatives' associations withdrew from it entirely. Very contradictory accounts have been given of the cause of its failure, but it seems to have been chiefly due to the mutual distrust of the two sides.(5)

(b.) Their organisation.

(*b.*) The rules of the Board of Arbitration and Conciliation for the Hosiery and Glove Trade of Nottingham and District, and of the Board of Conciliation and Arbitration for the Boot and Shoe Trade of London have been obtained by the Commission. The Hosiery and Glove Trade Board consists of 11 manufacturers, who are elected by a public meeting of their own body, and 11 operatives, elected by a meeting of the various branches of the trade, and the London Boot and Shoe Trade Board consists of eight manufacturers and eight workmen, elected by general or special meetings of their own bodies. The elections in each case are annual, and the members of both Boards appoint every year a president or chairman, vice-president or vice-chairman, one or two secretaries, and a Committee of Inquiry, consisting of four members. These Committees of Inquiry must investigate disputes in the first instance, and endeavour to effect an amicable settlement, but failing to do so must report them to the Board. Ordinary Board meetings are held once a quarter, and on a request, signed by three members, being sent to the president or secretary specifying the nature of the business for consideration, a special meeting must be summoned. If at any meeting both the president and vice-president are absent, the members present elect a temporary chairman. In the Hosiery and Glove Trade Board the chairman has a casting vote in addition to his ordinary vote, but in the London Boot and Shoe Trade Board a deliberative vote only. The latter Board has a rule that the number of voters upon each side must be equalised by the withdrawal by ballot of the number of members who are in excess upon either side, and that no member may vote upon a question in which he is directly interested. In both cases alterations of the rules may be made only at a quarterly meeting or special meeting convened for the purpose, and notice of proposed alterations must be given one month beforehand. Any expenses which are incurred by these Boards must be borne equally by the employers and the operatives. Any complaints submitted to the Boards or Committees for investigation must be embodied in writing, stating clearly the nature of the question at issue, such statements to be sent in one week or three days before a Board meeting. The rules of the Hosiery and Glove Trade Board require that a month's notice of any desired advance or reduction in the rate of wages must be given before the Board can consider the matter, and the London Boot and Shoe Trade Board lays down that any changes in modes of working which involve alterations in the hours of labour or the scale of payments must be matters of notice, and, so far as possible, of arrangement beforehand, so as to avoid needless subsequent disputes. It is also required in the rules of this Board that any complaint on the part of the workmen must first be brought before the employer or his representative, and if no settlement takes place the representative of the union must see the employer. If he cannot settle it, the work in dispute, or portions of it, must be marked by the employer and workmen's representatives, and submitted to the Committee of Inquiry. In case of disputes, work must be given out and received, and payment made, as previously, until the decision of the Board, or if the dispute concerns a new class of work, the decision of the Committee of Inquiry is binding until that of the Board is given. If any suspension of work takes place on either side the Board may refuse to inquire into the matter in dispute until work is resumed, and will take the fact into account in considering the case. The rules of the Hosiery and Glove Trade Board make no provision for reference to arbitration, but in the London Boot and Shoe Trade Board, two arbitrators, who must both be practical men, must be elected, one by the employers, and the other by the workmen, and these must elect an umpire, to act if called upon. Any question which is referred by the Board to the arbitrators must be argued before them by the chairman and vice-chairman of the Board, or by any two members, of whom one must be a workman and one an employer, and the arbitrators have power to call witnesses, and to require the production of books and documents by any or either of the parties to the dispute in question.(1) [§ 384 (b.)]

General relations between employers and employed.

385. In the hosiery trade organisation appears to be very incomplete amongst the operatives, and is non-existent upon the side of the employers. The failure of the Conciliation Boards is chiefly due to this fact, and in Nottinghamshire and Derbyshire there is said to be much discontent on account of the different prices paid by various employers. In Leicester and the neighbourhood, however, the relations of employers and operatives in this trade are said to be fairly good.(2) In the London Boot Clickers' industry the relations of the employers and operatives are very unsatisfactory, as the employers have opposed and refused to recognise the men's union, and disregarded an attempt made by the union to enter into negotiations with a view to establishing a board of arbitration. In the other branches of the London Boot and Shoe

* The following extracts are taken from the "Times" of July 10th and July 20th, 1893:—

"*Arbitration in the Shoe Trade*:—The National Federation of Boot and Shoe Manufacturers' Associations has ordered the immediate suspension of all shoe-trade arbitration boards throughout the country. This step, which, if persisted in, will lead to numerous strikes in all the shoe-making centres of England, has been taken by the employers in consequence of a strike at Messrs. Smith, Son, and Company's factory at Bristol, where the men's union object to the introduction of what is known as the team system. It is a condition of all the arbitration boards that there shall be no strike or lock-out in the matter to be arbitrated upon; but the men's union declines to allow the men to go back unless the cause of the strike, the new system of labour, is removed. Notices have been sent to the members of arbitration boards in all the trade centres that there will be no meetings for the present."

"The strikes and the notices for a lock-out in the boot and shoe trade were formally withdrawn, yesterday, by both the National Federation and the National Union handing the requisite notices to Sir Thomas Wright, who at once telegraphed them from Leicester to the various centres affected. The whole of the questions in dispute will be referred to the National Arbitration Board, of which Sir Thomas Wright is president, and, failing an agreement, they will be referred to Sir Henry James, the umpire, whose decision will be final. Sir Thomas Wright is also formulating a scheme whereby substantial guarantees will be required from both sides for the prevention of strikes and lock-outs."

For the recommendations of the Sub-Committee appointed in August 1892, to draw up a code of rules for the prevention of strikes and lock-outs in the boot and shoe trade generally, *see* the Appendix to this Summary on p. 276.

[§ 385.] Trade, however, good relations have prevailed since the formation of the Board of Arbitration and Conciliation, and similar conditions exist in Northampton. In Leeds also the relations between employers and men in the boot and shoe trade are said to be good upon the whole, although difficulties have arisen through the refusal of unionists to work with non-unionists (1). The relations between the organisations of employers and workmen in the tailoring trade are still far from good, and the master tailors complain that the men refuse to recognise their association, although they recognised that of the operatives. They believed that the men regarded their association as "an upstart affair," because it had only been established for two and a half years, whereas the Amalgamated Society of Tailors had existed for 26 or 27 years. The operatives stated that they suspected the Master Tailors' Association of being a "mere bogus affair," as they had never been able to ascertain of whom it was really composed. They had broken off negotiations with this society on the subject of a national time log, because they did not consider it able to enforce its decisions, but they would be willing to meet the masters again, so soon as they were better organised (2).

2. CONCILIATION, ARBITRATION, AND MEDIATION.

oncilia-on. 386. The existing and proposed Boards of Conciliation or Joint Committees in the textile and clothing trades have already been considered amongst the organisations, and it has been seen that there is a very large consensus of opinion in favour of such systems for the settlement of disputes. In the textile trades, it is true, that comparatively little has yet been done in the actual establishment of such boards, but a desire for them is expressed by both employers and operatives, and the still imperfect organisation of some branches of the trades appears to be the chief obstacle in the way of their further development. In the clothing trades, upon the other hand, two long established and very successful boards in the hosiery trade have recently fallen into decay, and are practically extinct, but a new group of boards which have arisen in the boot and shoe trade seem to have already had a fair amount of success, and to be likely to continue in operation.

rbitration, pinion in vour of. 387. There is a wide-spread feeling in favour of arbitration in the clothing and textile trades, with the exception of the cotton industry in Lancashire. It is, however, difficult to select from the evidence many arguments or many instances in support of this favourable attitude. The terms Conciliation, Arbitration, or Mediation are used somewhat indifferently by the witnesses, and no particular distinction is drawn between the Board of Conciliation and Arbitration, the Board of Arbitration, and the individual arbitrator. But in theory, at least, they are in favour of some system of arbitration as a last resort, on the general ground of the desirability of avoiding dead-locks and strikes. In spite of unsatisfactory attempts in this direction, especially in connexion with the less highly organised trades, and those in which there is no definite system of conciliation, a general tendency towards this method of settling disputes is observable. This attitude towards arbitration has not, however, generally speaking, resulted in the insertion of a clause in the rules of the associations providing for reference to arbitration before a strike or lock-out may take place, nor in the formation of Boards of Arbitration.

xperience f arbitra-on. 388. A clause providing for arbitration exists, however, in the rules of the Dundee and District Mill and Factory Operatives' Union, the Amalgamated Society of Tailors, and the Employers' Association in the same trade, and the President of the Dundee Operatives Union stated that the workers were "favourable to arbitration," and "quite willing to act up to the rule."(3) Mr. Inskip, of the Boot and Shoe Operatives' Union, recommends local boards of conciliation and arbitration, and in the case of a federation of employers, a central board in addition. "I am of opinion," he continued, "that had such a board been in existence the lock-out "at Bristol would not have taken place, and the "consequent loss to the union and to the employers "would have been avoided." It may be noted in corroboration of this opinion that the dispute was brought to a close when referred to arbitration.(4) It appeared from the evidence of Mr. Lilley and Mr. Freak, who represented respectively the masters' and the men's associations in the boot and shoe trade, that the system of arbitration which now prevails in London and Nottingham was the "outcome of strikes," and had not been brought about without a good deal of difficulty, on account of the opposition of the men. "This," they stated, "has now been overcome," and the boards of arbitration which have been established provide a carefully graduated system by which the intervention of the arbitrator is reserved for extreme cases. "The union (has) agreed in writing that under "no circumstances shall the men leave off work. In "fact, if they leave off work, they are out of court for "coming to the board." "As a body," said an employer, "it has been absolutely loyal to the board."(1) The recent history of arbitration in the tailoring and hosiery trades has been less successful. In both cases however, the witnesses expressed themselves strongly in favour of this method of settling disputes.(2) Reference was made to more or less unsuccessful attempts in the direction of arbitration, in which, according to the evidence of the men, the difficulty appeared to lie chiefly in the unwillingness of the employers to submit to that method of settlement. Mr. Inskip mentioned a dispute on a technical point in the boot and shoe trade at Bristol, which was referred to the arbitration of Mr. Manfield, member for Northampton, but the employers afterwards procured an alteration of the award and the dispute broke out again. "We persisted in having the dispute referred "(again) to arbitration, and after the men had been "locked out some weeks, the employers consented, and "the verdict of the umpire, who was a manufacturer, "was in favour of the workmen."(3) Mutual distrust and misunderstanding appeared to be the cause of the failure of the recent attempt at arbitration in the tailoring trade. According to one witness one of the difficulties arose from the demand of the men for local arbitration in the particular dispute, while the master tailors wished all points at issue to be settled by general arbitration for the whole trade. Other difficulties arose with respect to the method as well as the scope of the proposed arbitration, and the men's union broke off negotiations with the employers' association. But both sides appeared equally favourable to the principle of arbitration in itself.(4) Mr. Taylor, a member of the Irish Linen Lappers' Trades Union, stated that his union had offered to refer a dispute that was then going on to arbitration, but that the Linen Merchants' Association refused to agree to this step. In consequence, they were at a "dead-lock," though the men were "perfectly willing to abide by the offer." He considered that a court of arbitration in Belfast would be "very desirable," but as "(they) were only two years in existence, they could scarcely act first."(5) Mr. Ward, assistant secretary to the Gas Workers' and General Labourers' Union, gave similar evidence with regard to a strike that had been going on for 23 weeks at Berry's Serge Factory in Devonshire. "We have "approached the employer several times and offered "to submit the case either to arbitration or to the "Plymouth Board of Conciliation, but he has refused "point blank."(6) Various attempts are being made to supply some system of arbitration, which may be taken advantage of by any trade, where there is no express provision for settling any dispute that may arise. These partake of the character of arbitration, conciliation, and mediation, though they are differently named in the several instances. The object of the "Mayor's Arbitration Board" which has recently been established at Leicester is that "in case little differences "could not be settled by the people themselves, there "should be a sort of appeal board."(7) Mr. Wates, a partner in a worsted spinning firm, and the President of the Chamber of Commerce, was appointed chairman. He stated that the board was composed of men "representing totally different trades," because it was thought that this would result in a more "unbiassed" and "dispassionate" treatment of the questions submitted to it. Appeal was only to be made to the supreme board in the last resort, when the individual board of arbitration belonging to the particular trade had come to a dead-lock. He thought that this contingency was likely to arise, because as these local boards were composed of "an equal number of em-"ployers and employed . . . I always feel that "the weak point is the want of an umpire, who should

[§ 388.] "be, so to speak, outside it all."(1) A somewhat similar board was described by Mr. Arnold Forster. The Bradford Board of Conciliation was constituted under the auspices of the Bradford Chamber of Commerce, and having in this way an external origin was of necessity a "permissive body," and only took action on the invitation of the two parties. No provision is made for the appointment of an umpire in the rules of either of these boards. The former, it was stated, had not been in existence long enough for its services to be called into requisition, but the members of the latter on one occasion were equally divided and no settlement was possible.(2) The "original idea" of the board on this point, Mr. Arnold Forster added, "might have to be amended." The Leeds Board of Conciliation was formed in 1890, and has been instrumental in settling several disputes. Mr. Beckworth, president of the Board, and of the Leeds Chamber of Commerce, explained that its object was to "mediate" between the two parties, when disputes arose which could not be settled by the boards of arbitration in the separate trades. When a dispute occurs the board proffers its services, but until both sides are willing to accept them, no steps are taken. The word "arbitration," he added, "has not been "found acceptable, and, as a matter of fact, in working "these things we have found that mediation is really "what is wanted." The points of difference are gradually narrowed down, and "by mutual mediation" a settlement has been arrived at in two cases at least.(3) Corroborative evidence as to this board was given by the vice-president and the secretary, both working men.

Arguments against arbitration.

389. The opposition to arbitration in this group of industries comes exclusively from the textile trade in Lancashire. With one doubtful exception all the employers in the district as well as the operatives are of opinion that disputes are most satisfactorily settled by the joint committees or local boards of conciliation. "It is very much better," Mr. Rawlinson stated, "to "throw the responsibility of an important decision "upon those whom the decision will affect, than "to throw it upon independent parties."(4) Moreover, it is urged these boards are composed of practical men, acquainted with the technicalities of the trade, but it is impossible to find an arbitrator who is both impartial and competent. "I am afraid," Mr. Wilkinson stated, "a difficulty would arise in selecting the referee. If "the employers had to select a man, naturally we know "on which side he would be, and ditto with the men. If "they could agree on a suitable man and a man who "could understand the technical points, then it might "do."(5) Again, Mr. Birtwistle asserted that the employers, on one occasion, "said that it was a matter "that no one but an employer himself could under-"stand. The operatives, on the other hand, would "scarcely trust an employer to be a referee. There is a "lot of technical knowledge required to solve these "questions which we believe none but ourselves under-"stand thoroughly."(6) "I do not think," said Mr. Rawlinson, an employer, in reference to a refusal to submit a dispute to the arbitration of the late Bishop of Manchester and Lord Derby, "that it would have "been prudent to entrust the destinies of a great trade "to the opinion of any single individual who neces-"sarily could not know anything of the details and "intricacies of the trade,"(7) and Mr. Mawdsley, Secretary of the Amalgamated Association of Operative Cotton Spinners, and a member of the Commission, expressed the opinion that "if (we) had arbi-"tration (we) would have much less wages than (we) "are getting now. Arbitrators generally go for a "certain standard of profit for capital, generally speak-"ing it has been 10 per cent. We are opposed to the "system altogether: we have tried it. Mr. Thomas "Hughes was our arbitrator at one time, and he gave us "a reduction of wages when profits were bigger than "they were when we got the last advance." This witness mentioned another case in which Mr. Hinckes, M.P., was appointed umpire, by the arbitrators chosen by either side. "The operatives did not get any [§ 389.] "advance, though, if they had been organised as we "are, there is not the slightest doubt that they would "have had 5 per cent. They would have come out on "strike for it and they would have got it within a "week."(1) Another objection to arbitration which was raised by Mr. Noble, an employer, was to the effect that "it generally takes a half course, and these settle-"ments are not, as a rule, satisfactory."(2) This view was supported by an operative, who added that, "in "most arbitration cases the arbitrator simply splits "the difference between the two disputants, irrespective "of the merits of the case."(3) So much was arbitration distrusted that Mr. Birtwistle stated "the "difficulty is to induce people to accept it."

Method of arbitration. Compulsory or voluntary arbitration.

390. There is not much evidence on the question whether arbitration should be compulsory or voluntary, but the great majority of the witnesses either implicitly or explicitly expressed their preference for the voluntary system. Mr. Judge, representing the Leeds branch of the Boot and Shoe Operative Union, stated that he "failed to see how compulsory arbitration "could be carried out. If an award were made by a "Government official, and the men were told they "must take it, and then a man said, 'Well, I give in "'my notice, I will not work any longer,' I would not "care to see that made a penal offence, which it must "be in order to make compulsory arbitration worth "anything."(4) "You cannot compel a man to work," Mr. Beckworth added, "and you cannot compel an "employer to go on with his employment of labour. "You can only bring to bear the force of public "opinion."(5) On the other hand, three employers and one trades union official were in favour of compulsory arbitration. "Unless an umpire was a permanent "official and his award enforceable by law, disputants "would rarely agree in the selection of an umpire," said Mr. Simpson, a cotton manufacturer, and the only advocate of arbitration in the Lancashire textile industry. Mr. Gordon, a master tailor, also desired to see the compulsory settlement of all disputes by boards of Conciliation and Arbitration. "If an employer would "not submit to the award," he added, "we would turn "him out of the association."(6) Mr. Simpson admitted the difficulties involved in any proposal of this nature, but the only definite attempt to meet them was made by Mr. Freak, president of the National Union of Boot and Shoe Operatives, and Mr. Lilley, chairman of the Boot Manufacturers' Association and of the London Board of Conciliation and Arbitration. These witnesses proposed that "an Act should be passed setting up a "tribunal to which appeal should be made." This Act should require boards of Conciliation and Arbitration to be registered in a similar way to a public company, and the magistrates' court should be the court to which appeal should be made to enforce the decisions of the registered boards. Any dispute arising should first be submitted by the secretary to the sub-board of arbitration, then, if necessary, to the full board, then to the arbitrators, and finally to the umpire. As to the enforcement of the decision of the board by the magistrate, it was stated that if two parties entered into a contract to abide by the decision of a tribunal, this decision must be enforced by a penalty similar to that which attaches to any breach of contract. This would be more practicable if the law required every man to sign a contract to submit to arbitration, in which case the association would cease to act, "they would become "individuals entering into a contract." Other difficulties, it was suggested, might be met by the bestowal of legal powers on the board, in the direction of "coercive authority." Fines might be imposed on either masters or men who wished to leave the association rather than submit to an award. The "legal "remedy would be very seldom put into force, except "in extreme cases; the knowledge that there was some "sort of legal sanction would have a great moral effect "on both sides." What was really wanted, it was stated, was an effective authority by which the associations of employers and the trade unions could control their own members.(7)

C. TRADE DISPUTES.

1. GENERAL RELATIONS BETWEEN EMPLOYERS AND EMPLOYED.

[§ 391.] Effect of organisation on trade disputes.

391. It appears from the evidence given in connexion with the textile and clothing industries that, either with the greater development of personal intercourse between employers and employed, or with the increase of organisation among them, strikes tend to become much less frequent and severe. Thus, a representative of the firm of Southwell and Co. stated that strikes were very infrequent in the carpet trade. "I have "always felt," he added, "that we have owed a great "deal of our exceptional peace . . . to seeing a "good deal of the men and knowing them and interest- "ing ourselves in them . . . and if employers "could do a little more in that direction I have always "thought that that would avoid many strikes, because "... there would be sympathy between the men "and their employers. A very great deal depends on "the personal element in these discussions. . . . I "feel certain it is much better, without calling in "anyone to deal with the employers and employed "direct in the first instance."(1) It was, however, urged by the greater number of witnesses that organisation on both sides was the best preventive of disputes. "A good organisation of employers and a good "organisation of workpeople," Mr. Mullin stated, "tend to lessen disputes and bring about speedy settle- "ments." The operatives "want every employer to "join the Employers' Association, and then, we think, "the biggest part of the strikes will be averted." Members of the Employers' Association are better informed as to the customs of the trade, and where "masters and men" are through their representatives "brought into closer contact and more frequent asso- "ciation with each other a better understanding" prevails. Thus, Mr. Noble stated that "with the closer "connexion and feeling that has come into operation "of late years between the two unions . . . a better "feeling is being established." This understanding has tended to grow year by year, while "the disputes "have become less and less." If the employers would cultivate a closer relationship with the officials "of the operatives' associations it would be the means "of preventing strikes."(2) In the comparatively unorganised industries, evidence was also given to the effect that the tendency to dispute was lessened with the development of organisation. The case was mentioned of a strike of women in 1891 at the Pier Cordage Works, Millwall, on the conclusion of which the manager said that "if he had known he was going to have an "organised strike, he would not have held out at all."(3) In the East Scotland Power Loom Tenters' Association disputes were stated to be "still becoming less, especially "where the men workers can claim the intervention of "a union."(4) Mr. Jonathan Peate asserted that he had "very strong reasons" for believing that "as the "workers become more organised a better state of "things will exist in the future between workmen and "employers."(5) It may be noted that although, in the industries under consideration, proposals of arbitration offered by one side concerned in the dispute have in a few cases been refused by the other, conferences, attempts at mediation or arbitration have preceded most of the important strikes.(6)

Causes of trade disputes.

392. The great majority of strikes in the textile and clothing industries have been caused by disputes connected with wages, and Mr. Holmes stated that "Where "the trade is organised, it is very seldom indeed that "a strike is agreed upon by the association for any- "thing else."(7) "In the cotton industry of Lancashire "reductions in wages are a fruitful source of strikes,"(8) and threatened reductions have also caused strikes among the jute workers of Dundee and the dyers of Bradford. Strikes for an advance of wages (9) have occurred among the spinners at Bradford and the dyers' labourers at Hawick, while others have been caused by the absence of a standard rate or scale.(10) One case is mentioned of a strike for a reduction of wages.(11) With regard to unionism, it was stated that "Another "source of strife in the boot trade is the antipathy of "employers to see the chosen representatives of the "workmen in case of dispute."(12) "Overbearingness "of union" was given as the cause of a dispute in a boot factory at Carmoustie.(1) And in the Hinckley and Leicester districts, and in one case at Colchester strikes have been caused by refusals on the part of employers to recognise the union.(2) In one instance it was stated that "the employer has locked out eight "men . . . simply and solely because they are mem- "bers of a trades union; there is no dispute about "price."(3) The introduction of labour-saving machinery has been the cause of several disputes.(4) In other instances disputes are said to have arisen from the employment of women and boys instead of men.(5) A few instances were given of strikes caused by refusal of compensation for bad material,(6) long hours of work,(7) and the conduct of officials.(8) Personal, local, and technical causes (9) were mentioned as having given rise to minor disputes in the boot and shoe trade in particular.

2. SPECIAL STRIKES.

Textile Trades.

Cotton trade, N. and N.E. Lancashire 1883–4.

393. In 1883–4 a strike took place in the cotton trade which affected the whole of North and North-East Lancashire, but which "on account of the threats by "the employers to lock out the whole of the districts(10) located itself practically in Blackburn. For a long period before the strike it was stated that business "had been very bad," "there were many failures," and many works "were closed through bankruptcy." "Employers," Mr. Rawlinson added, "were driven "either to reduce their wages or to close their works;" "it was a simple choice between the two."(11) The matter in dispute was a proposed 5 per cent. reduction in wages, over which the two sections of the joint committee of the Employers' and Workmen's Associations failed to agree. This reduction, it was stated, "was "considered a fair reduction by the leaders of the "operatives."(12) "As a matter of fact, the weavers in "Preston, Accrington, Burnley, and other districts "accepted it," but "in Blackburn, Darwen, and "Padiham they over-ruled their leaders."(13) The strike began in December 1883 and ended in February 1884. In the end a compromise was effected between the masters and men, in which the terms of settlement were "that the work should be resumed with a 5 per "cent reduction until June 1884."(14) "The operatives, "therefore, went back to work upon the same terms as "those against which they struck, but an arrangement "was made that the whole subject should be reviewed "in the May following."(15) This undertaking was carried out, and as trade had slightly improved in the interval,(16) the 5 per cent was restored in the first week in July. Arbitration(17) was stated to have been proposed by the operatives as a means of settling the dispute, but was declined almost unanimously(18) by the employers. The persons suggested as arbitrators were the late Bishop of Manchester and Lord Derby. The Secretary of the North and North-East Lancashire Cotton Spinners' and Manufacturers' Association stated that, had the arbitration been accepted, "the employers "would have suffered more loss; there would have "been more machinery standing, and altogether the "state of things with the 5 per cent. advance would "probably not have been better than it was with the "5 per cent. reduction."(19) He added that he "did not "think it would have been prudent to entrust the "destinies of a great trade to the opinion of any single "individual who necessarily could not know anything "of the details and intricacies of the trade."(20)

Power loom weavers, W. Yorkshire. 1883

394. A considerable strike occurred in 1883 among the power loom weavers of the West Riding of Yorkshire.(21) About 1881 an attempt had been made by the workpeople to get the firms in the district to pay a uniform rate of wages. "To a certain extent they "were successful. There was no employers' associa- "tion at that time." (22) In consequence of the action, however, the employers organised and "after some "considerable time" (23) brought out a statement of wages. "The men said that it was not good enough,

[§ 394.] "and they refused to accept it. That was the cause "of the strike." The strike lasted 12 weeks, and resulted in the men's acceptance of the scale after a few concessions had been made. It still involved a reduction of wages, which fell more heavily upon the women than the men. The reason given for this was that "at the time there were considerably more men "weavers in the trade than women weavers and . . . "the attention of the committee . . . was directed "more to the question of men's labour than of women's "labour.(1) It was stated that the want of organisation in the trade was "very bad,"(2) and that "the "women were very badly organised; even worse than "the men.(3) The scale even in its modified form was "forced upon the workmen"(4); they had no share in drawing it up,(5) and "nothing but the pinch of "hunger," it was stated, "drove them to accept it."(6) The strike was said, however, to have left the union richer than when it began, because at first it had practically no funds, "but levies were laid as far as possible "to meet the expenditure which was going out."(7)

Jute and linen workers, Forfar 1889.

395. In 1889 a strike took place among the jute and linen workers of Forfar.(8) A demand was made for an increase of wages of 5 per cent. "because of an increase "that had been conceded at Dundee;"(9) the demand was denied, and the men in two of the factories of the town struck work. In one they were successful in three days in gaining their demand; in the other they "could not get the employers to respond reasonably "about the matter."(10) After they were out two weeks, all the other firms in the town locked out their operatives. For 10 weeks the number on strike was 500, and the total number both on strike and locked out by the employers was 2,400. At the end of that time the dispute was settled by conciliation, through the influence of Dr. Thornton, the town clerk. The men earning less than 20*s.* got an advance of 5 per cent.; those earning less than 17*s.*, an advance of 7½ per cent. There was no increase in the women's wages, because "the union's funds and all the money collected . . . "were exhausted, and the employers also were pre-"sumably tired of the dispute."(11) A promise was given that the women's claims should be considered in the spring of 1890, but this had not been fulfilled by 4th December 1891. The concession of the employers, Mr. Roy asserted, was "a promise that looked larger "than it was in reality. The number who were to "participate in the rise was comparatively so small "that it was not as much as if they had given 5 per "cent. to the women alone, who were the parties who "struck."(12) The strike cost the Factory Workers' Union about 2,400*l.*(13)

Spinners Shelley Road Mill, 1890.

396. In 1890 a strike occurred at the Shelley Road Mill, Preston, belonging to Messrs. Hartley Brothers.(14) "The spinners alleged that their earnings has been "reduced in consequence of bad material put in by "Hartley Brothers"(15) and claimed compensation. It was stated by a representative of the mill-hands that the strike was due to mismanagement (16) on the part of the manager; but this charge was contradicted by the chairman of the Cotton Operatives Society of Preston.(17) The secretary of the North and North-East Lancashire Cotton Spinners' and Manufacturers' Association asserted that in the first instance "it was "a very trumpery dispute; 30*s.* would have settled "it."(18) The employer, however, refused compensation; and when the representative of the Cotton Operatives Association saw him and intimated that they would demand it, brought the matter before the executive of the employers, who refused to give him permission to pay the claim. The secretary of the Employers' Association went through the mill, saw the material, and acknowledged that the spinning was bad but refused compensation, "as it was the principle of "the thing they objected to."(19) The strike began on 23rd January 1890, when a legal notice was given and the mill picketed. Implicit instructions were given to the pickets that under no circumstances were they to use violence, but several cases of intimidation were reported. Five persons were summoned and convicted,(20) and the Preston Association paid the fine in one case "because from the evidence that they had "they did not believe the man had been guilty of the "charge that was preferred against him."(1) Mr. Rawlinson stated that "there was a good deal of shouting "and hooting. Hartley Brothers imported hands, and "they were sent back again and terrorised."(2) Mr. Wilcock, one of the imported hands asserted, but the statement was denied by Mr. Stewart, that when they went to work they found that the machinery had been loosened in order that injury might result.(3) The employer carried on his work during the strike by means of imported labour, and "had half the machinery "running for a considerable portion of the time."(4) The strike lasted about six months, and was finally settled by the local union. The individual strikers were not consulted(5), and it ended in the men "re-"turning to work on the same terms that they came "out."(6) They considered that they could have settled it better themselves "when they saw Mr. Hartley "about three weeks before."(7) About 1,800*l.* was spent in strike pay by the Operatives' Association during the strike, and 1,500*l.* was paid by the Employers' Association to Messrs. Hartley Brothers as compensation for the loss they incurred.(8) [§ 396.]

CLOTHING TRADES.

Hosiers, Leicester, 1888.

397. A strike occurred in 1886 among the Leicester hosiers.(9) Prices were "very unequal," and a meeting was held between employers and employed, and a uniform list of prices drawn up, signed by representatives of both sides. It was stated by one of the employers that "as soon as the lists were issued, there "seemed to be some misconception on the part of the "people that their own representatives had not secured "quite as good lists as they might have done, so they "struck against their own representatives really."(10) A representative of the employed, however, stated that the strike "arose first through one of the employers "endeavouring to supersede men by boy labour,"(11) and that after this strike had continued some time, "the employers combined, taking us, as they thought, "at our weakest, and endeavoured to introduce a "reduction all round. The result was a general strike "throughout the town, and an entire stoppage of the "whole of the factories."(12) The Mayor of Leicester mediated between the two sides, and a list was arranged which "was not a reduction all round, but "was more of a revision. In some cases it was an "advance; in some cases it was a reduction; but on "the whole we stood pretty much where we were "before."(13)

Tailors at Southport, 1891.

398. About a month after an arrangement had been made for the settlement of all disputes by arbitration, the operatives in Southport sent their employers a circular demanding "an advance of ½*d.* per hour on our "present prices, *i.e.*, 5*d.* and 5½*d.*"(14) The employers of the Southport Branch of the Master Tailors' Association refused this demand, and the result was a strike.(15) The branch therefore requested the intervention of the executive of the Master Tailors' Association, which, according to its settled policy, advised a reference to the General Arbitration Board. The employers agreed to this course, but the workmen would only agree on condition that any increase of pay which the board might grant should date back to the day the men resumed work. The condition was granted and work was resumed. On May 11th, 1891, the following award was issued by the board: "We recommend the masters "in Southport to pay the advance of ½*d.* per hour "demanded by the men, on condition that the classi-"fication of material, as printed in the time log, be "strictly adhered to; the machine to be used at the "discretion of the employers."(16) The Southport workmen refused, however, to abide by this decision, or to submit to further arbitration, and again went out on strike. For eight weeks the executive of the Masters' Association made efforts to put an end to the strife. During this time the employers were able to get their work done and carry on their business. The men therefore demanded an individual undertaking from two members of the executive, Messrs. Allen and Johnston, not to assist the Southport masters on pain of the immediate withdrawal of the workmen from the firms of which they were partners. The undertaking was declined, but arbitration as to the justice of the demand was offered. The men's union refused it, and withdrew the workmen. The Liverpool branch of the association then unanimously resolved to lock out all

[§ 398.] union workmen till the men withdrawn from the two firms returned to work. After the strike had lasted for eight weeks the Liverpool men had to return without the undertaking they struck to enforce, and the Southport men were induced, by the exhaustion of their funds, and the apparent hopelessness of the struggle, to submit to independent arbitration. The first question submitted to the arbitrator was whether under the award of May 11th "day wage and machine men" were entitled to an advance of ½*d.* per hour. The operatives contended that they were, the employers that they were not, on the ground that they were paid at a higher rate than 5*d.* and 5½*d.* an hour, and were therefore not included in the demand. The arbitrator's decision was as follows: "The representatives of the "men contended that the refusal of the employers to "pay this 'back money' to 'day wage and machine "men' was a breach of the award. I do not agree "with this, By paying the advance (and the back "money) to men previously receiving 4½*d.* and 5*d.* "per hour, the employers have, in my opinion, complied "with the decision of the Arbitration Board upon this "point . . . I think the Southport employers acted "wisely in advancing the wages of their 'day-wage "and machine men,' but had they done otherwise "I could not have said that they were refusing to "comply with the award."(1) The second point submitted was the classification of materials. According to the secretary of the Master Tailors' Association "this question of classification lay at the bottom of "the dispute at Southport,"(2) The men contended that if the employers forced goods which had hitherto been paid first-class into the second-class scale, the advance of ½*d.* per hour was "illusory." On the other hand, an employer stated that "in Southport they had "put nearly all the common and inferior tweeds into "the first class."(3) It was, however, conceded before the arbitrator that the employers intended by giving a "new reading" to the classification of goods to prevent the operatives getting the full advantage of an advance of ½*d.* per hour. He decided that, "in his opinion, a "new reading was not authorised by the award."(4) No change should have been made in the classification without either the previous consent of the operatives or an appeal to arbitration, and as the employers sought the change, they should have taken the initiative to put the arbitration rules in force. The arbitrator finally advised the consideration of Mr. Gordon's proposal that "the two executives should make up "bunches of patterns into first and second class "material for the guidance of employers and employed "at Southport."(5) That course has not been adopted, however, "and at the present time it is still an open "question; we cannot get the men to submit these "bunches for consideration."(6)

3. PICKETING AND INTIMIDATION, AND LEGISLATION RELATING THERETO.

Conspiracy and Protection of Property Act.

399. With regard to the Conspiracy and Protection of Property Act,(7) it appears from the evidence that the opinions of employers and employed differ very widely. The representatives of the employés were almost unanimously agreed that "the seventh section of the Act is "a danger to trade unionists,"(8) especially to those in positions of authority. It is stated in that section that:—"Every person who, with a view to compel any other person to abstain from doing or to do any act which such other person has a legal right to do or abstain from doing, wrongfully or without legal authority:

"1. Uses violence to or intimidates such other person, or his wife or children, or injures his property; or,

"2. Persistently follows such other person about from place to place; or,

"3. Hides any tools, clothes, or other property owned or used by such other person, or deprives him of or hinders him in the use thereof; or,

"4. Watches or besets the house or other place where such other person resides, or works, or carries on business, or happens to be, the approach to such house or place; or

"5. Follows such other person with two or more other persons in a disorderly manner, in or through any street or road, shall, on conviction by a court of summary jurisdiction, or on indictment as herein-after mentioned, be liable either to pay a penalty not exceeding 20*l.*, or to be imprisoned for a term not exceeding three months, with or without hard labour. [§ 399.]

"Attending at or near the house or place where a "person resides, or works, or carries on business, or "happens to be, or the approach to such house or place, "in order merely to obtain or communicate information "shall not be deemed a watching or besetting within the "meaning of this section." Mr. Judge stated, however, that he had been convicted on the sole ground of having written a letter to an employer to the effect that if he continued to discharge men because they were seen speaking to him, his men would be withdrawn and his premises picketed. This was held to be an illegal threat, and Mr. Justice Stephen emphatically stated that a threat causing any kind of fear was an offence. This decision was, however, overruled by the Court of Appeal. Mr. Judge considered that the use of such language should be dealt with under the ordinary Police Act. He "would not justify the offence, but "would modify the punishment."(1) Mr. Marston was of opinion that "the 7th section of the Conspiracy Act "operates very arbitrarily against trades unions, and "ought to be abolished,"(2) and Mr. Keir proposed "to "wipe the 7th section of the Act altogether out of the "Statute Book, and treat a man who tries to intimi-"date his fellow man under the common law." He denounced the clause as one "directed distinctly "against trades unionists. It creates an offence, and "it punishes you for the offence afterwards."(3) As regards picketing, Mr. Inskip considered that the workmen have been unduly interfered with,(4) but that they already have sufficient rights under the Act if properly interpreted(5). "We only want our right of obtaining "and communicating information recognised."(6). He desired, therefore, "that the Act should be so amended "that magistrates and the clerks who advise them "should not have the power they now have of reading "the 7th section without reading also the saving "clause."(7) A resolution was stated to have been carried unanimously at a meeting of the Amalgamated Society of Tailors at Liverpool, in August, 1891, to the effect "that this conference is of opinion that section 7 "of the Conspiracy and Property Act of 1875 ought to "be brought into accord with the saving clause of that "section, seeing that there have been several instances "where the meaning of the Act has been misconstrued "in courts of summary jurisdiction and superior "courts, thereby causing needless expense and anxiety "to trade unionists."(8) The employers, on the other hand, with one exception, would like to see the laws of picketing made a little more stringent.(9) Reference was made by several to the great difficulty of obtaining convictions.(10) Mr. Simpson held that "the only way "of dealing with the difficulty is to do away wholly "with picketing . . . . . I should make "it a point of damages . . . . . I "think it would be much easier to get juries to give "damages in a civil action than it is to get justices to "convict."(11) Mr. Russell "would certainly put down "picketing by legal means,"(12) and Mr. Allen "would "not allow pickets of more than one person."(13) Mr. Gordon "would like to see a sufficient protection "afforded to those men who are willing to continue "their labour for the employers,"(14) and Mr. Noble thinks "that the law should make it an offence to "follow and hoot at the hands and to intimidate them "in various ways, though without doing them bodily "injury."(15) Mr. Rawlinson, on the other hand, held that the law is strong enough. "It is in the impossi-"bility of administering it in the spirit in which it was "drawn that the difficulty lies."(16) He could, however, suggest no specific alteration either in the law or in its mode of administration.

GEOFFREY DRAGE,
Secretary.

APPENDIX.

RULES FOR THE PREVENTION OF LABOUR DISPUTES IN THE BOOT AND SHOE TRADE.*

At the conference of the Federated Associations of Boot and Shoe Manufacturers and the National Union of Boot and Shoe Operatives, held in August 1892, a sub-committee was appointed to draw up a code of rules for the prevention of strikes and lock-outs, and to secure the reference of all trade disputes to arbitration. This sub-committee accordingly recommended that a permanent board of conciliation and arbitration should be established in each trade centre, and that every question affecting the relations of employers and workmen, collectively or individually, should be submitted for settlement to such local boards. The constitution and rules of the London Board of Conciliation and Arbitration were recommended as a model for other centres. All disputes should be at once referred to the secretary of the local board, and by him to the investigators, or, failing these, or in the event of their being unable to settle the matter, to the committee of inquiry. Any question which cannot be decided by the committee of inquiry must be referred to the local board of arbitration and conciliation to decide or refer to the arbitrators or umpire. If, for any reason, a local board is unable to appoint arbitrators or an umpire, the president of the Federated Associations and a member appointed by the executive of the National Union of Boot and Shoe Operatives are empowered to appoint the arbitrators, and failing their decision the matter must be referred to an umpire appointed at an annual conference between the executive committee of the Federated Associations and a committee of an equal number representing the National Union of Boot and Shoe Operatives. If the employers or operatives desire to amend the existing prices or conditions they are required to give at least three months' notice, to come into operation at the beginning of a season, and if it is decided by the local board that the proposed change involves a new principle, it must be referred to the conference, pending the decision of which no steps must be taken to enforce the change. It is particularly urged that on no account should there be any cessation of work, at the instigation of either employers or employed.

* Minutes of Evidence Vol. III., Appendix CXIV.

GROUP C.

SUMMARY of the EVIDENCE, oral and written, received by GROUP C. of the ROYAL COMMISSION ON LABOUR.

PART II.—CHEMICAL, BUILDING, AND MISCELLANEOUS TRADES.

A. CONDITIONS OF LABOUR:

Page.

1. WAGES.—(i.) *Statements of Wages* - - - - - 282
(ii.) *Profit-Sharing and Co-operation* - - - - 293
(iii.) *Superannuation Funds* - - - - - 295

2. HOURS.—(i.) *Statements of Hours* - - - - - - 295
(ii.) *Limitation of Hours; e.g., Early Closing and the Eight Hours' Day* - - - - - - 303

3. STATE AND MUNICIPAL EMPLOYMENT - - - - - 307

4. INSPECTION AND REGULATION OF FACTORIES AND WORKSHOPS, AND LEGISLATION RELATING THERETO - - - - - - 307

5. ACCIDENT FUNDS AND EMPLOYERS' LIABILITY, AND LEGISLATION RELATING THERETO - - - - - - - 309

6. SICK FUNDS AND CONDITIONS OF EMPLOYMENT IN RESPECT OF HEALTH - 311

7. OTHER CONDITIONS OF LABOUR - - - - - - 313

B. ORGANISATIONS:

1. ORGANISATIONS OF EMPLOYERS, ORGANISATIONS OF EMPLOYED, AND JOINT BOARDS - - - - - - - - - 314

2. CONCILIATION, ARBITRATION, AND MEDIATION - - - - 326

C. TRADE DISPUTES:

1. GENERAL RELATIONS BETWEEN EMPLOYERS AND EMPLOYED - - 328

2. SPECIAL STRIKES - - - - - - - - - 329

3. PICKETING AND INTIMIDATION, AND LEGISLATION RELATING THERETO - 333

NOTE.

IN accordance with a Resolution of the Commission, the Secretary was directed to prepare Summaries of the Evidence (oral and written) received by the Committees. This Evidence includes:—

1. The Minutes of Evidence, with Appendices.
2. The Answers to the Schedules of Questions.
3. The Rules of Associations of Employers and of Employed, and of Joint Boards.
4. The Rules of Accident, Sick, and Superannuation Funds handed in to the Commission.
5. Certain other Documents handed in or forwarded to the Commission, but not printed with the above.

Under the head of Chemical, Building, and Miscellaneous Trades, these include:—

Letters from five doctors, testifying to the injurious effects of the long hours upon shop assistants, especially upon females; handed in by Mr. Milligan.

Report of the London United Trades' Committee of Carpenters and Joiners upon the "Eight Hours' Movement," &c.; handed in by Mr. Dew.

6. Further Correspondence on certain subjects.

N.B.—The following official sources of information have also been consulted:—

(i.) Statistical Tables and Report on Trade Unions, Fifth Report, 1891.
(ii.) Report on the Strikes and Lock-outs of 1891, issued by the Board of Trade.
(iii.) Returns on Hours of Work, ordered by the House of Commons, on the motion of Mr. Broadhurst (375, 1890).

PART II.—CHEMICAL, BUILDING, AND MISCELLANEOUS TRADES.

A. CONDITIONS OF LABOUR.*

1. WAGES.

(i.) STATEMENTS OF WAGES.

[§ 400.] I. BUILDING AND COGNATE TRADES. Sources of information.

400. The following tabular statement of the average weekly wages of various classes of workmen in the building and cognate trades has been drawn chiefly from the Statistical Tables and Report on Trade Unions for 1891 published by the Board of Trade, and from the written evidence given in to the Commission, which has been supplemented in a few cases by the oral evidence taken.

[§ 400]

TABLE showing the Means of Returns of Weekly Wages in the Building and Cognate Trades, arranged in descending order.†

References.	Class of Workmen.	Weekly Wages. £ s. d.	REMARKS.
Minutes of Evidence, Vol. II., Appendix XXX. Statistical Tables and Report on Trade Unions for 1891, pp. 160–163.	Bricklayers -	1 12 6⅜	In the returns for 108 districts given by the National Association of Master Builders the average weekly wages of bricklayers are found to be 32*s.* 5⅜*d.*, and in the returns for 177 districts given by the Operative Bricklayers' Society they are found to be 32*s.* 7½*d.* The amount given in the table is the mean of these two results.
Minutes of Evidence, Vol. II., Appendix XXX. Statistical Tables and Report on Trade Unions for 1891, pp. 189–192.	Plumbers - -	1 12 6⅛	In the returns for 112 districts given by the National Association of Master Builders the average weekly wages of plumbers are found to be 31*s.* 8½*d.*, and in the returns for 107 districts given by the United Operative Plumbers' Association they are found to be 33*s.* 3¾*d.* The amount given in the table is the mean of these two results.
Minutes of Evidence, Vol. II., Appendix XXX. Statistical Tables and Report on Trades Unions for 1891, pp. 193–197.	Masons - -	1 12 3¼	In the returns for 119 districts given by the National Association of Master Builders the average weekly wages of masons are found to be 31*s.* 10⅝*d.*; in the returns for 136 districts given by the Operative Stonemasons' Friendly Society they are found to be 31*s.* 11½*d.*, and in the returns for 46 districts given by the United Operative Masons' Association of Scotland they are found to be 32*s.* 11⅝*d.* The amount given in the table is the average of these three results.
Minutes of Evidence, Vol. II., Appendix XXX. Statistical Tables and Report on Trade Unions for 1891, pp. 185–188.	Plasterers -	1 12 3	In the returns for 111 districts given by the National Association of Master Builders the average weekly wages of plasterers are found to be 31*s.* 2½*d.*, and in the returns for 94 districts given by the National Association of Operative Plasterers they are found to be 33*s.* 3½*d.* The amount given in the table is the mean of these two results.
Minutes of Evidence, Vol. II., Appendices XXX. and XXXIII. Statistical Tables and Report on Trades Unions for 1891, pp. 176–179.	Carpenters and joiners.	1 12 0⅜	In the returns for 118 districts given by the National Association of Master Builders the average weekly wages of carpenters and joiners are found to be 30*s.* 9⅛*d.*; in the returns for 298 districts given by the Amalgamated Society of Carpenters and Joiners they are found to be 32*s.* 0½*d.*; in the returns for 86 districts given by the General Union of Operative Carpenters and Joiners they are found to be 33*s.* 11¾*d.*, and in the returns for 100 districts given by the Union of Associated Carpenters and Joiners they are found to be 31*s.* 4¼*d.* The amount given in the table is the average of these four results.

* The few suggestions with regard to the publication of statistics, given in the oral and written evidence, have been dealt with in the Summary of the Evidence given before the Commission Sitting as a Whole, under the head of "Labour Department."

† The returns from which the averages have been obtained are for 1891 in all cases except in those of coopers, coachmakers, and brickmakers, in which it is not stated whether they are for 1890 or 1891. Returns of rates of wages in the various districts and for the various classes of workmen for July 1893, have been sent to the Commission by the National Association of Master Builders. These show several local changes in rates of wages, but the alterations made by them in the general averages are so slight that it has not been considered necessary to point them out.

§ 400.] TABLE showing the Means of Returns of Weekly Wages in the Building and Cognate Trades, arranged in descending order—*continued.* [§ 400.]

References.	Class of Workmen.	Weekly Wages. £ s. d.	REMARKS.
Minutes of Evidence, Vol. II., Appendix XXX. Statistical Tables and Report on Trades Unions for 1891, pp. 180–185.	Painters - -	1 10 11¾	In the returns for 109 districts given by the National Association of Master Builders the average weekly wages of painters are found to be 28*s.* 6¾*d.*; in the returns for 48 districts given by the Amalgamated Society of House Decorators and Painters they are found to be 32*s.* 4*d.*, and in the returns for 66 districts (of house painters only) given by the National Amalgamated Society of Operative House and Ship Painters and Decorators they are found to be 32*s.* 0½*d.* The amount given in the table is the average of these three results.
Minutes of Evidence, Vol. II., Appendix XXX.	Slaters - -	1 10 6⅝	This is the amount of the average weekly wages of slaters as found from the returns for 93 districts given by the National Association of Master Builders.
Digest, Vol. II., pp. 54–55. Answers to Schedules of Questions, pp. 54–57.	Coopers - -	1 10 4¾	This is the amount of the average weekly wages of coopers as found from the oral and written evidence relating to six branches of the Mutual Association of Coopers and the Coopers' Branch of the Dock, Wharf, Riverside, and General Labourers' Union.
Statistical Tables and Report on Trade Unions for 1891, pp. 198–200. Answers to Schedules of Questions, pp. 40–45. Digest, Vol. II., p. 44.	Cabinet makers -	1 9 9¾	In the returns for 51 districts given by the Amalgamated Union of Cabinet Makers the average weekly wages are found to be 32*s.* 4½*d.*; in the returns for 16 districts given by the United Operative Cabinet and Chair Makers' Society of Scotland they are found to be 29*s.* 4¾*d.*, and in the answers from eight branches of the Alliance Cabinet Makers' Association they are found to be 27*s.* 8½*d.* The amount given in the table is the average of these three results, and is further corroborated by the oral evidence of the Secretary of the Alliance Cabinet Makers' Association, who stated that the average earnings were under 30*s.*, although in good shops more was earned.
Answers to Schedules of Questions, pp. 409–415.	Coachmakers -	1 6 5¼	This is the amount of the average weekly wages of coachmakers as found from the written evidence of nine employers.
Answers to Schedules of Questions, pp. 375–381. Digest, Vol. II., p. 40.	Brickmakers -	1 6 1½	This is the amount of the average weekly wages of brickmakers as found from the written evidence of seven employers and the oral evidence of a representative of the Operative Brickmakers' Society of Nottingham.
Minutes of Evidence, Vol. II., Appendix XXX.	Plasterers' labourers.	1 1 1⅜	This is the amount of the average weekly wages of plasterers' labourers as found from the returns for 105 districts given by the National Association of Master Builders.
Minutes of Evidence, Vol. II., Appendix XXX.	Masons' labourers	1 0 9¾	This is the amount of the average weekly wages of masons' labourers as found from the returns for 114 districts given by the National Association of Master Builders.
Minutes of Evidence, Vol. II., Appendix XXX.	Bricklayers' labourers	1 0 8⅛	This is the amount of the average weekly wages of bricklayers' labourers as found from the returns for 109 districts given by the National Association of Master Builders.

Note.—In the tables given in by the National Association of Master Builders the rates of wages per hour are given alone. In order to find the average weekly wages, the average rate per hour was first determined, and this multiplied by what was found to be the average number of hours worked per week.

iformity rates of ges.

401. It will be noticed that there is considerable uniformity in the rates of wages thus obtained for the different classes of workmen, those of all workmen engaged in the building trades proper (with the exception of the labourers) lying between 30*s.* 6¼*d.* and 32*s.* 6½*d.* There are, however, in all these classes of labour extensive local variations. Thus the rates per hour quoted by the United Operative Plumbers' Association vary from 5½*d.* in Londonderry to 10*d.* in London, and those quoted by the Operative Bricklayers' Society vary from 5*d.* at Cromer to 9*d.* in most of the large and northern towns.

cent ances in ges.

402. In the majority of these trades there have been recent advances in wages, which are attributed to trade union efforts, and in some cases to the effect of strikes. Thus during the year 1891 there were advances in the rate of wages in—

96 branches of the Amalgamated Society of Carpenters and Joiners,
46 branches of the Operative Bricklayers' Society,
45 branches of the United Operative Plumbers' Association,
31 branches of the National Association of Operative Plasterers, and
28 branches of the Operative Stonemasons' Friendly Society,

as well as numerous similar advances in the branches of smaller societies. (1) The alterations that have taken place in the weekly wages of masons in some of the larger towns of Scotland since 1869 are shown in the following table. (2)

(1) Statistical Tables, &c. for 1891, pp. 163, 174, 188, 192, 196. (2) Minutes of Evidence, Vol. II., Appendix XXX.

[§ 402.] TABLE of Masons' Weekly Wages in Seven Years in Seven Towns in Scotland. [§ 402.]

Town.	1869.	1872.	1876.	1880.	1884.	1888.	1891.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.

Inverness - -	1 4 11½	1 4 11½	1 11 10½	1 6 6¾	1 6 6¾	1 10 9¾	1 10 9¾

Note.—Wherever two rates have been given for one year the arithmetic mean has been taken.

It will be seen from the above table that there was a general reduction in masons' wages in Scotland between the years 1876 and 1880, and in the oral evidence this was attributed to the effect of the City of Glasgow Bank failure in 1878, after which "there was an entire stoppage" of the building trade in the district. (1) Since 1880 wages have gradually risen again, but have not yet recovered the 1877 rate. A similar movement took place in the wages of carpenters and joiners in Glasgow and of masons in England at the same time. (2)

Mode of payment.

403. Wages in the various branches of the building trades are as a rule calculated by the hour and paid weekly. In Scotland the wages of carpenters and joiners are said to be paid fortnightly in some cases, and in Dublin they are calculated by the day instead of the hour, whilst in a few small towns in England they are calculated by the week. (3) Piece-work is much disliked by the builders' trades unions, several of which forbid their members to work in this manner. It is stated that piece-work leads to a reduction of wages and to work of an inferior quality. It is, however, seldom practised except in "sweating" shops, and in making staircases, for which special hands are necessary. Task-work is also disliked and not recognised by the unions. (4) Cabinet makers are paid according to three different systems, by time-work, piece-work, or lump-work. In piece-work the workman undertakes a piece of furniture at a certain price after reckoning minutely the cost of every detail. In lump-work, on the other hand, the details are not taken into consideration, but the employer gives out a piece of furniture to be made at a price fixed by himself or the workman on a mere guess as to what the cost will be. Something is then paid on account each week until the article is finished, when the balance is made up. This system is much disliked by the workmen, who regard it as a form of sweating, and speak of "the rotten system of lump-" work, getting full pressure out of the best workmen " and rating the others at the same level." In the best shops payment is by the hour or the day. (5) The substitution of cheap furniture for high-class work is, however, said to be on the increase, and this is attributed partly to the large number of foreign Jews who have entered the trade both in London and Leeds, and who learn to make only certain parts of a piece of furniture which is divided up between several persons. These foreigners carry on the trade in their own houses or in "shanties," and work long hours for very small wages. They sell their work to furniture dealers, and as they must be paid before 2 o'clock on Saturday in order to buy wood for the following week's work, if they are too late to cash their cheques at a bank they are obliged to take them to another salesman to cash them for a small commission. Or if they cannot sell the work at all they leave it in pawn, on the understanding that they will receive whatever price it fetches minus the commission and a small advance which is made upon it to enable them to buy wood. In other cases the employers pay their foreign workmen in advance, in order to keep them bound to work under very unfavourable conditions. (6) Coach makers are as a rule paid by piece-work, though weekly wages are also common, (1) and coopers are paid either by day-work or on piece-work according to prices fixed by mutual agreement. In the Newcastle district there are said to be three sections of coopers' work, viz., tight work for dairy produce, and dry work for the brewery and the spirit trades, and a standard price is fixed for each article. (2) On the East and West coasts of Scotland all the journeymen coopers engaged in making barrels for fish agree to make a certain number every week, from 20 to 30, and are paid by the week, thus working by a kind of task-work. (3) Task-work is also mentioned in cabinet making, but no particulars are given with regard to its nature. (4)

Sub-contracts.

404. The sub-contract system in building is a frequent subject of complaint upon the part of the workmen, who explain that their grievance only refers to those cases in which a master builder allows some of his workmen to undertake part of a building on their own responsibility, or in which the sub-contractors do not provide materials, but simply pay the wages of the workmen. In the first case the work is sometimes sub-let to the men on the promise of a certain payment, but without any written agreement. It is said that they accept the work at a price too low to allow of any profit, and when they ask for the balance due to them the employers find fault with the work and refuse it. (5) In the second case the sub-contractors have no reputation to lose and therefore pay low wages, adulterate the materials, and scamp the work. "Sub-letting practically means that the same " amount of work is squeezed out of four men by a " scamping system that would in an ordinary way be got " out of five men . . . . In bricklaying . . . . . " a certain master will take the job of laying bricks on " a certain building at so much a thousand or so much " a yard. Then he will employ . . a couple of men " who are well known in the trade as 'bell-horses.' Pro- " bably they are two of the strongest men he can get; " he will give them, perhaps, 3*d.* or 4*d.* an hour more " than he will give to the other men, and they take the " corners and some of the leading parts of the building, " and push the line up as fast as they can. The general " line of men who are working along it have to keep " up level as the line is moved, otherwise they are dis- " charged." (6) A similar complaint is made of the "sweating" employers in the outlying districts of London, who are said to choose their foremen simply on account of their power of driving the workmen, although they may be quite ignorant of the higher technicalities of the trade. Ready-made carpentry is said to be made by the cartload for jerry builders in sweating shops of this kind. (7) The trades unions have, however, no objection to the form of sub-contracting which is usual when a large contractor undertakes the whole of a building and sub-lets the various branches of the work, still retaining the responsibility of the whole. It was stated by some employers that the sub-letting of portions of the work which require special skill is an advantage to all concerned, and that

[§ 404.] plumbing, plastering, marble, mosaic and smiths' work are generally recognised as specialities. In some cases the architect specifies in the agreement that the plumbing or plastering shall be sub-let, and even mentions the name of the man who is to take it. The effect of this system upon wages is said to be good rather than the reverse, for while ordinary master builders only pay the wages current in the trade, specialists often pay ½*d.* an hour more in order to secure the best workmen. (1) A form of sub-contracting is common in coach-building according to which the employer gives out the work to certain men "who are "selected for their good qualities, and who engage the "men who work under them; they are also responsible "for the excellence of the work, and pay the men they "engage." The workmen, however, complain that these piece-masters, or sub-contractors, make their profit by getting the men under them to work as cheaply as possible, and that "in some shops one man "has all the work, much to the loss of the other men "employed." (2) The system of sub-contracts appears to prevail in some districts amongst cabinet makers and coopers, as at High Wycombe, where "most of the "polishing and a large per-centage of the upholstering "and some parts of the back-making are paid through "a sub-contractor;" and at St. Helens', where coopers are paid through a sub-contractor "in two or three "shops out of six"; whilst in other neighbourhoods the system is almost unknown. (3)

Variations of wages.

405. In all branches of the building trades there are considerable local variations in wages, as has been already pointed out. These variations are in some cases attributed to want of organisation rather than to any local differences in the circumstances of the labourers, and amongst house painters they are said to be due to the employment of unskilled men who "scamp" their work and to the severe competition amongst the workmen. (4) Insufficient scope for variations in wages was complained of by a non-unionist representative of the carpenters and joiners, who stated that the influence of the trade unions reduced wages to a dead level, so that the masters were unable to pay higher wages to the superior workmen. He did not advocate a strict classification of the workmen with regard to wages, but thought that the foreman might be allowed discretional power in the matter. Several employers supported his view of the tendency of the unions to make the wages of good and bad workmen equal. (5) There are considerable local variations in the wages of cabinet makers, and it is stated that the wages of coachbuilders vary more with the locality and the shop than according to skill. They are generally highest where the union is strong, but the latter has made no attempt to establish a uniform rate of wages throughout the kingdom, as this would be impossible under the present system of different classes of workshops. It has, however, endeavoured to keep up the general rate of wages, and to establish higher ones in the high-class shops. (6)

Irregularity of employment.

406. Work is irregular in all the building trades, as some branches are directly dependent upon the season and weather, and their irregularity affects the other trades. There is least irregularity from this cause amongst carpenters and joiners, but even for them work is very scarce during January, February, and March. (7) Brickmakers, bricklayers, and stonemasons appear to suffer most in this respect, and are said to be "em-"ployed six months in the year, and stopped in wet "weather," or to be fairly well employed in the summer, and subject to starvation in the winter. (8)

(1) Digest, Vol. II., p. 40. Digest, Vol. III., pp. 15, 16. (2) Digest, Vol. II., p. 54. Answers to Schedules of Questions, pp. 53, 408. (3) Answers to Schedules of Questions, pp. 41, 55, 57. (4) Digest, Vol. II., pp. 34 and 42. (5) Digest, Vol. II., p. 36. Digest, Vol. III., p. 15. (6) Digest, Vol. II., p. 54. (7) Digest, Vol. II., pp. 33 and 37. (8) Answers to Schedules of Questions, pp. 116, 117.

[§ 406.] Similar complaints were made with regard to house painters, a large proportion of whom are unemployed from October to March. The representatives of two societies of house painters considered that far more painting could be carried on in the winter than was customary, and suggested that if public work were done during the slack time it would render employment more regular. (9) In other trades the employment is said to be fairly regular, except for some seasonal fluctuations Thus coachmakers have usually a slack season during the winter, and are very busy in the spring, whilst for cabinet-makers "the first quarter of the year is gene-"rally very quiet, the summer busy, and August and "September slack, and then till Christmas good." (2) The coopers' trade is often dependent upon some other industry, the fluctuations of which affect the coopers directly. Thus at St. Helens it depends upon the bleaching powder trade; at Hull upon the oil trade; on the east and west coasts of Scotland upon the fishing; and at Belfast upon the whiskey trade. (3)

Allowances and deductions.

407. There are very few allowances in addition to wages mentioned in these trades, but coopers employed by breweries are generally given an allowance of beer, and those employed on the west coast of Scotland sometimes have free lodgings and food provided for them. Food is also sometimes provided for Jewish cabinet makers. (4) There are as a rule no fines or deductions from wages in the building trades, with the exception of occasional deductions for the purpose of insurance. The payment of railway fares by the men in going to their work was mentioned as a grievance by two witnesses, one of whom referred to the large amount of money spent in this manner by the lath-renders, whose work is very irregular, and who are obliged to take a job wherever they can get one. (5) The other witness, himself an employer, desired that employers should be legally bound to pay the railway expenses of men sent to work in the country. (6) Attention was also called to the fact that carpenters provide their own tools, which cost from 10*l.* to 25*l.*, and the witness therefore recommended that employers should provide a watchman to take care of them. (7) Deductions from wages to pay for the use of gas or other artificial light are common in the case of cabinet makers, and often amount to 6*d.* a week, and one large firm at Hull is said to stop 5 per cent. on all earned by the piece amongst chair-makers, but amongst coopers and coachmakers the only direct stoppages are for loss of time. (8) Both coopers and cabinet makers are required to provide their own tools, which for the former are worth about 4*l.* a set, whilst those of cabinet-makers are worth about 15*l.* a set, and cost 1*s.* a week for grinding and repairs. (9)

II. PRINTING AND COGNATE TRADES.

Sources of information.

408. The oral and written evidence which has been received with regard to the wages of workmen engaged in the printing, bookbinding, and cognate trades is summarised in the four tables below. The rates which have been quoted in these sources for the various districts of the Scottish Typographical Association and the Bookbinders and Machine Rulers' Consolidated Union have been compared with those quoted in the "Statistical Tables and Report on Trades Unions" for 1891, and when a difference occurred the rate quoted in the tables is that given in the latter publication, as it is probably of a more recent date than the one given in the evidence. Any divergence of this kind has, however, been noticed in the remarks on the tables.

WAGES of different Classes of Workmen in Printing and Cognate Trades.

References.	Society.	Weekly Wages.	REMARKS.
Digest, Vol. III., p. 56	London Society of Compositors.	38*s.* average for day work 55*s.* for night work. 46*s.* 6*d.* total average.	Men employed on night work earn an average of from 50*s.* to 60*s.* The arithmetic mean is taken.
Answers to Schedules of Questions, p. 95. Digest III., p. 57.	Printing Machine Managers' Trade Society.	35*s.* (average)	In the written evidence it is said that 30*s.* is a fixed minimum, but many members get from 32*s.* to 40*s.* In the oral evidence wages are said to vary from 35*s.* to 80*s.* or 100*s.*
Digest, Vol. III., p. 54. Answers to Schedules of Questions, p. 93. Statistical Tables, &c. for 1891.	Amalgamated Society of Lithographic Printers.	32*s.* 6*d.* average for United Kingdom.	Local variations from 28*s.* at Aberdeen to 42*s.* in London.† Minimum recognised by Society is 30*s.* a week, but the majority are said to earn more, and in some cases 47*s.* 6*d.* or 50*s.*
Digest, Vol. III., p. 80	National Union of Paper Mill Workers.	42*s.* 6*d.* average for machine men. 36*s.* 6*d.* average for beaters. 18*s.* average for machine assistants. 21*s.* 6*d.* average for beaters' assistants. 29*s.* 7½*d.* (total average).	Average wages for machine-men are said to be 35*s.* in the North of Scotland and South of England, and 50*s.* in the Midlands and North of England; wages of beaters vary from 28*s.* to 45*s.*; those of machine assistants from 15*s.* to 21*s.*, and those of beaters' assistants from 18*s.* to 25*s.* In all these cases the arithmetic mean has been taken, but this is probably below the true average, especially in the case of the machine men.
Digest, Vol. III. p. 55	Lithographic Stone and Zinc Preparers' Society.	25*s.* for polishers and shifters 28*s.* for grainers. 30*s.* for leading hands. 27*s.* 8*d.* (total average).	It is said that these rates are fixed by the Union, but that some employers pay less.
Digest, Vol. III., p. 58	Printers' Labourers' Union.	20*s.* on day work 27*s.* 6*d.* average on newspaper work. 23*s.* 9*d.* (total average).	Night work is paid at 6*s.* 6*d.* a night, newspaper work is paid 25*s.* or 30*s.* The arithmetic mean has been taken.

† For full details, see the table in Statistical Tables and Report on Trade Unions for 1891, page 246.

Recent advances in wages.

409. It will be seen that the recent changes are all in the direction of an increase in wages, which is attributed in all cases to trade union efforts. Thus, the wages of lithographic stone and zinc preparers were said to be very low before the formation of the Union, but after the men had been organised for about 12 months they drew up the wages' scale quoted in the table, which has been accepted by many of the employers. (1) The members of the London Society of Compositors had earned on an average 36*s.* a week ever since 1866 until 1891, since when their average weekly earnings have been 38*s.* (2) The formation of the Printers' Labourers' Union has also resulted in a considerable advance of wages, as the men now receive 20*s.* for a week of 54 hours, and 6*s.* 6*d.* a night in addition; whereas before they were organised they earned only 12*s.* or 14*s.* for day work, and 4*s.* for night work. (1) In Glasgow printers' wages were raised in 1891 from 32*s.* 6*d.* to 34*s.* a week, whilst 20 years earlier they only earned 25*s.* for a considerably longer week's work; and in Belfast also wages have risen conjointly with a reduction in hours. (2) During the year 1891 advances in wages were gained in nine branches of the Scottish Typographical Association, seven branches of the Amalgamated Society of Lithographic Printers, and two branches of the Bookbinders and Machine Rulers' Consolidated Union. (3)

(1) Digest, Vol. III., p. 55. (2) Digest, Vol. III., p. 56.

(1) Digest, Vol. III., p. 58. (2) Digest Vol. III., pp. 60, 62. (3) Statistical Tables, &c., pp. 244, 245, 247, 248.

[§ 410.] Mode of payment.

410. Printers are usually divided into two classes, of those who receive fixed weekly wages or so-called establishment wages, and those who are paid by piece-work, generally at the rate of so much per thousand "ens," an "en" being the standard unit used in calculating the amount of type set. Time wages are generally paid to men engaged upon jobbing or book work, whilst those engaged upon newspaper work are paid by the piece, and receive higher rates for work done at night. The piece rates are generally fixed according to a more or less elaborate scale which varies with the type used and the arrangement of the matter, and allows for extra payments in special cases, as for foreign languages or provincial dialects, interlined manuscripts, &c. Piece-work is said to be sometimes a cause of difficulty, since it induces the men to work excessive hours in order to increase their earnings. A complaint is also made that in offices in which both the time-work and piece-work methods of payment are in force there is a tendency to give all the "fat" or especially remunerative work to the men on fixed wages. (1) Bookbinders and machine rulers receive time wages as a rule, which are calculated by the hour and paid weekly, but in some cases they work by the piece. (2) Amongst paper mill workers there is said to be no uniformity with regard to the mode of payment of wages. In some mills the work is done on a piece-work scale, and in others the men are paid a fixed weekly wage with a bounty upon every ton of perfect paper produced above a certain amount. This is objected to on the ground that the bonus is only paid to those who have the practical driving of the mill. (3) Task-work is said to exist only in one district among printers and in two districts among bookbinders and machine rulers, and there appears to be practically no sub-contracting in the printing and kindred trades. (4)

Variations in wages.

411. It has been seen in the above tables that there are considerable local variations in the wages of printers, bookbinders and machine rulers, lithographic printers, and paper mill workers. The trade unions generally fix a minimum rate of wages for all their members, but in non-union offices the rates paid are sometimes below the minimum, whilst in other districts or firms the average wages are often considerably above it. Amongst lithographic printers, however, the union rate is said to practically govern the wages of non-unionists. As some branches of these trades afford scope for considerable skill and artistic ability, there are frequently wide differences in the earnings of individuals engaged in the same office or on the same kind of work, so that it is difficult to obtain a true average. (1)

[§ 411.]

Irregularity of employment.

412. The printing and book trades are to some extent seasonal, the summer being a slack time as a rule. This is especially the case in newspaper printing, the busy and slack periods of which depend upon various events which recur with more or less seasonal regularity, such as the sessions of Parliament, races, cricket matches, &c. In a few cases the irregularity of employment is partly attributed to the number of apprentices employed. (2)

Allowances and deductions.

413. No mention is made in these trades of any allowances in addition to wages. Fines are mentioned in a few instances and are generally said to be inflicted only for loss of time. They are objected to by the English and Scottish Typographical Associations. (3)

III. Gas, Coal, Chemical, and Kindred Trades. Sources of information.

414. The tabular statement of rates of wages in the gas, coal, chemical, and kindred trades has been rendered difficult by the fact that the rates given in the evidence are generally those earned by particular witnesses or paid by individual firms in certain selected cases only, and further by the fact that when averages have been quoted, very contradictory evidence has in some cases been given by the representatives of the employers and the employed. The information upon which the following table of average wages is founded is therefore neither so wide in extent nor so accurate in character as that available in the case of the building, printing, and cognate trades, but the nature of the information and the method of dealing with it which has been adopted are pointed out in the remarks upon the table.

TABLE showing the Means of Returns of Weekly Wages in the Gas, Coal, Chemical, and kindred Trades arranged in descending order of Wages.

References.	Class of Workmen.	Weekly Wages.	REMARKS.
		£ s. d.	
Digest, Vol. III., pp. 37, 41, 48, 50, and 52. Minutes of Evidence, Vol. III., Appendix XLVIII.	Coal porters, loaders, and fillers, &c.	2 10 0	A representative of the Coal Porters' Branch of the Gasworkers' and General Labourers' Union stated that men employed on unloading coal earned 16*s.* 8*d.* a day, but were employed only for four or five days a week in summer and two days in winter. If three days a week is taken as the average for the year, the average weekly wages are 50*s.* The witness, however, considered that the average weekly wages throughout the year were 45*s.*, but the former calculation is more in accordance with that given by Mr. Gardner, who stated that the average wages earned by each man during nine successive discharges of one ship had been 16*s.* 11*d.* a day, and the number of days of employment in the week two to four. If three days a week is taken as the average, therefore, the weekly wages would be 50*s.* 9*d.* Three days may, however, be too low an average since the general manager of the Commercial Gas Company stated that the men unloading coal earned an average of 15*s.* a day for 250 days in the year, which would give an average weekly wage of 70*s.* 6*d.*, and a table given in by the chief engineer of the Gas Light and Coke Company shows the average yearly wages paid to the men in 12 different gangs of coal fillers to have been 178*l.* 10*s.* 4⅛*d.*, which gives an average weekly wage of 68*s.* 10⅛*d.* On the other hand the secretary of the Coal Porters' Union stated that the average of Mr. Gardner's men was 31*s.* 10*d.*, and the general average of coal porters 29*s.* a week.*

* Mr. Locket stated that the wages of six men loading out of trucks had averaged 49*s.* 2*d.* for 26 weeks, and this closely approaches the amount given in the table. He further quoted the average wages of trolly men employed by three different firms as 51*s.* 1*d.*, 42*s.* 8*d.*, 41*s.* 11*d.* respectively.

§ 414.] TABLE showing the Means of Returns of Weekly Wages in the Gas, Coal, Chemical, and kindred Trades arranged in descending order of Wages—*continued*. [§ 414.]

References.	Class of Workmen.	Weekly Wages. £ s. d.	REMARKS.
Digest, Vol. III., pp. 37, 38, 40, 43, and 44. Minutes of Evidence, Vol. III., 25,696 and 26,706.	Gas stokers and firemen.	1 13 6¾	In the returns from 110 gasworks given by Mr. Valon the average wages of stokers are found to be 30*s.* 7¼*d.*, and those of firemen 31*s.* 11½*d.* The arithmetic mean, 31*s.* 3⅜*d.*, has therefore been taken as the average wages of the two classes. Mr. Livesey gives the wages at the Old Kent Road Station of the South Metropolitan Gas Company of stokers working on the two-shift system as 39*s.* 6*d.*, and those of stokers working on the three-shift system as 33*s.* 6*d.* The arithmetic mean, 36*s.* 6*d.*, has therefore been taken as the average wages of stokers. Mr. Trewby gives the average wages of scoop-drivers, stokers, and firemen at the Beckton works of the Gas Light and Coke Company as 33*s.* to 35*s.* The arithmetic mean, 34*s.*, has therefore been taken. Mr. Duxbury gives the wages of stokers at the Darwen Gasworks as 5*s.* 5*d.* a day, which would give a weekly wage of 32*s.* 6*d.* In all these cases the wages are calculated for a week of six days only, and are therefore below the full week's wages which would include a certain amount of Sunday work, generally paid for at a higher rate. The amount given in the table is the average of the above four results.
Digest, Vol. II., p. 49. Digest, Vol. III., pp. 19, 21, 22. Minutes of Evidence, Vol. III. Appendices XCVI. and C.	Chemical workers	1 12 6	Both Mr. King and Mr. Mitchell agree in giving the general average of weekly wages for all classes of chemical workers as from 30*s.* to 35*s.* The amount given in the table is the arithmetic mean of these amounts. This is also in close agreement with the amount, 33*s.*, quoted by Mr. Greig as the average wages of red lead workers employed in the desilverising process. It must, however, be noticed that the average wages of men engaged in "special processes" are higher than those quoted by Mr. King and Mr. Mitchell, which include all classes. Thus in the tables handed in by the United Alkali Company the average wages of men employed in the vitriol, saltcake and bleaching powder departments are found to be 38*s.* 6*d.* in the St. Helens district, 39*s.* 8¼*d.* in the Widnes district, and 41*s.* 3½*d.* in the Tyne and Scotland district.
Digest, Vol. III., pp. 22–23. Further correspondence.	Copper workers -	1 9 4½	In the smelting department copper workers were said to earn 5*s.* 4*d.* or 6*s.* a day according to the tonnage worked. The arithmetic mean, 5*s.* 8*d.*, has therefore been taken as an average day's wages, which would give an average weekly wage of 34*s.* In the finishing department the average wages of the various classes of workmen whose wages have been given were found to be 4*s.* 1½*d.* a day, which would give an average weekly wage of 24*s.* 9*d.* The arithmetic mean of these two results has been taken as the average rate of weekly wages for all classes of copper workers.*
Digest, Vol. II., p. 51	Salt workers -	1 7 0	Mr. Ward gave the ordinary wages of a salt boiler as 26*s.* and of a fireman as 28*s.* The arithmetic mean has been taken as the average weekly wages of both classes of salt workers.

* In a letter dated November 4th, 1892, Mr. Wignall gave the following rates of daily wages, which differ slightly from those given in his oral evidence. Copper plate roller men, 4*s.* 10*d.*; drawing on roller men, 4*s.* 9*d.*; finishing roller men, 5*s.*; plate furnace men, 4*s.* 0*d.*; drawing on furnace men, 3*s.* 10*d.*; finishing furnace men, 3*s.* 3*d.* (1st hand) and 8*s.* (2nd hand); picklers, 4*s.* 4*d.* It is these rates which have been used in finding the above average.

ne length the week ed in cal- lating ages.

415. For the sake of uniformity the wages in the above table have in all cases been calculated for a week of six days (or less in the case of coal porters), although, as pointed out with regard to the gasworkers, it is usual in some trades to work for some part at least of Sunday, and in these instances a full week's wages would be above the average quoted.

ecent in- ease in ages.

416. In the majority of these trades there has been some increase in wages during recent years, and this is generally attributed, by the men at any rate, to the influence of their improved organisation. Statements in tabular form were given in by Mr. Valon and Mr. Livesey showing the increase that has taken place in the wages of men employed in or about gasworks. That of Mr. Valon is compiled from the returns received from 110 gasworks, and shows the number of men whose wages have been increased by certain rates of per-centage since 1887.(1) It may be summarised as follows:—

Class of Workmen.	Under 5 per cent.	5 per cent. to 10 per cent.	10 per cent. to 15 per cent.	15 per cent. to 20 per cent.	20 per cent. to 25 per cent.	25 per cent. to 30 per cent.	30 per cent. to 35 per cent.	35 per cent. to 40 per cent.	40 per cent. to 45 per cent.	45 per cent. to 50 per cent.
Yard labourers	377	749	1,553	203	24	229	—	—	—	—
Mechanics and artizans	256	322	95	75	53	43	(25 per cent. to 38 per cent.)		—	—
Stokers	359	1,090	761	962	111	227	1,074	99	84	716
Firemen	—	155	196	34	62	—	194	6	—	45

(1) Minutes of Evidence, Vol. III., 25,696.

[§ 416.] Mr. Valon stated that he had chosen the year 1887 as the basis of comparison because it was in that year that the Gasworkers and the General Labourers' Union had been formed, and he considered that the increase in wages had been due in part at least to combination amongst the men. (1) Mr. Livesey, on the other hand, was of opinion that the advances were in no way due to the trade union, since before the formation of the Gasworkers' Union the labourers and stokers, who had no union, had received the same advances as the artizans who belonged to unions. (2) The table given in by Mr. Livesey shows the gradual increase which has taken place in the wages of gasworkers employed at the Old Kent Road Station of the South Metropolitan Gas Company since 1838, and may be summarised as follows:—(3)

Year.	Rates of Daily Wages.		
	Yard Labourers.	Fitters and Mechanics.	Stokers.
	s. d.	*s. d.*	
1838 - -	2 6	4 3	3*s.* 8½*d.*
1840 - -	3 0	4 9	4*s.* 0*d.*
1850 - -	3 1½	5 6	4*s.* 0*d.*
1860 - -	3 3	5 6	4*s.* 3½*d.* (and in 1866 5*s.*).
1872 - -	4 0	5 9	5*s.* 2*d.* and 1*s.* 6*d.* a week.
1880 - -	4 2	6 3	5*s.* 2*d.* and 1*s.* 6*d.* a week.
1889 - -	4 3	6 3	5*s.* 2*d.* and 1*s.* 6*d.* a week.
1890 - -	4 7½	6 8½	5*s.* 4*d.* (on three-shift system), 6*s.* 4*d.* (on two-shift system), and 1*s.* 6*d.* a week.

It was stated that in the Darwen Gasworks wages were fairly stationary from 1882 to 1887, and that at that time the wages of retort-house work amounted to 2*s.* 9·4*d.* per ton of coal carbonised, but during the three years 1890, 1891, and 1892 the cost of the same work had been 3*s.* 6·1*d.* per ton; (4) and a table was given in by Mr. Trewby which showed that the cost in wages per ton of coal carbonised by the Gas Light and Coke Company had been in 1888, 5*s.* 1·71*d.*; in 1889, 5*s.* 8·94*d.*; in 1890, 6*s.* 9·97*d.*, and in 1891, 6*s.* 7·97*d.* (5) It was stated that in the finishing department of the copper works at Swansea the general average of wages was the same at present as 10 years ago, "because in "1873 the men formed a union, struck for an advance "of wages," and obtained an average increase of 5 per cent. They then became disorganised, and the masters are said to have taken advantage of the fact to enforce continual reductions, until the wages were 25 per cent. less than before. Since the formation of the Copper Workers' branch of the Dock, Wharf, Riverside, and General Labourers' Union the men had, however, succeeded in winning back this 25 per cent. (6) The representatives of the United Alkali Company stated that the wages of chemical workers are considerably higher than they were 20 years ago, and Mr. King stated that a general increase of wages throughout the trade had taken place since the formation of the Chemical and Copper Workers' Union. The wages of the white lead workers on the Pattinson process on the Tyne are also said to have increased by 4*d.* a day since the formation of the Tyneside National Labourers' Union. (7)

Mode of payment.

417. Some form of piece-work is generally adopted in all these trades, and amongst the London coal porters it is said that no other method would be possible on account of the irregularity of the work. Coal porters and fillers are paid by the ton, sack, or chaldron, according to the nature of the work. (8) Amongst chemical workers piece-work is more general than time-work, but some particular classes of workers, such as the sulphur burners, are paid by the shift. The copper workers at Swansea are nominally paid by the ton, but it is said that the ton they handle actually weighs 23 cwt., and that sometimes their work is not weighed at all, or is weighed upon machines which require a weight of 50 lbs. to be put into the scale before it moves, or in which the weights are covered up so that the men cannot see them. (1) The salt workers are paid by the ton if working at lump salt, and by the day if working at bulk salt. (2) In gasworks the retort hands are in some cases said to be paid by the task, a certain amount of coal being carbonised in each shift. (3) The only mention of a sub-contract system is amongst the chemical workers, where it is said that the system is unfair to the men, since the sub-contractor who only superintends the work gets double as much wages as the workers. The latter consider that a foreman might be appointed at a weekly wage to superintend them in place of the sub-contractor. (4) [§ 417.]

Variations in wages.

418. There are local variations in the wages of gas and chemical workers, and the average wages of the latter class are said to be considerably lower in Scotland than in England. (5) Amongst the copper workers at Swansea there are said to be variations of 2*d.* a day in the wages paid in different mills for the same kind of work. (6) With regard to variations in wages, the manager of the Darwen Corporation Gasworks complained that the minimum rate of wages fixed by the men's Union was so high as to be virtually a maximum rate, and that this acted harshly upon the men themselves, since those who were not worth the full rate of payment were entirely debarred from finding employment. (7)

Irregularity of employment.

419. Work is said to be fairly regular for copper and chemical workers, though there has been more fluctuation in the employment of the latter class of workers since the formation of the Chemical Syndicate. (8) In gasworks it is necessary to employ a larger number of stokers during the winter than during the summer, but as the extra hands in many cases work on brickfields, or are employed by the gas companies as yard labourers during the summer, and return regularly to their work every winter, their work may be considered as practically continuous. (9) Amongst the coal porters there is necessarily some irregularity of employment, as their work is to a great extent dependent upon the arrival of ships. It is stated that this is increased by the varying sizes of the cargoes, and that employment would be more regular if the carrying power of the ships were made uniform. The men are said to work four or five days a week in the summer, but only about two days a week in winter. On the other hand, some employers consider that the irregularity of the employment is generally exaggerated. In the Regent's Canal boats are continually coming in, so that the coal porters employed there by the Commercial Gas Company have practically regular work; and those employed at Wapping by the same company find subsidiary work in unloading barges at Stepney during the intervals of their work at Wapping; so that although they only work about 163 days in the year at the latter place, they are employed altogether about 250 days in the year. It is stated that out of the 15,000 coal men employed in London, about 12,000 are permanent workers, and the remaining 3,000 are casual men. The latter do about two days' work in the week in winter, and are employed on all kinds of odd jobs, and go haymaking and harvesting in the summer. The regular men are said to be employed as much as possible, but in very busy times an odd gang of casual men is taken on and paid at the same rate as the regular men. (10)

Allowances and deductions.

420. Very few allowances in addition to wages are mentioned in connexion with these trades. The South Metropolitan Gas Company, however, allots land for gardens to some of its workmen and provides oatmeal and water for the use of the men employed in the retort houses. Some chemical manufacturing companies allow a small bonus to the foremen for "special services," or to men engaged in particularly dangerous or disagreeable work, and in one case an allowance of house coal is made to the married men. (11) The only deductions from wages which are mentioned, with the exception of deductions for sick funds or insurance against accidents and for rent, occur in connexion with the copper workers at Swansea. The employers in this industry have instituted what is described as an "insurance on labour": 1*s.* a week is deducted from wages, and another 1*s.* added by the employer, and this sum is given to the workman at Christmas if his work has been satisfactory. If not, the deducted money alone is paid to him without the bonus. It is also a

MISCELLANEOUS TRADES. Sources of information.

421. The information which has been obtained in oral or written evidence with regard to various miscellaneous trades which have not yet been dealt with is contained in the following table. Although the trades are very different in their nature and the conditions of employment, it will be noticed that the average wages in the majority of cases are not very unequal, since in all trades but two they lie between 29*s.* and 23*s.* The exceptions are the glass bottle makers, whose wages are considerably above the average, and the mat-makers, whose wages are considerably below it. [§ 421.]

TABLE showing the Means of Returns of Weekly Wages in various Miscellaneous Industries arranged in descending order.

References.	Class of Workmen.	Weekly Wage. £	*s.*	*d.*	REMARKS.
Digest, Vol. III., pp. 74, 76. Minutes of Evidence, Vol. III., Appendix LXXVII. Answers to Schedules of Questions, p. 766.	Glass bottle makers	2	2	0	The secretary of the Glass Bottle Makers of Yorkshire United Trade Protection Society gave 42*s.* as the average weekly wages of each of the three men employed in a group. This is supported by the evidence of a member of the Glass Bottle Manufacturers' Association of Yorkshire, who had taken the average earnings of six men, and found them to be 49*s.* 2*d.* for the maker, 47*s.* 2*d.* for the blower, and 32*s.* 5*d.* for the gatherer, or a general average of 42*s.* 11*d.*, and by the averages given by the Glass Bottle Manufacturers' Association of Lancashire, which are 53*s.* for the maker, 41*s.* for the blower, and 32*s.* 6*d.* for the gatherer, or a general average of 42*s.* 2*d.* These estimates are also very near those obtained from the actual wages paid by an important Yorkshire firm during 42 weeks in the year 1890, which gave an average of 45*s.* 2*d.* for the maker, 43*s.* 2*d.* for the blower, and 29*s.* 9*d.* for the gatherer, or a general average of 39*s.* 4½*d.*(2)
Digest, Vol. III., p. 85 - -	Seed crushers -	1	8	10	It was stated by a representative of the Hull Seed Crushers' Branch of the Dockers' Union that pressmen earn from 30*s.* to 40*s.*, grinders from 24*s.* to 30*s.*, and parers from 21*s.* to 28*s.* The average of the three classes would therefore be 35*s.*, 27*s.*, and 24*s.* 6*d.*, and the general average 28*s.* 10*d.*
Digest, Vol. III., pp. 64, 65, 66, 67, and 71. Answers to Schedules of Questions, pp. 16, 17, and 755.	Bakers - -	1	7	4	27*s.* 4*d.* is the general average which has been obtained from seventeen returns with regard to various districts in the United Kingdom, of which eleven were contained in the oral, and six in the written evidence. It may be noticed that 27*s.* is the arithmetic mean of the average, 25*s.* 4*d.*, obtained from the rates of wages in the North of England, quoted by a representative of the Amalgamated Union of Bakers, and the average wages of bakers in London, 28*s.* 8*d.*, quoted by the London Master Bakers' Protection Society.
Digest, Vol. III., p. 82. Answers to Schedules of Questions, pp. 70, 71.	Pottery makers -	1	6	9¾	26*s.* 9¾*d.* is the average obtained from the rates of wages quoted in the oral evidence of a representative of the United Firemen, Dippers, and Placers' Association, and in the written evidence of four societies of potters and their assistants. The rates of women's wages were not included in obtaining the average.
Answers to Schedules of Questions, p. 96.	Sawyers - -	1	4	6	The Hull Mill Sawyers and Wood Cutting Machinists' Society quotes the rate of wages as 30*s.* for unionists, and 26*s.* for non-unionists, which would give an average of 28*s.*, and the Aberdeen Saw Mill Workers' Society quotes the rates of wages as 16*s.* to 26*s.*, which would give an average of 21*s.* The arithmetic mean of these two results has been taken.
Digest, Vol. III., p. 72 - - -	Butchers -	1	4	0	A representative of the Journeymen Butchers' Society of Birmingham stated that wages varied from 18*s.* to 30*s.* a week. The arithmetic mean has been taken.
Digest, Vol. III., pp. 91, 93, 96. Minutes of Evidence, Vol. III., Appendix LXXXV.	Shop assistants -	1	3	11	A representative of the National Union of Shop Assistants stated that the average wages of adult male shop assistants, including the value of their board, are about 22*s.*, and a representative of the Liverpool and District Grocers' and Provision Dealers' Association stated that the average wages are 20*s.*, 26*s.*, or 30*s.*, according to grade, which would give a general average of 25*s.* 4*d.* In a table of the wages of shop assistants in Scotland the average wages of qualified male assistants in 16 different trades is found to be 24*s.* 5½*d.* The amount given in the table is the average of these three results.
Digest, Vol. III., p. 79. Answers to Schedules of Questions, p. 67.	Mat makers -	0	16	10½	In the oral evidence of a representative of the Mat and Matting Trade Society the average wages were said to be about 15*s.*, and in the written evidence from the Cocoa Fibre Mat Makers' Society the average wages are said to be 19*s.* 4½*d.* in London and 16*s.* 3*d.* in the country. The average of these three amounts has been taken.

(1) Digest, Vol. III., p. 23. (2) The rates of wages quoted for glass bottle makers in this table include overwork paid for according to "catalogue prices." For the present "standard wages," see the following table.

[§ 422.] Recent changes in wages.

422. In those trades with regard to which any information was given as to recent changes in wages there was generally said to have been an advance, although a representative of the London Domestic Servants' Union made the statement, which he was however unable to substantiate, that this class are worse off now with regard to wages and general comfort than they were fifty years ago. (1) It was stated that whereas the wages of bakers in London twenty-five years ago were 24*s.* or 25*s.* a week for a foreman, and 17*s.* or 18*s.* for a second-hand, they are at present 30*s.* for a foreman and 25*s.* for a second-hand, and that in Ireland the wages of bakers had advanced in seventeen towns in 1890 from 12*s.*, 15*s.*, or 16*s.*, to 27*s.* and 28*s.* It was indeed denied by an employer that the advance in Dundalk had been so great as the men had asserted, but he admitted that since the formation of the union wages had risen from 24*s.* to 27*s.* a week. (1) The London seed crushers mention an advance in wages which has taken place since the strike in 1889, before which they were very low. (2) The most complete information with regard to recent fluctuations in wages has been received from the glass bottle makers and is contained in the following table. (3) [§ 422.]

TABLE showing the Fluctuations in the Standard Wages of Glass Bottle Makers since 1845 in the three principal Districts.

Note.—The information in the above table is drawn chiefly from the tables handed in by Mr. A. Greenwood and printed as Appendices LXXV-LXXXI. to the Minutes of Evidence, Vol. III. These have been supplemented in the case of a few years by the information contained in the tables of glass bottle makers' wages in the Statistical Tables, &c. for 1891.

Mode of payment.

423. Time-work is usual in the less skilled of the miscellaneous trades, piece-work in the more skilled. In the pottery trade the two systems of payment are found side by side, the unskilled workmen being paid by the week, the skilled by the piece. (2) A small amount of task-work is also found in this trade. In the baking and the seed crushing trades payment by time is the rule. In the glass bottle makers' industry a combination of task-work and piece-work prevails; under "standard wages" the workman produces a given number of a certain kind of bottle; what is made over and above the stipulated quantity is paid by "catalogue wages," *i.e.*, so much per gross extra. The men urge that time-wages would be fairer in this trade, since bad metal or tools may prevent the workman from turning out the "number," and so through no fault of his own he loses part of his wages. (3)

Sub-contracts.

424. The practice of sub-contracting was mentioned once in connexion with the baking industry, but the only case in which it would appear to be at all prevalent is in the pottery trade; and here, it may be noted, the allusions to the system all come from the employers, one of whom stated that "practically no profits are made by the sub-contractor." (4)

Variations in wages.

425. Variations in wages are most noticeable in the case of bakers. They are well paid in Lancashire, and especially in Manchester, while in other parts of the country, notably at Norwich, Southampton, and Plymouth, their earnings are very much lower. (5) In Ireland, bakers' wages in Cork are considerably lower than in Belfast or Dublin in spite of longer hours; and again the rate of pay in Belfast is as much as 4*s.* a week lower than that in Dublin. (6) It was stated that in London all the wholesale bakers recognise a uniform rate of wages; other employers admit the desirability of uniformity in this matter, but find a difficulty in the fact that the work is unequal, no two shops out of a dozen working on the same system. (7) There is no standard rate of wage in the case of shop assistants. (8) In some industries something has been done towards doing away with unnecessary variations; the seed crushers of Hull gave evidence that whereas before 1890 "there were hardly two mills in the town who "paid the same rates," and "in one firm they had "three different rates of pay for precisely the same "class of work," the result of the dispute in that year was the establishment of uniformity in this direction. (4)

Irregularity of employment.

426. The most important case of seasonal irregularity of employment among the trades in question is that of the seed crushers, who are employed from November to May, and during the summer months take to painting or dock work. The men admit that the seed must be crushed early if it is to yield its maximum value, and that oil-cake must be sold soon lest it should turn mouldy on the manufacturers' hands. They are of opinion, however, that the season to which the trade is now confined is shorter than necessary, and it is with a view to lengthening it that they have insisted on the abolition of overtime. The employers on the other hand urge that in view of foreign competition any interference with the manufacturers' freedom of policy is very serious, and consider that the workmen do not take "a proper view of the necessities "and exigencies of the trade." (3) The glass bottle makers were also represented as suffering considerably from irregularity of employment, although this circumstance would appear to differ in different branches and localities. A witness from the "Yorkshire District" stated that at the time at which he gave evidence (November 1892) 30 per cent. of the glass bottle makers in the district were out of work, and a large number were idle during three months of every year. He supported his statement by tables giving the returns of workmen and of unemployed. (5) Different views were taken by different employers as to the general accuracy of these representations; one of them admitted that since the McKinley tariff had come into force he had found it increasingly difficult to provide regular work for his hands; others asserted that employment was continuous in the case of the works with which they had to do. (7) The fact would seem to be that the glass trade is to some slight extent seasonal in certain branches, *e.g.*, the mineral water bottle department, and that it is open to employers to either intensify or minimise the irregularity by the arrangements in the

[§ 426.] works. Some firms make a practice of stopping to repair furnaces in the slack time, between November and February; others have no regular time for repairs, and keep an extra house in which work can be carried on without interruption. The Lancashire Glass Bottle Manufacturers' Association guarantees to the workmen in its employ a portion of the wage in case of accident or stoppage for repairs.(1) Other instances of irregularity of employment are the trades of pork butchers and Covent Garden porters; of the former, more than half are thrown out of their trade in the summer and take work as painters or labourers; the Covent Garden porters are busy in the summer, but in the winter about half of them go to the gasworks or become costermongers; the Union members, however, have permanent employment.(2) Potters and sawyers lose a certain amount of time in the year through inclemency of weather or seasonal causes.(3) Domestic service was alleged by one witness to be a more irregular employment than it was formerly, because the "migratory state of living" of the upper classes led to the engagement of servants by the job or for short periods.(4)

Allowances and deductions.

427. The most important form of allowance to be noticed in the trades under consideration is that which goes by the name of "living in." Domestic service is the typical instance of the "living in" system; the servant receives, in addition to wages, board, lodging, and sometimes clothing. One witness complained of the frequent insufficiency and inferior quality of the food provided, and this complaint was much more strongly urged in the case of shop assistants, of whom considerable numbers are employed under the same system in England.(5) The shopkeepers who gave evidence before the Commission denied that the charge as to bad food was of at all general application;(6) but Mr. Davis, president of the National Union of Shop Assistants, asserted that he knew "as a positive fact" that while employers calculate the board and lodging of an assistant as equal to 10*s.* per week, it does not cost in a large business more than 4*s.* 6*d.* per week; "so that "really this living in system is a remnant of the truck "system, by which the employers make a profit out "of the actual necessities of his employés in addition "to the profits of the business."(7) "Living in" is also customary in the case of barmen and barmaids.(8) It used to be common among unmarried bakers in country towns, but it has been objected to of late by the men as tending to lower wages; in Leicester the strike of 1891 succeeded in abolishing the custom.(9) Bakers in London are generally paid to a certain extent in bread; it is done by agreement, and the employers are of opinion that the workmen are satisfied with the arrangement. It was, however, stated, on the other hand, that if a man could not use the whole allowance in his family he was obliged to sell some of it at a loss. No case of this kind has been tried under the Truck Acts, but since the passing of the amended Act of 1887 several large firms have stopped the allowance and given 2*s.* or 4*s.* in place of it The practice does not prevail in the country.(10) A money allowance mentioned in connexion with the baking trade is known as "sponging money"; workmen who, after baking by night, return to the bakehouse during the day in order to "set the sponge," receive 1*s.* for the journey to and from home.(11) Bonuses in the form of money are given by one or two firms in the pottery trade, either for regularity or on production.(12) Shop assistants are often given a commission on the sale of soiled or unseasonable goods, but it was asserted by one witness that this was really a part of their wages, given in this form with a view to the deduction from it of fines, which cannot legally be deducted from wages.(13) It was from this class that the most serious complaints came on the subject of deductions; it was alleged that fines varying from 1*d.* to 2*s.* 6*d.* were imposed for every trifling offence; one witness had known girls in the drapery trade (where fines are most common) to lose as much as a fortnight's wages in a period of one or two months, and gave as his opinion that in a house employing 200 assistants probably not more than three would go through a week without some deduction of this nature (14) According to the evidence of an employer, these statements are probably applicable only to large establishments. When the assistants are engaged they agree to conform to the rules of the firm, and thereby agree to pay fines in certain cases; moreover the money obtained from this source is generally devoted to the purchase of books and papers for the use of the assistants.(1) Glass bottle makers are liable to deductions from wages either for incomplete "numbers," or for badly coloured or otherwise faulty bottles; at the Seaham Harbour Glass Works no deduction is made, but the men make a few dozen extra, above the nominal number, to indemnify the employer for bad work or breakages.(2) In the answers from the pottery trade, one or two mentions were made of deductions for the use of wheels and gas,(3) and disciplinary fines were alluded to in one or two cases in various trades. (ii.) PROFIT SHARING AND CO-OPERATION.*

Profit-sharing.

428. The representatives of the industries under consideration were almost unanimously in favour of the introduction of a system of profit sharing, but their approval was based upon various grounds. In a few instances the system in itself was valued as being desirable in the interests of both employers and employed, and as giving the men an interest in their work which wages alone cannot give.(4) It was stated that workmen are quite capable of appreciating this method of industrial remuneration in spite of the necessary delay before the receipt of dividends, and that in the glass trade at any rate men were able to save sufficient money to make the introduction of such a scheme feasible.(5) In the majority of cases, however, it is looked upon rather as a "stepping stone in "the right direction"(6); and though likely to produce a better feeling than exists at present between employers and employed, as not adequate to all that is required.(7) Most of the witnesses while stating that they looked beyond profit sharing to a better system had no clearer idea of the goal to which it was tending than that it was a step in the direction of "a wider and "broader co-operation than we have yet grasped at, ". . . a more equitable distribution of wealth."(8) One witness, however, pointed out that profit sharing should lead to a system of industrial partnership, which he defined as "both profit sharing and loss sharing." Under such a system every workman, while receiving the ordinary wages, would have some capital at stake in the business and take his share in the results, whether loss or profit, at the end of each year. This was considered a more equitable plan than profit sharing alone, under which the capitalist had to bear the whole burden of the losses, and also to part with the profits which might have enabled him to meet a period of depression. Capital, he stated, for the purpose of an industrial partnership might be saved from the workmen's wages, and the sums which are now reserved by unions and societies for strikes would no longer be required for that purpose and might also be invested. There are, it was acknowledged, difficulties in the way of such a scheme, since the men might be unwilling to part with their funds which they regard as a weapon of defence; but the Limited Liability Act made the plan practicable if they could be brought to consent to it.(9) Another witness, while heartily approving of Industrial Partnership, feared that profit sharing would not lead to it, because though willing to share in profits the men would be "frightened" by the prospect of a loss.(10) The experience of profit sharing in these industries is very slight. A few experiments of this nature have been made among house painters, but they have been "of such a limited character "that it would be premature to express any opinion "upon the matter."(11) The system was introduced into a coachbuilding firm at Derby but lapsed "owing "to bad trade perhaps." The same firm introduced it into their works at Lichfield, and it is "still in opera-"tion, and on the whole satisfactory."(12) A profit sharing experiment is being made at the pottery works of Mr. A. Brownfield which is being "watched and "supported with great interest by the workmen." The business was valued at 20,000*l.* Mr. Brownfield retained his interest in it in the form of ordinary and

* It appeared convenient to deal with the subjects of profit-sharing and co-operation at this stage, inasmuch as they are methods of industrial remuneration.

[§ 428.] debenture shares. The interest was restricted to six per cent. on debentures, and five per cent. on ordinary shares, and the profits which remained when this interest was paid were divided on a "unique principle." The workmen left in a certain percentage of their wages to form a reserve fund and they received a share in the profits in proportion to this percentage. The operative potters have subscribed some 1,200*l.* as shares towards it. Mr. Owen stated that he "thoroughly approved of "the scheme, and believed it would be successful, "because so much can be contributed to the success of "it by the heads of departments and the workmen "themselves. Even low paid workers may in our "trade spoil the result of everybody else's work "that has gone before, and the co-operation, in "my opinion, is likely to be eminently successful." He admitted that there was one defect in the scheme, that it is only shareholders who derive any benefit. He would like to see it extended to all the workers.(1) The most important instance of profit sharing in these industries is the scheme introduced by Mr. Livesey in the South Metropolitan Gas Company's Works.(2) Mr. Livesey stated that the immediate cause which led the Company to adopt the system was the necessity of obtaining or retaining the allegiance of the workmen, which was "fast passing away" in the autumn of 1889 under the influence of the Gas Workers' Union. The plan was not, however, new; in 1875 a proposal was made to extend the benefits of the sliding scale to officers and workmen, "but the "directors of that day would not entertain it." It was revived in 1886, when an annual bonus dependent on profits was given to the officers and foremen, but it was not till 1889 that profit sharing was extended to the workmen. The scheme as proposed by Mr. Livesey in October 1889 bound any workman who signed the agreement to the Company's service for twelve months during which time he was to "serve the Company "in whatever capacity he might from time to time be "employed at the current rate of wages applying to "such capacity." The Company, on their part, paid the Trades Union rate of wages, and guaranteed that no alteration should be made in wages to the disadvantage of any of the men, and that the workman should receive a share in the profits in addition to his wages. "For the purpose of making a good start" the system of bonuses was to be calculated three years back. No money except in the case of death was to be withdrawn during the first year, nor during the first five years except in cases of death, superannuation, or leaving the service of the Company. A committee composed of equal numbers of workmen and officers was to be appointed to settle details, and it was stated that "the "money will be the absolute property of the men "except in the case of a strike or wilful injury to the "Company in which cases and in those only it will be "forfeited by those men guilty of that conduct."(3) When this scheme was brought before representatives of the men at the Old Kent Road Station the non-unionists at once said, "it is the finest thing we have "ever heard of for working men," and were "exceedingly pleased" with it. The unionists said, "it seems "a good thing but we cannot say anything about it "till we have consulted the executive."(4) At the other stations the unionists did not appreciate the scheme and it was thought that it must drop, but the non-unionists began to ask "why they should lose such "a good thing, because the unionists disapproved of "it." It was therefore resolved to offer a share in the profits to any man who would sign the agreement. Within a week it was signed by 1,000 non-unionists, "practically all the free men."(5) The unionists, however, took objection to certain clauses, and therefore a few alterations were made at a meeting held on November 21st. The first clause objected to was that which bound the men to twelve months' service, although a note appended to the agreement stated that "no obstacle will be thrown in the way of any man "engaged under the above contract who may wish to "leave the Company's employment before the expiration of the period of service therein agreed for, "provided . . . the engineer shall consider that "the services of such can be dispensed with without "detriment to the Company." "Under that agreement," Mr. Blackburn complained, "it all lay with "the engineer; there is nothing for the workman. "You are bound for twelve months and there is no "escape."(6) Objection was also made to the clause binding a man to serve the Company in "whatever "capacity he might from time to time be employed," though it was stated that this was an arrangement to provide continuous work for the stokers during the summer months. The third clause objected to was the "strike or wilful injury" clause, under which, as Mr. Livesey admitted, a man who had signed the profit sharing agreement must not strike, whatever his provocation; and which therefore brought the new system into conflict with unionism. This clause was struck out of the agreement.(1) The fact, however, that three Union men at Vauxhall signed the agreement by stealth and that the Company refused on the request of the Union to dismiss them was made the pretext of a strike, which began in December 1889. As a former workman writing to Mr. Livesey expressed it, "they (the Union) could see that the majority of the "men would sign the agreement, and only be too glad "to do so, in preference to the flimsy allurements of "their Union, therefore they would strike purposely "to crush the profit sharing scheme whilst in the bud, "and before the men could see its many advan-"tages."(2) Mr. Livesey stated that when the strike was over the bonus scheme was much appreciated and its results were extremely good. It had been suggested to him that it might be better to abolish it altogether, but he found that "the only anxiety of the men is to "sign the agreement."(3) Two witnesses employed by the Company corroborated this statement and added that the men "are only sorry that more cannot join "than do join."(4) Mr. Livesey stated that "they "were getting the best results . . . . the work "was never so well done,"(5) and he and Mr. Carpenter, an engineer of the Company, gave instances of the saving of time and material due to the system. "Pre-"vious to the introduction of the system it was a "difficult matter to get the stokers to do the proper "amount of work, they would not put the proper "quantity of coals into the retorts . . . . now I "am told that there is no trouble whatever with the "stokers."(6) Mr. Carpenter stated that the scheme "secures the goodwill of the workman and the desire "on his part to economise all the material, expenditure "and cost of the Company."(7) [§ 428.]

Co-operative production.

429. With regard to co-operative production, opinion in these industries appears to be divided. It was in no instance regarded with unqualified approval or recommended for immediate adoption. Though in one case it was spoken of as "the future remedy for industrial evils"(8) it was more often regarded merely as a palliative. It was stated that it might lead up to, but could not quite reach, the desirable object that those who produce profits should receive at least the bulk of their products.(9) In another instance it was suggested as a means of lessening the competition between employers and employed.(10) On the other hand, it was stated that however successfully the co-operative principle might be applied in distribution, it was inapplicable to manufacturing businesses, in which individual judgment and a certain speculative element were involved.(11) In the baking industry it was stated moreover that the co-operative company is in some centres more oppressive to workmen than private employers, and is "never better."(12) The experience of co-operative production has been correspondingly various, though there are on the whole more cases of success than of failure. No instances were given in the building, glass, or pottery trades. In the cabinet-making industry the majority of the attempts made at co-operation have been successful. Co-operative establishments were started at Oldham, Nottingham, Bath, and Bradford(13) as the result of disputes, and are reported to be doing fairly well; and a new one is in contemplation at Leeds. The Bradford establishment was stated to "make for the public," and is thus exposed to competition; and the Leeds one "would like to" do the same.(14) The only co-operative factory in London is a small one in the East End which employs only four or five men; and an attempt to establish another was made by the Alliance Cabinet Makers' Association, which failed although there was "no opposition to co-"operation in the society and no idea of rivalry."(15) "Too many garret masters and sweaters to contend "with" was given as the probable reason.(16) With

§ 429.] regard to co-operative bakeries a failure was mentioned at Cork; (1) but successful instances were cited at Plymouth, Woolwich, Stratford, Manchester, Leeds, and Bolton. (2) With reference to Bolton, Mr. Jenkins stated that the men "stop at those places a very long "time, much longer than they are in the habit of "doing in private places . . . and take a greater "interest in their work." (3) The system was stated to have been satisfactory among the mat-makers of Manchester, where wages have been raised 60 per cent., (4) and in the printing trade of Newcastle, Gateshead, and Felling-on-Tyne. (5),

opera- e distri- ion.

430. The only instance of co-operative distribution occurs among the London gas workers. A store was started at the time of the South Metropolitan strike, and is worked entirely by the members of the union. The assistants work only 48 hours a week, and they are now doing a trade of 90*l.* or 100*l.* a week. (6)

(iii.) SUPERANNUATION FUNDS.*

tent of erannua- n funds.

431. No mention is made of superannuation funds in connexion with particular works and partially supported by the employers, throughout the industries here under review, except in the gas and coal trades. A fund of this nature exists in connexion with the South Metropolitan Gasworks, which is supported by the joint contributions of employers and employed, and pensions are granted to the workmen in the firm belonging to Mr. Locket, provided that they have been in the service of the Company for over 20 years. (7) No other mention was made of the existence of any funds of this nature, but the desire for their formation, if necessary by legislation, was expressed by a representative of the Gas Workers' and General Labourers' Union, and by the President of the Incorporated Gas Institute. The proposal made by the former witness, Mr. Taylor, was to the effect that old age pensions should be provided by the State by means of a progressive income tax and the imposition of death dues. The wages of the workman, this witness maintained, were such as to make thrift impossible without lowering his standard of life. (8) The latter suggested the formation of a central pension fund by gas companies and corporations "into which "all employers and employed" should contribute "a "fair and equal amount based on per-centage of the "amount received by the employed." These contributions were to be made compulsory by the union of all the gas companies and corporations, or if necessary, by means of legislation (9) It may be noted that the special advantage of the formation of this central fund was that the removal of a man from one works to another would not interfere with the amount of claim he would eventually have upon the general fund. Nevertheless, the compulsory contribution on the part of the employer or corporation would cause an increase in the working expenses, and consequently, at any rate in municipal works, the ratepayers would be taxed for the benefit of the gas workers. This was acknowledged to be an objection.

orkmen's erannua- n fund, uth Me- politan sworks.

432. The rules of the Workmen's Superannuation Fund connected with the South Metropolitan Gasworks were handed in to the Commission. This fund was established in 1855 by the late Thomas Livesey, Esq., secretary to the Company. Its rules were revised in 1864 and again in 1880. In 1887 the amount of the superannuation benefits was increased by the directors, and in 1891 the rules were again revised and the benefits still further increased. The entire management of the fund is undertaken by the Company. The secretary of the Company and any two directors for the time being are appointed honorary secretary and trustees respectively. Any disputes as to the rights of members under the rules of the fund are referred for the time being to the trustees for settlement. Their decision in writing, signed by any two of them, is "final and con- "clusive as to the matters in dispute". (1) Formerly membership of this fund was optional, but in 1885, by the unanimous vote of the workmen, it was made compulsory. (2) The subscriptions, which are payable weekly, vary from 3*d.* to 1*s.*, a higher scale of benefits corresponding to the higher subscription, The Company subscribes annually an amount equal to the amount of the members "gross subscriptions for the "same years as a guarantee of the stability of the "fund." "Back" subscriptions may be paid either in a lump sum or in weekly instalments. Benefits are granted by this fund in case of injury incurred in the discharge of duty in the Company's service, in the case of infirmity which "is not the result of the member's bad "conduct," and in that of old age. "Retiring allowances" are also granted to subscribers of not less than 25 years' standing and not less than 55 years of age, who, "not having received benefit from the fund," desire to retire before they can claim their full pension. A pension is granted to subscribers of not less than 25 years' standing when they attain to the age of 65. Members who retire or are discharged from the service of the Company receive certain specified amounts as compensation. Compensation is also payable either to the widow or young children, or if there be no widow or young children, to any children over 20 years of age, or the father or mother of the deceased member, provided the said member has not received any benefit from the fund. The amount of benefit payable as retiring allowance to members over 55 years of age in case of infirmity, and to members over 65 years of age as superannuation allowance, varies with the rate of contribution paid, the number of years of membership of the fund, and the age of the member in question at the time of joining the fund. Members who joined at the age of 20 and who have paid 6*d.* a week for 44 years are then entitled to an allowance of 22*s.* 6*d.* per week. (3) It may be noted that in the year 1891, 62 annuitants were in receipt of a total sum of more than 16*l.* (4) [§ 432.]

2. HOURS.

(i.) STATEMENTS OF HOURS.

I. BUILDING AND COGNATE TRADES.

Sources of information and method of dealing with it.

433. The following tabular statements of hours have been drawn from the written evidence sent to the Commission and the "Statistical Tables and Report on Trade Unions" for 1891 issued by the Board of Trade. The information thus obtained has been supplemented where necessary by that derived from the Returns of Hours of Work ordered by the House of Commons in 1891. The method that has been followed in dealing with these materials is that explained in the Statements of Hours in the Summary of Group A., Part II. (§115). It must be noticed that some of the returns give the average weekly hours throughout the year, whilst others give the hours for summer and winter separately and do not state what portion of the year is included respectively in these divisions. In such cases the arithmetic mean of the summer and winter averages has been taken to represent the average hours throughout the year, but it is probable that in some of the trades at least the summer hours would be worked for more than six months. In a few instances the hours of work in winter are said to be "from light to dark," and this has been taken as equivalent to 45 hours a week.

[§ 433.] TABLE showing the Means of Returns of Weekly Hours of Labour in the Building and Cognate Trades arranged in ascending order of Hours.* [§ 433.]

References.	Class of Workmen.	Weekly Hours.	REMARKS.
Minutes of Evidence, Vol. II., Appendix XXX. Statistical Tables and Report on Trade Unions for 1891, pp. 193–197. Returns on Hours of Work, ordered by the House of Commons, 1890, pp. 21–23.	Masons - -	50·80	In the returns for 119 districts given by the National Association of Master Builders the average hours for masons are found to be $53\frac{14}{119}$ in summer and $47\frac{295}{476}$ in winter. The average for the whole year has therefore been taken as $50\frac{381}{952}$. In the returns for 136 districts given by the Operative Stonemasons' Friendly Society the average hours are found to be $52\frac{285}{272}$ in summer and $46\frac{263}{272}$ in winter. The average for the whole year has therefore been taken as $49\frac{248}{272}$. In the returns for 46 districts given by the United Operative Masons' Association of Scotland the average hours throughout the year are found to be $52\frac{5}{46}$. The number given in the table is the average of these three results. The average obtained for the year 1890 in Parliamentary Returns of Hours of Work is 50·59.
Minutes of Evidence, Vol. II., Appendix XXX.	Slaters - -	50·84	In the returns for 93 districts given by the National Association of Master Builders the average hours for slaters are found to be $53\frac{82}{93}$ in summer and $47\frac{101}{124}$ in winter. The average for the whole year has therefore been taken as $50\frac{331}{744}$.
Minutes of Evidence, Vol. II., Appendix XXX.	Masons' labourers	50·95	In the returns for 114 districts given by the National Association of Master Builders the average hours for mason's labourers are found to be $53\frac{55}{76}$ in summer and $48\frac{41}{228}$ in winter. The average for the whole year has therefore been taken as $50\frac{217}{228}$.
Minutes of Evidence, Vol. II., Appendix XXX.	Bricklayers' labourers.	51·19	In the returns for 109 districts given by the National Association of Master Builders the average hours for bricklayers' labourers are found to be $54\frac{10}{109}$ in summer and $48\frac{98}{109}$ in winter. The average for the whole year has therefore been taken as $51\frac{48}{218}$.
Minutes of Evidence, Vol. II., Appendix XXX.	Plasterers' labourers.	51·20	In the returns for 105 districts given by the National Association of Master Builders the average hours for plasterers' labourers are found to be $54\frac{1}{210}$ in summer and $48\frac{99}{210}$ in winter. The average for the whole year has therefore been taken as $51\frac{22}{105}$.
Minutes of Evidence, Vol. II., Appendix XXX. Statistical Tables and Report on Trade Unions for 1891, pp. 160–163. Returns on Hours of Work, ordered by the House of Commons, 1890, pp. 10–11.	Bricklayers -	51·45	In the returns for 108 districts given by the National Association of Master Builders the average hours for bricklayers are found to be $54\frac{5}{72}$ in summer and $48\frac{5}{108}$ in winter. The average for the whole year has therefore been taken as $51\frac{25}{432}$. In the returns for 177 districts given by the Operative Bricklayers' Society the average hours are found to be $55\frac{99}{177}$ in summer and $48\frac{95}{177}$ in winter. The average for the whole year has therefore been taken as $51\frac{162}{177}$. The number given in the table is the mean of these two results. The average obtained for the year 1890 in Parliamentary Returns of Hours of Work is 50·03.
Minutes of Evidence, Vol. II., Appendix XXX. Statistical Tables and Report on Trade Unions for 1891, pp. 185–188. Returns on Hours of Work, ordered by the House of Commons, 1890, 16–17.	Plasterers -	51·86	In the returns for 111 districts given by the National Association of Master Builders the average hours for plasterers are found to be $53\frac{104}{111}$ in summer and $48\frac{117}{222}$ in winter. The average for the whole year has therefore been taken as $51\frac{1}{148}$. In the returns for 94 districts given by the National Association of Operative Plasterers the average hours throughout the year are found to be $52\frac{69}{94}$. The number given in the table is the mean of these two results. The average obtained for the year 1890 in Parliamentary Returns of Hours of Work is 54·91.
Minutes of Evidence, Vol. II., Appendix XXX. Statistical Tables and Report on Trade Unions for 1891, pp. 189–192. Returns on Hours of Work, ordered by the House of Commons, 1890, pp. 18–19.	Plumbers -	51·88	In the returns for 112 districts given by the National Association of Master Builders the average hours of plumbers are found to be $54\frac{5}{32}$ in summer and $50\frac{79}{448}$ in winter. The average for the whole year has therefore been taken as $52\frac{158}{896}$. In the returns for 107 districts given by the United Operative Plumbers' Association the average hours are found to be $52\frac{105}{214}$ in summer and $50\frac{31}{107}$ in winter. The average for the whole year has therefore been taken as $51\frac{257}{428}$. The number given in the table is the mean of these two results. The average obtained for the year 1890 in Parliamentary Returns of Hours of Work is 51·47.

* The Returns from which the hours have been obtained are for 1891 in all cases, with the exception of those of brickmakers and coachmakers, which are for 1890, and those of coopers, in which it is not stated whether they are for 1890 or 1891. Returns of Hours of Labour in the various districts and for the various classes of workmen for July 1893, have been sent to the Commission by the National Association of Master Builders. These show several local changes in hours, but the alterations made by them in the general averages are so slight that it has not been considered necessary to point them out.

[§ 433.] TABLE showing the Means of Returns of Weekly Hours of Labour in the Building and Cognate Trades arranged in ascending order of Hours—*continued.* [§ 433.]

References.	Class of Workmen.	Weekly Hours.	REMARKS.
Minutes of Evidence, Vol. II., Appendices XXX. and XXXIII. Statistical Tables and Report on Trade Unions for 1891, pp. 176–179. Returns on Hours of Work, ordered by the House of Commons, 1890, pp. 12–15.	Carpenters and joiners.	51·92	In the returns for 118 districts given by the National Association of Master Builders the average hours of carpenters and joiners are found to be $53\frac{379}{472}$ in summer and $49\frac{211}{238}$ in winter. The average for the whole year has therefore been taken as $51\frac{801}{944}$. In the returns for 298 districts given by the Amalgamated Society of Carpenters and Joiners the average hours are found to be $54\frac{773}{1192}$ in summer and $51\frac{209}{298}$ in winter. The average for the whole year has therefore been taken as $53\frac{417}{784}$. In the returns for 86 districts given by the General Union of Operative Carpenters and Joiners the average hours throughout the year are found to be $50\frac{171}{172}$, and in the returns for 100 districts given by the Union of Associated Carpenters and Joiners the average hours throughout the year are found to be $51\frac{130}{200}$. The number given in the table is the average of these four results. The average obtained from Parliamentary Returns of Hours of Work is 53·12.
Minutes of Evidence, Vol. II., Appendix XXX. Statistical Tables and Report on Trade Unions for 1890, pp. 180–185. Returns on Hours of Work, ordered by the House of Commons, 1890, p. 16.	House painters -	53·06	In the returns for 109 districts given by the National Association of Master Builders the average hours of house painters are found to be $54\frac{213}{218}$ in summer and $47\frac{193}{438}$ in winter. The average for the whole year has therefore been taken as $51\frac{823}{876}$. In the returns for 48 districts given by the Amalgamated Society of House Decorators and Painters the average hours are found to be $55\frac{1}{98}$ in summer and $53\frac{7}{392}$ in winter. The average for the whole year has therefore been taken as $54\frac{6}{15}$. In the returns for 66 districts (of house painters only) given by the National Amalgamated Society of Operative House and Ship Painters and Decorators the average hours throughout the year are found to be $53\frac{33}{88}$. The number given in the table is the average of these three results. The average obtained from Parliamentary Returns of Hours of Work is 54·96.
Statistical Tables and Report on Trade Unions for 1891, pp. 198 to 200. Answers to Schedules of Questions, pp. 40–45. Returns on Hours of Work, ordered by the House of Commons, 1890, p. 24.	Cabinet-makers -	53·6	In the returns for 51 districts given by the Amalgamated Union of Cabinet Makers the average hours are found to be 54·4. In the returns for 16 districts given by the United Operative Cabinet and Chair Makers' Society of Scotland the average hours are found to be 51·43. In the returns for 12 districts given by the Alliance Cabinet Makers' Association in Answers to the Schedules of Questions issued by the Commission the average hours are found to be 54·99. The number given in the table is the average of these three results. The hours quoted in different districts range from 60 to 51, but in 38 cases are said to be 54. The average obtained from Parliamentary Returns of Hours of Work is 54·55.
Answers to Schedules of Questions, pp. 54–57.	Coopers - -	54·16	This is the average obtained from six returns to the Schedules of Questions issued by the Commission. In two cases in which the hours are given as nine a day this has been taken as equivalent to 54 a week.
Returns on Hours of Work ordered by the House of Commons, 1890, p. 29. Answers to Schedules of Questions, p. 53.	Coachmakers -	54·69	This is the average obtained from 47 returns, of which 46 are contained in the Parliamentary Returns on Hours of Labour, and one in the Answers to the Schedules of Questions issued by the Commission. The hours given in these returns vary from 60 to 51, but in 30 returns are said to be 54.
Returns on Hours of Work ordered by the House of Commons, 1890, pp. 8–9.	Brickmakers -	55·15	This is the average obtained from 36 returns, in which the hours given vary from $67\frac{1}{2}$ to 46. Whenever the hours were given separately for summer and winter the mean has been taken.

Uniformity of hours.

434. It will be seen that there is great uniformity amongst the average hours thus obtained for the various branches of the building trades proper; the hours in all cases except that of the house painters lying between $50\frac{3}{4}$ and 52. The hours of coachmakers, coopers, cabinet-makers, and house painters and decorators all lie between 53 and $54\frac{1}{2}$ and thus approximate closely to the average hours of other skilled industries. The local variations in the hours worked by the same class of workmen are however considerable. Thus the hours quoted by the National Association of Master Builders for masons vary in different districts from $61\frac{1}{2}$ to 47 in summer and from 60 to 40 in winter, and a similarly large range of variations occurs in other trades.

Recent reductions in hours.

435. There have been considerable reductions in the hours of labour in these trades during recent years. Thus the present hours of carpenters in Dublin are 54 a week, but from 1872 to 1890 they worked $60\frac{3}{4}$ hours a week, and joiners in Wales are now working 54 hours where they worked 63 hours about 30 years ago. Similarly masons in Scotland in 1860 worked 57 hours a week, but the hours were reduced to 51 in 1861 in Edinburgh and in 1871 in Glasgow. In Leeds, however, the hours of masons have advanced since 1876 from 48 to 50, although the shorter time is still worked

[§ 435.] in Lancashire; but 30 years ago both masons and bricklayers are said to have worked 60 hours in summer and from light to dark in winter.(1) The weekly hours of coachmakers have also been reduced during a comparatively recent period from 60 to 54. In some districts a 54 hours' week had been obtained before 1879, but the hours were increased in that year to 56½. In Lancashire and Yorkshire, however, they have again been reduced to 54, and a reduction has also taken place in parts of Scotland and Ireland, and throughout the North of England. The hours of coopers in the Leith and Edinburgh district were reduced from 57 to 56 in 1891.(2) This gradual process of reduction in hours may be seen more generally in the following table, which shows the average weekly hours in the various building and cognate trades during the years 1850, 1860, 1870, 1880, and 1890:—

TABLE showing the Means of Returns of Weekly Hours obtained from the Returns on Hours of Work ordered by the House of Commons, 1890.*

Class of Workmen.	1850.	1860.	1870.	1880.	1890.
Bricklayers - -	—	—	—	53·81	50·03
Masons - -	58·36	56·41	54·18	52·21	50·59
Plumbers - -	58·11	56·94	53·35	51·45	51·47†
Carpenters and joiners	—	—	56·35	53·88	53·12
Cabinet-makers -	60·91	60·19	57·09	55·63	54·55
Coachmakers - -	60·94	60·05	57·48	54·94	54·65
Plasterers - -	59·5	59·5	54·75	54·75	54·9†
House painters -	60·15	59·54	55·58	55·20	54·96
Brickmakers - -	57·96	57·53	56·65	55·34	55·15

Overtime. 436. A large amount of overtime appears to be worked by carpenters and joiners. One witness stated that systematic overtime was the greatest evil in the trade, and that he had himself worked from 6 o'clock in the morning to 9 or 10 o'clock at night, and in exceptional cases even till midnight. Overtime was sometimes worked in the West End of London for the convenience of private individuals, but chiefly in the City and the great public thoroughfares. The witness did not, however, wish for the entire abolition of overtime, as it afforded an opportunity for extra savings on the part of energetic men.(3) Several of the unions object to overtime work on the ground that other men are thus kept out of employment, and the Newcastle, Gateshead, and district branch of the Amalgamated Society of Carpenters and Joiners has succeeded in practically abolishing overtime on new work, "only "half-day being allowed to be worked by six men at "the finish of a house or ship; on old work and repairs "no restriction is placed."(4) The Cambridge branch of the National Association of Master Builders on the other hand states that "during summer many work-"men desire to work overtime . . . . particularly "those away from home working in the country."(5) Overtime in the building trades is usually paid for at a higher rate, such as time and a half or time and a quarter. Night shifts are not common except for painters, by whom they are said to be a good deal worked.(6) Sunday work is said to be very rare in the building trade, and only worked as a rule in case of breakdowns in mills, &c. It is usually paid for as double time.(7) There does not appear to be much overtime worked as a rule by either cabinet makers or coopers, although the hours worked by the Jewish cabinetmakers in their homes or sweating shops are excessively long.(8) The members of the Dublin City branch of the Alliance Cabinet Makers' Association are agitating for the abolition of all overtime work in order to provide work for the unemployed, and the National Amalgamated Society of Coopers of Newcastle has been successful in a similar effort and has thus obliged some employers to engage additional men, although with a consequent reduction in the wages of the men who gave up working overtime. The coopers who make herring barrels in the North of Scotland are said to be badly organised, and in consequence to work very long hours for small pay.(9)

437. The tabular statements of hours in the printing and cognate trades have been drawn chiefly from the Answers to the Schedules of Questions issued by the Commission and the "Statistical Tables and Report on Trade Unions" for 1891 issued by the Board of Trade. The information contained in these sources has been supplemented by that in the oral evidence, and the Returns on Hours of Work ordered by the House of Commons on the motion of Mr. Broadhurst (375, 1890). It is important to notice that the average hours for different classes of labour for the year 1890 which have been obtained from the last-mentioned returns, most of which come from employers of labour, are in close agreement with the averages obtained from the Answers to Schedules of Questions and the "Statistical Tables, &c." in both of which cases the returns are made by the unions of employed.

TABLE showing the Mean of Returns of Weekly Hours worked by Members of various Societies in the Printing and Cognate Trades.

References.	Society.	Weekly Hours.	REMARKS.
Answers to Schedules of Questions, pp. 80—85. Digest, Vol. III., p. 60. Statistical Tables, &c., pp. 244–5. Parliamentary Returns on Hours of Work ordered by the House of Commons, 1890, pp. 43–44.	Scottish Typographical Association.	53·44	53 9/16 is the average number of hours obtained from the answers of 16 branches of the Scottish Typographical Association, which give hours varying from 54 to 56; and 53 is the average number of hours obtained from the returns of 27 branches of the Association quoted in the "Statistical Tables and Report on Trade Unions" for 1891, which give hours varying from 51 to 57. The average given in this table therefore is the arithmetic mean of these two results. It must, however, be noticed that in each case only one branch returns 53 hours as the actual number worked, while 10 branches in the former case and 12 branches in the latter give 54 as the actual number. The average obtained from 54 returns for the year 1890 in the Parliamentary Returns of Hours of Work is 52·9.

* In the case of several of these trades the sources of information from which the averages are obtained differ considerably in the different years.

† The averages taken from the same sources as those used for the preceding years are, in the case of plasterers, 54·75, and in the case of plumbers, 51·03, but these averages are modified by those from the additional returns for the year 1890. It is probable that if similar returns could have been obtained for the previous years the increase in hours in 1890 would not appear.

437.] TABLE showing the Means of Returns of Weekly Hours worked by Members of various Societies in the Printing and Cognate Trades—*continued.* [§ 437.]

References.	Society.	Weekly Hours.	REMARKS.
Answers to Schedules of Questions, p. 93. Digest, Vol. III., p. 54. Statistical Tables, &c., p. 246. Parliamentary Returns on Hours of Work ordered by the House of Commons, 1890, p. 44.	Amalgamated Society of Lithographic Printers.	53·66	The average given in the table is that obtained from the returns of 39 branches of the Amalgamated Society of Lithographic Printers quoted in the "Statistical Tables and Report on Trade Unions" for 1891, which give numbers of hours varying from 50 to 55. In 18 cases the actual number of hours worked is given as 54. In the oral evidence it was said that the average hours were 54 in England and 51 or 52½ in Scotland, which would give a general average of about 53. In the written evidence the hours were given as from 52½ to 55, which would give an average of 53¾. The average given in the table, which is obtained from more complete data than either of these results, is also seen to lie between them. The average obtained from 11 returns for the year 1890 in Parliamentary Returns of Hours of Work is $54\frac{5}{44}$.
Digest, Vol. III., p. 58	Printers' Labourers' Union.	54	The regular hours are 54, but one or two nights a week are worked in addition.
Answers to Schedules of Questions, p. 94.	Printing Machine Managers' Trade Society.	54	
Digest, Vol. III., p. 55	Lithographic Stone and Zinc Preparers' Society.	54	
Digest, Vol. III., p. 56	London Society of Compositors.	54	It is stated that 54 is the usual number of hours for day work, and that for night work they are slightly less.
Answers to Schedules of Questions, pp. 72—80. Digest, Vol. III., p. 56. Parliamentary Returns on Hours of Work ordered by the House of Commons, 1890, pp. 42–44.	Typographical Association.	54·02	$54\frac{1}{52}$ is the average number of hours obtained from the answers of 26 branches of the Typographical Association, 16 of which give 54 as the number of hours worked, whilst the others give numbers varying from 51 to 56. In the answer referring to the Association as a whole, it is said that the hours are from 51 to 54, and "generally the latter." In the oral evidence, however, it was stated that the usual hours were about 53 for day work and 52 for night work. The average obtained from 42 returns for the year 1890 in Parliamentary Returns of Hours of Work is $54\frac{1}{42}$.
Answers to Schedules of Questions, pp. 85—92. Statistical Tables, &c., p. 247. Parliamentary Returns on Hours of Work ordered by the House of Commons, 1890, pp. 44–45.	Bookbinders and Machine Rulers' Consolidated Union.	54·12	$54\frac{1}{8}$ is the average number of hours obtained from the answers of 20 branches of the Bookbinders and Machine Rulers' Consolidated Union, which give hours varying from 52 to 59; and $54\frac{1}{18}$ is the average number of hours obtained from the returns of 45 branches of the society quoted in the "Statistical Tables and Report on Trades Unions" for 1891, which gvie hours varying from 51 to 56. The average gives in this table is the arithmetic mean of these two results. It must be noticed that 13 branches in the former case, and 27 in the latter, give 54 as the actual number of hours worked. The average obtained from 19 returns for the year 1890, in the Parliamentary Returns of Hours of Work is $54\frac{3}{19}$.
Digest, Vol. III., p. 63	Dublin Typographical Provident Society.	56	The majority of the offices are said to work 56 hours a week, though a few work 57 hours.
Digest, Vol. III., p. 80	National Union of Paper Mill Workers.	72	The men are employed on two shifts, those on the day shift working 78 and those on the night shift 66 hours a week. The number given is the arithmetic mean of these numbers.

iformity hours.

438. It appears from the above table that there is considerable uniformity in the number of regular hours worked in the different branches of the printing and book trades, the average being close upon 54 in almost every case. The exceptions are a comparatively small society of printers, which is confined to Dublin, and the members of which are said usually to work 56 hours a week, and the National Union of Paper Mill Workers, the members of which work 78 or 66 hours a week, according as they are employed upon the day or the night shift. The conditions of labour of the latter class of workers are, however, in all respects dissimilar to those of printers or bookbinders. (1)

(1) Digest, Vol. III., pp 63, 80.

Recent reductions in hours.

439. The hours in the majority of these cases have been considerably reduced during recent years. Thus the members of the Glasgow branch of the Scottish Typographical Association, whose hours were reduced from 54 to 52½ in 1891, are said to have worked 60 hours a week some 20 years ago, and the members of the Belfast branch of the Typographical Association, whose regular hours on newspaper work are now 60 a week, are said to have until very recently worked 70 hours a week. (1) Seven branches of the Scottish Typographical Association and thirteen branches of the Amalgamated Society of Lithographic Printers succeeded in obtaining a reduction of hours during the

(1) Digest, Vol. III., pp. 60, 62.

[§ 439.] year 1891.(1) The gradual reduction which took place in the average weekly hours of labour in these trades between 1850 and 1890 will be seen from the following table:—

TABLE showing the Means of Returns of Hours obtained from Returns of Hours of Work ordered by the House of Commons. 1890.

Nature of Labour.	1850.	1860.	1870.	1880.	1890.
Letterpress printing (Scotland).	62·9	59·08	55·84	53·14	52·71
Letterpress printing (England and Ireland).	59·45	59·07	57·17	54·27	54·03
Bookbinding - -	59·08	58·64	56·93	54·21	54·15
Lithographic and ornamental printing.	58·16	56·4	55·5	54·61	54·34

It appears from this table that the greatest reduction of hours has taken place in the case of the letterpress printers in Scotland, whose average hours in 1850 were higher than those of any other branch of the printing and kindred trades, whilst they are at present lower than those in any other branch. It is a curious fact that in the other three classes of work the amount of the reduction in hours follows the same order as the extent of the hours at the beginning of the period, so that the four classes which are arranged in descending order in 1850 are in ascending order in 1890.

Overtime. 440. It remains to be noticed that in the above tables no account has as a rule been taken of overtime work, which is often of considerable importance in these trades. The Secretary of the London Society of Compositors stated that overtime was worked to a large extent in many offices, and that it would be desirable to limit it, both for the sake of the men employed and in view of the large numbers of unemployed. He considered that Government contracts were to some extent responsible for this, as official minutes, &c. have to be printed as soon as they come in, at any hour of the day or night.(2) The members of the Printers' Labourers' Union are said to work one or two nights a week in addition to the regular 54 hours. The rules of this Union only allow work on one night in the week, but the efforts to enforce the rule have not been very successful at present. When work is done at night the man works thirty-six hours continuously, with only an hour and an half off the whole time, and although the work is not very laborious it requires constant attention to avoid being caught in the machinery. It is stated that whilst some members were glad of the opportunity of earning extra pay, others objected to overtime work altogether, and would rather that it was worked by the unemployed.(3) The members of the National Union of Paper Mill Workers, who work alternate day and night shifts, complain that they are sometimes required to do two shifts continuously if the man on the other shift is unable to replace them, and urge that a spare hand should be kept, who would be available in such emergencies.(4) Overtime work is generally paid at a higher rate, which in the Typographical Association is said to be 20 or 30 per cent. above the ordinary rate, and in the Scottish Typographical Association to be usually time and a half.(5)

Sunday labour. 441. Sunday work is generally paid at a higher rate if worked by jobbing printers, but newspaper men are obliged to begin work at 4 or 5 o'clock on Sunday afternoon, and this is considered as ordinary time. It is seldom worked by bookbinders and machine rulers.(6)

III. GAS, COAL, CHEMICAL, AND KINDRED TRADES.

Nature of information. 442. It has been found impossible to obtain any general averages of the hours worked in the gas, coal, chemical, and kindred trades, because the only exact information which has been received upon these points relates as a rule to the hours worked in connexion with particular firms or companies, or by individual workmen, and when general statements have been made these are often of a very contradictory nature.

Hours of gas workers. 443. A statement has been given in by Mr. Valon which embodies in tabular form the answers obtained by him from 103 gas companies with regard to the length of the hours worked by their stokers in a week.(1)

TABLE showing the Number of Gas Companies whose Stokers work certain Hours.

Number of Gas Companies.	Number of Hours worked per Week.	
	Range of Variations.	Mean.
49	48 to 58	53
22	60 to 72	66
31	73½ to 84	78·75
1	90	90
103	48 to 90	63·88

The above table shows that in 102 gasworks the weekly hours of stokers range from 48 to 84, whilst in one case they are as high as 90. It is obvious, therefore, that the variations in the length of hours in this industry are too great for a general average to be of value. It appeared, however, from the evidence given by the principal London gas companies, that the stokers in their works generally have eight hour shifts, and that seven shifts are usually worked during the week, and similar evidence was given with regard to the Darwen Gasworks.(2) In this industry the work has to be carried on continuously by day and night, so that the eight hours' system, which was adopted in 1889 at the request of the men, involves three shifts of men instead of the two shifts which were usual before then. It was stated by Mr. Livesey that some men in the South Metropolitan Gas Company's works still preferred to work on the two-shift system, and this plan is adhered to at some provincial gasworks, as at Ramsgate. The work is, however, not continuous throughout the shift. At Ramsgate the retorts are said to be drawn every two hours, and the stokers are able to rest for 50 minutes out of every two hours, and to take their meals in these intervals.(3) Mr. Thorne stated that under the two-shift system at the South Metropolitan works the men rested for one out of every two hours, but that the work was of so exhausting a nature that it would be impossible to stay at it continuously.(4)

Hours of chemical workers. 444. Tabulated statements of the weekly hours of labour of various classes of workmen in different chemical works have been received from the United Alkali Company, and are summarised as follows.(5)

TABLE showing the Weekly Hours of Chemical Workers in different Districts.

District.	Nature of Work.	Hours worked per Week.	
		Range of Variations.	Mean.
Tyne and Scotland.	Vitriol, saltcake, bleaching-powder, alkali, sulphur.	39 to 72	62·99
St. Helens -	Vitriol, saltcake, bleaching-powder, pearl hardening, copper.	36 to 84	63·00
Widnes -	Vitriol, saltcake, bleaching-powder, sulphur, copper.	54 to 81	67·63
	Total - - -	36 to 84	64·5

It must be noticed that in the above table the range of variations refers to the averages of hours worked by men employed in different chemical processes, and not, as in the case of the table of gas stokers' hours, to those worked by different firms. It was stated by Mr. King that the average hours of chemical workers were 112 one week and 56 the next, or an average of 84 hours a week all the year round, but from the above table this would seem to be true only of the men employed in the vitriol department, in which the maximum number of hours are worked in the St. Helens and Widnes districts.(6) Mr. Mitchell stated that sixty per cent. of the Scotch chemical workers work 84 hours a week on an average in alternate day and night shifts. The day

(1) Statistical Tables, &c., pp. 244, 245, 247. (2) Digest, Vol. III., p. 56. (3) Digest, Vol. III., pp. 57, 58. (4) Digest, Vol. III., p. 80. (5) Answers to Schedules of Questions, pp. 72, 80. Answers to Schedules of Questions, pp. 74, 75, 78, 86, 90, 91. Digest, Vol. III., p. 56.

(1) Minutes of Evidence, Vol. III., 25,696. (2) Digest, Vol. III., pp. 40, 42, 43, 45. (3) Digest, Vol. III., pp. 36, 44. (4) Digest, Vol. III., p. 32. (5) Minutes of Evidence, Vol. III. Appendices Nos. 1 and 6. (6) Digest, Vol. II., p. 51.

444.] shifts work eleven and the night shifts thirteen hours as a rule, but when the shifts are changed at the end of the week one works nineteen and the other twenty-two hours. It is said that the work is so hard that the men often cannot work the full hours but are obliged to find substitutes to fill up the time in which their work should be performed, and that there is no fixed time for meals, which the men must take whenever they can find time. Mr. Mitchell admitted that the work was not continuous, but stated that the periods of rest between the charges only lasted half-an-hour, and that the three hours of rest which ought thus to be obtained between the six charges during the day are often encroached upon by "other small things which "take up the time."(1) Mr. King also stated that the English chemical workers were hard at work nearly the whole time that they were on duty, since three charges were made in the 24 hours, and each charge took 6 hours and a quarter, or 18 hours and 45 minutes altogether.(2) Similar evidence with regard to the continuous and laborious nature of the work was given by a representative of the chemical workers in the Tyneside and National Labour Union, but it was stated that the majority of the chemical works upon the Tyne had adopted a three-shift system, which reduced the weekly hours to 56.(3) In the acid manufactories in Glamorganshire the day shift lasts 10 hours and the night shift 14, and it is said that out of each 12 hours more than eight are spent in actual work. The furnaces are charged every 35 minutes, and each charge lasts four or five minutes, but in the intervals the men have to wheel away the ashes and burnt ore.(4) The United Alkali Company have sent in tables to the Commission showing the actual hours of labour which it is estimated are required in the performance of various chemical processes, and which are considerably less than those calculated by the men. Thus it is asserted that in the St. Helens district, although the hours of attendance in the vitriol department are 84 a week, the hours of actual labour are only 28½ a week; and the average hours of actual work of six different classes of chemical workers amount to 30¾ a week, although their average hours of attendance are 60¼ a week.(5) The average weekly hours of chemical workers as obtained from the Returns of Hours of Work ordered by the House of Commons in 1890 are as follows:—

Year.	1850.	1860.	1870.	1880.	1890.
Number of returns -	8	16	24	36	40
Hours - - -	59·75	61·53	60·62	61·13	59·76

It will be seen that the average hours obtained from these returns are below those obtained from the returns of the United Alkali Company quoted above, but that the average hours in 1890 are no lower than they were in 1850, and that they have fluctuated very slightly during the interval. It must, however, be noticed that the number of returns for 1850 is very much smaller than the number of those for 1890, and if the average of the eight returns given by the same persons who gave those for 1850 is taken in each year the following table is obtained:—

Year.	1850.	1860.	1870.	1880.	1890.
Hours - - -	59·75	59·75	59·25	58·00	55·87

It is possible therefore that there has been a real reduction in the hours of labour throughout the trade which does not appear in the former table.(6)

ours of
lt, copper,
d coal
orkers.

445. In the salt industry the hours vary with the nature of the work and are very irregular, the length of the various shifts being fixed by the men themselves. Salt miners are, however, said never to work for more than eight hours.(7) The copper workers in the smelting department work as a rule for 12 hours on six days in the week, and in some works they are said to be frequently kept at work for 24 or even 36 hours continuously. In the finishing department the average hours are 10 in the day shift and seven in the night shift, day and night shifts being worked alternately, but in some works the day and night shifts are each of 10 or 11 hours. The witness who gave evidence with regard to this trade referred to "the abominable system of overtime," and urged that it should be entirely abolished except in special emergencies.(1) The representative of the Coal Porters' branch of the Gasworkers' Union stated that the average hours of coal porters might be roughly estimated at about 40 hours a week, but explained that the work was too uncertain and irregular for any real average to be found. The work must be done at any hour of the day or night when required, but the men are often without any work for the greater part of the week.(2) [§ 445.]

(1) Digest, Vol. III., p. 19. (2) Digest, Vol. II., p. 50. (3) Digest, Vol. III. p. 20. (4) Digest, Vol. III., p. 22. (5) Minutes of Evidence, Vol. III., Appendix XCVI. (6) Returns of Hours of Work, p. 25. (7) Digest Vol. II., p. 51.

446. The question of Sunday labour assumes considerable importance in several of these industries and particularly in that of the gasworkers. Mr. Valon stated that practically the greater number of gasworks worked on Sundays as on ordinary days, and that great difficulties had been found to attend any other system. Attempts to stop work for less than twenty-four hours on Sunday were of little value, "because men who were "changing to night duty had their Sundays spoilt by "having to spend the greater part of the day in bed in "order to prepare themselves for the Sunday night's "work. The system of resting twelve hours on Sunday "also caused increased expense, owing to the waste of "fuel, &c. . . . . Or if the works were stopped "for twenty-four hours the extra labour and anxiety "of having to start a 'dead' works was so great" as to counterbalance the good effect of the day's rest; in fact where the twenty-four hours' rest had been tried the men had requested that work should be continued as before. In the Ramsgate gasworks eight men are employed instead of seven in order that work may be carried on continuously without any man working more than six days a week, and "by a simple system of interchange it was so "arranged that a free Sunday came to every man in "his turn once in seven weeks." This plan had not been found to increase the cost of carbonisation, and the men are physically and morally better for the rest.(3) Mr. Duxbury stated that in the Darwen gasworks the men worked seven days a week, and though a Sunday rest had been tried it had proved unsuccessful and the men had not cared to continue it. They are, however, paid for time and a half during the two Sunday shifts.(4) In the London gasworks all work is as a rule suspended on Sunday between 6 a.m. and 6 p.m., and double time is paid for the work done between 6 p.m. and 10 p.m. The Commercial Gas Company had tried to suspend work altogether on Sunday, but found it impossible to do so for more than twelve hours without injury, and complained that the double pay demanded for the four hours on Sunday evening had raised the cost of production considerably. When work is continuous on Sunday, as sometimes happens in the case of heavy fogs, the company have to pay for five shifts between Saturday night and Monday morning. In the works of the Gas Light and Coke Company no work is done as a rule during sixteen hours on Sunday.(5) Mr. Livesey stated that the plan adopted in the Ramsgate gasworks of one day off for each man in the week had been tried by the South Metropolitan Gas Company but had proved to be unsatisfactory. It was after a conference between all the engineers of the London gas companies and Dr. Gritton, the secretary of the Lord's Day Observance Society, that all work had been stopped for twelve hours on Sunday, but the payment of double time between 6 p.m. and 10 p.m. was demanded by the Gasworkers and General Labourers' Union, and had led to a dispute with that Union.(6) Sunday labour is also common amongst chemical workers, and it is asserted that 50 per cent. of the labour then performed could be dispensed with without serious loss to the masters. If the masters were required to pay double wages for Sunday labour it is thought that the system would be largely, if not totally, abolished. In Scotland the employers are said to make no arrangement for relief on Sundays, so that any free time which the men get is obtained by arrangement with their fellows on the opposite shift. In England, however, Mr. King stated that the Chemical and Copper Workers' Union had partially abolished Saturday night and Sunday work, though he feared that the employers would take the first oppor- Sunday labour.

[§ 446.] tunity of reverting to the old system.(1) At the acid works in Glamorganshire the men are employed every other Sunday, which they consider a great grievance. The nature of the work renders seven shifts necessary, and they therefore recommend a relief shift for Sundays.(2) Copper smelters do not work on Sunday as a rule, but "in case a bottom is changed at the end of "a week, and the furnace takes some sand on Saturday," they may have to work on Sunday, and the payment for occasional Sunday work is only 2s., irrespective of the length of time required, which may be as much as fourteen or fifteen hours.(1) [§ 446.]

447. The information which has been obtained with regard to the length of hours in various miscellaneous trades, which have not yet been dealt with, is comprised in the following table:— IV. Miscellaneous Trades. Sources of information.

Table showing the Means of Returns of Weekly Hours of Labour in various Miscellaneous Trades, arranged in ascending order.

References.	Class of Workmen.	Hours per Week.	REMARKS.
Digest, Vol. III., pp. 74 and 76. Answers to Schedules of Questions, pp. 61 and 766. Returns on Hours of Work ordered by the House of Commons, 1890, p. 33.	Glass bottle makers	49·25	This is the average obtained from five returns of hours, of which two are contained in the oral and three in the written evidence. The hours quoted for the Seaham Harbour Works (59½ a week) were not included in obtaining the average, as the other conditions of employment there differ from those in other works. The average obtained from 15 returns for the year 1890 in the Parliamentary Returns of Hours of Work is 52·31, but some of these returns seem to refer to classes of workmen not included in the former returns.
Answers to Schedules of Questions, p. 96.	Sawyers	55·00	This is the arithmetic mean of the hours quoted by the Hull Mill Sawyers and Wood Cutting Machinists' Society (54 a week) and those quoted by the Aberdeen Saw Mill Workers' Society (56 a week).
Answers to Schedules of Questions, pp. 70, 71. Returns on Hours of Work" ordered by the House of Commons, 1890, p. 42.	Pottery makers	55·80	This is the average of five returns of hours contained in the written evidence. The hours said to be worked by women only were not included in obtaining the average. The average obtained from 36 returns for the year 1890 in the Parliamentary Returns of Hours of Work" is 54·57. The latter returns are given chiefly by employers, whereas the former are given by associations of the employed.
Digest, Vol. III., pp. 86, 87. Answers to Schedules of Questions, p. 69.	Seed crushers	61·83	The seed crushers in Hull are said to work on an average 55 hours, and those in London appear to work about 72 hours a week; 58½ is the length of hours quoted in the written evidence of the Seed Crushers' Society. The amount given in the table is the average of these three estimates.
Digest, Vol. III., pp. 64, 65, 66, 67, 71, 72. Answers to Schedules of Questions, pp. 16, 17, 755. Returns on Hours of Work ordered by the House of Commons, 1890, pp. 7, 8.	Bakers	69·83	This is the average obtained from 12 returns of hours, of which seven are contained in the oral and five in the written evidence. A representative of the Amalgamated Union of Bakers stated that the hours ranged from 54 to 100, and that the average was 70 a week. The average obtained from 27 returns for the year 1890 in the Parliamentary Returns of Hours of Work is 56·73. The latter returns are chiefly from employers.
Digest, Vol. III., pp. 90, 92, 94, 95, 96. Minutes of Evidence, Vol. III., Appendix LXXXIV.	Shop assistants	81·47	The representatives of the National Union of Shop Assistants stated that the average hours in retail shops were 82, and that the average hours of 21 warehouse porters and packers had been found to be 96 a week for three months and 78 for the rest of the year, which would give an average throughout the year of 82·5. The average obtained from a table of the approximate hours of shop assistants in various trades in Scotland is 82·89. The average hours of grocers' assistants are said to be 80, and the same length is given for the average hours of shop assistants in Liverpool. The hours given in the table are the average of these five results. The average given by Mr. Langford, viz., 71 hours, was not included in finding the general average, as it referred only to the Old Kent Road.

Range of variations in hours.

448. It may be noticed that the range of variations in hours in the above table is greater than is the case in any of the groups of trades already considered, the hours of glass bottle makers being the shortest, and those of shop assistants the longest, of all the trades included in this section of Group C. Complaints as to the length of hours were made by butchers and domestic servants, but the irregularity in each case was said to be too great for any average to be given. The hours of Covent Garden porters are also very irregular, so that no general statement can be made with regard to them.(3)

Recent reductions in hours.

449. There have been recent reductions in hours of labour in several of these trades, and the gradual reduction which has taken place in the case of bakers, glass workers, and pottery makers, since the year 1850, is shown in the following table.

Table showing the Means of Returns of Weekly Hours obtained from Returns of "Hours of Work" ordered by the House of Commons, 1890.

Class of Workmen.	1850.	1860.	1870.	1880.	1890.
Glass workers*	55·53	55·78	53·87	53·02	52·44
Pottery makers	58·43	58·27	56·69	54·96	54·57
Bakers	70·86	68·68	60·38	60·12	56·73

* This includes other classes of glass workers besides those engaged in making glass bottles.

(1) Digest, Vol. II., p. 50. Digest, Vol. III., p. 19, 25. (2) Digest, Vol. III., p. 22. (3) Digest, Vol. III., pp. 72, 73. 88.

(1) Digest, Vol. III., p. 23.

[§ 449.] It was stated that in 1890 the hours of bakers were reduced in several towns in Ireland from 105 to 60 hours a week, through the efforts of the Irish National Bakers' Federation.(1) The seed crushers in both London and Hull have also been successful in obtaining a reduction in their hours of labour.(2)

ertime. 450. The trades in which overtime work assumes most importance are those of the bakers and the shop and warehouse assistants. Evidence was given showing that towards the end of the week bakers worked 22, 23, 24, and at one of the Midland towns as much as 34 hours consecutively.(3) For this overtime they sometimes received no extra remuneration, but generally it was paid for at the rate of time and a quarter or time and a half, and it was stated that the men were glad to supplement their wages in this way.(4) The willingness of the workmen did not, however, prevent the long hours from being very injurious, and the extreme exhaustion produced by the continuous work was said to result in many cases in driving men to drink.(5) As regards shop assistants, it was declared that, in addition to long hours, a considerable amount of overtime was worked in all trades; but it was pointed out that this statement did not apply to low class businesses, since in these there was ample time for putting the shop straight in the morning when very little was going on.(6) In small towns, and especially at the seaside, shop assistants work excessively long hours in summer, and less than the general average in winter.(7) Warehouse assistants were described as working three, four, or five hours a day overtime in the busy season, and it was stated that, whereas the salesman had this busy season only about twice a year in each department, the clerks, porters, and packers had perhaps only one month in the year during which they stopped work at the proper time. Neither in this case nor in that of the shop assistants is there any remuneration whatever for this extra work.(8) Another instance of very long hours during the busy season is that of the Covent Garden porters, who are at work in the summer sometimes from 3 a.m. to 10 p.m.(9) The London seed crushers consider that overtime prevails in their trade "to a greater "extent than it should do"; they speak, however, of an improvement in this respect since the strike of 1889, and in Hull the system of overtime has been entirely abolished so far as this trade is concerned.(10)

ight work. 451. Under the heading of night work, again, the chief grievance is that of the bakers, who, both in England and Ireland, work to a very great extent by night. In some parts of England, however, the efforts of the men have resulted in the abolition of night work. This has been the case in Liverpool and Leicester, and in Staffordshire Friday night is the only one on which baking goes on.(11) In Scotland, day-work has prevailed for the last 30 years; though it was stated that recently the keen competition amongst employers had partially broken down the system, and for a short time bakers in one or two centres, Glasgow in particular, had drifted into night work.(12) The workmen contend that the unavoidably unfavourable conditions of the trade are much aggravated by this practice of working at night; they are of opinion, moreover, that night work is quite unnecessary since bread, even when sold new, is seldom eaten until it is at least 12 hours old. In support of this view one witness referred to the six months' trial given in London in 1872 to the day system, and alleged that the customers "did not notice any difference."(13) The employers, on the other hand, stated that the experiment had to be abandoned because of the competition of bakers who worked by night, and that so long as the two systems were in practice side by side it was impossible for day work to succeed. They held that nothing short of legislation could abolish night work, and that in any case its abolition would mean the closing of wholesale bakeries since bread could not be delivered in time to the retail dealers if baked during the day.(14) As regards other trades, day and night shifts are worked by the seed crushers, and also by the glass bottle makers; in the latter case the shifts are sometimes arranged so as to divide the night, one shift working from 3 a.m. to 1 p.m., the other from 2 p.m. to midnight; the proposed three-shift system is objected to on the ground that it would involve regular night work.(1) In the pottery trade a very small amount of night work is necessary in connexion with the kilns.(2) [§ 451.]

Sunday labour. 452. Bakers work on Sunday nights as a rule, and complaints were made, especially by those in Ireland, of the early hour in the evening at which they have to be at work. Belfast bakers start work at 9 p.m. on Sundays, while at Dublin and Cork the hours for beginning may be as early as 6.30 and 5 p.m. respectively.(3) In addition to this evening work the baker in London and the Midland towns is often required to be at the bakehouse to cook dinners for some four hours on Sunday morning; it was, however, stated that this custom, which is almost unknown in the North, is gradually dying out in London except in very low-class localities.(4) Frequently there is no remuneration for Sunday work, but there is considerable variety in the answers given on this point. Other industries in which a certain amount of Sunday work is found to be necessary are the glass trade, and to a very small extent the pottery trade.(5) Seed crushers in London work on Sunday night, and complain that for the six nights in the week they receive only the ordinary wage, whereas in Hull the men work five nights and are paid for six.(6) Barmen generally work for seven or eight hours on Sundays, but every third or fourth week they have most of the day off.(7) With regard to the shops in poor neighbourhoods which are open for about five hours on Sunday morning, it was stated that as a rule few or no assistants were employed in them.(8)

(ii.) LIMITATION OF HOURS BY LAW OR OTHERWISE.

(a.) EARLY CLOSING OF SHOPS.

Arguments in favour of Early Closing. 453. Reform in the direction of the earlier closing of shops is urged on the grounds that it is desirable and even imperative that there should be secured to those serving in them conditions which render possible "good "health, intellectual improvement, social advantages, "and rights and interests of citizenship."(9) It was represented before the Commission that the desire for these advantages was by no means confined to the employed, but that shopkeepers were at least equally anxious for the shortening of their hours of labour; for though in one sense freer than their assistants, they often, as a matter of fact, worked even longer hours.(10)

(i.) That the present long hours are injurious to health. As regards the length of hours, there is at present no uniformity, and the weekly averages mentioned in different cases ranged from 53 to 93 hours. The former figure was given as the average for the best shops in Manchester, the latter as the maximum in the low class neighbourhoods of Liverpool.(11) Between these two extremes every variety of length of day is found, and the average throughout the country is estimated by the Secretary of the National Union of Shop Assistants at 80 to 84 hours per week.(12) This estimate was, however, characterised as "outrageous" by one witness, who gave 71 hours as the average in the Old Kent Road, a late closing neighbourhood.(13) In the cities of Scotland the average is 82·89 hours.(14) Letters from several doctors were shown, which testify to the injurious effects produced on the health of shop assistants, especially of young women, by the long confinement and standing.(15) The Shop Regulations Act was stated to be too narrow in its application, since it relates only to women and youths under 18, and inadequate in its provisions even for those. It was, moreover, said to be rendered entirely nugatory by insufficiency of inspection.(16) On the other hand, it was pointed out by an employer that the argument as to the prejudicial effects of the present hours of shopmen was not borne out by facts. The death-rate amongst them was precisely the same as that of commercial travellers, who, it was stated, had the advantage of being in the open air during a great part of the day; and shop assistants were remarkably free from sickness.(17) The scanty leisure at their disposal was, however, insisted upon as a serious hindrance to self-improvement; though, for the most part, intelligent men, they are, it is said, cut off from all public

(ii.) That the shop assistant has no leisure for self improvement.

(1) Digest, Vol. III., pp. 76, 86. (2) Answers to Schedules of Questions, pp. 426–431. (3) Digest, Vol. III., pp. 64, 65, 66. O'Connor, 28,811. [§ 453.] and social interests, and, as a result, the average shop assistant and warehouseman "does not know really the "changes that are taking place around him ;" he does not read the daily papers, and could not tell you the " constitution of the present Government, and knows " nothing of the outside world."(1) With a view to remedying this state of things, the shortening of the hours during which shops are open was advocated by witnesses speaking on behalf both of employers and employed.

Arguments in favour of voluntary action in the matter of Early Closing.

454. But the unanimity on the general question was accompanied by considerable difference of opinion with regard to the methods to be adopted. Voluntary, as opposed to compulsory, early closing was warmly supported by two out of the three shopkeepers who gave evidence.(2) They urged that voluntary action was preferable on general grounds to State interference, and that moreover in the case in question it was free from the numerous objections as to matters of detail to which any form of legislation would necessarily be open. They held that compulsion in this matter was an unjustifiable infringement of the liberty of the subject, and that the circumstances were too intricate and the necessities of different classes too varied to be successfully dealt with by any uniform measure. Compulsory early closing would press hard on both buyers and sellers in poor districts ; the wives of working men could not do their shopping early, and it was argued that the result of early closing in London would be that the husbands would be put to the inconvenience of shopping when they left work, and the large establishments would benefit at the expense of the small ones.(3) Shops in the vicinity of stores contend that they are obliged to keep open later than these, or they would lose their custom altogether. Moreover, it was alleged that early closing would mean ruin to the costermongers, who could not, in fairness to the shops, be allowed to be out later, and yet could not otherwise make a living. The ruin of the costermongers would entail great hardship on the poorer classes of buyers.(4) Wholesale dealers again, would, it was asserted, find their business simply "paralysed" if they were unable to work long hours in busy seasons.(5) Finally, an unfair advantage would be given to publicans, since it was not proposed that the regulations should apply to them.(6)

Arguments in favour of legislation in the matter of Early Closing.

455. On the other hand, all the representatives of the shop assistants, and those of two associations composed respectively entirely and partially of shopkeepers, were strongly in favour of legislation as the only means by which satisfactory reform in the matter of closing could be obtained. Voluntary effort was stated to have "miserably failed" to attain the desired end, and arguments were brought forward demonstrating the impossibility of effectual action on the part either of assistants or employers, owing to the circumstances of the case.(7) Shop assistants, it was pointed out, are prevented from organising against long hours by the very fact of those long hours, which leave them no time for intercourse or discussion. Unionism was said to be gradually spreading amongst them, but one witness gave as his opinion that they were 50 years behindhand in organisation. He thought, moreover, that philanthropic associations had delayed improvement in this direction, and had effected little except in the way of "educating the shopkeeper."(8) Employers, again, even if thus "educated," are prevented from successful voluntary action by the fact that the majority who desire early closing are at the mercy of the minority who are opposed to it. "The history of early-closing " movements on voluntary lines . . . showed that " one dissentient could upset and thwart the intentions " of a majority of 40 to 1." "Any voluntary arrange- " ment that may have been established is continually " being jeopardised by the action of one or two " employers, or owing to a new shopkeeper who may " come into the district deciding to keep open later."(9) The opponents of legislation maintain, however, that the force of this argument is greatly exaggerated, and that "with a little courage on the part of the man who " has a little more business, early closing might very " often not be thwarted," and in proof of what voluntary movements have already accomplished one witness instanced his own case, in which the hours had been reduced by 800 per year since he began business nine years before.(1) But the more general view would seem to be that in many cases early closing associations have been "impotent to effect any change whatever," and that the only hope of the shop assistant lies in Parliamentary enactment.(2) It was asserted that three-fourths, if not seven-eighths, of the shopkeepers and the majority of the public were in favour of early closing, and that nothing but competition stood in the way. A London tradesman maintained, however, that the majority was a provincial one, and that London shopkeepers were opposed to compulsion in the matter.(3)

[§ 455.]

Question of local option.

456. Where legislation was desired local option was approved of as giving the employers a voice in the decision. One witness, however, while objecting to legislation in any form on this question objected in particular to local option for London. If the area were to be a County Council one, uniformity would injure a great number of shopkeepers; if it were to be a Parliamentary one, those on the fringe of a section which kept open would suffer by custom leaving them and crossing the boundary.(4)

Half holidays.

457. The weekly half holiday was said to be very general in the large towns in the North of England, and it was recommended that any Bill for early closing should contain a half-holiday clause for the benefit of towns desirous of having it, but the advocates of the shortening of daily hours resented the giving of half holidays "as a sop to stifle agitation for early closing."(5)

(b.) EIGHT HOURS' DAY.

Arguments in favour of an eight hours' day.

458. In the various industries in this group there is a very widespread desire for an eight hours' day, though it is not always very definitely formulated nor have the difficulties involved been fully considered.

(a.) Non-economic. (i.) That it would have beneficial physical, and moral effects, and that it is especially urgent in the case of dangerous and unhealthy industries.

(*a.*) It was alleged that an eight hours' day would have beneficial physical, and moral effects on the workers. It was stated with regard to the gas stokers that "the short hours have tended to make the men " more self respecting and more temperate . . . . " the (friendly) societies have not had so much illness " and have had less claims upon them."(6) An employer in the Yorkshire Glass Workers' Association stated that he "decidedly" thought the eight hours' system would be beneficial to the health of the men, as then they would not be obliged to take their heaviest meal at the hot furnace.(7) Two representatives of the chemical industry stated respectively that those men who were "engaged in three shifts" were "most " decidedly . . . healthier and better than the others," and that though they had slightly less wages they had "greater comfort and health." This was at Messrs. Gaskell Deacon and Company and at "another branch" in Northwich.(8) The workers in unhealthy and dangerous industries make a special claim for the limitation of the hours of labour. The bakers maintain that their trade is "undoubtedly unhealthy" owing to long hours, night work, and impure and hot atmosphere, (9) and a printer demanded the eight hours' day on the ground of the "poisoned air" in which they worked.(10) But the workers in chemical industries present the strongest case. The manufacture of vitriol, caustic, and bleaching powder was stated to be peculiarly detrimental and trying to the health. "It made them " old men whilst they were young men." Moreover, it was stated that the vitriol makers and the caustic makers worked very long hours. One witness desired to reduce the hours in certain exceptionally unhealthy industries to six, while a member of the Chemical and Copper Workers' Union tendered written evidence to the effect that no branch of any trade in England required the eight hours' shift more than the caustic workers. It was stated by an employer that in certain departments in certain works the eight hours' shift had been adopted.(11)

(b.) Economic. (i.) That its adoption is easy in certain industries.

(*b.*) Certain trades claim an eight hours' day on the ground that the conditions under which they work lend themselves especially to its adoption. Such are the gas, glass bottle, and seed crushing industries, where it is desirable that the works should be kept going continuously. Hence the most convenient and in some cases the most economical way of carrying them on is, it is stated, by three eight hour shifts.

[§ 458 (b.)]

Thus one gasworker desired the eight hours' day, at any rate in all places where machinery ran continuously for 24 hours.(1) The men claimed that it had worked successfully where it had been introduced, viz., in the South Metropolitan Gasworks, in the Toxteth Park Works, in the Bristol Works, the Commercial Gas Company's Works in Poplar, and the Gaslight Company Works, Beckton Station.(1) Employers in the glass bottle-making trade alleged that they could carry on the business more advantageously by the system of three eight hour shifts than by the present twelve hour shift. The men, however, appear at present to object to the change.(2) The trade of the seed-crushers was maintained by one of the workers to be "peculiarly applicable" to the eight hour shift, as they worked "all "round the clock . . . the mill was running 24 "hours." An employer in the same industry argued that owing to the inconsiderate demands of the men on the question of hours, the engine was now compelled to stop work "something like 33 hours a week" and the men were not employed for more than one-third of their time at the mills. In the stationary, if not retrogressive, state of their trade this was most unsatisfactory. Hence it was claimed that it would be to the advantage of the employers to have the eight hours' shift, because then "their machinery could go, like the corn millers, "from Monday morning to Saturday night."(3) It was further claimed by some of the advocates of the eight hours' day that the output would be "about the same" or "very little less," and that the wages if not actually increased would not be appreciably reduced. Evidence to this effect is given chiefly by the gasworkers, who do not as a rule discuss the question of the cost of production. One of them owned that under the eight hours' day it had increased by 14 per cent., but this he remarked fell "on the consumer." Gas, however, he acknowledged is a "monopoly," and "not "exactly on all fours with articles that have to be "exported and sold in foreign markets in competition "with others."(4) Hence the arguments of the gas workers on this point have only a limited application to the general question. With this reservation, however, the evidence of the gas workers clearly supports the contention as to wages at all events. For instance, the secretary of the Gas Workers' Union claimed that more work was done in eight hours now than was formerly done in twelve. More frequently it is stated either that the output is relatively larger, though absolutely less, or that more work is now turned out in an hour, though the output is necessarily less in eight hours than in twelve. Wages, generally speaking, are maintained, and the majority of gas workers throughout the kingdom are now working eight hours a day for better wages "on the whole."(5) A compositor who stated that his society was in favour of the eight hours' day added that they did not think the cost of production would be increased to any appreciable extent, because the employer would get more work done in the time.(6) A vitriol worker stated that in one firm in his industry where the eight hours' day was introduced the men's wages were only slightly decreased.(7) The most decided opinion on this question, however, was that expressed by an employer in the glass bottle-making industry. An eight hours' day under the three-shift system would, in his opinion, "increase the output "of bottles by 20 per cent., which would mean a very "lessened cost of production." He would then be able to produce a cheap kind of bottle, which is now almost entirely supplied by foreign countries, and the men would still make "splendid wages."(8) The argument that an eight hours' day would check overtime and more especially that it would tend to absorb the unemployed was also brought forward. Thus the secretary of the Coach Makers' Union advocated it, "as the best method of getting rid of the difficulty of "overtime."(9) The glass bottle merchant above quoted stated that an eight hours' day on the three-shift system "would have the effect of employing 50 per "cent. more bottle hands in the trade." A compositor "simply recognised that a kind of abuse exists, in the "fact that the men are allowed to continue on this "work into the night, whilst hundreds of men are "walking about doing nothing . . . an eight hours' "day would bring about a decidedly more satisfactory "state of things."(10) A representative of the house painters gave as one of his chief reasons for a uniform eight hours' day "the vast number of men unemployed," and many others expressed the same view.(1)

(1) Digest, Vol. III., p. 140. (2) Digest, Vol. III., p. 147. (3) Digest, Vol. III., pp. 147, 148. (4) Thorne, 25,013-20. (5) Digest, Vol. III., pp. 140, 142. (6) Digest, Vol. III., p. 144. 459. Hence it appears that the advocates of the eight hours' day contend that in this group of industries it is not only perfectly possible in certain trades, but that it can be effected without economic loss to the community, while it would tend to reduce overtime and employ surplus labour. It is further urged that there is an especial need for it in those industries where the conditions are dangerous or unhealthy, and that it would be generally desirable on physical and moral grounds.

Summary of arguments for an eight hours' day.

460. (*a.*) On the other hand, some employers in the gasworks stated that the change to the eight hours' day had been by no means an unqualified success in its effect either upon the quality of the work or upon the behaviour of the men. One of the directors attributed this to the fact that the men got it "too easily." He added, however, "I am bound to say that this year "things have improved and the men are doing their "work in a much more satisfactory manner." One effect of the eight hours' day was predicted to be that "if the men were to earn anything like the money in "the shorter time, the work must be more severe per "hour than it was before" . . . "That would shut "the company out from keeping on their older stokers "or men of inferior physique."(2)

Arguments against an eight hours' day.
(*a.*) *Non-economic.*
(i.) *The eight hours' day in the gasworks has not been an unqualified success.*

(*b.*) Again, it is urged by the opponents of the eight hours' day that in many instances it would be quite impracticable. This is particularly the case in "season" trades and those industries where employment is irregular, owing to the weather, or to other causes independent of the work itself. The secretary of the Amalgamated Society of Carpenters and Joiners said he "could not see his way clear" to support a general eight hours' day as it might not be advantageous to trades such as plasterers, bricklayers, and painters which were subject, more or less, to the severity and inclemency of the weather. A bricklayer stated that as their hours were necessarily irregular, it would be impossible for them to work a uniform eight hours' day.(3) The secretary of the Dublin United Trades Council stated that "season trades" and "trades of "fashion could not work an equal number of hours in "the busy season and in the slack season." A house painter who was in favour on the whole of a legal eight hours' day mentioned the difficulties that stood in his way as his trade was a season one. He also said that most of the men would be against the prohibition of overtime, because they needed it in the summer to wipe off the debts incurred in the winter.(4) The Director of the Salt Union stated that in a considerable portion of their trade it would be "utterly impossible" for an eight hours' system to be carried out at all. The employment of the boatmen and the saltmakers, for instance, is quite irregular, and depends upon the tides and the hours at which the ships come in.(5) A coal porter gave similar evidence, though he desired to see the hours restricted in some way to 48 a week.(6) This argument of total impracticability is also urged on behalf of small tradesmen by the representative of the South London Voluntary Early Closing Association. Should an Eight Hours' Bill be passed he "would not "be able to open his shop till 1 o'clock in the day, if "he wished to keep it open till 9." It would be a "very drastic measure."(7) The increase in the cost of production is stated to be a very serious objection to the eight hours' day, both by industries such as the production of gas, which are not affected by foreign competition, and more especially by those which have to hold their own in the market against cheap continental goods. The employers in the gas companies state that since the introduction of the eight hours' day in their works the cost of production has "increased enormously," because, though the men cannot do so much work in eight hours as they could do in 12 their wages have not been reduced. This increased cost of production is estimated in various works at 16·6 per cent., 10 per cent., and 20 per cent. But owing to other causes consequent on the concession of the eight hours' day, and the further demands of the men, the increased cost of 20 per cent. in the South Metropolitan Gas Company was subsequently raised to 44 per cent., and in another case to 48 per cent. The employers expressed themselves as much disappointed by this result. The increased cost, it was stated, fell partly upon the price of the gas and partly upon the dividends

(*b.*) *Economic.*
(i.) *That in many industries it would be quite impracticable.*

(ii.) *That the increase in the cost of production would injure trade and that the rate of wages could not be maintained.*
(*a.*) *In gasworks.*

[§ 460 (b.)] (b.) *In other industries subject to foreign competition.*

of the shareholders.*(1) The increased cost of production which would be involved by the limitation of the hours of labour in those trades which are subject to foreign competition is a still graver objection. This is recognised by some of the workers who are distinctly in favour of an eight hours' day if possible. The most striking instance is that of a seed crusher, who said "the thought had struck (him)" that with the shorter hours "the money to pay the extra gang would "have to come out of the profits . . . . or out of the "prices paid for oil and cake. This may mean, in the "face of the great competition already existing with "America, a serious blow to English trade, and instead "of the men being employed 12 hours a day they "would probably not be employed at all."(2) Another witness from the same industry, who was also an advocate of the eight hours' day, acknowledged that there was "not a doubt that foreign competition would "have a detrimental effect upon our own industries." He met the objection, however, thus: "If the only way "that we can conduct any business is on starvation "wages, so that the men who have the work to do "cannot live a decent life, it is as well to let that "business slide."(3) A representative of the carpenters and joiners stated that owing to importation from foreign countries where men worked longer hours for lower wages an eight hours' day would not be satisfactory in England unless it were international.(4) This was corroborated by a representative of the Cork United Trades Society and a member of the building trade. Those who are in favour of an eight hours' day usually assume, if they do not actually state, that there will be no appreciable decrease in wages in consequence. The men in the glass bottle works, however, are strongly against any legal limitation, on the express ground of loss of wages which would result. Thus Mr. Greenwood, the secretary of the Yorkshire Glass Bottle Makers' Society, argued that the system of three eight-hour shifts would leave the workmen only eight hours altogether for work, including meal times, and then "they could not make wages at all."(5) He claimed that the effect on the men's wages in a factory where the experiment had been tried had been "very bad," and that in Germany the three-shift system was "being abandoned." It may be noted that the employers in this industry asserted that under the three-shift system the men would receive higher wages than at present.(6) The Amalgamated Society of Coopers also disapproved of an eight hours' day, because they feared "that they would not be able to "retain the same rate of wages."(7)

Summary of arguments against an eight hours' day.

461. From this evidence it appears that the arguments brought forward by the advocates of the eight hours' day are absolutely contradicted by those of its opponents. The latter assert that, apart from the fact that the conditions of many industries make such a measure impracticable, the increased cost of production would have an injurious effect upon English industries, particularly on those subject to foreign competition, while the rate of wages could not be maintained. It is further stated that the effect of the experiment in the gasworks has not so far been altogether satisfactory as regards the conduct and the work of the men.

Method of procuring an eight hours' day. (a.) *By voluntary effort.*

462. (a.) There is very little evidence in favour of procuring an eight hours' day by voluntary effort in the trades here under review. Some representatives of the carpenters, of the men employed in the London Oil Mills, and of the Cork United Trades Society are in favour of voluntary effort.(8) The latter looked upon State interference as "very dangerous" and "preferred "to rely on the workmen's own efforts."(9) The representatives of the printing trade, with two exceptions, appeared to be distinctly against legal intervention with the question of hours. "They had always believed "in trying to improve their own position." "They "have no wish for State interference beyond what was "absolutely necessary."(10)

(b.) *By legislation.*

(b.) Almost all the trades which advocate an eight hours' day, and they form the great majority in this group, desire to avail themselves of the authority of Parliament. Very few, however, appear to have thought the matter out; a number of slightly different reasons in favour of this course are given, and a variety of more or less vague suggestions and conditions are brought forward with regard to it. A rough classification of the opinions held by the witnesses can, however, be made. A certain number are in favour of State action under certain conditions, but they see the difficulties that are involved, and would prefer the voluntary method if they thought it would be successful. For instance, it is suggested that legislation should be resorted to in certain industries, "Governmentshould "set the example and should introduce the eight hours "into all its workshops;" it should be adopted "in "all places where machinery ran continuously for "24 hours,"(1) in "especially arduous or unhealthy "industries," or it should be both "universal" and "international."(2) Many advocate a legal eight hours' day on condition that there should be much elasticity in its "regulations," with a considerable amount of local liberty. This class, however, is more conveniently dealt with under the head of Trade Option. A large class think that legislation is the only weapon strong enough to effectually shorten the working day; while others urge this method as preferable in itself to strikes. This position is taken up for the most part by the less highly organised industries. Thus the bakers state that having failed to reduce hours by their own exertions, they look in future to the State; four strikes had taken place in Cork during the last 10 years on the question of hours, but none had been successful.(3) A member of the trade added, "I believe that we shall "never get eight hours, nor a universal 10 hours, "unless the State does interfere, and I will tell you "why. We are not in such a powerful condition for "organisation as such bodies as the engineers, the "carpenters, or the typographical printers. We work "in small sections and we have a difficulty in getting "our men together. The influence of an employer "over one or two men is much greater than the "influence of an employer over 100 or 200 men. As a "trade it is a loose trade."(4) In the same way the representative of the National Union of Shop Assistants pleaded that they were generally "too weakly or-"ganised to obtain anything like a reduction in the "hours of labour by Trade Union efforts."(5) Again it was stated by a representative of the house painters, that owing to so many of the painters being unorganised, "if we only got (the eight hours' day) by "word of mouth, we could not sustain it." A representative of the chemical industry argued that unless the eight hours' day was made law the masters would revert to the old order of things on the first opportunity.(6) The general secretary of the Gasworkers and General Labourers' Union stated that four strikes had been caused by the attempts of the directors of gasworks "to fix the men down to the twelve-hour "system in preference to the eight hours." If the eight hours had been established by Act of Parliament this would not have happened, and "we should have "been thousands of pounds in pocket and there would "have been really more men employed than at the present time."(7) Mr. Fenelon, an employer and a skilled artizan, desired a legal eight hours' day on the ground that it would put the question on a different and better basis. "I think it cannot be done by "mutual arrangement as these little disputes are going "on interminably."(8)

[§ 462 (b.)]

(c.) *Question of Trade or District Option.*

(c.) The question of Trade or District Option has hardly been discussed in detail. But those who desire legal limitation of hours usually stipulate that some form of Trade Option should be provided and the general opinion appears to run in favour of "a per-"missive Bill, on the lines of Mr. Mann's proposal" at a recent congress. Thus Mr. Wilson, M.P., was "favourable to an Eight Hours' Bill to be applied by "the local authorities on the demand of the persons "concerned;" "Trade Option coupled with the option "of the district."(9) Some system of this sort was advocated by Mr. Dew, secretary of the London Building Trade Committee, who was the only witness who went into the question at any length, but his views were not consistent, as he appeared to argue first for District and then for Trade Option. He wished to decide the matter by districts or towns and not by the votes of the societies. The conditions of work in London and in the country were different, and the London building trade should decide for itself whether it should have the eight hours. In spite of the difficulty of unfair competition which would then be introduced,

* It may be noted that the increased cost of production was not stated to have affected the consumption of gas, or the business as a whole.

[§ 463.]

he "was still in favour of local option in preference to "a universal eight hours' day." However, he further added, "I agree with an Eight Hours' Bill on the "Fabian lines. That is an Eight Hours' Bill should "be passed by the legislature and then any trade by a "two-thirds majority can come within the provisions "of the Bill. They could take it up trade by trade. "My opinion is that some trades at the present "moment are not ripe for it, others are more "than ripe for it . . . . . I should not give "the employers any voice in it. I cannot see that "it matters to them."(1) On the other hand, a gas-worker, a baker, and Mr. King, of the Chemical and Copper Workers' Union, advocated Trade Option, with no reference to District Option. Mr. King wished the question to be decided by the majority of the members in any particular trade and "the employer "would have nothing to say to it whatever . . . . "but the common sense of the men would not ruin "an industry from which they got their bread and "butter."(2) With reference to the last point raised, as to how far the employers should have any voice in the matter, a gasworker suggested that "Parliament ". . . . should give Trade Unions the power of en-"actment . . . without consulting the employer "at all."(3) A compositor, on the other hand, was more conciliatory and held that the details of the Act should be arranged between the employers and the employed after "minute discussion."(4) A representative of the shop assistants advocated an eight hours' day for warehousemen "without any regard to local or "trade option, or even trade exemption."(5)

) Penal-s for aches of Act.

(*d.*) Very little evidence is given on the question as to whether breach of the Act is to be made penal, or necessary overtime to be allowed. A house painter, a mason, and a chemical worker, stated that they would make the Act penal on both employer and employed, but Mr. King only suggested that it should be made penal on the employer. As regards overtime, a house painter was prepared to allow a "reasonable discretion" to rest with the workmen and masters, on sufficient cause being shown. (6) A baker also considered that though it was the function of the State to step in and shorten the hours of labour, yet "great elasticity" must be allowed to "trade regulations." "A hard-and-fast "law would be a very good thing for the bakers."(7)

3. STATE AND MUNICIPAL EMPLOYMENT.

nditions labour in ate and unicipal ploy-nt.

463. The evidence given on this subject is in almost every point contradictory; and hence, it is impossible to deduce from it any general statements. In the majority of instances the wages paid by the State or by municipalities were stated to be lower than the standard rate in the trade. (8) This was especially the case where labour is employed by Government indirectly through contractors. Most Government contracts, it was stated, were worked at a price which barely admitted of profit to the employer, as Government always accepted the lowest tender; and the tendency therefore was to throw the work into the hands of "unfair" employers, who recouped themselves at the expense of the workmen. On the other hand, it was stated in some cases that the wages paid were as high or higher than the current rate; or where they were lower, that they were supplemented by an allowance in case of accident or illness.(9) The conditions of labour in other respects were sometimes said to be favourable under State or municipal employment;(10) in others long hours and sweating were asserted to be the practice.(11) Government contracts in the printing trade were stated to be largely responsible for overtime work, for the payment of which moreover no provision was made in the schedules.(12) While in one case it was asserted that "results were satisfactory" in Government employment but not under local authorities,(13) another witness, who pointed out the evils of State employment, was of opinion that the men employed by the local boards were in a better position than those in private firms.(14) Several witnesses, arguing from the successful undertaking of the gas and water supply by various municipalities, urged the municipalisation of the baking trade. They contended that under municipal control bread would be much purer than at present, and that though private competitors need not be suppressed, the municipal bakery would produce bread at a price which would soon "drive them from the field." The principle might be extended to the whole trade of any district.(1) With regard to the fair contract clauses, they were in most cases spoken of with approbation. Before February 1891, it was stated, all Government repairs were done at a rate which precluded Trade Unionists from employment, now that the current rate of wages was fixed, an advance of from 25 to 30 per cent. had resulted.(2) For County Council work the contractor has, moreover, to observe the recognised custom as to hours, and to submit to a "very "strong stipulation against sub-letting"(3). One witness asserted, however, that the clauses had operated very harshly on the less able workmen. Many old men who knew their work well, but were not quick workers, had been dismissed, because the employer was obliged to pay the Trades Union rate of wages, and these men were "not worth it." Another result of the clauses was that many building firms declined to tender for county council and school board work because of the restrictions placed on them.(4) It may be noted that the clauses had not yet affected the printing trade, because some of the present contracts had still three years to run.(5)

4. INSPECTION AND REGULATION OF FACTORIES AND LEGISLATION RELATING THERETO.

Nature of evidence.

464. On this subject the bulk of the evidence, which is of a similar nature, comes from the side of the employed. Where, however, evidence has been given by the employers, it, as a rule, contradicts or modifies the view of the work people.

Complaints with regard to sanitation.

465. The representatives of the employed in all the trades under review cited numerous instances of the ignorance or indifference of the employers with regard to sanitation. It may be noted, however, that their condemnation was by no means universal. It appears, in the first place, that in the building, printing, and pottery trades, and among shop assistants, large establishments are generally satisfactory as to sanitation, while the small ones are the reverse.(6) Secondly, the extent of the evil appears in some industries to vary largely according to locality. Thus the condition of bakehouses is said to be excellent in Belfast, but bad in other Irish towns, especially in Cork,(7) or again, good in the Midland towns of England but unsatisfactory in London.(8) Printing offices were stated to be in excellent condition in Glasgow and Belfast, but otherwise in Dublin, London, and other localities.(9) The London gasworks were said to be greatly superior to the provincial ones.(10) On the other hand, there is not a single instance in which the sanitary condition of chemical works was spoken of with approval by the employed; and in all the trades under consideration certain factories were condemned. The state of the sanitary arrangements was described in a few instances as "shockingly bad"(11) and "thoroughly disgraceful,"(12) and in many as "unsatisfactory" or "defective."(13) In bakehouses complaint was made of the use of low underground rooms, which were liable to be flooded, and in which the atmosphere was said to be very bad. Night work was another grievance which was quoted as aggravating the unfavourable conditions of the trade.(14) The printers also complained of hot underground rooms and want of ventilation. The exposure of the men to the weather after the high temperature of the offices was said to lead frequently to consumption, and the dust produced by the paper used for cheap printing rendered the trade in some instances additionally unhealthy.(15) In the pottery trade the chief grievances were the high temperature, dust, want of ventilation, or the alternative of a violent draught, and, in the case of the smaller establishments, the absence of any protection from the weather.(16) Shop assistants were stated to suffer from excessive heat.(17)

[§ 465.] Employment in chemical works was stated to be particularly unhealthy; and though in part inevitable, it would appear from the evidence of the employed and from the statements of Dr. Arlidge* that little care is taken to minimise the noxious effects of the work. The manufacture of red lead, for instance, which was said to be always unhealthy, demands the strictest attention to cleanliness, but in some factories no provision of this sort was made for the workmen. In others no means were provided for carrying off the dust which the manufacture produced.(1) In chemical works of other kinds harmful gases, it was asserted, were allowed to accumulate and escape into places where the men were working. It was stated that "with proper precautions and ventilation for carrying "away the gas, much of the injury that the men "suffer might be prevented"(2) The introduction of a better draught in the furnaces and the use of decomposing pots might, it was thought, prevent the escape of gas in the works.(3) Among the miscellaneous trades included under this group, want of ventilation was an almost universal complaint.(4) Throughout these trades the employers without exception considered the sanitation of their factories and workshops satisfactory, and in some cases excellent.(5) A master baker was of opinion that the evils of underground bakehouses had been exaggerated, and stated that great sanitary improvement had taken place during the last 20 years. He added, moreover, that sanitary conditions are not always dependent on the employer.(6) Another employer contradicted the evidence with regard to the sanitary condition of small shops on the ground that the interests of employer and employed in such cases are indentical. While admitting that nothing but good could come of increased sanitary inspection he "objected to the inference that it is the small trader "who wants it particularly."(7)

Proposed remedies.

466. In spite, however, of the need which the evidence thus reveals of improved sanitation, no definite suggestions were made by the witnesses as to the amendment of the Acts. Beyond the general proposal that the inspector should himself give notice to the local authorities of cases where it was defective instead of leaving it to the workmen,(8) the chief improvements suggested related to chemical works and bakeries. For the former the wider use of mechanical means for removing dust and better provision for cleanliness were desired.(9) With regard to the latter it was proposed that underground bakehouses should be prohibited; that all bakehouses should be registered, and that the use of machinery should be extended in order to ensure higher rooms.(10)

Complaints with regard to boy labour.

467. Evidence was given by several witnesses with regard to the evasion of the Factory Acts by the employment of boy labour. It appears that boys are frequently employed under age, and when the inspector comes round are hidden, so that the infraction of the law is seldom discovered. The extent of this evil varies, however, very largely in different localities. Thus, at Cork it was stated that the law had not been put in force for ten years, and "all the boys were working."(11) At Belfast, on the other hand, the inspector was said to be "most energetic in keeping down the system."(12) A representative of the printing trade stated that there was no tendency among the employers to employ boys under age, but that the parents "try to push them in."(13) Hours in excess of those allowed by the Act were stated to be worked at the present time in the baking and gas industries; but in the latter case the abuse was said to have been remedied by the factory inspector.(14) Even when not in defiance of the law the work performed by boys was considered by some witnesses to be too laborious. Thus, in one printing firm boys under 16 were mentioned as working 36 and 40 hours at a stretch;(15) in copper works they were said to do very heavy work for "ridiculously small" pay; (16) and in a glass bottle-making firm they had to run 25 miles a day, carrying bottles between the furnace and the annealing oven.(17) Boy labour was moreover considered likely to lead to accidents, and it was therefore advised that they should not be employed so early as at present on work requiring skill.(1) It was stated that the number of boys employed under 13 in the printing trade was decreasing.(2) None are mentioned as being employed in building, and "comparatively none" in the chemical trade.(3) In the glass bottle making firm of Messrs. Bagley, Candlish, & Co., few boys begin work before 14. Very few half-time children were employed in the printing trade, and "the tendency was to lessen the number,"(4) and in the glass bottle making industry half-timers are not employed unless it is absolutely necessary. [§ 467.]

Proposed remedies.

468. It was recommended that the hours of labour of boys in bakehouses should be limited,(5) and that the age at which they might be employed should be raised, for day work to 16 or 17, and for night work to 17 or 18.(6)

Complaints with regard to inspection.

469. With regard to inspection, numerous and serious complaints were made by the representatives of the employed. Some considered the system itself at fault. The porters especially "have not much faith in factory inspectors."(7) The more usual opinion is, however, that the system itself is excellent, but that its working is very defective. The chief and most widely recognised of these defects was undoubtedly the insufficiency of the number of inspectors. In the building trade their visits were stated to be "exceedingly rare";(8) and in chemical works to be "few and far between";(9) the inspection of bakeries was said to be "never done";(10) and in the printing industry, while the scarcity of inspectors in England was also pointed out, Ireland especially was stated to be "very badly supplied." There are now only two inspectors of the trade for the whole of Ireland, though there used to be three.(11) Several witnesses declared that they had never seen an inspector inside their workshops at all;(12) and nearly all agreed that however well-meaning and hard-working they might be, their number was utterly inadequate to the work expected of them. "There are not enough inspectors, not half," said Mr. Ham.(13) Apart from this, however, the inefficiency of inspection was also complained of. In chemical works it was said to be merely nominal.(14) In Ireland it was described as "a farce,"(15) and representatives of various trades stated that the inspector usually saw only the employer, and did not enter the workshops or inspect the machinery. The employer, it was asserted, moreover, always knew when the visit of the inspector was going to take place, and preparations were therefore made for it. Boys working under age or overtime could be hidden, and the gas in the flues of alkali works reduced to the legal amount; and it was stated that the only instance where discovery of such evasions was made "never came to anything."(16) It was pointed out by several witnesses that inspectors were usually men who had no practical knowledge of the trade they inspected; and therefore "took but small interest in the matter," and could be easily deceived.(17) The employers, on the other hand, seemed to consider the inspection both sufficient and efficient. In the building trade it was stated that all workshops were inspected regularly, and that where the inspector had ordered improvements they had been carried out.(18) A representative of the baking trade said that his premises were inspected twice a year; but admitted that he always received a notice previously.(19) Among the representatives of the employed, one witness stated that in the printing trade of Glasgow the inspectors were very hardworking, and all offices were frequently inspected.(20) With regard to the transfer of inspection to the local authorities, one witness was of opinion that local inspection in the provinces was not satisfactory as "the inspectors were "too much under the influence of local men";(21) and an employer thought that an occasional inspection by a Government (not parochial) officer was desirable on sanitary grounds.(22) On the other hand, the potters "believe in local control," and desire that the inspectors should be under the control of a local committee.(23)

[§ 470.] Proposed remedies.

470. With regard to inspection, one union demanded "some system by which inspectors should be bound "to do their work"(1) without in any way specifying what form such a system should take; but the majority of witnesses had definite and practical remedies to propose. Witness after witness called for the appointment of more inspectors as the greatest desideratum of all.(2) Similar unanimity was displayed in the demand for the appointment of "practical" inspectors;(3) men who had themselves had practical experience of the trade in the district over which they were placed; and who "would be the eyes and ears, so to speak, of "the higher inspector."(4). A representative of the printing industry thought that it would be possible to select a competent man who thoroughly understands the nature of the work, and in twelve months he would be able to inspect every office in London, and at the proper time;(5) and it was anticipated that if working men inspectors were appointed the men would co-operate with them, and themselves enforce a better system of ventilation. The appointment of women inspectors was also recommended in a few instances.(6). One witness wished that the inspection of bakehouses in Ireland should be placed in the hands of the constabulary, which he considered the most practical body of men to put the law in motion, "because any Acts of "Parliament they do get to enforce they can enforce "pretty strongly."(7) A chemical worker proposed that in every centre there should be one inspector, with powers to enforce the altering or repairing of any portion of the works where there is an escape of gas,(8) and another wished the Act regulating the inspection of white lead factories to be extended to those in which red lead was manufactured.(9) Minor suggestions were made such as that the inspector should not give notice of his impending visit to the employer; but should "see the people under the actual conditions of their work,"(10) and that every place where persons are engaged in manufacture should be registered as such. A request was further made that one inspector should be appointed for saw mills alone; and a representative of the Union of Paper Mill Workers recommended that paper mills should not be without the scope of the provisions of the Factory Workers' Act with respect to the conditions of labour for women and girls.(11)

5. ACCIDENTS AND EMPLOYERS' LIABILITY ACT AND LEGISLATION RELATING THERETO.

Nature and causes of accidents.

471. Many of the accidents that occur in the industries included under this group are alleged to result from preventible causes, and according to the men, are chiefly due to the neglect of proper precautions with regard to the plant on the part of the employer, while according to the latter they are mainly due to the carelessness of the employed. Thus, it was contended by representatives of the copper working, chemical, printing, and sawing industries, that the machinery was insufficiently fenced, and a witness from the two latter trades further stated that it was often dangerously overcrowded.(12) Mr. Copsey stated that accidents in his trade frequently happened because the saws were placed too close to one another; also because boys without proper training were employed in difficult and dangerous work. He further stated that in the last two years 12½ per cent. of the members of his union had been injured, while, in the printers' trade, Mr. Leahy estimated the number at 5 per cent. In the opinion of Mr. Copsey accidents could not be attributed to the carelessness of the men in one case out of fifty(13). Representatives of the bricklayers, masons, carpenters, and coal porters complained of many accidents which they said were caused by the use of inferior plant and the falling of scaffolds.(14) It may, however, be noted with regard to the last complaint that two representatives of the master builders contended that the remedy lay in the men's own hands, because it was their duty, and not that of a Government inspector, to see that the scaffolding was secure. Accidents, they stated, were generally due to carelessness on the part of the men themselves.(15)

[§ 472.] Compensation for accidents.

472. Compensation for accidents, other than that obtainable by the Employers' Liability Act, is provided for in various ways, either by some system of insurance or through the agency of trade and friendly societies. A scheme which has been drawn up by the South Metropolitan Gas Company was handed in by Mr. Livesey.* In this provision is made that compensation for accidents to the workmen shall be a charge on the sick and burial fund to which reference has already been made. It is laid down in this scheme that in the case of any accident an inquiry shall be held by the engineer of the station, or by the chairman or by a director in the case of a fatal accident, in conjunction with a jury of twelve workmen. If they decide by a majority of at least two-thirds that there was no "contributory negligence" on the part of the workman, a grant shall be made of 6s. a week in addition to the ordinary sick pay.(1) A somewhat similar scheme was proposed by the secretary of the National Association of Master Builders. He stated that the masters desired to start a mutual insurance fund supported by the joint contributions of employers and employed. Under this scheme the company would pay two-thirds of the weekly wage to the injured man and 100*l.* in case of death, whether the accident were due to the fault of the employer or to the men's own negligence. The great advantage of this scheme, the witness added, was that the expense and waste of litigation would be avoided.(2) It appeared that both these schemes were intended to stand in lieu of any claims under the Employers' Liability Act of 1880. In one case, however, an instance of insurance was mentioned, which was not intended to take the place of the legal liability of the employer. Mr. Emmett, a representative of the bricklayers, stated that shortly before the Employers' Liability Act came into force in 1881 the employers in the Ashton district took out "joint insurance policies" to insure the workmen in case of accident. It was, however, made clear to the workmen that by contributing to a policy of that kind they in no sense "contracted themselves out of the Act."(3) Other cases of provision for accidents are found in the rules of friendly, benefit, and trade societies, such as the United Operative Bricklayers' Trade, Accident, and Burial Society,(4) to which reference has been made under the heading of "Organisations."

Contracting out.

473. A good deal of evidence was given with regard to the Employers' Liability Act, and bore reference to attempts to obviate or evade its action, to grievances which arise out of its administration, and to proposed amendments in connexion therewith. The practice of "contracting out" of the Act appeared on the whole to be regarded with disfavour.(5) It was, however, advocated by Mr. Chance, the managing partner of the Oldbury Alkali Works. On the passing of the Act in 1880 it was pointed out to the men employed in this firm that a very small proportion of the accidents which usually occurred would come under the Act, because no compensation was due in those accidents for which no one was to blame, or in those in which there was "contributory negligence" on the part of the injured man himself or any of his fellow workmen. He further drew attention to the fact that under this Act "many "months and possibly more than a year would elapse "before a single penny came to the man or his family," and meantime he would be involved in the "harassing "suspense of a law suit." In place of the Employers' Liability Act he therefore proposed a scheme of mutual insurance, which was unanimously accepted by the workpeople and came into operation in January 1881. The contributions of the firm to this fund are equal in amount to the total annual contributions of the members. Such payment, however, the firm undertakes shall not be less than 100*l.* in any one year. The management of this fund, the rules of which were handed in to the Commission, is in the hands of a Committee, with a member of the firm as chairman. The firm of Chance Brothers acts as treasurer and the secretary is nominated by the chairman and approved by the committee. There are also two auditors and three "stewards," the duty of the latter being to "make a weekly visit in every case of disablement" and "report thereon to the general committee." The rules provide that committee meetings shall be held quarterly and at such other times as may be necessary. General meetings are held annually, and special general meetings are summoned by the secretary "on the "written requisition of not less than 25 members."

* This scheme has since been established. For further details see Appendix I., p. 334.

(1) Minutes of Evidence, Vol. III., App. LIV. (2) Digest, Vol. II., p. 49. (3) Digest, Vol. II., p. 39. (4) Minutes of Evidence, Vol. III., App. XLI. (5) Digest, Vol. III., p. 179.

[§ 473.] It may be noted that the chairman has power to give a casting vote in the event of the votes of the committee being equally divided. In all cases of dispute between the committee and a member of the society the matter must be referred to arbitration. Two arbitrators are appointed, one by the committee and the other by the members with whom the dispute has arisen, and if they fail to agree an umpire is chosen by them. The decision of such arbitrators or umpire is held to be binding, and "in case either party neglect to appoint "an arbitrator" within a certain specified period the decision of the arbitrator appointed by the other party is "binding and conclusive on both parties." The rules may be added to, altered, or rescinded only by a special general meeting of the provident society as a whole, of which the accident fund forms an important branch. The subscriptions to and benefits granted by the fund are given in the following table:—

Contributions	1*d.* per week if above the age of 18. 1*d.* per fortnight if under the age of 18.
Benefits:—	
1. Temporary disablement	10*s.* per week, for period not exceeding 26 weeks. 5*s.* per week for further period not exceeding 26 weeks.
2. Permanent disablement	Committee has power to grant, at any time after accident takes place, a sum not exceeding 50*l.*, *in full discharge of all claims.*
3. Fatal accidents	If disablement allowance has not been already paid, 100*l.* If disablement allowance has been paid, the amount of such payment shall be deducted from the 100*l.* in case of death. N.B.—In the case of members under 18 years of age, one-half the above amounts shall be paid.

These benefits are only granted in the event of accidents which occur to workmen "while engaged in "the pursuit of their employment under the firm," and in accordance with certain conditions laid down in the rules. It may be noted that any recommendation on the part of the committee to increase the benefits or alter the payment must be submitted to a special general meeting, called for this purpose.(1) Another case of "contracting out" of the Employers' Liability Act, though of a totally different kind, was mentioned by the secretary of a district branch of the Gas Workers' Union. He produced a form of memorandum which had to be signed by anyone who desired to work in a certain firm, by which, in consideration of the undertaking of the employer "to effect a policy of insurance in some society for the benefit of the said workman . . at a reduced premium," he agreed in no case to make any "claim whatsoever upon the said employer "under the Employers' Liability Act."(2) The insurance of workmen against accidents by the employer in some way similar to that just referred to was stated by one witness to be not unpopular with the workmen so long as the compensation was specifically fixed, though the method of assessing contributions in one case without regard to the amount of the men's wage was regarded as unfair.(3) On the other hand, it was contended that the transference of the responsibility of the employers to any insurance society, unless guarded by an express clause, as in the case quoted by Mr. Emmett, was a method of "contracting out" of the Act and open to serious objections.(4)

Insurance.

474. The system of "joint insurance" on the part of the employers was strongly objected to by the men. This practice, it was stated, "did away . . . with "the whole spirit and object of the Act," and made the employer careless and indifferent as to the safety of the men, "took away the chief motive of careful supervision," and "shifted the responsibility off their "shoulders on to the insurance company for an annual "or quarterly payment." "It is cheaper (to the "employer), perhaps, to pay his insurance than to "look after his plant . . . ." "We do not really "want compensation for accident, we want a Bill that "will practically prevent accidents."(5) It was also urged on behalf of the builders, by whom, it may be noted, the chief objections on this point were brought forward, that employers' liability insurance associations were "far more difficult to negotiate with than "individual employers, some of whom are very honourable and humane." The former "generally offer "ridiculously low compensation, or compel legal proceedings, which they fight to the last." On the other hand, representatives of the master builders "strongly objected" to the "reckless statements" of the men with regard to "the indifference of the masters "as to their plant . . . the fault has been," as before stated, "with the carelessness of the men themselves."(1) The charge that the masters were careless of the lives of their workmen, in consequence of the system of insurance, and that they fought cases merely to try and "shirk responsibility," was regarded as "injurious" and untrue. The employers further insisted that the system of joint insurance was necessary in the case of "beginners in business and small "builders, because if they were unlucky enough to "have an accident they might very likely be ruined in "a moment."(2) "If there was no insurance com- "pany, and the employers could not insure, many of "the small men would never be able to pay any "compensation at all."(3) "We claim the right to "insure."(4)

[§ 474.]

Other grievances and suggested amendments.

475. Apart from the disputed points of "contracting out" and "insurance," various grievances were brought forward and certain amendments suggested with regard to the practical working of the Employers' Liability Act. The Act itself was attacked by several witnesses as "absolutely worthless" and "very defective." There "are too many loopholes for the employers to creep "out of"; "there are too many disqualifying condi- "tions which render the Act inoperative."(5) On the other hand, representatives of the stone masons and painters stated that a great improvement in appliances and plant of late years was directly due to the Employers' Liability Act.(6) In several cases it was complained that no compensation was voluntarily given by the employers in cases of accidents, while the obscurity of the Employers' Liability Act and the difficulty and expense attending legal proceedings hindered attempts to procure legal compensation under the Act. A representative of the printers stated that when an accident occurred in the shop the employer rarely paid the workman for the time he was out. "I have three "cases that have occurred in the last three weeks, "one a fatal case, in which they have refused to pay "anything in the way of compensation."(7) Another witness alleged that "compensation was unheard of in "the copper works." He recommended that "the Employers' Liability Act should be made much clearer ". . . so that the men should have an idea of "when and how they could claim compensation . . . "the men in the first instance cannot get hold of the "copies (of the Act), they are dear, and when they get "them they cannot understand them." The special difficulties of the unorganised workmen were also urged. "When they do not belong to the Union there "is no one to look after their interests."(8) "If a man "does not belong to a society he has no funds to back "him up, and no friends to advise him, and he does "not care to enter into these matters."(9) With regard to the expense attending prosecutions under the Act, one witness "remembered a case where a man obtained "compensation . . . and yet came out of court "with empty pockets."(10) Another difficulty appeared to be the possibility of an appeal against a "claim "allowed in a law court . . . It is almost an "impossibility for a workman to take it to a higher "court, and therefore he is defeated."(11) Evidence was also given as to the unsatisfactoriness of the Act on other points. The "period of notice" was stated to be "not long enough," and should be "much extended." The General Secretary of the Gas Workers' Union stated that under the existing law, if a man does not lay his claim within six weeks he is deprived of the benefits of the Act. "Now we have had several "men who have met with accidents, and on account of "these men being so severely injured, and having to lie "upon a bed of sickness over six weeks, they have not "been able to lodge their complaint, and the result is "when they are well again they are entirely outside "the scope of the Act."(12) A representative of the master builders, however, "strongly objected to extending the "notice as the man knows perfectly well when he has "met with an accident, but the master may not know. ". . . Our workmen are a class of men who move "about the country very much . . . and we lose "all knowledge of them. We are not able very "frequently to identify them again. Then again, too, "very many of them work under an assumed name."(13)

475.] The "doctrine of common employment" was a point which several witnesses "desired to see altered." They maintained "that as a workman has no control over "his fellow workman, however incompetent, the employer should be held responsible for the accidents "which one man may cause his mate."(1) But it was further suggested by a representative of the carpenters and joiners that they "would like to make the principal "contractor liable for the negligence of the servants of "his sub-contractor."(2) Finally, the "limit of compensation" was pronounced "inadequate," and a desire for its extension expressed.(3) Amendments in the law were advocated on all these points, but more especially on the subjects of "contracting out" and "insurance."(4) The chairman of the Amalgamated Society of Carpenters and Joiners, however, although he desired these reforms, thought that a total repeal of the Act would be the best course of all. "I hold that the only "just and lasting settlement of the question is to place "the whole affair under the common law . . . I "do not want the workman to enjoy any peculiar "advantage over the rest of the community."(5)

Chemical workers.

476. Special complaints were made with regard to the unhealthy conditions of employment in the chemical, pottery, and baking trades, but, except in the pottery trade, the evidence given by employers and employed was of a contradictory nature.

(*a.*) The statements made by the representatives of the chemical workers, with three exceptions, were to the effect that the conditions of employment in that industry, and in particular in the bleaching powder department and the chrome branch of the trade, were very unhealthy. The workmen, it was said, suffer chiefly from bronchitis and asthma, and in the bleaching department they are in constant danger of asphyxia from the gas. One witness from the salt-cake branch of the trade stated that the average death-rate was higher than in any other industry, and that the conditions of work were such that no man could remain at it continuously. The white lead industry, which was said to be particularly harmful to the younger women, frequently leads in the men to partial or total paralysis.(6) Statements to a different effect were made by three of the workmen from the salt-cake and bleaching departments,(7) and by the chairman and district manager of the United Alkali Company.(8) They asserted that the chemical industry was, on the whole, a healthy occupation, that the statement that nearly all chemical workers suffered from bronchitis was not true, and that workmen employed in the bleaching-powder department were among the most healthy men in the trade. These statements were supported by the statistics of sickness in the alkali works at St. Helen's and at Hebburn, and by the statistics of mortality in various districts from which the following table has been drawn up.(9)

District and Class of Work.	Average No. of Days' Sickness per Member per Annum.	Average No. of Deaths per Thousand per Annum.
United Alkali Company—		
Tennants' Works, Hebburn, 1884-90—		
(i.) Total	10·37	11·42

† The above four years are the only ones for which figures are given in the Foresters' Directory, 1891.
‡ This figure is said to be probably somewhat too low.

(1) Digest, Vol. II., p. 96. (2) Digest, Vol. II., p. 98. (3) Digest, Vol. II., pp. 36, 96. (4) Davies, 18,247. (5) Digest, Vol. II., p. 96. (6) Digest, Vol. II., pp. 49, 56. Digest, Vol. III., pp. 19, 21, 22, 24, 25. (7) Digest, Vol. III., p. 25. (8) Digest, Vol. III., pp. 25-6. (9) Minutes of Evidence, Vol. III., Appendices XCVI., XCVII., CII.

[§ 476 (*a.*)] The conclusions drawn from the figures given with regard to Tennants' Alkali Works at Hebburn—and "by analogy" Mr. Stuart states that they would apply "in all works where the same operations are carried on"—are to the following effect. "The rate of "mortality throughout the works, and in the three "departments where gaseous escapes are liable to "take place, is slightly less than the average ex-"perience of friendly societies," and "the number of "days' sickness per annum per member in the whole "works is about the same as the average of friendly "societies, whilst the sickness in three departments "where gaseous escapes are liable to take place is "actually about 23 per cent. less than the average of "friendly societies." With regard to the district of St. Helens, Mr. Wylde concludes "that the conditions "of health which affect the chemical operative are not "more unfavourable than those which obtain generally "throughout the different trades of the country."(1) Mr. Brock stated that this conclusion was true of the industry in general and not only of particular works. Although in the past there has been a great deal of difference in the mortality of men working in different works according as greater or less precaution was taken to preserve the health of the men, this is no longer the case. "Gradually," he stated, "the poorest "are being brought up to the level of the best."(2) The comparative mortality shown in the above table of chemical and other classes of workmen may perhaps be susceptible of a certain amount of explanation. Dr. Ogle, in his evidence before the Commission sitting as a whole, stated, as a possible explanation of the fact that miners are specially exempt from the disease of phthisis, that they are a "select body of men."(3) It would appear that a similar explanation might be afforded of the comparatively low rate of mortality in the chemical industry. "Of course it may be stated," said Mr. Brock, speaking of the men employed in the bleaching-powder department, "that the men "who are selected for that work are naturally strong "men; naturally you would not put a man to such "work who was delicate."(4) A further explanation may be found in a statement made by Mr. Mitchell. "Taking the per-centage of the men who keep working "at the chemical industry," this witness asserted that the average death-rate is much higher among chemical than among ordinary workmen, but "three-fourths of "them only apply themselves to it for a limited period "of their lives and then leave it." He added that, "as a general rule, the industry is pretty much com-"posed of young men."(5) This latter statement does not, however, stand uncontradicted. A list was handed in to the Commission of the number of men of 60 years of age and upwards employed in March 1892, at the St. Rollox Chemical Works in the Tyne district and in Scotland. These men had been employed at the works on an average for a period of 35½ years, and their average age at this date was 65½. In the list of deaths which had occurred at the same works between May 1884 and May 1892 the average age at death in the process departments was 58, and in the trades departments, 56.(6)

(*b.*) With regard to the unhealthy nature of the pottery trade, a pamphlet by J. T. Arlidge, M.D. and A.B. (Lond.), and F.R.C.P. (Lond.), on "The "Pottery Manufacture in its Sanitary Aspects," is printed as an Appendix to the third volume of the Minutes of Evidence. The most injurious of the materials used by the potter are Cornish stone, flint, and lead. "The mischief done" by the former materials "is progressive and slow, and consequently escapes "notice for a longer or shorter period, determined "materially by the impurity of the air breathed, and "by the habits, carefulness, and constitutional state "of the workers." Lead has "highly poisonous "properties." Generally speaking, the evils of lead poisoning are also of slow growth, but "one of the "most remarkable phenomena of the poison is its very "different activity in different persons." This may be accounted for partly by individual idiosyncracy, but Dr. Arlidge states that "in the majority of cases the "difference is to be explained on more obvious grounds, "existing in carelessness at work, indifference to "cleanliness in the person and clothing, in reckless "eating and drinking in the case of work, and in "wearing the clothing begrimed with glaze, whereby

(b.) Pottery trade

(1) Minutes of Evidence, Vol. III. Appendices XCVI. and XCVII. (2) Digest, Vol. III., p. 26. Brock, 32,413. (3) Minutes of Evidence taken before Commission as a Whole, question 1687. (4) Digest, vol. III., p. 26. Brock, 32,412. (5) Digest, Vol. III., pp. 19, 20. Mitchell, 21,277-80. (6) Minutes of Evidence, Vol. III., Appendices, CV., CVI.

[§ 476 (b.)] "the poison is carried to the homes. Lastly, ill-con- "structed, dirty, confined shops and want of free "ventilation contributes an important factor." It therefore appears that the dangerously unhealthy nature of the pottery trade might be to some extent improved by special care on the part of the work-people themselves, and by special regard to sanitary conditions on the part of the employers. At the present time, Dr. Arlidge states, the insanitary conditions under which the work is carried on are "largely contributory" to the serious consequences of the inhalation of dust. "Few workshops," he adds, "ap- "proach what, from a sanitary point of view, they "should be." Many are kept "in a dirty state," and they are frequently deficient both in cubic capacity and in means of ventilation. Dr. Ogle, in the Supplement to the 45th Annual Report of the Registrar-General, acknowledges that the potters' employment is "one of "the unhealthiest trades in the country." Their rate of mortality is only exceeded by that of the coster-mongers, Cornish miners, inn and hotel servants. "This excessive mortality is in greatest part due to "phthisis and diseases of the respiratory system, the "deaths from these two causes being represented by "1,118, while the number for all males is only 402; "so that the mortality under these two headings is "almost three times as great in this industry as among "average males."(1)

[§ 476 (c.)] (c.) *Baking trade.* The only other industry from which special complaints were made with regard to the unhealthy nature of the employment, is that of baking, and, as before stated, the evidence given is contradictory. The representatives of Bakers' Unions in Scotland and Ireland were of opinion that the industry was not healthy. Mr. O'Connor stated that, according to the Returns of the Registrar-General for Ireland, the average length of life of a baker was about 30 years. It was further stated that, although more than half the members of the Staffordshire Branch of the Amalgamated Union of Bakers are young men, in 1891 each member on an average had received two weeks' sick pay.(1) Representatives of the Master Bakers' Protection Society maintained, on the other hand, that the employment was not particularly unhealthy. "We have a good "many old operative bakers," Mr. Prior stated in support of this view. "If it is to be judged of from the "Journeymen's Pension Society, they have no lack "of candidates from 60 years of age that have worked "from 30 to 50 years in the bakehouse."(2)

Comparative mortality of males in industries under consideration.

477. The following table shows as completely as possible the comparative mortality of males, between the ages of 25 and 65, in the different industries under consideration. The mortality of clergymen, as the lowest mortality of all, is taken as the basis:—

COMPARATIVE MORTALITY of MALES, 25–65 Years of Age, in different Occupations, from all and several Causes (arranged in descending order) 1880–1–2.*

Profession or Trade.	Males from 25 to 65 Years of Age.													
	Comparative Mortality from all Causes.	Diseases of Nervous System.	Suicide.	Diseases of the Circulatory System.	Phthisis.	Diseases of the Respiratory Organs.	Diseases of the Urinary System. * Table D., handed in by Dr. Ogle, Superintendent of Statistics in the General Register Office. Minutes of Evidence before Commission as a Whole, question 1674.
† The deaths from suicide were not separated in this case from the deaths from nervous diseases.

It would appear from the above table that some trades, such as earthenware manufacture, plumbing, painting, and glazing, are especially unhealthy. The rate of mortality among printers is greater, and among builders and bakers only slightly less, than that of all males. The mortality of bakers, moreover, is considerably higher than that of carpenters and grocers. With regard to the special diseases connected with special trades, plumbers, painters, glaziers, printers, and earthenware manufacturers are subject to phthisis and diseases of the respiratory system. This is similarly the case, but in a somewhat less degree, with the builders, bakers, carpenters, and grocers. These diseases are caused either by impure air (*e.g.*, grocers and printers) or by the inhalation of dust (carpenters, bakers, builders, and earthenware manufacturers).(2)

Health of gas workers.

478. No information is given in this table with regard to the health of gas-workers, but this can be, to a certain extent, obtained from the Report of the Consulting Physician of the Gas Light and Coke Company, on the health of members of the Workmen's Provident Societies.(3) It is shown therein that the rate of sickness in the half year ending December 1888 averaged 2·49 per cent., and the number of deaths in the same period represented a death-rate of 8·8 per thousand per annum. The prevailing diseases in the period were rheumatism, catarrh, and bronchitis: 8,308 out of 9,540 men placed on the sick list were suffering from rheumatism, articular and muscular, 204 from catarrh and bronchial catarrh, and 114 from bronchitis. The consulting physician to the company, George Hastings, M.D., adds that "it is gratifying to be able "to report that the above per-centage appears to "demonstrate the fact that the health of men engaged "in the various occupations connected with the manu- "facture and distribution of gas is good; even com- "paring favourably with that of such a fine body of "men as the Metropolitan Police, whose rate of "sickness for the year 1887* was 2·9 per cent."

Sick funds.

479. Except in the gas, chemical, salt, and copper works, no mention is made of the existence of sick funds in the industries under consideration. Workmen's provident societies, supported by the joint contributions of employers and employed, have been established at the works belonging to the Gas Light and Coke Company. These are managed by local committees of the men at each station, and by a representative committee at the head office.(2) In 1842 a sick fund was started at the gasworks owned by the South Metropolitan Gas Company. The company guaranteed the stability of the fund, and added whatever sum was

(1) Minutes of Evidence, Vol. III., Appendix LXXXIII. (2) Minutes of Evidence taken before Commission as a Whole, Tables E. and F. handed in by Dr. Ogle on the Third Day. (3) Minutes of Evidence, Vol. III., Appendix XLVI.

[§ 479.] necessary to secure its financial stability. This contribution amounted to 2*d.* a week for every 3*d.* contributed by the members.(1) From documents handed in by the representatives of the chemical industry it appeared that sick funds exist in connexion with 13 out of 16 chemical works in the Widnes district.(2) Membership in seven instances is compulsory. The management, generally speaking, is in the hands of the members themselves, and where a doctor is appointed in connexion with the fund this is also usually left to the members. The rules of the dispensary and burial funds in connexion with the Oldbury Alkali Works were handed in to the Commission. The former fund, which was started about 40 years ago is maintained "by the contributions of the workpeople, to "provide themselves and their families with medical "attendance and drugs, at a fixed weekly rate." The fund is managed by a committee consisting of all the foremen of the works, with one member of the firm as chairman. The firm act as treasurers, and nominate each year two or more duly qualified doctors for the ensuing year, whose appointment, when nominated, rests solely with the committee. The burial fund, which was established in 1870, is also managed by the dispensary committee. This fund is also maintained exclusively by the contributions of the workpeople themselves; but the convalescent cottage home, for the benefit of the persons employed at these works and their families is supported by subscriptions from the workpeople, supplemented by contributions from the firm. Membership of this provident society is one of the conditions of employment at the works.(3) The subscription to, and allowances granted by, the funds here under review are given in the following table. [§ 479.]

Table showing amount of Contributions and Benefits in the Societies under consideration.

Contributions and Benefits.	Workmen's Provident Societies. Chemical Works, Widnes District.(4).	Gas Light and Coke Company's Workmen's Provident Societies.(5)	South Metropolitan Gas Company's Sick Fund.(6)	Oldbury Alkali Works Provident Society.(7)
Weekly subscription	3*d.* to 9*d.*, in different societies.	6*d.*	3*d.*	*Dispensary Fund:* 1*d.* to 3*d.* per week according to wages earned. *Burial Fund:*— 1*d.* to 4*d.*, according to wages earned and scale of benefit.
Benefits	Sick allowance:— Varies from 7*s.* to 10*s.* a week; granted for six months usually. Less allowance for following six months. Funeral benefits: *Death of Member:* Varies from 4*l.* to 10*l.* *Death of Wife:* Varies from 4*l.* to 8*l.* *Death of Child:* Where granted, varies from 1*l.* to 5*l.* N.B.—Boys under 14 pay half contributions and receive half benefits.	Sick allowance:— 12*s.* a week in case of sickness or injury.	Sick allowance:— 12*s.* a week for three months, and 6*s.* a week for another three months. Medical attendance included. Funeral benefit: Granted partly by an additional levy, and partly out of fund. *Death of Member:* 12*l.* 10*s.* *Death of Wife:* 7*l.* 10*s.*	Sick allowance:— Medical attendance and medicine without further charge. Burial fund: Varies from 1*l.* 10*s.* for a child under 18 years and over seven days. old, to 5*l.* on death of workman of 21 years and upwards.

The Salt Union has no sick funds for the benefit of their workmen. Some of the separate salt works had at one time, it was stated, "workmen's benefit clubs"; "but there seemed a kind of reluctance on their part, "probably from want of organisation, to have any-"thing of a definite nature, and they divided every "Christmas everything they had, and started afresh." "We offered," Mr .Ward (a director of the Salt Union) added, "to put 100*l.* in the bank for them as a nucleus "to start the fund again before the Salt Union was "formed, but they would not accept it."(8) With regard to the lead workers, Mr. Shotton stated that the employers pay the doctor who examines the workmen, and in some instances employers are "very kind," but no regular provision is made for sickness. When men are from this cause away from work for more than three weeks the workmen make a contribution for them among themselves, and cases of sickness are so frequent that this contribution is a regular thing. But they "can hardly keep even (weekly benevolent "societies) going, the sickness is so great," and but few friendly societies will admit lead workers to membership.(9)

7. OTHER CONDITIONS OF LABOUR.

480. Certain matters to which reference was made in the evidence remain to be noted. These refer mainly to the question of apprenticeship and boy labour and the introduction of machinery.

481. Many complaints were made by representatives of this group of industries on the one hand, as to the decay of the old system of apprenticeship, which in London was said to be "almost obsolete," and the introduction of cheap and unskilled boy labour, and on the other, as to the undue number of apprentices allowed in certain trades. In the first case it was claimed that this had a bad result on the work and on the boys themselves, and in both cases complaint was made of the consequent increase in the pressure of competition. That the decay of the system of apprenticeship lowered the character of the work was insisted on by the majority of the witnesses, and especially by members of the building trade. Mr. Fenelon, a house-painter and decorator, attributed the inferior workmanship which he found in his trade to this cause. When youths served seven years, he stated, they obtained a thorough training, and were drawn from a better class than the workmen of the present time.(10) With regard to the evil effects of the loose system of apprenticeship on the boys themselves, the extremely unsatisfactory character of the training now usually received was witnessed to on all hands. Where the practice of "indentures" has died out and in certain miscellaneous industries where perhaps this more formal practice has never existed, boys are taken on by a mere verbal agreement, in many cases without the payment of fees.(11) The technical skill acquired under the old system of apprenticeship in certain trades is now impossible, and in less skilled trades this tendency to employ boy labour is stated to result in training that is both inferior and incomplete.(12) A representative of

Apprenticeship and boy labour.

Digest, Vol. III., pp. 55, 85, 96.

[§ 481.] those employed by grocers and provision dealers complained that numbers of lads were taken on as errand boys and allowed gradually to acquire a half knowledge of the trade.(1) It appeared further that the present system sometimes led to the underpayment of the boys, who were liable to be dismissed, it was stated, after an apprenticeship of a year or two. Thus, in times of depression a large amount of cheap unskilled labour was thrown on the market, and these lads "swell "the army of the unemployed."(2) The competition of boy with adult labour, and of apprentices with journeymen is, however, the main grievance. In the printing trade, where a definite system of apprenticeship seems still in vogue, disputes arise in connexion with the proportion of apprentices to journeymen. Various customs seem to prevail in the different associations of employed on this point, but the rules are not uniform.(3) Complaints were made that these rules were often disregarded in houses where Government printing was done, and that employers were constantly trying to increase the number of apprentices.(4) Some representatives of the printers, the secretary of the Association of Glass Bottlers, and witnesses from other industries contended that the excessive number of apprentices tends to overcrowd their industries and to cause the properly trained journeyman to be supplanted by inferior labour.(5) A shop assistant attributed the lowness of the wages of his class to the competition of half-trained youths whom the "employers soon con- "sidered proficient enough to displace qualified hands."(6) It must be noted that these complaints on the part of the employed were in some instances stated by the employers to be without foundation. A glass-bottle manufacturer objected to the restrictions placed by the men's Union on the number of apprentices, and stated that in 1891 there were not sufficient journeymen to meet the demands of the trade. Another union rule, whereby a boy who began one process in the trade when he was 16 was not allowed to begin another till he was 18, without regard to his fitness or unfitness, was regarded by the same witness as a hindrance to progress.(7) The Vice-President of the Metropolitan Grocers' and Provision Dealers' Association was of opinion that the statement that men were dismissed to make room for boy labour "might "mean anything or nothing," and asserted that there was a gradual and necessary system of promotion in all shops.(8) Various suggestions were made on the part of the men to remedy these grievances. Some recommended a revival of the old system of apprenticeship, by which youths should be indentured to a recognised master for a definite term of years. This would be a safeguard against the overcrowding of the labour market, and a guarantee for thorough training.(9) "If "the Painters' Company," said Mr. Patrick, would do "the same as the Plumbers' Company (10) have done, "and fix a standard of perfection, we should show the "public a better system of working together, invigorate "the trade, and bring back a means of living to "numbers of men who are practically unskilled work- "men, though nominally supposed to be skilled work- "men." In this case it was urged that the Painters' Company should undertake the functions which its character secured to it and see that every boy who [§ 481.] entered the trade was practically acquainted with his business. These boys should have free education in the technical colleges of the painting trade.(1) It was also proposed in certain industries to raise the age at which boys should be allowed to work, in others to forbid their employment on the ground of the unsuitability of the work.(2) As regards the alleged excessive number of apprentices in certain trades, a desire was expressed amongst the printers, cabinet-makers, and glass bottlers for a stricter limitation of the number in the proportion of one (apprentice) to three (journeymen), one to four, and four to five respectively.(3)

Machinery. 482. The introduction of machinery is deprecated by a certain number of witnesses in this group mainly on the ground that it has considerably lessened the number of the men employed in various trades. A representative of the carpenters and joiners stated that it had so lessened the demand for labour that in Dublin 10 per cent. of the carpenters had emigrated,(4) while a representative of the coopers affirmed that not only had a third of the men in his trade been thrown out of employment from this cause, but that the remainder were reduced to the position of unskilled labourers on much lower wages.(5) A brickmaker complained that the substitution of machine-made for hand-made bricks had resulted in a great displacement of labour and in the production of an inferior quality of bricks.(6) It was objected that the introduction of machinery in some gasworks had resulted in the loss of the eight-hours day which had been enjoyed for 12 years, because the machines were unable to do the work in that time. The witness further stated as his belief that this step had not been altogether salutary, because the price of gas in these works was now higher than it was in some other works where machinery was not used.(7) A gas manager admitted that in one case the use of machinery had resulted in the dismissal of 60 per cent. of the men. This change, however, he argued, had been brought about largely in consequence of strikes.(8) In reference to the "composing machines" now used in the printing trade, a printer remarked that in his opinion "the hand compositor "was the cheaper workman."(9) In consequence of the displacement of skilled labour by the substitution of machinery, it was suggested by one witness that where machinery was used it should be taxed, and by another that its use should be accompanied by a curtailment of the hours of labour.(10) On the other hand, it was urged by Mr. Moore, a representative of the building trades, and by Mr. Brough, a mason, that the introduction of machinery had afforded great relief from mechanical drudgery and heavy manual labour, while a gas manager pointed out that the stokers' work had thereby been rendered far less hot and arduous.(11) A member of the Cork United Trades Council stated that the artisans in that district did not offer any opposition to the introduction of machinery, while another witness regarded any question as to the value as "obsolete."(12) Various witnesses denied that trade had suffered in consequence, and some representatives of the printers asserted that as many or more men were now employed and that wages were higher.(13)

B. ORGANISATIONS.

1. ORGANISATIONS OF EMPLOYERS, ORGANISATIONS OF EMPLOYED AND JOINT BOARDS.

I. Building, Printing, and Cognate Trades. Organisations of employers.

483. Oral and written information has been received from the Central Association and 25 branches of the National Association of Master Builders of Great Britain, the Association of Master Painters in Scotland, the Glasgow Master Plasterers' Association, the Master Masons' Association of Glasgow and Vicinity, and the Glasgow Master Wrights' Association; and the rules of the Yorkshire Master Printers' and Allied Trades' Association were forwarded to the Commission.

(a.) *Date of formation and extent.*

(a.) The Master Masons' Association of Glasgow was formed in 1861, and now numbers 43 members, embracing railway contractors and builders. Seventy-eight employers are still unconnected with the Association, which is confined to Glasgow and the neighbourhood. Its members employ about 3,000 persons in all, including "about 2,200 operative masons, and 800 masons' "labourers, with a fluctuating number of railway "navvies."(14) The Glasgow Master Plasterers' Association was formed in the year 1869. The central association* of the National Association of Master Builders was established in 1878 as "the outcome of "the Manchester strike in 1877."(15) The National Association itself extends from Inverness to Truro, and has a membership of about 1,300 employers, embracing "all the large contractors of the country." It does not, however, admit "speculative builders" to membership. The date of establishment of the various branches, where mentioned, ranges from 1866 to 1891. No further information has been received with regard to the date of establishment of the Associations under review.

(1) Digest, Vol. III., p. 94. (2) Digest. Vol. II., pp. 34, 45. Digest, Vol. III., pp. 63 and 74. (3) Digest, Vol. III., pp. 54, 55, 60, 62, and 63. (4) Digest, Vol. III., pp. 56, 60, 63. (5) Digest, Vol. III., pp. 61, 63, 74. (6) James, 31,026. (7) Digest, Vol III., p. 77. (8) Digest, Vol. III. p. 77. (9) Digest. Vol. II., pp. 34, 38, 52. (10) Minutes of Evidence, Vol. II., Appendix XXXIX.

* The term "central association" is here applied (see Tabulated Rules, No. 409) to the central administration of the National Association, the head quarters of which are in Liverpool. It must be noted, however, that in the oral evidence it is stated that "the National "Association is the parent association, and the central association is "that which represents London only." See Baird, 31,975.

(15) Digest, Vol. II., p. 48. Knox, 18,438

[§ 483(a).] Constitution and government.

(b.) The associations are governed by an Executive Council, Committee, or Board of Management. In addition to the committee-men the principal officers are the president, treasurer, and secretary. As a general rule from one to four vice-presidents and one or two auditors are also appointed. The secretary frequently receives some payment for his services. Committee and general meetings are held monthly, quarterly, or at shorter intervals if necessary, and there is in most cases a half-yearly or yearly general meeting, at which the election of officers takes place. A simple majority of votes usually decides any question before the association, but it is sometimes required that important matters, such as a lock-out, shall receive the approval of two-thirds, three-fourths, or four-fifths of the members present. The voting power of members on such matters varies in proportion to the number of men in their employment. All members of firms affiliated to the associations are entitled to attend the meetings, but it is sometimes stated that only one member of a firm may vote. Alterations in the rules can only be made at a general meeting, of which from seven days to two months' notice must have been given to each member. Generally speaking, the proposed alterations must be specified in such notice.

Entrance fees and contributions.

(c.) An entrance fee is only mentioned in the rules of four of the associations in question; in these it ranges from 1*l.* to 2*l.* 2*s.* Members are generally required to give from three to twelve months' notice of intended resignation, and in some cases this notice is only accepted at a certain period before the annual general meeting; the rules of several associations provide that any member may be expelled by a majority of votes at a general meeting. The amount of the annual subscription varies considerably in the different societies. Sometimes a fixed sum is paid, which ranges from 10*s.* 6*d.* to 1*l.* 1*s.*, in others the subscription varies with the number of men employed. Thus in the Manchester and Salford branch of the National Association of Master Builders the annual subscription ranges from 1*l.* for employers of less than ten men to 50*l.* for those employing 400 men and upwards. In most of these associations a levy can be raised at any time if necessary. It is stated in the rules of a few societies that members "in arrears" are not entitled to vote at meetings, and if they continue "in arrears" for longer than a certain period, which varies from three months to two years, they are liable to exclusion.

Benefits.

(d.) No benefits appear to be granted by the majority of these associations, but in the Cardiff branch of the National Association of Master Builders provision is made that members in need of pecuniary assistance shall inform the secretary, who must summon a meeting to consider the case. A benevolent association has been established in connexion with the Portsmouth branch, but the rules of this fund are distinct from those of the association.

Dispute regulations.

(e.) The rules of the Glasgow Master Plasterers' and the Glasgow Master Wrights' Associations and the Cambridge branch of the National Associations of Master Builders contain no regulations with regard to trade disputes. In the other societies it is generally stated that members must endeavour to arrange all differences by arbitration or other peaceful means. In the event of a strike the members concerned must at once inform the secretary, who summons a special meeting to consider the dispute. It may be noted that, at such meeting, the number of votes to which members are entitled varies in accordance with the number of men in their employment. Should the dispute only concern one branch of the trade, a meeting is called of the employers engaged in that branch alone. In several associations it is stipulated that no lock-out can be declared without the consent of a certain specified majority which ranges in the various societies from two-thirds to four-fifths. Members of the Newport branch of the National Association of Master Builders may not make or agree to any proposition during a strike without the sanction of their association, and in a few cases it is stipulated that if the men employed by one member come out on strike, no other member shall employ them during the course of such strike. A black-list is circulated from time to time by the Yorkshire Master Printers' and Allied Trades Association. The separate working rules agreed upon by representatives of the associations of employers and employed frequently contain provision for the settlement of disputes by conciliation or arbitration.

Other regulations.

(f.) Almost all the associations have some regulations concerning the conditions of employment. No member, generally speaking, may make any alterations in the established rate of wages, rules, or customs which regulate his relations with the men in his employment without the consent of a special meeting of the association. Members are frequently not allowed to negotiate on matters relating to trade with the associations of the employed, but are obliged to make all communications through the secretary. Members are otherwise bound not to take advantage of their fellow members in any way. Thus in the Bradford branch of the National Association of Master Builders, and the Association of Master Painters of Scotland, apprentices who have left the employer to whom they were indentured cannot be employed by another member without the consent of their former master, and in several branches of the National Association of Master Builders it is provided that no member may accept a contract which has been declined by another member, unless the Committee considers the objection untenable, nor may he sign a legal contract which does not contain a strike clause. The Yorkshire Master Printers' and Allied Trades' Association provides a workmen's labour registry. [§ 483 (f.)]

Objects.

(g.) The objects of these associations are principally concerned with the interests of the trade as such. They aim at collecting and spreading statistics and other information of importance to the development of the trade, at enabling members to deal as a body with questions relating to wages, hours, and other conditions of employment, and at bringing about the amicable arrangement of trade disputes. Most of the builders' associations further wish to obtain the recognition by architects and other persons of a fair form of contract between builders and customers, and, generally speaking, the associations express a wish to co-operate with kindred societies throughout the country.(1) (g. Objects

Organisations of employed.

484. The rules of 113 associations of employed in the building, printing, and cognate trades have been received by the Commission. Of these 59 are connected with building, including cabinet-makers, upholsterers, coachmakers, and coopers, and 54 with the paper making, printing, and book-binding trades.* The central association and 17 branches of the Mutual Association of Coopers are included in the former group. Among the Printers' Unions there are 23 branches of the Typographical Association, and 10 of the Scottish Typographical Association. Oral and written information has also been furnished by a number of other societies in the building trade, including the London Building Trades Committee, the Cork United Building Trades Society, and various branches of the Amalgamated Society of Carpenters and Joiners, the Operative Stonemasons' Friendly Society, and the Alliance Cabinet Makers' Association.

(a.) Date of formation and extent. (i.) Building and cognate trades.

(a.) (i.) The United Operative Masons' Association of Scotland was established in 1831† and reconstituted in 1852. It extends throughout the whole of Scotland, and has affiliated to it 62 branches numbering 3,848 members in all, or about one-half of the workmen employed in the trade. The society is especially strong in Glasgow, where the membership was said to have doubled during the year 1891. Mr. Brough stated that the number of unionists in this district was 1,700 as compared with 500 non-unionists. Between 200 and 300 of the latter work practically on the same footing as unionists, but are disqualified for membership by their age.(2) The United Kingdom Society of Coachmakers was established in 1834.‡ Ninety per cent. of the persons engaged in the trade in Lancashire and Yorkshire are unionists, but in the West Midlands and in the South the majority of workers are non-society men, and in London its membership only numbers about 400. In this latter district the membership decreased in 1879 in consequence of a lock-out, but between 1881 and 1891 more than 1,000 new members were enrolled. Mr. Waldron stated that there were "two or three" other societies in London, with a membership of 200 or 300, but that in the provinces the United Kingdom Society was practically the only association. It has "between 50 and 60 members "scattered all over South Africa and other places." About one-third of the members are smiths, and two-thirds workers in wood.(3) The Operative Bricklayers'

* The Society of Women employed in the Upholstery Trade is dealt with in the Summary on The Employment of Women (*see* Appendix III., p. 472). For the rules of the London United Trade Committee of Carpenters and Joiners, *see* Appendix II. to this Summary on p. 334.

† It may be noted that in the oral evidence the date of establishment is given as 1832. Digest, Vol. II., p. 37.

‡ The oral evidence stated that the Society was formed about 1825. Digest, Vol. II., p. 53.

(1) Tabulated Rules, Nos. 400-432, 439. (2) Digest, Vol. II., p. 37. (3) Digest, Vol. II., pp. 53-4. Waldron, 20,217.

[§ 484 (a.) (i.)] Society was formed in 1848; in 1891 it had 214 branches, of which 34 were in the London district, and numbered more than 17,000 members.(1) This Association is quite distinct from the United Operative Bricklayers' Trade, Accident, and Burial Society of Great Britain and Ireland, which on account of its immediate connexion with Manchester is "commonly called" the Manchester Order of Operative Bricklayers. It had 82 branches in 1891, and numbered more than 2,000 members. The date of establishment is not stated.(2) The National Association of Operative Plasterers dates from 1860. It extends throughout the United Kingdom, and has 125 branches with a total membership of 5,600.(3) It was stated that the society is better organised in the provincial towns than in London, where only about 2,500 out of 9,000 or 10,000 plasterers are members. The Amalgamated Society of Carpenters and Joiners was established in the same year; only "small local societies" existed previously. The head-quarters of the association were originally in London, but were transferred to Manchester. At the close of the first year 618 members had been enrolled, and the assets were 321*l.* In 1891 the society numbered 541 branches throughout the United Kingdom, with a membership of 33,533 ordinary, and 1,246 trade members;(4) and with assets amounting to 66,359*l.* Branches have also been established in the Colonies and the United States. This it was stated is by far the strongest society in the building trade.(5) "One or two local unions" existed in Scotland before the formation of the Society of Associated Carpenters and Joiners in 1861. This union was at first confined to Scotland, but in 1891 out of 105 branches 15 were established in England and 2 in Ireland. These include Englishmen and Irishmen among their members, but were founded mainly for the convenience of Scotchmen who had left their own country. The total membership of the Society is about 5,800. Including the members of the Scotch branches of the Amalgamated Society, about 7,000 of the carpenters and joiners in Scotland are unionists. It was stated that the number of unionists in Scotland was increasing; but that this society was not now extending so rapidly as in former years.(6) In 1865 the Alliance Cabinet-Makers' Association was instituted. It has 68 branches, of which 60 are in England, 5 in Scotland, and 3 in Ireland, and a total membership of 6,500.(7) Several other associations of cabinet-makers exist, of which the Amalgamated Union, established in 1832, is the most important; but less than 15,000 out of between 70,000 and 80,000 cabinet-makers throughout the United Kingdom are unionists. In London, where 20,000 or 25,000 persons are employed in this industry, only about 3,000 belong to any union.(8) In 1865 the United Operative Plumbers' Association of Great Britain and Ireland was formed by the amalgamation of several smaller societies. Between 1879 and 1891 the membership increased from 2,500 to 5,500, and it was stated that a further development had taken place since 1891. The total expenditure in 1891 was about 7,700*l.*, of which nearly 3,280*l.* was required for working expenses. The society had in that year 124 branches, a large number of which are in Scotland. In this district there is also a local union which was established in 1872 under the title of the United Operative Plumbers' Association of Scotland, and which in 1891 numbered about 380 members.(9) The central association of the Mutual Association of Coopers was established in 1878. The Mutual Association itself extends throughout the United Kingdom, and is an amalgamation of 28 local societies. The total membership of the affiliated societies is 5,868.(10) The National Amalgamated Society of House and Ship Painters and Decorators was established in its present form in 1886. It then had 25 branches and 1,305 members, and now includes 67 branches and 4,100 members. It was stated that in Manchester and the immediate district "there are "very few non-society men as painters."(11) In 1891 the income of the society was 6,362*l.*, and the balance in hand at the end of the year nearly 6,087*l.* This society has no branches in London, where there are, however, "about 12 or 14" societies of painters, of which the Amalgamated Society of House Decorators and Painters, established in 1873, is one of the best organised.(1) The painters' associations in London have been recently formed "into one organisation for "trade purposes" only.(2) The Cork United Building Trades Society, an association of carpenters, masons, stone-cutters, and plasterers, was organised in 1890, but the separate societies in these four branches of the trade were stated to "have had some sort of existence "for hundreds of years," and to be "relics of the old guilds."(3) The date of formation is not given for the other societies included under this group. The Friendly Society of Operative Stonemasons extends throughout the United Kingdom, and in the year 1891 had established 314 branches. In 1874 the society numbered about 27,000 members, including both trade and sick members, and in 1877 the total membership had risen to 34,000*l.* Owing to depression in trade, and the "great struggle" during the building of the Law Courts, the members fell off; and it was stated that the total number belonging to the society is now about 16,000; but the witness added "we have been "picking up of late years about 100 a fortnight, 100 "to 150."(4) The Operative Brickmakers' Society of Nottingham is a purely local association, and numbers 150 members. Mr. Corbett stated that at one time none of the members could read or write, and had to employ a man unconnected with the trade as secretary. Many of the older men are even now illiterate.(5) The Lath Renders' Branch of the National Union of Gas Workers and General Labourers in London has a membership of about 83, out of "some 250" workers. Mr. Brooks stated that the lath renders were not bound by the rules of the Gas Workers' Union, but were merely affiliated to it.(6) Before the lock-out in 1891 the General Union of Mill Sawyers in London numbered about 400 members. This number was afterwards reduced to 25. Mr. Copsey stated in December 1892 that the membership had risen to 200; and "we "are adding members to the books at the rate of about "10 a week," and "bid fair to get them all back again." In the East End alone about 4,000 men are engaged in the trade.(7)

[§ 484 (a.) (i.)]

(ii.) Printing and cognate trades.

(*ii.*) The London Printing Machine Managers' Trade Society, established in 1839, now includes about 1,500 members out of a total number of 1,800 engaged in the trade.(8) The Typographical Association was formed in 1849. At the present time it has affiliated to it 99 branches in England, Wales, and Ireland, with a total membership of about 10,500, representing all departments of letter press printing. The funds of the society amount to rather more than 30,000*l.*, of which 8,700*l.* are set aside for superannuation benefit. The organisation is weak amongst the employed in the south and south-west counties of England, but it was stated that where branches have been established "at least "four-fifths of the men in the trade" are members. At Oxford nearly all the men employed at the Clarendon Press are unionists, but Mr. Slatter asserted that the society had no connexion with the Pitt Press, and he believed that there was not "a single member "in Cambridge town." The only independent society of any importance in the provinces is the one which is in existence at Leeds.(9) The Scottish Typographical Association extends throughout the whole of Scotland, includes 29 branches, and has a total membership of 2,700. The Glasgow Branch, established in 1817, has a membership of 1,100 or 1,200, that is, "fully ninety-"five per cent." of the men engaged in the trade. Between 1872 and 1891 the society spent 9,409*l.* on strikes.(10) In 1880 the Amalgamated Society of Lithographic Printers was formed. It extends throughout the United Kingdom, and has a membership of about 2,500. It was stated that in the provinces the proportion of unionists to all the men in the trade was 75 or 80 per cent.; in London "it is an unknown quantity," probably not more than 50 per cent.(11) The Printers' Labourers' Union and the Lithographic Stone and Zinc Preparers' Society were both founded in 1889. The former includes 1,400 members. Mr. O'Grady stated that at present only a few members are employed in newspaper offices, because the wages paid there are higher than the minimum required by the union, but, he added, "we are framing another rule for them, "and in a few months we shall have them all in the "society."(12) The Lithographic Stone and Zinc Pre-

parers' Society, which is confined to London, numbers 170 members out of a possible 200 or 250.(1) Information was not given as to the date of formation of the London Society of Compositors and the National Union of Paper Mill Workers. The former society has a membership of 9,450 and admits to membership persons engaged in the "newspaper, book, and general jobbing "work."(2) The National Union of Paper Mill Workers, which is strongest in Lancashire and the Midlands, has members "all over Scotland and the "North of England." Out of 42,000 or 45,000 workers in the trade, 2,600 are members of the Union.(3)

(*b.*) In the majority of these associations the supreme government is vested in a General Council, or in a general or delegate meeting or conference. An Executive Council, Committee, or Committee of Management is appointed to conduct the ordinary business of the society. The principal officers are a president, chairman, or in the Ancient Guild of the Incorporated Brick and Stonelayers' Trade Union, a master, a secretary, and treasurer. In several societies these officers or the committee-men have charge of the funds, but generally speaking, trustees are elected for this purpose. Their number varies greatly: thus, the United Operative Masons' Association of Scotland has three trustees of the working fund, and sixteen of the sinking fund. Four trustees are elected by the United Operative Plumbers' Association to represent England, Scotland, Wales, and Ireland. In a few societies a banking or finance committee, which usually consists of three members, is appointed instead of, or in addition to, the trustees. The accounts are generally submitted to one or more auditors specially appointed, but in the Amalgamated Cabinet Makers' Society and a few others they are audited by any branch other than the seat of government. In almost all cases the president, secretary, and treasurer receive some payment for their services, the amount of which varies according to the size of the union and the amount of work which falls to their share. The larger societies are divided up into branches and lodges, or "chapels," as they are called in the printers' associations. These chapels are managed by a "father" and "clerk." The government of districts, branches, or lodges is, generally speaking, similar to the central management, but on a smaller scale. Committees or Councils and various officers are elected, and in many societies the rules of the central association are binding on the branches. In other cases, as in the Mutual Association of Coopers, the districts and branches have distinct rules for their own administration. Meetings of the Central Executive, and of the branch and district Committees, are held at stated intervals, usually every week or fortnight, but this period varies considerably in the different associations. The General Council, general or delegate meeting, or conference, is held annually in the majority of the societies, but in other cases the intervals between the ordinary meetings vary from three months to four years. In addition to the fixed meetings it is generally provided that special meetings may be called when necessary. According to the rules of certain associations the voting power of delegates varies in proportion to the number of members they represent. A simple majority of votes is sufficient to decide ordinary questions, but the rules frequently provide that certain matters must be approved by a majority of two-thirds or three-fourths. In the event of the votes being equal, the presiding officer generally has the casting vote, sometimes in addition to a deliberative vote. Generally speaking, all disputes between members of the associations must be first brought before the branch or district Committee, and thence referred, if necessary, to higher bodies. No appeal is, however, allowed from the decision of the General Council, general or delegate meeting, or conference. It is laid down in the rules of several societies that disputes must be referred to arbitration; some appoint a permanent body of arbitrators at stated intervals, others elect them when necessary. Generally speaking, proposed alterations in the rules, of which due notice must be given, are referred to a general or delegate meeting, and a few societies provide for the establishment of a special Committee of revision. A majority of two-thirds or three-fourths is required before any benefits can be annulled.

(*c.*) Owing to the highly skilled character of most of the industries connected with the building and printing trades, certain conditions with regard to wages, period of apprenticeship, &c., have to be fulfilled by new members. Generally speaking, candidates for membership must have served a regular apprenticeship, which varies in the different societies from three to seven years, or they are required to prove that they have worked at the trade for a certain period, which ranges from six months to seven years. The rules of several associations stipulate that members must, in addition, be earning the current rate of wages. In many cases no person below or above a certain specified age can be admitted to full membership. The amount of the entrance fee, where stated, ranges from 1*s.* to 5*l.* in the different unions, and in some societies varies with the age of the candidate at the time of admission, the time which has elapsed since the expiration of his apprenticeship, or, in the Amalgamated Society of Lithographic Artists, Designers, and Writers, Copperplate and Wood Engravers, with the benefits to which he desires to be entitled. As a general rule, apprentices are admitted free, and where this is not the case they almost invariably pay a lower fee than journeymen. The rate of contributions also varies considerably, but not to the same extent as the entrance fees. In many cases different rates are paid according to the age of the members, the benefits which they desire to receive, or the wages which they are earning. The contribution to the Alliance Cabinet Makers' Association varies with the standard wages of the town. Generally speaking, the contribution ranges from 6*d.* to 1*s.* a week for ordinary members, but in a few associations it is as low as 2*d.* Members entitled only to trade benefits pay a lower rate than full members, and apprentices usually pay half the ordinary rates. It is frequently stated in the rules that additional levies can be raised when necessary. Generally speaking, members "in arrears" for more than a certain specified period are liable to a small fine, are suspended from benefits, or are even excluded from the association.

(*d.*) It must be noted that in considering the number of benefit funds allowed by these associations the benefits granted by the central association of a large society, which are usually mentioned in the rules of the branches, have been counted once only. In the branches themselves account has only been taken of benefits granted in addition to, or instead of, those allowed by the central rules. The total number of benefit funds provided by 113 associations, the rules of which have been forwarded to the Commission, is 389. These have been tabulated as follows:—

TABLE of Benefits granted by Associations of Employed in Building, Printing, and Cognate Trades.

—	Building and Cognate Trades.	Printing and Cognate Trades.	Totals.
Number of associations	59	54	113
Funeral benefit	50	22	72
Dispute benefit	47	14	61
Travelling benefit	27	29	56
Out-of-work benefit	30	20	50*
Sick benefit	30	13	43
Distress benefit	24	11	35
Superannuation benefit	20	11	31
Accident benefit	24	1	25
Emigration benefit	5	11	16
Totals	257	132	389

* It was stated in the oral evidence that the United Operative Plumbers' Association provides out-of-work benefit in addition to the benefits mentioned in the rules. Digest, Vol. II., p. 43.

Funeral benefit is paid in a lump sum, the amount of which frequently varies according to the length of membership, or, in other societies, according to the rate of contributions. In many cases this benefit is also paid on the death of a member's wife. In some unions this amount is subtracted from that payable on the member's own death, but in others it is allowed in addition to this sum. It may be noted that although some associations only grant this benefit in the case of one wife, others grant it for a second, provided that a small registration fee has been paid. In several unions a member's widow may receive funeral benefit, on condition of paying a small contribution, which is usually 1*s.* a quarter. Some associations allow a certain sum on the death of a member's children. Unmarried members

(1) Digest, Vol. III., p. 54. (2) Digest, Vol. III. p. 56. (3) Digest, Vol. III., p. 80.

[§ 484 (d.)] in a few societies are allowed benefit on the death of one parent. In several cases, as in the Lithographic Stone and Zinc Preparers' Society, a general levy is raised on the death of a member, in order to prevent the funds from being exhausted by frequent claims. Dispute benefit takes the form of a daily or weekly allowance, the amount of which sometimes varies according to the length of membership or rate of contributions. In some cases it is given for a specified number of weeks, in others no limitation is mentioned. Three societies, in addition to the ordinary dispute allowance, grant a small sum for each child under a certain age. "Victimised" members generally receive an allowance equal to the wages they were earning at the time of dismissal. The amount paid in the form of dispute benefit is not always stated in the rules, and is sometimes left to the discretion of the Committee. Legal assistance is frequently provided when necessary. The rules of a few societies provide that no dispute benefit shall be granted if the funds are below a certain minimum. It appears from the above table that travelling benefit is allowed by a very large proportion of these societies. This is due to the fact that it is the only local benefit granted by many branches of the typographical associations. In the majority of these unions travelling benefit is paid in a lump sum, in others it takes the form of a daily allowance, or members receive a small sum, usually 1*d.*, for each mile that they travel in search of work. The amount given frequently varies according to the length of membership, and in the Hull branch of the Typographical Association, married members receive double the benefit granted to single men. The rules of several associations further provide that when work is found for members at a distance, their fare shall be advanced. Out-of-work benefit is paid, usually for a limited period, as a weekly allowance, the amount of which frequently varies according to the length of membership, the rate of contributions, or the state of the funds. Sick benefit is, generally speaking, paid on the same principle as out-of-work benefit. The sums allowed as distress benefit, which is usually granted in these associations in the case of loss of tools by fire, are proportioned to the loss, and sometimes vary with the circumstances of the member who claims relief. In order to be entitled to superannuation benefit, members must generally have attained to a certain age, and have belonged to the society for a certain specified number of years. A few associations, however, grant this benefit to any member, irrespective of age, if incapable of supporting himself. It is almost invariably paid in the form of a weekly pension, but in the Operative Bricklayers' Protective and Friendly Association of Scotland the gift of a lump sum is optional. A few societies provide that not more than a certain number of members may be in receipt of superannuation benefit at one time. Members who are temporarily disabled by accident generally receive a weekly allowance until their recovery; should the disablement prove permanent, a lump sum is usually paid to enable them to set up in another trade. In the Friendly Society of Operative Stonemasons this sum ranges from 10*l.* to 100*l.* according to the member's age on entry. Legal assistance is also granted if necessary by a few societies. Emigration benefit is paid in the form of a lump sum, and frequently varies according to the length of membership of the recipient. The Bookbinders' and Machine Rulers' Consolidated Union does not provide this benefit for more than eighteen persons in one year. The United Brotherhood of Paper makers only allows one person in each quarter to receive emigration benefit, and each emigrant must have been a free member for 13 years, and not have received any benefit for a longer period than three months. Members of the Belfast Coopers' Trade Union must refund the moneys allowed to them if they return within two years.

(e.) Dispute regulations. (*e.*) The rules of thirty-two of the associations under review contain no special regulations with regard to disputes with employers. In several other cases only very short directions are given. Thus, the rules of the Fret Lead Glaziers' and Cutters' Union merely provide that disputes between masters and men shall be investigated by the Council. Some of the larger societies, however, are bound by elaborate regulations in the management of trade differences. It is usually stated that all possible means of amicable arrangement must be exhausted before resort is had to a strike. Arrangements are made for sending single delegates or deputations to confer with the employer or his representatives, and to try to obtain a settlement by means of conciliation or arbitration. Even in cases when the employer refuses to accept proposals for arbitration or conciliation, members are rarely allowed to strike unless this measure is approved by a majority of two-thirds, or, in a few associations, of three-fourths, of the members present at a special general meeting. To enforce the observance of this rule it is sometimes stated that members who leave work on their own responsibility shall receive no support from the funds, and in a few cases they are expelled from the association. In several unions branch Committees are authorised to permit a strike in connexion with certain questions, but generally speaking the consent of the Executive or general meeting, or both, is necessary. It is required by the rules of several associations that disputes which the branch or district Committees fail to settle must be referred to the Executive Council or general meeting. When a strike has been declared, a strike Committee is frequently appointed to conduct the strike and report on its progress from time to time to the general secretary. In the rules of the National Amalgamated Society of Operative House and Ship Painters and four other associations it is stated that the Executive Council is empowered to declare a strike closed at any time. It may be noted that the dispute regulations of the Amalgamated Society of Carpenters and Joiners present a strong contrast to those of the Fret Lead Glaziers' and Cutters' Union mentioned above. In the former society a Managing Committee for the guidance of trade movements can be elected for one year with the consent of a majority of the members present at a general meeting called for the purpose. The branches are represented on this Committee by three or more delegates, in proportion to their membership. In towns and districts where there is more than one society, United Trade Committees may be formed, consisting of representatives of the various societies. Separate Managing Committees are not established where the United Trade Committees have been formed. When an extension of privileges is sought by a branch, the Executive can appoint delegates to visit the locality. If the branch affected is in the district of the central office, the Executive must receive notice of the consent of the General Council within one week, otherwise a strike cannot be declared. In all cases of dispute, the Managing Committee must obtain the sanction of the Executive or district Committee, and must then communicate with the employers and try to arrange an amicable settlement. When more than ten men are on strike, a Strike Committee must be appointed from and in proportion to their number. No strike can take place without the sanction of the Executive, which has power at any time to declare the strike at an end. A few associations have further regulations for the conduct of their members during and after a dispute. Thus the Glasgow Operative Glaziers' Trade and Friendly Society and the Scottish National Federation of House and Ship Painters punish with suspension, at the discretion of the Committee, any member who supplants another who has been discharged for refusing to work below the minimum wage. Members of the Fret Lead Glaziers' and Cutters' Union who work in a shop which the society considers "unfit" are fined, suspended, or expelled. With the rules of the Amalgamated Association of Pressmen a list of shops is given, where members may not work before they have consulted the secretary, and the Mutual Association of Coopers issues in a special circular a black list of members who persistently work in a shop which the society has declared to be closed. The rules of the Operative Masons and Stone-Cutters Society provide that non-members who accommodate an employer in opposition to the society shall be dealt with as it may decide.

[§ 484 (e.)]

(f.) Other regulations. (*f.*) Various other regulations are contained in the rules of most of these societies respecting the behaviour of members towards their employers, towards non-unionists, and in the performance of their work. In several cases working rules are published distinct from the rules of the associations. A number of the unions provide that members who lose their situations through intemperance or other misconduct, or who leave without giving proper notice, shall be fined or suspended from one or more benefits for a certain period. In several cases they are "out of benefit" until they have been for a certain time in other employment. Fines are inflicted by some of the associations on members who boast of their independence towards their employers on the ground of their membership. With regard to non-society men, it is frequently stipulated that members working with them must endeavour to persuade them to join the society, and if they refuse to do so they must acquaint the secretary of the fact. Fifteen of the unions forbid

[§ 484 (f.)] members to help non-unionists to get work under penalty of a fine or expulsion. Several societies allow their members to refuse to work with non-unionists, and in order that the latter may be easily recognised members are sometimes required to have "working cards," which they must show on demand to the officers of the society on commencing new work, or at any other time. The Amalgamated and the Associated Carpenters and Joiners refuse to grant compensation to a member who lends his tools to a non-unionist if the latter loses them. Less exclusive regulations are laid down by the Operative Lath Makers Benevolent Society, which allows strangers working in Manchester, who do not join the society, to take any overplus of work on payment of 6*d.* a week, and the Glasgow branch of the Bookbinders and Machine Rulers' Consolidated Union, which may support non-unionists in distress, at the discretion of the Committee. Generally speaking, some regulation of wages or hours of labour is contained in the rules, and full details of prices are laid down by several branches of the Typographical Associations. In the printing trade, piece-work is recognised on an equal footing with day work, but in other societies, both payment by the piece and sub-contracting are frequently forbidden. A considerable number of associations have established a minimum wage, below which no able-bodied members are allowed to work. In several cases it is provided that members in regular employment must give or receive a week or a fortnight's notice of the termination of their contracts, and four associations forbid their members to engage themselves to their employers for a long or indefinite period. Several regulations for the benefit of unemployed members are contained in the rules of these associations. One which occurs most frequently in the rules of the various printers' unions forbids members in regular employment to work overtime for any other employer so long as any members are out of work. In the rules of the Typographical Association such conduct is termed "smooting" and is punished by fine or expulsion from the society. A number of associations forbid members to work overtime for their regular employers except in cases of absolute necessity, and members of the Operative Lath Makers' Benevolent Society who work on Sunday are fined 5*s.*. In addition to these preventive measures, most of the associations have some provisions for finding work for the unemployed. Owing to the skilled character of the building and printing trades these associations frequently lay down restrictions with regard to apprenticeship. The Ancient Guild of the Incorporated Brick and Stonelayers' Trade Union allows no member to take a free apprentice unless it be his son or the son of a deceased member, and two branches of the Mutual Association of Coopers require that apprentices shall be sons of coopers. A scale fixing the proportion of apprentices to journeymen is frequently included in the rules. A few societies forbid the employment, without express leave from the Committee, of "turnovers," or apprentices who have left their original employer before their term has expired.

(*g.*) *Objects.* (*g.*) The rules of the associations are frequently preceded by a preface, preamble, address, or declaration in which the objects for which the society was founded are set forth. In the case of seventeen associations no other objects are mentioned besides those contained in the preface and the rules of four societies do not contain any objects at all. Thirty-eight associations directly refer to regulation of wages and hours of labour, and the rules of the Printers' and Stationers' Warehousemen, Cutters' and Assistants' Union state the minimum wage which the society desires to establish. The restriction of the number of apprentices is mentioned by seventeen societies. The adjustment of differences and regulation of the relations between employers and employed are among the more general objects of the societies, five of which expressly desire to arrange disputes by arbitration. It may be noted that a few associations, including the London Printing Machine Managers' Trade Society remind their members that, while supporting the rights of labour, they must not lose sight of the rights of capital. A large number of these associations desire to promote the general advancement of the trade, but only three allude to legislation as a means to this end. One or two societies express a wish to assist other unions and other trades to promote the principles of trade unionism. The majority of these associations further aim at improving the material, intellectual, and social conditions of their members, and in the preface to the rules of the Amalgamated Society of Carpenters and Joiners a desire is expressed for the establishment of co-operative societies.(1) [§ 484 (*g.*)]

Joint Boards. (*a.*) *History and relations between employers and employed.*

485. (*a.*) The rules of Boards of Conciliation in the building trade at Wolverhampton, Birmingham, and in 13 other districts have been forwarded to the Commission.(2) The Wolverhampton Board was established in 1864 and was "the outcome of a series "of strikes and labour disputes which had seriously "interfered with the business of the town. After a "seventeen weeks' strike in 1863, the Mayor of "Wolverhampton called a meeting of the building "trades in the town to endeavour to find a means of "preventing such an occurrence in the future. One "branch of the trade, the carpenters and joiners, "arranged for a conference of six delegates from "amongst themselves with six from the employers, "and both sides agreed to choose Mr. Rupert Kettle, "judge of the Worcestershire County Court, as their "chairman. The result of this conference, which "took place on March 14th, 1864, was the formulation "of a scheme which . . . was found to work "satisfactorily at Wolverhampton, and soon spread to "branches of the building trade in other districts. "Mr. H. Crompton, writing in 1876, stated that Boards "of Conciliation and Arbitration for the building trades "on the same lines as that at Wolverhampton were "then in existence at Birmingham, Bristol, Manchester, "and Coventry, and since that time they have been "instituted in many other towns. As a rule, however, "it is only one or two out of the five or six different "branches of the building trades which belong to the "conciliation board."(3) For "about 23 or 24 years," Mr. Davies stated, the working rules of the Amalgamated Society of Carpenters and Joiners have provided for the formation of Joint Boards of employers and employed. It was asserted that these committees "worked excellently," and that "they have generally "come to an amicable understanding without resorting "to arbitration."(4) Owing to the strike in 1884, the United Operative Masons' Association of Scotland and the Master Masons' Association of Glasgow and Vicinity agreed to hold an annual conference "for the "settlement of all questions relating to the trade, and "every dispute that might arise." For this purpose a Joint Committee was established. This committee, Mr. Macgregor stated, had worked "admirably," and Mr. Brough asserted that the relations between employers and employed were "better than they have "ever been." The agreements made at the conference are binding upon all the towns in the neighbourhood of Glasgow.(5) As a representative of the Associated Carpenters and Joiners, Mr. Beveridge stated that no Board of Conciliation existed in Glasgow, but that "there was a sub-committee of the men appointed to "act along with the employers." This sub-committee does not meet at stated intervals, but only "as occasion requires."(6) Conciliation Boards have been formed in connexion with a few other branches of the society. The cabinet-makers in Hull and coach-makers in London also mention Boards of Conciliation.(7) No further information has been received respecting the establishment of Joint Boards in these industries, but, generally speaking, the relations between employers and employed in the building trade appear to be friendly. It was affirmed, however, that "in the lower "class of cabinet work" in London the relations were not so good, owing to the employment of Jewish labour.(8) With regard to the printing trade, Mr. Ross stated that "about twenty years ago" a Joint Committee was in existence, but this has "fallen into abeyance." No permanent Board of Conciliation or Arbitration appears to exist at the present time, but "sometimes a Com- "mittee of employers and workmen meets together."(9) Boards of Conciliation are formed for the settlement of disputes in the paper trade, and the Aberdeen branch of the Bookbinders' and Machine Rulers' Union mentions a Board of Conciliation and Arbitration.(10) The relations between employers and employed were, generally speaking, declared to be satisfactory, and Mr. Eddy maintained that "there could not be a better "feeling than that between the employers and the "members of our society."(11)

[§ 485 (b.)] (b.) *Constitution and government.*

(b.) The constitution of these Boards or Committees is very similar in so far as they all consist of equal numbers of employers and operatives. The number of representatives on either side varies from four to seven. The Birmingham Board of Conciliation consists of six employers and six workmen in the branch of trade affected, or, in the case of a dispute affecting the whole trade, of two workmen from each branch, with an equal number of employers. This Board has a Standing Committee for each branch of the trade, consisting of three employers and three workmen. The rules of the Birmingham and Wolverhampton Boards of Conciliation provide for the appointment of arbitrators in the event of the Boards failing to come to a decision within a certain period. These arbitrators appoint an umpire to whom the matter is referred if the arbitrators cannot come to a decision. In the Wolverhampton Board arbitrators are only appointed in the event of the members of the Board being unable to agree upon an umpire in the first place.

(c.) *Dispute and other regulations.*

(c.) The Standing Committee of the Birmingham Building Trade Board of Conciliation must hear and endeavour to settle by amicable arrangement any differences that may arise between any employer and any workman when the question does not affect the trade as a whole. If either side should request a formal arbitration, before the inquiry is held the matter must be decided by the Board of Conciliation or by the arbitrators whom it appoints. The agreement concluded between the United Operative Masons' Association of Scotland and the Master Masons' Association stipulates that all grievances must be brought before the Committee with a view to an amicable settlement. It also determines the rate of wages for the ensuing year, the day and time of payment, the hours of labour, and other conditions of employment. The Birmingham and Wolverhampton Boards do not allow any alterations in the working rules or rate of wages to be made either by employers or employed, without a written notice to the other party before a certain date in the year. The other party must reply by a counter notice or otherwise within a cert n period, and the matter must then be referred in the first instance to the Board of Conciliation.

II. Gas and Coal, Chemical and Salt Trades. Organisations of employers.

486. Very little information has been obtained with regard to the organisations among the employers in the gas and coal, chemical and salt trades. Oral evidence has, however, been received from the Incorporated Gas Institute, the Society of Coal Merchants, and the Salt Union, and the United Alkali Company has furnished both oral and written information.(1) The Incorporated Gas Institute was established in 1863 under the title of "The British Association of Gas Managers." In 1881 this was changed to "The Gas Institute," and the society only adopted its present name when incorporated in 1890. Its members include the managers, engineers, and secretaries of more then 300 "gas undertakings" in the United Kingdom, and more than 30 in the colonies and abroad, but the gasworks of London, Birmingham, Liverpool, and Leicester are for the most part connected with another institute formed about 1890. The Salt Union was founded in 1888, and is a federation in the form of a limited company of nearly all the employers in the salt industry. Members of all trades subsidiary to the salt industry as well as those engaged in the actual production of salt are included in the Union, employing altogether rather more than 3,000 men.(2) The United Alkali Company is a union of about 50 works, or at least nine-tenths of the alkali works in England, employing some 15,000 workmen and paying about 18,000*l.* a week in wages. So far as the manufacture of alkali is concerned it was stated that the Company controls the whole trade, but Mr. Brock added that "it is hardly a "syndicate in that common acceptation of the term."(3) The Incorporated Gas Institute, the Salt Union, and the United Alkali Company are incorporated under the Limited Liability Act. No information respecting the constitution and management of any of the societies in question has been obtained. The objects of the Incorporated Gas Institute are to promote "professional and "social intercourse amongst the members, by the read- "ing and discussion of papers upon subjects pertinent to "the gas industry." With regard to labour questions, it was stated that the society only acts indirectly "by "the ventilation and dissemination of views in papers "and discussions."(4)

(1) Answers to Schedules of Questions, p. 389. (2) Digest, Vol. II., p. 50. (3) Brock, 32,381. (4) Digest, Vol. III., p. 38.

[§ 487. Organisations of employees.

487. Oral and written information has been furnished by the National Union of Gas Workers and General Labourers of Great Britain and Ireland, the Coal Porters' Union, the Chemical and Copper Workers' Union of Great Britain and Ireland, the chemical workers' branches of the Tyneside and National Labour Union, and of the Dock, Wharf, Riverside, and General Labourers' Union, the Redleaders' Trade and Friendly Society, and the Northwich and District Amalgamated Society of Salt Workers, Alkali Workers, Mechanics, and General Labourers. Oral evidence alone has been received from the Coal Porters' Union, the rules of which have not been forwarded to the Commission.

(a.) *Date of formation and extent.*

(a.) The National Union of Gas Workers and General Labourers, the Coal Porters' Union, and the Chemical and Copper Workers' Union were all established in the year 1889. The National Union of Gas Workers and General Labourers originally consisted entirely of gas workers, but the rules and the name of the association were altered later so as to admit labourers from all trades. According to the present rules, "all persons "engaged in any work connected with gasworks, "building, foundries, iron-work, engineers' shops, "excavating, oil mills, breweries, brick-making, "lath-rending, skin-dressing, gun-making, sewerage, "tan-yards, cement, jute, sugar, india-rubber, wire, "telephonic, metal, galvanising, forges, grinding, "polishing, saccharine, sanitary soap, chemical, mineral "water, patent stone, starch, paper, blue, rope, candle, "rag, button, pen, cotton, stamping, jam, pickle, laun- "dry, or any other trade or works; as van-drivers, "canal men, grave-diggers, tailoresses, shirt-makers, "needle-women, or as agricultural labourers"(1) may be admitted to membership. At the present time the Union extends throughout the United Kingdom, and has a membership of 45,000 or 50,000 workpeople, of whom about 25,000 or 30,000 are gas-workers, and the remainder members of at least seventy trades. About 2,000 women in various occupations belong to the society. It may be noted that although the Union was only established in 1889, it has spent 22,000*l.* on strikes.(2) The Gas Workers' Union belongs to "the new school "of trades unionism," and according to the statement of the general secretary, "is wholly and solely a fighting body," which provides dispute benefit for its members. The witness appeared to consider that this feature of the new unions was an advance in the right direction, and added that the stability of the older associations did not lie in their benefit funds, "because "in our organisations, where we have not got them, "we get on as well as they do." The opinion held by this new school of trades unionism is that every man, unskilled as well as skilled, should join a union, and that employers should force the men to become members by employing only unionists. The employers, he asserted, would in this manner "get the best work "done, and they would get more advantage in that "direction dealing with organised workmen than they "would have with half organised and the others out- "side," and "the workers would make more progress "if they were all members of a union."(3) Mr. Thorne was also of opinion that if all the men in an industry were members of the same union the work would be done at once "more amicably" and "more effectively." With regard to other persons engaged in any industry, he considered that it was advisable that they should be admitted to membership of the Union in order that they might not fill the places of gas-workers on strike.(4) It was alleged by Mr. Ward that the Gas Workers' Union had never employed "force of any description" to induce persons to become members.(5) The Coal Porters' Union included about 8,000 members in the year 1892.(6) Mr. King believed that before the Chemical and Copper Workers' Union was established, "two or three attempts" at organisation had been made, but without success. When the Union was founded 10,000 cards of membership were issued, but a large number of members have fallen away after paying two or three contributions, and only about 2,000 now subscribe regularly. This apathy among the chemical workers was ascribed by Mr. King to the conditions under which they work. Before the establishment of the Union "the spirit of the "men was crushed within them." He asserted, however, that even those who did not contribute were not in any way opposed to the Union, and he believed that in the event of a general strike he "would get them to "act in concert." At present the Association is confined chiefly to North Wales and Lancashire. The

(1) Tabulated Rules, No. 274. (2) Digest, Vol. III., p. 29. Ward, 23, 941. (3) Thorne, 24,775–8, 24,789. (4) Digest, Vol. III., pp. 31, 32. (5) Digest, Vol. III., p. 29. (6) Digest, Vol. III., p. 53.

[§ 487 (a.)] copper workers in South Wales have not been affiliated, and the Scotch branches, it was stated, have not proved successful.(1) The Northwich and District Amalgamated Society of Salt Workers, Alkali Workers, Mechanics, and General Labourers has a membership of 2,000.(2) About 600 lead workers on the Tyne are members of the Tyneside and National Labourers' Union, which includes various branches of chemical workers.(3) About 2,500 or 3,000 copper workers at Swansea, and chemical workers in Swansea and elsewhere, are members of the Dock, Wharf, Riverside, and General Labourers' Union.(4)

Constitution and government.

(*b.*) The ordinary government of these societies is administered by an Executive, which generally consists of a president, secretary, treasurer, committee-men, three to six trustees, and from one to three auditors. A vice-president and one or more assistant secretaries are also appointed in some cases. The supreme government is vested in the general meetings, or in the case of the National Union of Gas Workers and General Labourers, in an annual conference of delegates. Branches, yards, or shops are managed by a Committee and other officers, according to the number of members. In addition to the annual general meeting, Executive, branch and other meetings are held periodically, and when necessary special meetings may be summoned. The principal officers in the National Union of Gas Workers and General Labourers, and the Chemical and Copper Workers' Union, receive payment for their services, but no salaries are mentioned in the rules of the other two societies. Any disputes that arise between members of the associations may be brought before the branch Committee; and, in some cases, when no satisfactory settlement can be arrived at, they are referred thence to the Executive Council or Committee, the decision of which is final, except in the Red-leaders' Trade and Friendly Society, in which there is a further appeal to the general meeting. Generally speaking, alterations in the rules can only be made at a general or delegate meeting, of which due notice has been given. In the Northwich and District Amalgamated Society of Salt Workers, Alkali Workers, Mechanics, and General Labourers, no proposal for altering the rules can be adopted until it has been one month before the Committee and has been accepted by two-thirds of the officers, and the Red-leaders' Trade and Friendly Society stipulates that no amendment shall be valid until it is registered. [§ 487 (b.)]

(c.) Entrance fees and contributions.

(*c.*) The entrance fees, contributions, and benefits, which vary in the different associations, have been tabulated below. In addition to the ordinary contributions a levy can be raised by the Committee, or with the consent of a majority of the members present at a general meeting. Members "in arrears" for more than a specified period are either fined a small sum or temporarily suspended from certain benefits. If they allow their arrears to remain unpaid for a further stated period they are generally excluded from membership.

TABLE showing the Entrance Fees, Subscriptions, and corresponding Benefits granted by associations of Employed in the Gas, Chemical, and Salt Trades.

—	National Union of Gas Workers and General Labourers of Great Britain and Ireland. Tabulated Rules, No. 274.	Chemical and Copper Workers' Union of Great Britain and Ireland. Tabulated Rules, No. 286. Digest, Vol. II., p. 49.	Red-Leaders' Trade and Friendly Society. Tabulated Rules, No. 297.	Northwich and District Amalgamated Society of Salt Workers, Alkali Workers, Mechanics, and General Labourers. Tabulated Rules, No. 298.
Entrance fee - -	Men, 1*s.* 5*d.* women 9*d.* (subject to alteration by the annual conference).	Not stated.	Efficient workmen, 5*s.*; learners, 10*s.*	Not stated.
Contributions - -	Men, 2*d.* a week, and 3*d.* a quarter; women, 1*d.* a week, and 1½*d.* a quarter.	4*d.* a week for dispute, funeral, and accident benefits; 8*d.* for all benefits, including sick and higher funeral benefit.	3*d.* a week - - -	6*d.* a fortnight.
Accident benefit - -	—	The branch Committee may grant a sum not exceeding 5*l.*	—	—
Dispute benefit - -	A levy is raised when necessary for the support of members on strike. "Victimised" members receive compensation from the Executive or district Council. Legal assistance is also provided.	Such sum is granted as the branch Committee may determine. "Victimised" members not more than 30*s.* a week, at the discretion of the branch Committee. Legal assistance is also provided, or not more than 5*l.* is allowed.	Full members, 10*s.* 2*d.* a week; half members, 5*s.* 1*d.* a week.	12*s.* a week. "Victimised" members are supported at the discretion of the Committee.
Funeral benefit - -	—	Not more than 3*l.*, unless the funds amount to 2,000*l.* On payment of 4*d.* additional subscription: death of member, 5*l.*; wife, 3*l.*; child under 14, 2*l.*; unmarried member's parent, 3*l.*	Full members: death of member, 7*l.*; death of wife, 5*l.* Half members: death of member, 3*l.* 10*s.*; death of wife, 2*l.* 10*s.*	Death of member or member's wife, 6*l.*; death of child under seven, 1*l.* 10*s.*; death of child under 14, 2*l.* Benefit is allowed for a second wife on payment of an additional 1*l.* A widow may retain her benefit by paying 1*s.* a quarter. Half benefit is allowed on the death of a member over 50 at the time of entrance, or of his wife. Members over 60 at the time of entrance only receive funeral benefit for their children.
Sick benefit - - -	—	On payment of 4*d.* additional subscription: 8*s.* a week for three months, 5*s.* for three months, then 2*s.* 6*d.* for six months.	—	—
"Shifting" allowance -	—	Fare not exceeding 5*l.* is paid for any member for whom work is found at a distance.	—	—

Disputes and regulations.

(*d.*) The rules of all of these societies contain some provision for the conduct of members in the event of a trade dispute. Members are not allowed to leave work without first consulting the Committee, which in all cases must endeavour to arrange an amicable settlement either by arbitration or otherwise. Should the employer refuse arbitration the dispute must be laid before

(1) Digest, Vol. II., p. 49. King, 20,753, 20,928, 23,931. (2) Answers to Schedules of Questions, p. 68. (3) Digest, Vol. III., p. 21. (4) Digest, Vol. III., p. 22.

(d.)] the Executive. According to the rules of the National Union of Gas Workers and General Labourers, this body must state all particulars to the branches, and if possible take the votes of all members by ballot; a majority of two-thirds must be obtained before a strike can be declared. In two cases it is expressly stated that the Executive or district Council or a general meeting is empowered to close a strike at any time. The rules of three of these associations stipulate that members who neglect their work, leave without giving proper notice, insult or otherwise misconduct themselves towards their employers, shall be fined, excluded from benefits, or expelled. Members of the National Union of Gas Workers' and General Labourers are fined if they "accommodate" an employer, and in all these societies a fine is inflicted on members who help a non-unionist to get work. On the other hand, the members of the National Union of Gas Workers and General Labourers are bound to do all in their power to assist other members out of work to obtain employment. Some regulations respecting the conditions under which members may work are contained in the rules of all but the National Union of Gas Workers and General Labourers. In the Red-leaders' Trade and Friendly Society members who do not conform to the rules of the shop where they are working are fined, members of the Northwich and District Amalgamated Society of Salt Workers, Alkali Workers, Mechanics, and General Labourers must endeavour to abolish all unnecessary labour on Sundays, and the rules of the Chemical and Copper Workers' Union require that each yard shall appoint a Committee "to look after the "health and lives of members, and act as far as "possible in unison with the masters."

(e.) *Objects.* (e.) The rules of the National Union of Gas Workers and General Labourers are preceded by an address, in which it is stated that the immediate object of the union is to improve the material condition of its members. The objects of the associations in question generally include the regulation of hours, wages, and other conditions of employment, and the general relations between employers and employed. Thus, the Chemical and Copper Workers' Union, and the National Union of Gas Workers and General Labourers desire the establishment of an eight hours' day with the abolition of Sunday labour and unnecessary overtime. The last-mentioned society further wishes to obtain the same wages for women as for men for the same work, and to settle trade disputes by "amicable agreement" or arbitration. The promotion of legislation with a view to securing safer conditions of working is included among the objects of the Chemical and Copper Workers' Union, which also aims at assisting other similar associations and supporting any movement for the interests of the working classes in general.(1)

Joint Boards. 488. No information has been received with regard to any joint boards or joint committees in the coal, chemical, and salt industries, and "in only one case "was anything known of a board of conciliation in con- "nexion with gasworks, and that was a local effort, "which had not up to the present been called into "action."(2) With regard to the general relations between employers and employed, Mr. Stuart stated that in the Newcastle district the relations between the chemical workers and their employers were "perfectly "friendly,"(3) and according to Mr. O'Connor the relations are "generally good" between the Coal Porters' Union and the coal merchants.(4) It must, however, be noted that the latter complain with regard to the Union that "it has caused a strained feeling "between employers and employed, and destroyed "the sense of community of interest which formerly "prevailed . . . Secondly, it seeks to interpose between "the merchants and their men, and to dictate to the "former whom they shall employ . . . Thirdly, it seeks "to use the employer as a means for collecting sub- "scriptions, by stopping his work because men have "discontinued their payments, and for compelling the "men to join the Union whether they wish to or not." Mr. Locket stated that he had no objection whatever to organisation on the part of the men, but he considered that "where their action involves an interference "with the work of the employer, the employer is "authorised to take what steps he can" to prevent such interference.(5) The opinions held by various witnesses with regard to the relations between employers and employed in the remaining industries vary considerably.

(1) Tabulated Rules, Nos. 274, 286, 297, and 298. (2) Digest, Vol. III., p. 39. (3) Digest, Vol. III., p. 26. Stuart, 32,480. (4) Digest, Vol. III., p. 53. O'Connor, 32,905. (5) Digest, Vol. III., p. 51. Locket, 27,766.

489. Oral and written information has been received from the Glass Bottle Manufacturers' Associations of Lancashire and Yorkshire, the Metropolitan and the Liverpool and District Grocers' and Provision Dealers' Associations, the London Master Bakers' Protection Society, the Leeds Corn Millers' Association, the Association of the Leather Trade, and the Staffordshire Potteries Manufacturers' Association. The rules of the four last-mentioned societies have also been handed in to the Commission(1).

(a.) The Association of the Leather Trade, which was established in 1866, is confined to the neighbourhood of Leeds, and has a membership of 23 employers.(2) The only other societies of which the date of formation was given are the Yorkshire Glass Bottle Manufacturers' Association, established in 1875,(3) and the Metropolitan Grocers' and Provision Dealers' Association, formed in 1891. This latter union includes 450 employers engaged in the grocery, provision, Italian warehouse, and oil and colour trades, representing about 1,000 shops in the metropolitan district.(4) About 309 shops are embraced by the Liverpool and District Grocers' and Provision Dealers' Association (5). The London Master Bakers' Protection Society has a membership of about 500, out of about 3,000 employers. The members of the association together employ about 2,500 workpeople. "Some thirty to forty local associations" are affiliated to the union, which is entirely confined to London, and has no connexion with local societies in provincial towns.(6) The Lancashire Glass Bottle Manufacturers' Association includes three firms, employing 2,062 workpeople.(7) According to the Answers to the Schedules of Questions, the membership of the Staffordshire Potteries Manufacturers' Association is 64, and the Leeds Corn Millers' Association includes 20 members, who employ from 300 to 400 workpeople. (8).

(b.) The societies are managed by an Executive Committee and officers, of whom the principal are a president or chairman, secretary, and treasurer. Three trustees and three auditors are also elected by the London Master Bakers' Protection Society, and a solicitor is appointed to conduct the legal business. In the same association an Auxiliary Staff is attached to the Committee to mediate in disturbed districts. Local associations comprising ten or more members are entitled to send a delegate to the Committee.(9) The supreme government of the associations is vested in the general meetings, which are held annually, or oftener if necessary. Committee meetings are held monthly, quarterly, or, in the Association of the Leather Trade, when summoned by the secretary. At the monthly meetings of the Corn Millers' Association all questions are decided by the vote of the majority, but at "extraordinary" general meetings no motion can be passed without a majority of two-thirds. In the Earthenware Manufacturers' Association and in the Corn Millers' Association the president has a casting vote, in the latter, in addition to a deliberative vote. Alterations in the rules can only be made at a general meeting, and, generally speaking, provided that due notice has been given of the proposed change. The Committee of the London Master Bakers' Protection Society has, however, the power to establish byelaws.

(c.) An entrance fee of 10*l.* is required on joining the Association of the Leather Trade. The annual subscription in this society is 3*l.* 3*s.*; in the London Master Bakers' Protection Society, 10*s.* for each shop, with option to pay for only one shop, and in the Corn Millers' Association, 10*s.* 6*d.* for three pairs of millstones, and 1*s.* for each additional pair up to 21*s.* Additional levies may be raised when necessary. Notice of withdrawal from membership, varying from fourteen days before the annual meeting to six months, is required by three of these societies, but in the Corn Millers' Association and the Earthenware Manufacturers' Association any member may without notice be expelled from the society. The funds of the Master Bakers' Protection Society are invested by the trustees as the Committee may decide. No money may be invested in any other than Government securities, except in advances of sums not exceeding 50*l.* to local associations. Assistance is allowed to members in distress through underselling or embezzlement, or if

summoned under the Smoke Nuisance or Adulteration of Food Acts. Any member of this Society inconvenienced by his journeymen leaving without due notice is under certain conditions allowed legal assistance.

(*d.*) No regulations with regard to disputes or the conditions of employment are given by these associations. It may be noted that when a loaf is purchased from any member of the Master Bakers' Protection Society for the purpose of analysis he must inform the secretary, in order that a portion of the flour of which it was made may be secured for the use of the Committee. The local secretary must inform the general secretary of any cases of underselling. A weekly meeting of the members of the Corn Millers' Association is held to fix the nominal price of flour, and a special committee is appointed to regulate prices when a change occurs on any but the market day. The rules of the association are binding on all members. Meetings of the Earthenware Manufacturers' Association may be summoned to deliberate with regard to selling prices and terms of payment, but the members are not bound by such decisions.

(*e.*) The societies in every case desire to protect the interests of the trade. The Earthenware Manufacturers' Association also wishes to "extend the source of "supplies of materials and guard against monopolies; "to interchange information about wages, and encourage "improvements in working"; to maintain the usage of "good from oven," *i.e.*, payment for the work after it has been baked; to regulate apprenticeship and the custom respecting the engaging and discharge of workmen, and to support the Board of Conciliation and Arbitration. The London Master Bakers' Protection Society desires to obtain a repeal of vexatious statutes, to enforce the application of the Adulteration of Food Acts and other legislative measures, to "prosecute fraudulent servants," and protect members unjustly prosecuted; to "introduce a sounder system of trading by the recognition of a standard scale; . . . and to connect the whole trade in the metropolis in one association."

490. Sixty-eight associations of employed in glass-working pottery, and miscellaneous trades have either furnished oral or written information, or have forwarded copies of their rules.* This number includes eight societies of glass-workers, thirteen of bakers, two of millers, seven of potters, seven of brush-makers, and a number of unions in various other trades, including two societies of seed-crushers, which form branches of the Dock, Wharf, Riverside, and General Labourers' Union.

(*a.*) The Dublin Operative Bakers' Trade Union was originally founded in 1752, and was re-established, Mr. Lawlor stated, in its present form 48 years ago. At that time "four or five societies and numbers not society "men at all" were brought into the Union, which now includes 660 members, and extends throughout the county of Dublin. In 1891 the total expenditure of the society was nearly 5,046*l.* none of which was spent on strikes.(1) The United Cocoa-nut Fibre Mat and Matting Weavers' Trade Society was founded in 1853, and reconstructed in 1868. Mr. Adams estimated the membership of the society in 1892 as 700 or 800, out of about 3,000 men employed in the trade, but stated that it was impossible to reckon the numbers accurately, as the members were scattered over a very wide area.(2) In 1861 the Amalgamated Union of Operative Bakers and Confectioners of Great Britain and Ireland was established. The membership of the Union has increased of late years, and now has 90 branches, extending from Newcastle-on-Tyne to Plymouth and Southampton, and includes 4,400 members. In 1889 and 1890 5,000 of the men in London belonged to the society, but a large number "fell away" after they had obtained considerable advantages from it, and there are now only 1,800 unionists out of 7,500 workers in the trade. Where, however, branches are established in the provinces most of the men are members. It was stated that in many towns, especially in Yorkshire, only a small number of bakers are employed, and in such places no branches have been formed.(3) Before the establishment of the Purveyors' Association, about the year 1886, "there was "an older society, but they fell through." The association now numbers about 150 members out of about 400 purveyors' assistants in Dublin.(4) The Seed-crushers' branch of the Dock, Wharf, Riverside, and General Labourers' Union at Hull includes all the men employed in that town, "something like 1,500," or about half the total number engaged in the trade in England. Mr. Bell stated that an attempt had been made to organise the seed-crushers in the neighbourhood of Hull, "but we have not been able up to the present "time to do it." This witness added that, "with the "exception of London and a few in Liverpool," he believed the men in other parts of the country were still unorganised.(1) The London branch dates from about the year 1889; before that time "in oil mills "there were practically no Union men. It was only in "1889, when they saw that some good would result pro-"bably from their combination, that the men entered a "union. Some of the men joined the Union five "minutes prior to their going out on strike," and left as soon as they found that the strike had proved unsuccessful. This union now numbers only about 70 members out of 400 men actually employed in oil mills.(2) The Covent Garden Porters' Union was formed in 1889, "at the time of the dock strike," and now includes between 330 and 340 members. From May to August about 1,000 porters are employed in the market, and during this period there are some 700 non-unionists. Only about half this number are employed in winter, but the membership of the Union remains practically the same.(3) The National Union of Shop Assistants and the Scottish Shopkeepers' and Assistants' Trade Union were both formed in the year 1890. The National Union of Shop Assistants numbered about 3,500 members, about 500 of whom were women, in November 1892, showing an advance of about 1,000 on the previous year. It includes members of all branches of the wholesale and retail trades, and it was stated that more than 5 per cent. of the members were employed in wholesale houses. The number of shop assistants employed in the retail trade throughout the kingdom was roughly estimated at "over a million," and with the exception of the National Union they have practically no organisation. Some shop assistants are members of the Early Closing Associations, but it was stated that these are not associations of assistants properly so-called, and that "the effect of the Early Closing Association in "London has been to prevent the shop assistants in "London from organising." It was asserted that shop assistants are "fifty years, intellectually speaking, "behind the trade unions in organisation," and that in regard to wages and hours "they are worse off than "the average labourer" The long hours were declared to be the chief cause of their apathy in organising, but it was stated that the Union was increasing, especially in the North of England and in South Wales, where it is strongest.(4) The Scottish Shopkeepers' and Assistants' Union "arose out of a correspondence in the "newspapers regarding the long hours of shopkeepers "and shop assistants." Several voluntary early closing associations had previously existed from time to time, but all had resulted in failure. It was stated in November 1892 that the membership of this Union was 3,100, and that new members were joining "at an "average rate of 100 per week," principally, however, as affiliated members, because their low wages prevented them from becoming full members. The total number of shopkeepers and assistants in Scotland could not be ascertained, but was estimated roughly at about 180,000, the greater number of whom were employed in Glasgow. About 33,000 men and boys, and 15,000 women and girls, are employed, it was stated, in Glasgow alone.(5) In 1891 the London Domestic Servants' Union was formed; at the beginning of 1892 it included about 500 members, and in November of the same year its numbers had risen to 700, half of whom were men and half women. Before it was established there was no trade organisation, although benevolent societies existed.(6) The Journeymen Butchers' Society of Birmingham started in 1891 with 175 members, but in 1892 its numbers had fallen to 50. About 200 or 300 men are employed in the pork-butcher trade alone in Birmingham. In 1892 the funds in hand only amounted to 40*l.* or 50*l.* because many had left the society, "entirely through the "oppression of the masters," and many had not been able to "keep up their payments." Mr. Bartlett asserted that only 15 or 16 "financial" members had been in the society from the beginning.(7) In February 1892 it was stated that a trade union had "recently" been formed in the straw plaiting trade

[§ 490 (*a.*)]

[§ 400 (a).] at Luton. "There is a great deal of apathy," the witness added, "on the part of the people, because "they have not been taught . . . . . we "cannot get men to come forward for fear that they "might be boycotted by the people they have to "depend upon for their bread."(1) In the case of the following societies, the date of formation was not given. The Glass Bottle Makers' of Yorkshire United Trade Protection Society in the year 1891 numbered 2,304 members, and included all the men engaged in the trade in Yorkshire, together with those employed at other factories under similar conditions, numbering about 150. The Society had in the same year 17 branches. Its income was 9,102*l.*, and its expenditure 2,577*l.*, while the balance in hand at the end of the year was 22,061*l.*, showing an increase of 6,525*l.* on 1890. Women are not admitted to the Society, because they are not employed in the glass houses.(2) The Federated Union of Operative Bakers in Scotland numbers 2,400 out of 6,000 workers in the trade.(3) The International Union of Cork Cutters includes 270 members in England, Scotland, and Ireland, out of a total of 500 employed in the trade. Twenty years ago the number of workers in the trade was 1,800.(4) The Grocers' and Provision Dealers' Employés' Association is confined to the district of Liverpool, and has a membership of 600.(5)

(b.) Constitution and government.

(*b.*) Generally speaking the supreme government of these associations is in the hands of a Council of representatives, conference, general, or delegate meeting. The ordinary business is managed by an Executive Council, Committee, or Board, or Committee or Board of Management, composed of officers and council or committee-men, whose number varies considerably in the different societies. The principal officers are the president or chairman, secretary, and treasurer. From two to five trustees, and from two to four auditors, are usually elected, but the numbers are not always stated. In the United Flint Glass Cutters' Society five additional trustees are appointed when the funds amount to 1,000*l.* The United Society of Brushmakers elects three trustees for every 100*l.*, and the Amalgamated Gilders' Society has two for every 60*l.* As a general rule, the principal officers receive some remuneration for their services. Finance or Banking Committees of from three to five members are appointed by three societies, and the National Plate Glass Bevellers' Trade Union has an Emergency Committee of three members. The National Order of Potters has an agent or corresponding secretary. Meetings of the Executive, and general or delegate meetings, are held periodically at intervals which vary from a week to a year in the different associations. Additional meetings can be specially summoned when necessary. The Executive and general or delegate meetings frequently have power to remove any officer, and the general or delegate meetings may sometimes remove the Executive. In several societies the president has a deliberative vote, and in case of equality of votes he almost invariably gives the casting vote. Districts and branches, or, as they are called in the United Society of Brushmakers, "minor societies," have a form of government similar to that of the central association, but on a smaller scale. In some cases, as in the branches of the Amalgamated Union of Operative Bakers and Confectioners, and the Operative Bakers' of Ireland Federation, the districts and branches have distinct rules, in others they are governed entirely by the central rules. It is sometimes stated that branches must contain a certain number of members. Disputes are generally laid before the branch Committee, and thence referred, if necessary, to the Executive Council or Board, or to the general or delegate meeting, whence no further appeal is allowed. Four societies provide for the settlement of disputed questions by means of arbitration, and the Operative Bakers' Trade Union of Kilkenny allows an appeal to "two or more justices of the peace." Alterations of the rules can generally be made with the consent of a simple majority at a general or delegate meeting; in a few cases a majority of two-thirds or three-fourths is necessary. The rules of the Amalgamated Union of Operative Bakers and Confectioners may be altered by the Executive Council if a majority of the branches are in favour of the amendment, and no further changes may then be made within 12 months. New rules can be made only by the delegate meeting. A Revising Committee may be appointed by the branches of the Millers' National Union. It is generally required that due notice must be given of proposed alterations. [§ 400 (b.)]

(c.) Conditions of membership, entrance fees, and contributions.

(*c.*) Candidates for membership in these associations are frequently obliged to prove that they have served a regular apprenticeship or worked at the trade for a certain number of years. In several cases they are not admitted to all benefits if over or under a certain age. The maximum limit of age occurs in the rules of the Amalgamated Union of Operative Bakers and Confectioners, where persons are admitted between the ages of 16 and 50. The amount of entrance fee is not always stated, but where given it varies greatly, ranging between 6*d.* in the Edinburgh Cooks' and Confectioners' Association, and 5*l.* or 7*l.* for candidates to the National Flint Glass Makers' Society who are over 45 years of age. Apprentices are, generally speaking, admitted free, or on payment of a small sum. Both the amount of the entrance fee and the rate of subscription frequently vary with the age of the member, and the benefits which he desires to receive. In the United Society of Brushmakers the rate of contribution depends upon the state of the funds. In the National Union of Shop Assistants it varies with the member's sex, age on entry, and the scale of benefits desired. The smallest contribution mentioned occurs in the Edinburgh Cooks' and Confectioners' Association, where it is 6*d.* a month; the highest rate is 2*s.* 3*d.* a week, which is paid by members of the National Flint Glass Makers' Society. Additional levies can be raised by the Executive or a general meeting when necessary. Generally speaking, members whose subscriptions are "in arrears" are fined a small sum, and suspended from benefits, and unless they clear off their debt within a certain time they are excluded from the society. Women may not continue in the National Union of Shop Assistants after their marriage, but if they have belonged for two years, 50 per cent. of their contributions is returned to them, provided they have not received sick or out-of-work benefits.

(d.) Benefits.

(*d.*) The total number of benefits granted by the associations which have forwarded copies of their rules to the Commission is 127. As in the preceding groups this number does not include benefits provided by the central association, which are frequently mentioned in the branch rules, but only those local benefits are counted which are granted in addition to or instead of the former. In the case of the Glasgow branch of the Union of Saddlers, Harness Makers, and Bridle Cutters, all the benefits mentioned in the rules have been counted, as the rules of the central association have not been received. The following table shows the number of benefit funds and their distribution among the various classes of societies included under this group. It may be noted that the Edinburgh Cooks' and Confectioners' Association does not provide any benefits at all.

TABLE of Benefits granted by Associations of the Employed in Glass, Pottery, and Miscellaneous Trades.

	Baking Trades.	Brush-making Trades.	Glass Trades.	Milling Trades.	Pottery Trades.	Miscellaneous Trades.	Totals.
Number of associations -	7	3	5	2	4	15	36
Dispute benefit - -	4	3	5	2	4	11	29
Funeral benefit - -	4	2	5	1	2	11	25
Out-of-work benefit -	4	3	3	1	3	11	25
Sick benefit - -	4	1	1	1	1	7	15
Travelling benefit -	2	2	2	1	—	4	11
Distress benefit - -	1	—	1	—	1	5	8
Superannuation benefit -	—	1	3	—	1	3	8
Emigration benefit -	—	1	1	—	—	2	4
Accident benefit - -	—	—	1	1	—	—	2
Totals - - -	19	13	22	7	12	54	127

It will be seen from the above table that dispute benefit is granted more frequently than any other, as

(1) Digest, Vol. II., p. 56. Cuthbertson, 15,242-4. (2) Digest, Vol. III., p. 74. Minutes of Evidence, Vol. III., Appendix XX., Fifth Report on Trade Unions, p. 14. (3) Digest, Vol. III., p. 64. (4) Digest, Vol. III., p. 73. (5) Digest, Vol. III., p. 94.

[§ 490 (d.)] is the case in most of the previous groups of associations. This benefit takes the form of a daily or weekly allowance, sometimes for a certain number of weeks, in other cases no limit of time is mentioned. An additional allowance for members' wives and their children under a certain age is granted by a few societies. "Victimised" members sometimes receive benefit on a higher scale, but in the United Flint Glass Cutters' Society they receive a lower rate than ordinary members on strike. In the United Cocoa-nut Fibre Mat and Matting Weavers' Society and the Amalgamated Leather Trades Union the amount of dispute benefit granted depends upon the state of the funds, and in the Operative Bakers' of Ireland National Federal Union no benefit is paid unless the funds exceed 1,000*l.* Members of the National Union of Shop Assistants receive benefit according to the scale of their contributions. Funeral benefit is paid in the form of a lump sum, the amount of which is not always stated, but where given it frequently varies according to the membership or rate of contributions of the deceased person. Benefit is also allowed in many associations on the death of a member's wife, but in the Barometer, Thermometer, and Tube Blowers' Society this benefit is subtracted from the sum which would otherwise be paid on the member's death. Eight societies grant the benefit on the death of the first wife only, and four others for a second wife, either a specified number of years after the death of the first, or provided that a small registration fee has been paid. A few other unions provide funeral benefit on the death of members' children under a certain age, or the parents of unmarried members. The United Clay Tobacco Pipemakers' Association allows a grant for the brothers and sisters of unmarried members whose parents are dead, if under 14 years of age. In the Gold Beaters' Trade Society a levy is raised to provide benefit on the death of a member or his wife. Out-of-work benefit is paid as a weekly allowance, in many cases for a limited period, which ranges from four weeks to two years in the different unions. In the London Glass Blowers' Trade Society payment continues until work is obtained. The amount frequently varies with the membership of the recipient, or, in two associations, with the state of the funds. In the National Union of Shop Assistants, out-of-work benefit, like dispute benefit, depends upon the sex of the member, the age on entry, and the rate of contributions. Generally speaking, a limit of time is specified in the case of sick benefit, ranging between "four weeks" and "until recovery." This benefit is also paid in the form of a weekly allowance. The rules of the National Union of Glass Bottle Makers of Scotland allow a grant of 15*s.* to be made once in six months to members in search of work. In other societies travelling benefit takes the form of a daily or weekly allowance. "Books" or "certificates" are generally issued to enable members to draw their benefit at any branch of the society. In some cases they receive a certain amount, usually 1*d.*, for every mile that they travel. In addition to travelling benefit, several unions provide "shifting allowance," *i.e.*, they pay the fare of members for whom work is found at a distance. Distress benefit, an allowance in case of loss of tools, or necessitous circumstances, is always paid in a lump sum. In the Scottish Associated Paviors' Federal Union this assistance may not be granted more than twice in one year. Generally speaking, superannuation benefit is granted in the form of a weekly allowance to members unable through age or infirmity to earn the standard wages in their trade. Sometimes they must have belonged to the society for a certain number of years, and the amount given almost invariably depends upon the length of their membership. In the Amalgamated Gilders' Society it varies with the state of the funds. The rules of the National Flint Glass Makers' Society allow a grant of 9*l.* to be made to not more than ten members in each quarter, and superannuated members may compound their benefit for a lump sum of 50*l.*, after which their claim on the society ceases. With one exception, emigration benefit in these unions is paid in a lump sum, which in two societies varies with the membership of the recipient. Accident benefit is only provided by two societies, and takes the form of a weekly allowance; a lump sum is granted by the Millers' National Union in the case of total disablement.

Dispute regulations. (*e.*) The rules of eight associations do not contain any provisions with regard to trade disputes. Generally speaking, members are required to give notice of impending difficulties to the general secretary, who calls a meeting to consider the question. Two societies do not allow a strike to be declared without the consent of a majority of two-thirds of the members present at such meeting. Several arrange for sending deputations to confer with the employer or his representative to try to settle the matter amicably, and six associations require disputed points to be referred to arbitration. In the National Union of Shop Assistants, the Executive must repeat the offer of arbitration if ignored or refused by the employer on the first occasion. In the Glasgow and District Milling Trade Friendly and Protective League an additional Committee of three for the management of trade disputes is elected annually, and in this and two other associations a strike Committee is appointed to conduct a strike that has been formally declared. It is sometimes stated that no assistance is granted to members who come out on strike on their own responsibility. [§ 490 (e.)]

Other regulations. (*f.*) The majority of these unions have some regulations respecting the behaviour of members towards their employers and towards non-unionists, as well as with regard to wages, hours, and other conditions of employment. Members are required to give the customary notice to their employers before leaving work; those who neglect this rule and fail to keep their engagements or provide a substitute are fined or suspended from benefits. The same punishments are inflicted on members dismissed for intemperance, insolence, or other misconduct, or who injure or neglect their employers' property. If any member of the London district of the Amalgamated Union of Bakers and Confectioners embezzles his employer's money he is expelled from the society. In the Scottish Associated Paviors' Federal Union, members who boast of independence towards their employers on the ground of their membership are fined. A few societies make good the loss sustained by employers through members leaving work unfinished, but the rules of the Brushmakers' of Scotland Protective Association state that this compensation is not paid to those who employ any non-society men. A list of recognised shops is given with the rules of the Gold Beaters' Trade Society. Members are frequently forbidden, under penalty of fine or expulsion, to work with non-unionists, and if there are any non-unionists where they are employed they must endeavour to induce the latter to join the society. In the Operative Bakers' Trade Union of Kilkenny a member who loses his employment through neglect is fined, unless he is replaced by another member. With regard to the conditions of employment, several societies do not allow members to work below a specified wage, and in the Yorkshire district of the Amalgamated Union of Operative Bakers and Confectioners no member may take less than the workman who preceded him. Overtime must be paid for at a higher rate, and, like piece-work, is generally regarded with disfavour. A few societies do not allow members to engage themselves to one employer for a long or indefinite period. Regulations with regard to apprenticeship frequently occur in the rules, and eleven societies lay down in their rules a fixed scale of the proportion of apprentices to journeymen. Any member of the Gold Beaters' Trade Society may work where women are employed, but he must not help or be helped by them. In order to provide work for the unemployed, a few associations forbid members to work overtime for their own or other employers, and two societies do not allow members to apply for work at any shop without the sanction of the Committee or of the shop. Various other arrangements for procuring work for the unemployed are mentioned in the rules of most of these unions.

Objects. (*g.*) The rules of six associations are preceded by an address, introduction, preamble, or preface, in which an account is given of the objects for which the union was formed; in the case of two societies no other objects are mentioned. The Edinburgh Cooks' and Confectioners' Association, and the Liverpool and District Packing Case and Box Makers' Society do not state any objects at all. The majority of these unions express a desire to regulate the rate of wages and the hours of labour, and to restrict overtime, Sunday, and night-work. In the preface to the rules of the London district of the Amalgamated Union of Bakers and Confectioners, the "primary object" of the society is stated to be the reduction of the hours of labour to ten a day. The National Union of Shop Assistants wishes to promote the early closing of all shops, and to secure a weekly half-holiday in the retail trade, and is willing to support "imperial and local" legislation for these objects. Four societies desire to regulate apprentice-

[§ 490 (g.)] ship, in order to prevent overstocking the trade with labour, and three aim at procuring work for the unemployed. The London district of the Amalgamated Union of Bakers and Confectioners wishes for the repeal of oppressive statutes, and the Amalgamated Leather Trades Union desires to secure the benefits of the Employers' Liability Act. Proper supervision of sanitary arrangements, and the abolition of fines, and of the present system of boarding and lodging the assistants are mentioned by the National Union of Shop Assistants. In opposition to the Earthenware Manufacturers' Association, the Amalgamated Hollow-ware Pressers and Clay Potters desire to secure "good from hand," *i.e.*, payment for work which is good when it leaves their hands, before it is baked. The preface to the Scottish Associated Paviors' Federal Union expresses a hope that productive and distributive co-operative societies may soon be established, and emphasises the importance of economy and sobriety as a means to this end. Legal assistance and protection for members against unjust employers are frequently mentioned, and a few societies desire to settle all disputes amicably by arbitration or otherwise, and only to resort to strikes when all peaceful means have failed. The National Flint Glass Makers' Society expresses a willingness to co-operate for their mutual advantage with employers who perceive that trade unions are in sympathy with them. The more general objects mentioned by most of these associations are the regulation of the relations existing between employers and employed, the material, moral, and social advancement of the condition of members, and the protection of trade interests. The Millers' National Union looks to a "general federation of all trades" for the accomplishment of the objects it puts forward.(1) *See* also Appendix II., pp. 334–5.

Joint Boards. (a.) *History.*

491. (*a.*) The rules of the Board of Conciliation and Arbitration for the Staffordshire China and Earthenware Manufacturers were handed in to the Commission. This Board was established in 1868, and was at first "based upon the representative system, and presided "over by an umpire." At that time it "concerned "itself mainly with detail matters, such as the price "of work done in particular branches of the trade." The first umpire was Mr. J. E. Davis, who enjoyed the confidence of both employers and employed, and whose awards were never disputed. During the earlier years of its existence recourse was had to the Board "with moderate frequency," and it was "exceedingly popular "then in the district on both sides." The original constitution of the Board allowed it to meet independently of the umpire, but "from being a deliberative assembly . . . it became more a contentious "committee," and the rules were altered so that the umpire should sit during the hearing of the cases, and decide in the event of non-agreement on the part of the members of the Board. During the first four years the work done in each branch of the trade was considered separately, and in 1871 and 1872 several branches obtained advances of wages. In 1876 the manufacturers appealed for a reduction, and renewed their request in 1879, when "the whole of the trade "was allowed to be lumped together" instead of each branch being considered separately. The award, which was in favour of a reduction, "destroyed the usefulness of the Board to a very large extent," because it made wages dependent on fluctuations of the market, although the men had no knowledge of the employers' prices or profits to serve as a basis of comparison. The workmen obeyed the award, but between 1880 and 1881 their representatives withdrew from the Board. In 1885 the Board was reconstituted on a new basis, allowing the umpire "full opportunity to verify any "figures or statements made in evidence . . . through "the sworn accountant appointed by and responsible "to the umpire." The first arbitration under this rule was in May 1891, when the award was given against the men, and the dissatisfaction of the latter with the circumstances under which it had been given was so great that they withdrew from the Board in March 1892. Mr. Owen stated that he did not see his way to re-constituting the Board at present, and believed that there would "have to be an interregnum." On the other hand, Mr. Young declared that the manufacturers were "perfectly willing to reform the Board at any time."(2) As a representative of the Glass Bottle Makers' of Yorkshire United Trade Protection Society, Mr. Greenwood stated that a Joint Committee for the consideration of wages and trade disputes had been "more or less" in operation since 1868. This was re-established in its present form about 1880. "We have "never attempted to constitute a Board of Arbitra-"tion," the witness added, "which should have power "to determine between the two parties."(1) Mr. Prain stated that "some ten years ago," the Amalgamated Union of Operative Bakers and Confectioners requested the Master Bakers' Society to meet them in conference. Two or three conferences were held, and the witness believed that they "did some good" in bringing the employers and employed together.(2) Joint Committees have also been established by the Brushmakers' Society of Hull, the Seed-crushers in the same town, and in one district connected with the Operative Bakers' of Scotland National Federal Union. The United Clay Tobacco Pipemakers' Association has "no system but conferences."(3) It may be noted that the rules of the Amalgamated Leather Trades Union provide that Boards of Conciliation and Arbitration shall be established for the settlement of labour disputes, and that the decision of the Board or its referee shall be final. [§ 491 (a.)]

(*b.*) The Joint Committees in question consist of an equal number of employers and employed. An umpire, president, vice-president, and two secretaries, one for each side, were annually elected in the Staffordshire Potteries Board, which was composed of 10 employers and 10 workmen. A Committee of two employers and two operatives was appointed to inquire into disputes at any individual manufactory, which did not affect the interest of a whole branch of the trade. No employer or operative might appeal to the Board unless he had subscribed from the beginning of the current year. Each party paid its own secretary and its separate expenses, and the joint expenses of the Board were borne equally by employers and employed. Meetings were held quarterly and might be specially summoned by the president at seven days' notice, provided the nature of the business to be transacted were stated in such notice. All members present at any meeting might take part in the discussion, but only an equal number on each side might vote. The Board was bound to recognise the trade rules as binding on the parties to any dispute. Alterations in the rules could only be made at a quarterly or special meeting, of which due notice had been given. (b.) *Constitution and government.*

(*c.*) In case of dispute, either party might refer the question to the Board, but the primary obligation to appeal lay with those who were desirous of altering existing arrangements. The disputants had to furnish a joint or separate statement of their case at least two days before the meeting of the Board; oral evidence might also be produced. Before entering upon its duties, the Committee appointed to inquire into the dispute had to select a referee, and if the Committee failed to agree upon such appointment the choice lay with the umpire of the Board. The umpire was empowered to verify any figures or statements given in evidence by means of a sworn accountant appointed by and responsible to himself, provided that such verification did not interfere with the private business of a firm. A dispute affecting more than two branches of the trade was deemed a subject for general arbitration, and must be heard before the umpire of the Board, together with two arbitrators, with powers equal to his own, one chosen by the employers and one by the operatives. It was considered advisable that a general wages question should be dealt with in this manner, with the exception of the wages of ovenmen. This class of workmen was treated separately. At such arbitration, however, each branch might make special reference to any question which immediately concerned its own interests. When only two branches were affected, a general arbitration was not held, but either employers or operatives might appeal to the Board on any special ground. In all cases the award was binding upon both parties concerned.(4) (c.) *Dispute regulations.*

2. CONCILIATION, ARBITRATION, AND MEDIATION.

Nature of information.

492. It is difficult to summarise the evidence given before the Commission on the subject of conciliation, arbitration, and mediation owing to the nature of the information. The difficulty arises in the first place from the very miscellaneous character of the industries here dealt with, which comprise both skilled and unskilled trades, with organisations of widely different

[§ 492.] degrees of strength; hence a variety of contradictory opinions are expressed. In the second place, for the most part no definite system of conciliation and arbitration appears to have been established, although in almost every case an opinion favourable to some such form of settlement was expressed. In the third place the distinction between those methods of settling disputes was not always observed by the witnesses, nor does it seem to have been kept clear in the constitution of certain boards. Thus local boards which answer the purposes of both conciliation and arbitration have been instituted in some districts by Chambers of Commerce and by Trades Councils, in addition to the Joint Boards peculiar to the various industries to which reference has already been made.

ncilia-
n.

493. With regard to conciliation, it may be noted that in many cases, where no permanent Board exists, conferences of employers and employed are held, either at stated intervals as in the Master and Operative Masons' Societies of Scotland, or whenever any dispute arises. This latter is usually the case with the Typographical Association. The witnesses representing the industries under consideration, generally speaking, spoke in favour of the establishment of Joint Committees. The majority recommended that these Committees should be composed of employers and workmen engaged in the trade in which the dispute occurred. Others, such as the secretary of the Amalgamated Union of Bakers and Confectioners, desired the formation of Boards of Conciliation and Arbitration, composed of persons not directly interested in the trade, who should settle disputes on evidence supplied by employers and employed.(1) Mr. Leahy, a representative of the Printing Machine Managers' Trade Society, stated that he would not confine the choice of members of the Board to the particular trade under consideration.(2) It appears from the summary on organisation that the method of conciliation by means of Joint Boards, formal or informal conferences, have proved on the whole successful in bringing about a better feeling between employers and employed.

bitration.
.) *Expe-*
nce and
guments
favour of.

494. (*a.*) A certain amount of experience was also brought forward in favour of arbitration. The secretary to the National Association of Master Builders stated that by their trade rules a Court of Arbitration was formed, by which disputes were referred to an umpire if necessary. He "could suggest no better method" than this which had been in operation for 18 years and had only failed once.(3) Another member of the same association mentioned a strike of the joiners which had lasted nearly six months, but was finally settled by the arbitration of Mr. Mac Vicar Anderson.(4) The secretary of the National Society of House and Ship Painters and Decorators said, that his society had different systems of conciliation and arbitration, which were called "working rules" and varied in different towns. Generally speaking, these provided for arbitration, and the method had proved successful in most cases, notably in two strikes at Hartlepool and Burnley.(5) Disputes were mentioned by the representatives of the printing, copper, and chemical industries respectively,(6) which had been successfully terminated by arbitration, and both Mr. Meredith, "investigator" under the Docks, Wharf, and Riverside Union, and Mr. Davies, formerly chairman of the Amalgamated Society of Carpenters and Joiners, testified to the satisfactory result of the intervention of arbitrators in trade difficulties.(7) The practice of arbitration appears to be most firmly established in the bakers' trade. Four bakers spoke strongly in favour of this method, and gave various successful instances in Scotland and Ireland whereby strikes had been averted or ended. It was claimed by one witness that the Board of Arbitration in Staffordshire had produced a general level of wages and had frequently prevented disputes.(8). According to some witnesses, however, where both sides are organised and settle their trade grievances by Joint Boards, the necessity for arbitration may be obviated. On the other hand, others regarded arbitration as the natural corollary of such a system of conciliation. It was pointed out by a printer that while Joint Committees had "done a great deal of good in "averting strikes up to the present, there was something "wanting . . . it would require the establishment "of some independent Board to act in the shape of "umpire." "The defect," he urged, in the rules entered into by the Master Builders with the Bricklayers' and Carpenters' and Joiners' Societies was, that "if you "come to a deadlock there are no means of settling "it."(1) But although the evidence of the great majority of the 60 or 70 representatives of the building, printing, gas, chemical, salt, and miscellaneous trades bears witness to the desire for the establishment of Boards of Conciliation and Arbitration in some form, the actual instances of successful arbitration are few and isolated. [§ 494 (*a.*)]

(1) Digest Vol. III., p. 159. (2) Digest, Vol. III., p. 158. (3) Digest, Vol. II., p. 94. (4) Digest, Vol. III., p. 163. (5) Digest, Vol. II., p. 93. (6) Digest, Vol. III., pp. 158, 153-4. (7) Digest, Vol. III., pp. 153-4. Digest, Vol. II p. 92. (8) Digest, Vol. III., p. 159.

(*b.*) The difficulties and disputes that have arisen in connexion with arbitration appear to show that in the absence of a "spirit of mutual conciliation," and of strong organisations on either or both sides, the method has not been very successful. The relation of organisation to arbitration is shown by the history of the Board of Arbitration in the pottery trade. Founded in 1868, it worked very well at first, but of late years it appears to have ceased to command confidence on either side; both masters and men have refused to be bound by its decisions and have withdrawn from the board. Apart from the particular circumstances of the case, this generally unsatisfactory state of things was attributed by the secretary of the Hollow-ware Pressers' Society to the weakness of the associations on both sides. "For the (first) 15 years "of the Board's existence the men had rested upon its "usefulness and had not strengthened their unions." This fact was brought out by an unsuccessful strike against a reduction of wages, "with the result that the "trade has suffered a great deal of injury ever since, "because of the advantage that many of the employers "have taken of the men." This witness further stated that the chairman of the Board, who was a manufacturer, had said, "we have the utmost difficulty in getting "some of the employers to agree to the Arbitration "Board," and it was his opinion that "if the unions "were weak, the Board of Arbitration was weak." The natural result in this case was to discredit the system of arbitration, which the men thought had been proved to be "all on the masters' side."(2) Evidence which indirectly supported Mr. Pickin's view with regard to the necessity for organisation was given by the secretary of the Manchester Typographical Association and by a representative of the master builders. The former stated that the members of his association always preferred to find a masters' association in every town, as then "they could generally come to a satis-"factory arrangement which should be binding upon "all parties."(3) The one dispute that had been referred to arbitration had, he stated, been satisfactorily settled. In the opinion of the latter, "the employers would "rather deal with a society than with a few men out of "one shop and a few men out of another."(4) The obstacle to the formation of Boards of Conciliation and Arbitration in the copper-working and the Scotch chemical industries was in one case stated to be "that "they had no approach to the masters," who "had "never recognised the Union in any shape or form," and in the other, that the employers at the present time would not listen to such a proposal "because they "knew there was no organisation at the men's back to "force any such thing on them."(5) Evidence of opposition on the part of employers to proposals of arbitration was brought forward by representatives of the employed. The secretaries of the London Building Trades Committee,(6) the Gasworkers' and Genera Labourers' Union,(7) the Scotch Typographical Association,(8) the Society of Journeymen Coopers of Burton-on-Trent,(9) the president of the Trades Council at Belfast,(10) and a seed-crusher in the Dockers' Union,(11) all related instances in which the employers had "absolutely refused" or "would not accept" the men's offer of arbitration. A case was mentioned in the Acton and Shepherd's Bush district where a meeting between the employers and employed which was held to settle a strike broke up because the employers refused to allow an independent chairman to be elected.(12) On the other hand, the unreasonableness of the men was alleged by the employers to be one of the chief causes of the difficulty of settlement. The chairman of the Pottery Manufacturers' Association asserted that the failure of the Potteries Board of Arbitration was due to the unconciliatory attitude of the men, and that the masters were most anxious to re-constitute it on a proper basis and "let bygones be

[§ 494 (b.)] bygones."(1) The chairman of the seed-crushers' Committee stated in reference to a dispute alluded to by the men, that the employers wished to refer the whole matter in dispute to arbitration, but that the men refused to submit more than one point.(2) Again, the managers of the Commercial Gas Company of London offered to submit the quarrel in 1889 to arbitration, but the men "refused to meet (them) half-way." and "told "them they must have the whole thing and nothing "less." "I really do not see," said Mr. Jones, "what "a Board of Arbitration could do if you had one side "or the other so determined to carry every inch of the "ground."(3)

(c.) *Opinion against arbitration.*

(c.) An objection raised against arbitration by several witnesses was that such a method of settling disputes was unnecessary, because the existing system of conciliation by Joint Boards, or conferences between employers and employed, to discuss the points at issue, met the needs of the case. This was the position taken up by a mason, a house painter, a compositor, a carpet manufacturer, and a director of the Salt Union. Thus it was stated by one witness that though there would be nothing to prevent their doing so, they had never resorted to arbitration, because they found that by means of their Joint Committee they could always "higgle out" the question in dispute.(4) Again it was said "we have never yet had a question that we have "not been able to solve better ourselves than perhaps "anyone outside could do."(5) The result of settling difficulties "face to face with the men" was affirmed in another case to lead to "perfect peace and a good deal of happiness."(6) A few witnesses, however, objected to the system of arbitration in itself. Mr. Livesey said his experience had been "limited and very unfavourable."(7) The secretary of the Glass Bottle Makers' Society was of opinion that the workmen had not always confidence in an arbitrator, while an employer in the same industry "could not see how you could compel "either the manufacturer or the workmen to accept "the umpire's decision." (8) A representative of the plumbers stated that "they did not desire the interference of outsiders,"(9) and a member of the Leeds branch of the Stonemasons' Society preferred rather to "fight the matter out" with the employers than to seek "the intervention of disinterested persons."(10)

(d.) *Methods of arbitration. Voluntary or State arbitration.*

(d.) Various opinions were offered as to the best methods of arbitration. The great majority of witnesses appeared to favour local Boards of Conciliation and Arbitration, and some expressly desired that the Board of Arbitration should be closely connected with the particular trade, and not an outside body such as that established by the London Chamber of Commerce.(11) Others, who did not go as far as to advocate State Boards, demanded some means of compulsory enforcement by the State of the decisions arrived at by the voluntary trade board, which board, it was suggested, in some cases might be affiliated to the Board of Trade.(12) The difficulty of enforcing awards, especially when the organisations were weak, appeared to be the ground for this desire for "some legal binding force."(13) Thus the representative of the seed crushers' Committee stated that "the men would not be bound by their leaders."(14) The secretary of the Covent Garden Porters' Union complained that the managers "endeavoured in every possible way to evade the decisions "arrived at by the Board of Arbitration." But, he added, if the Board had "compulsory powers" they "would be bound" to obey.(15) The president of the Incorporated Gas Institute expressed a strong desire, which seemed to be very general in that industry, for "a Joint Committee of Arbitration and Con"ciliation between employers and employed in the "gas trade," with "power to settle in a judicial way" every question that might be brought before it.(1) Definite proposals for State Boards were made by gas managers and the representatives of certain other industries. Thus, although Mr. Trewby was favourable to the idea of a voluntary Board established by the three great gas companies of London, both he and Mr. Duxbury were of opinion that, in view of their "responsibility to the public . . . under any "circumstances and whatever the cost . . . to "keep the supply of gas going," there must be an ultimate appeal to a State Board, with a State umpire, whose decisions should be enforced by law. Mr. Duxbury suggested that resort to this Board should be compulsory, "at any rate . . . as regards the four "winter months, when there is risk to safety of life and property."(2) The chairman of the Cork United Building Trades advocated a "State Board of Arbitra"tion worked through a Department of Labour with a "responsible Minister at its head."(3) and a worker in the Potteries proposed a Government Board of Arbitration to which appeal should be optional.(4) On the other hand a builder, a plumber, a glass-bottle maker, and a member of the Dublin Trades Council objected strongly to any form of State arbitration or compulsion.(5) The difficulty of securing an arbitrator who "understands the technicalities of the trade," is "a fair and impartial man," and "acceptable" to both sides, was acknowledged by those in favour of any system of arbitration, and proposals were made that Government should either appoint suitable umpires, or nominate a certain number from amongst whom choice could be made.(6) With regard to the question of enforcement of awards, no very definite suggestions beyond that of "fines" were made, and the witnesses did not appear to have generally considered the difficulties involved. Those who advocated legal compulsion admitted, for the most part, that it was a "very difficult problem," though one witness regarded it as a "matter of detail which might be got over."(7) One employer proposed to make "the funds of the Union" on the one side and "the property of the employers" on the other answerable for the agreement of the award.(8) Another employer pointed out that the men could evade the award by leaving their employment at a month's notice, while the masters would still be bound by it.(9)

[§ 494 (d.)]

Mediation.

495. There is very little evidence of mediation in this group of industries. The secretary of the Dublin United Trades Council mentioned a dispute in the building and bricklaying trades that had been terminated through the intervention of the Archbishop of Dublin and Dr. Walsh.(10) The London Chamber of Commerce appears to have offered to mediate in connexion with the London carpenters' strike, and an extract from a report of the London Conciliation Board was read in which it was stated that "the "Board's services were at a late period of the dispute "accepted by the workmen but not by the employers." The latter explained this refusal on the ground that the men were in such an uncompromising frame of mind that they would accept nothing short of their whole demands; but this statement was subsequently denied by the men themselves.(11) A similar offer of mediation was made by the "Mansion House Committee," composed of Sir John Lubbock, Cardinal Manning, Mr. Lidderdale, and the Lord Mayor, in the gas strike of 1889. The gas manager "agreed to give "4*d.* a ton, subject to arbitration, and the men agreed "to that." The men then refused to submit the case to arbitration, and the mediators were unable to persuade them to do so. This Mr. Jones considered "a "very poor result of mediation at the end."(12).

C. TRADE DISPUTES.

1. GENERAL RELATIONS BETWEEN EMPLOYERS AND EMPLOYED.

General relations between employers and employed. (a.) *Building, printing, and cognate trades.*

496. (a.) It appears from the evidence given in the building, printing, and cognate trades that strikes have been very much fewer since 1881. This result is apparently due to the increase of organisation in these trades. The Scottish Typographical Association considers that "the stronger the Union the less strikes";(13) and the Associated Carpenters and Joiners of Scotland state that as their Society has "become better or"ganised, the relations with the employers have been "better, and the strikes fewer."(14) Annual conferences and joint committees of employers and employed were mentioned in several instances as having averted strikes.(15) In an immense number of cases the estab-

(12) Digest, Vol. II., p. 94. Digest, Vol. III., p. 163. (13) Digest, Vol. III., p. 158. (14) Digest, Vol. III., p. 163. (15) Digest, Vol. III., p. 164.

(1) Digest, Vol. III., p. 155. (2) Digest, Vol. III., pp. 155–6. (3) Digest, Vol. III., p. 94. (4) Digest, Vol. III., p. 81. (5) Digest, Vol. II., pp. 92–5. Digest, Vol. III., p. 163. (6) Digest, Vol. II., pp. 94–5. Digest, Vol. III., pp. 69, 152. (7) Digest, Vol. III., pp. 156, 164. (8) Digest, Vol. III., p. 163. (9) Digest, Vol. III., p. 157. (10) Digest, Vol. II., p. 95. (11) Digest, Vol. III., pp. 152–3. (12) Digest, Vol. III., pp. 155–6. (13) Answers to Schedules of Questions, p. 336. (14) Digest, Vol. II., p. 69. (15) Digest, Vol. II., p. 69.

[§ 496 (a.)] lishment of boards of conciliation was advised;(1) and personal dealing,(2) partnership,(3) legislation,(4) and above all organisation of employers,(5) were recommended as efficacious means of preventing disputes. Mr. Macgregor argued that "trades Unions being now "recognised, it would appear that to prevent strikes ". . . a counterpoise must be found. Hitherto "nothing in the shape of a counterpoise beyond a lock-"out has been adopted, which in its results is quite as "disastrous as a strike. It has occurred to me that "the most equitable mode of settling disputes and "preventing strikes is by conference, and each trade "should have an employers' union, an operative union, "and an annual conference."(6) In one case, however, it was stated that there was "never the slightest "difficulty with the men before the Union was "formed."(7) In the London Portland Cement Company the rarity of strikes is attributed to the unskilled nature of the labour employed.(8)

Gas, nical, salt les.

(b.) In the gas, chemical, and salt trades, the evidence again tends to show that the increase of organisation has been favourable to industrial peace, though strikes have been scarcely less frequent since 1881 than formerly. Mr. Steel stated that "the last three years "of organisation have been very favourable in so far "that there have been no strikes . . . It would "tend to diminish strikes if the men and masters were "better organised."(9) In the chemical works of the Tyneside district it was stated with regard to a dispute which occurred before the establishment of the Union, that if the Union had been formed then, that dispute would never have happened.(10) Among the coal porters of London, Mr. Locket stated that at the formation of the Union it was at first found very convenient to have "recognised people" to deal with; "there was a dis-"tinct improvement in the relations between the "merchants and the Union. They were not always "seeking to quarrel and find fault." He added, however, that "gradually they became more aggressive, "and the question at issue in the strike was really "one of principle, whether the men's Union should be "a voluntary or a compulsory one."(11) The South Metropolitan strike(12) in the gas trade also tends to show that the influence of organisation can be disturbing rather than conducive to peace. The aggressive action of the Union appears from the evidence to be very largely responsible for the disputes which led to that strike. It may be noted that whereas in the building trade strikes are considered less likely to occur among unskilled than skilled labourers, Mr. Taylor stated that in the gas trade "disputes have "been more prevalent amongst the unskilled than "amongst the skilled workers during the past few "years,"(13) and the frequency of disputes among the coal porters appears to bear out this statement in that industry also. "The casual men were most unreliable ". . . They made repeated demands for extra "money, on the most trifling excuses stopping their "work . . . often refusing point blank to return "to work unless the money was paid."(14) . . . "We "have had a great number of reckless actions with the "coal porters which were costly to us and extremely "unreasonable."(15)

) Glass, ttery, and scella-ous ades.

(c.) In the glass, pottery, and miscellaneous trades the effect of organisation on trade disputes appears to be doubtful. Strikes have been more frequent since 1881; and though the formation of boards of conciliation is advised in numerous instances, the better organisation of both sides is not so often recommended as a means of preventing disputes as in the former groups of industries. The West of England China, Stone, and Clay Company considers that "if there "were no union of men and none of employers . . . "very little dispute would ever arise."(16) Organisation is however said to have been of great value in several instances as having prevented strikes. Among the coopers of Edinburgh and Leith strikes have been less frequent of late years, "the cause being, as allowed "by both masters and men, that the trade is better "organised."(17) Since the formation of the National Amalgamated Society of Coopers in 1889 strikes have been entirely avoided.(18) The Alliance Cabinet Makers' Association state that they have been "most successful "in getting the employers to concede their demands "by deputation."(1) The Masters' Association of Glass Bottle Makers in Yorkshire was formed as the best means of "preventing disputes, and leading to their "settlement without resorting to strikes,"(2) and Mr. Bagley stated that "since the formation of the two "associations, the masters' and the men's, there have "been decidedly fewer strikes."(3) With regard to the seed-crushing industry of Hull, Mr. Bell said that before the formation of the Union, "we were con-"tinually having disputes arise between employers "and workmen, and we had not the opportunity to "place before the employers our grievances which we "find we have had since we were organised."(4). Mr. Smith, however, representing the employers, contradicted this . . . "I unhesitatingly state," he said, "that the disputes previous to the formation of the "Union were very much fewer than since."(5) From the evidence given in connexion with these industries, it again appears that where organisation is imperfect, it is apparently far from being conducive to peace. Thus, in a strike of seed-crushers at Hull in 1891, the men voted against their own leaders, and "not only pro-"longed the strike, but a great deal of bitter feeling naturally was evoked at that time."(6) The majority of the strikes in this group of industries have been caused by disputes with regard to wages.(7) Among the builders and gas workers questions connected with trades unionism(8) have given rise to several, and a few have arisen from long hours of work, the employment of women and boys, bad material, and other causes.(9)

2. SPECIAL STRIKES.

Nature of information.

497. Although the evidence on these industries includes accounts of a great number of small strikes there is very little detailed information given with regard to most of them. The only ones of which there is any full account occur in the gas, building, and pottery trades, and in the first of these trades the greater part of the evidence is derived from the employers.

Leeds Gas-workers' strike, 1889.

498. An important strike among the gas-workers of Leeds began in October 1889. Up to that date the gas stokers had worked on the "12 hours' shift and 5s. per "shift wages." Their work during these 12 hours was "to attend to 20 retorts, charging and drawing; to "attend to two fires for the heating of the retorts, and "the wheeling away of their coke and ashes, and to do "all that was necessary to the carbonizing of 55 cwt. "of coal." In October they demanded that the twelve-hours shift should be reduced to eight, the wages to remain the same; but they engaged to perform the same duties in eight hours that they had done in twelve, with the exception of the firing. They also demanded a week's holiday per annum for which they were to be paid. The gas committee thought the terms "very hard," but having failed in an attempt at compromise and considering that it was "in the face of winter," (10) and that trade was improving, they acceded to the men's demands. New rules were to be drawn up embodying the arrangements, but this was not done till April, and then certain alterations were made in the terms agreed upon in October. The stokers were asked to resume the work of attending to the two fires, and to consent to be relieved instead of the wheeling away of the coke and ashes. The week's holiday was refused, and they were to enter into an engagement not to leave their employment during the months of November, December, January, and February. The committee, on their part, undertook not to discharge a man except for wilful misconduct. These rules were posted on the premises about June 1st and were to come into force July 1st, but the men were unwilling to agree to them. They made no sign of whether they intended to seek a compromise or to give up work; hence 14 days before the expiry of the notice the committee announced that unless the terms were accepted the work would cease on June 30th. No attempt was made by either the committee or the workpeople to come together. "Both sides were willing to discuss the "matter, but neither side was willing to ask the other "to come" (11). The result was that the dispute "drifted to a lock-out," and on June 30th the men ceased to work. The gas committee had previously engaged a considerable number of men in Manchester and London, some of them without any agreement, but

[§ 498.] many upon a three months' and some upon a twelve months' agreement. These new hands arrived by train on July 1st. A large body of the old hands were waiting for them at the suburban station near the gasworks, and though a number of police were present to keep the peace it was thought better to take the new men on to Leeds and not attempt to run them into the gasworks. They were therefore taken to the town hall. The next day the excitement in the town was so great that it was found necessary, in order to prevent violence, that the military should be called in. They could not arrive till the evening, and the result was that the streets were lined with an excited mob as the men were conveyed from the town hall to the gasworks and much violence was employed. Several of the men were wounded, and "they scrambled as they could into the gasworks" (1) Mr. Beckworth considered that no association could be held directly responsible for the disturbance. He "did "not think the great body of the gas-stokers in any "way approved the violence that was committed," (2) and attributed it to the influence of a few agitators. In consequence of the persuasion used by the old hands and the insufficient protection afforded many of the new men joined the men who were locked out. The gas committee were left with only 150 out of the 400 men in their works. The President and Vice-President of the Leeds Chamber of Commerce intervened at this point. They saw the representatives of both sides and found that they were both willing to come together and discuss the questions in dispute. "For the first time the new rules were discussed "between the two parties." (3) The first evening no agreement was arrived at and riots again occurred, but the next morning a satisfactory compromise was arranged. The committee withdrew their requirement that the men should be engaged for four months, and it was agreed instead that 28 days' notice was to be given on either side. The men withdrew their demand for a week's holiday to be paid for, and instead four days' holiday were given, Good Friday, Christmas Day, Whit Monday, and the August Bank Holiday. They were to go on working as they had done from October, an eight hours' shift doing the same work, with the exception that they should carbonise 60 cwt. instead of 55 cwt. of coal. The old hands, however, peremptorily refused to go to work until every new man was dismissed, and the committee therefore discharged the new hands, giving them compensation with which they were said to be "highly satisfied." (4) The old hands then returned to work.

South Metropolitan Gasworkers strike, 1889-90.

499. The most important strike in the gas trade took place in the works of the South Metropolitan Gas Company,(5) beginning in 1889. A variety of circumstances were assigned as the causes of this dispute; the chief of these were a demand for double time for Sunday work; the proposal of a profit-sharing scheme; and the alleged breaking of an agreement by the Company. A large share of the blame of the strike appears from the evidence to be due to the aggressive action of the Union. Mr. Livesey, the chairman of the Company, described the condition of affairs before the strike.(6) In the latter part of 1889 an eight-hours shift was introduced, and for those men who elected to work under this system wages were 38*s.* 10*d.* for seven days or 32*s.* 6*d.* for six days. Those who continued to work under the twelve-hour shift were paid proportionately higher wages. Early in September the Union instructed the stokers not to oil the hinges of the retort lids, though the men themselves had no objection to do so. To this Mr. Livesey replied, "Well, if your Union is "going to act in that way, it will not last 12 months." This remark was interpreted to mean that he had said he would "smash up the Union," and was widely quoted. On September 16th it was found that the stokers were determined to force all the men into the Union, and they sent a notice that Rule 16 in the Union Rule Book would be enforced. This rule provides that all men working in the retort houses are to be called on to join the Union. At the Vauxhall works a man was discharged by the engineer for using unfair means to force men into the Union, and on September 16th Mr. Livesey was called to a meeting of the men, assembled to demand his reinstatement. Nothing was settled at this conference, but a meeting of delegates and directors was arranged for 12 o'clock, September 20th. At 11 o'clock on that day Mr. Livesey stated, "To my "great astonishment, at all stations the men handed in "their notices and gave us a week's notice to leave. [§ 499.] "... I thought this a very unfair thing, but we "were not prepared for a strike,"(1) and therefore all demands were conceded. It was agreed that members of the Gas Workers' Union should not, on account of their membership, be interfered with or intimidated by the officers or foremen of the company, and they on their side promised not to interfere with or intimidate the non-union men. Unionists and non-unionists were to work in separate gangs, but in the same retort house. In less than a month, however, "they had succeeded in "forcing every man into the Union."(2) "The effect "of this day's work," Mr. Livesey maintained, "was "to show that a strike was likely to take place at any "moment without warning. . . . We were as it "were sitting on a volcano, or a powder magazine "rather, to which the light might be applied at any "moment, and a strike might ensue in any week."(3) Preparations were therefore made to meet it. Advertisements were drawn up ready for insertion in the papers, and were sent to the advertising agents with instructions to insert them when they received a telegram. Agents were sent to various places to make inquiries about new hands, and temporary buildings, &c. were secretly run up. It then occurred to Mr. Livesey that it would be far better, instead of fighting the men, to conciliate them. He proposed, therefore, that the money that would be spent in a strike should form the beginning of a fund for the men's benefit, to be increased in future by giving them every year a share in the profits of the Company in addition to their wages. This scheme was brought before the board on October 30th, and on the same afternoon was explained to representatives of the Kent Road men. At the next board meeting it was resolved to offer a share in the profits to any man or men who chose to accept it by signing an agreement.(4) Just at this time came the demand of the men for double pay for Sunday labour. Mr. Blackburn admitted that in the twelve months he had worked for the Company before 1889 he had only had to work on one Sunday, but the men at other gasworks worked nearly every Sunday, and the Union thought that the workers as a body throughout the metropolis should stand one with the other.(5) "We thought it "our duty to have the same system throughout the "metropolis."(6) At meetings held at the Cannon Street Hotel on November 4th and 13th the other companies conceded the demand, but no representative of the South Metropolitan Company was present. Mr. Livesey, however, invited two delegates from each of the Company's stations to meet him at the head office, and they there discussed both the question of Sunday labour, and the new profit-sharing scheme. "The men were determined to have double time for "Sunday, if not, the result would be they would have "to tender their notices." Mr. Livesey replied that he was not prepared for a strike, and therefore granted the demand under protest. "Of course every one of "us understood then . . . that very shortly they "would have to come to a strike."(7) Mr. Marsh stated that "only the delegates were consulted"(8) about the demands made by the Union. With regard to the profit-sharing agreement, Mr. Livesey stated that between 6th and 13th November, "practically all "the free men," (9) about 1,000, accepted it; and according to Mr. Marsh and Mr. Saggers, it was thoroughly appreciated by the mass of the workers; but the Union considered several of the clauses "very objectionable,"(10) and declined to accept it. The unionists objected chiefly to three clauses in the scheme.(11) Some alterations were therefore made at a meeting held on November 21st between the directors and the men. The Union delegates continued, however, to watch the men most carefully, and when three men at Vauxhall signed the agreement by stealth, sent a letter to Mr. Livesey, December 2nd, "to certify that the men at "Vauxhall are justified to tender their notices if the "engineer had not removed Beadle, Harvey, and Kerr "from the retort-house men."(12) The demand was refused, and the next day the men began preparations for a strike. On December 4th a letter was received from the delegates of the Gas Workers' Union saying that a resolution had been passed at the meeting of delegates condemning the action of the Company as "unjust, "unfair, and to be resisted in forcing them to work "with men who had signed the bonus scheme, and "whom they looked upon as blacklegs to their

[§ 499.] "society," adding that "all the men in the South Metro- "politan Gasworks are justified in giving in their "notices until the same is abolished, and the said men "are removed from the works."(1) This was also refused, and though the men sent another letter saying that the word "and" in their notices was a mistake, and should have been "or," "that practically made no "difference as we could neither abolish the profit- "sharing scheme nor discharge the 1,000 men who "had signed agreements for twelve months."(2) The result was that on Saturday, December 7th, the whole of the stokers gave in their notices. The Company telegraphed to the advertisement contractors to insert the prepared advertisements, and preparations were made for the strike. A few new men were taken in at the Vauxhall and Rotherhithe stations on December 9th, and in consequence, by order of the Union, the stokers at all six stations stopped work. The new hands were therefore sent out to return on Friday, the 13th, when new men would replace the old on the expiration of the notices. Mr. Livesey stated that though the old hands resumed work, they "did everything they could to injure "the work,"(3) produced much less than the normal quantity of gas per day, and wantonly destroyed the Company's property. Police protection was procured, and as the men had not withdrawn their notices by the prescribed date, arrangements were made with new men. At this stage Mr. Causton and Mr. Beaufoy attempted to mediate, but the delegates of the Union would not accept them, and at an interview with the directors on December 11th they still demanded the absolute withdrawal of the profit-sharing scheme. Another attempt at mediation was made by the Rev. Hugh Price Hughes, who condemned the bonus scheme as one "depriving the men of the sacred right to strike."(4) Mr. Livesey pointed out that though the clause enforcing forfeiture in the event of "strike or wilful injury" had been withdrawn, the observation was just, since the agreement would be signed at different times, and therefore the notices would expire at different times, rendering it impossible for them all to leave at the same moment in order to strike. From the Company's point of view this was highly desirable; "they "meant to prevent a strike."(5) The attempt failed; and a meeting of coal merchants at the Mansion House, at which efforts were made to induce the Company to raise their wages and take their stokers back, was equally unsuccessful. On December 12th the whole of the men left, and the next day the new men came from all parts. Mr. Livesey said that "Our men "objected to the new men coming in, and before they "left us they had concentrated all their strength to "prevent the new men coming in."(6) Immense crowds collected, and assumed so threatening an attitude that large numbers of police were necessary, and false reports were circulated with regard to the new hands. There were many instances of violence and intimidation; "the men were afraid to go out,"(7) and had to be housed in the works. Mr. Blackburn however stated that "the Union in no way encouraged the "members to intimidate the non-unionists . . . if "anything was done in the way of violence it was "done contrary to the advice and inclination of the "officials of the Union;"(8) but Mr. Thorne admitted that he "did not try to prevent violence being used "in any shape or form,"(9) and Mr. Ward regretted that he had used his influence to prevent violence.(10) Mr. Thorne complained of the action of the police by whom the new men were protected, maintaining that there was "nothing to prove they were going to be "molested."(11) Throughout the strike the bulk of the 1,000 men who had signed the agreement remained loyal; and Mr. Livesey added, "the patience of the foremen, and "the labour they bestowed upon teaching the new hands, "and the patience of the engineers, and all the officers "is something beyond praise."(12) The strike dragged on, Mr. Livesey stated, for two months; "but we con- "sidered it ended when we got the new men in . . . "we were then most anxious for the strikers to come "back, but they said we will not come back in that "way; if we are to come back we will come back as a "body."(13) In the beginning of February 1890, however, on the request of the Gas Workers' and Coal Porters' Union and Seamen and Firemen's Union, the London Trades' Council opened negotiations with the Company. An agreement was signed on February 4th by which it was settled that unless mutually agreed to the contrary the men should work on the eight-hours' system, and that preference should be given to old hands in taking on more men. The profit-sharing scheme and the double pay which had been conceded for Sunday labour were to continue. Upon these conditions the strike was officially and formally declared at an end. A fresh grievance, however, soon arose; that "the Company had not adhered to its engage- "ment to take back old hands."(1) Mr. Livesey stated that "we had promised, and intended to carry out our "promise that we would give employment to our old "hands,"(2) and contradicted Mr. Thorne's statement that old hands had not been re-engaged when there was an opportunity of doing so. He added that no vacancies had occurred except at Rotherhithe, "in "place of a lot of men from Birmingham," and he believed that old men were taken on there. On February 15th a speech was made by Mr. Thorne at Plymouth in which he declared that a mistake had been made by the men in giving seven days' notice, and warned the consumers of London that the men would not again give seven days' notice before striking. He contended that "if the men had come out on that "day when they put down their tools the South "Metropolitan Company would have been defeated."(3) In consequence of this speech a notice was put up by the Company that since the Union had thus announced its intention of breaking the law, the Company, remembering its responsibility to the consumers for the supply of gas, would refuse to employ Union men. Mr. Livesey added that he "did not think there were "any members of the Union on the premises at that "time; several hundreds of the old stokers had come "back by that time, but they had come back before "the strike was at an end . . . . and had left the "Union. We did not discharge any man for being a "unionist . . . . I do not know that we should. "We say so, but if he was quiet and did not create a "disturbance we should just take no notice."(4) A clause was however inserted in the profit-sharing agreement that in order to share in its advantages a man must sign that he is not a member of the Gas Workers' Union. It had been suggested that the bonus agreement should be abolished altogether, but Mr. Livesey found that the feeling of the men was very strongly in favour of it. "The only anxiety of the "men is to sign. No sooner does a man come into the "service of the Company than he says, 'Can not I sign "'an agreement?'"(5) The result of paying high "wages with a bonus of 5 per cent. in addition was that "they were getting the best labour," the work was never so well done . . . . "we are getting better "results than we ever had before."(6) Though Mr. Higgins did not think that the scheme made the men exercise more care in avoiding waste, since they always tried to do so, Mr. Carpenter, engineer of the Company, held an opposite opinion.(7) The men are now free to belong to the Union or not as they like, but Mr. Livesey stated that as a rule "they do not see the "advantage of continuing members of the Union when "they have got permanent employment."(8) The settlement after the strike appears to Mr. Livesey to be very satisfactory. It cost the Union in all 12,000*l.*, and the Company 100,000*l.*, "but," said Mr. Livesey, "it was worth the money. Of course it checked further "aggressions of the Gas Workers' Union, one of "which would have been the additional shilling a day ". . . . . but this was the smallest part of the gain; "it broke down a system of tyranny over employers "and employed that had become intolerable . . . . "it gave in place of hostility and antagonism peace "and goodwill; in place of doubt and mistrust con- "fidence, and in place of sullen and discontented "workmen a body of cheerful, willing, and capable "workers with whom it is a pleasure to be asso- "ciated."(9)

[§ 499.]

500. The strike of the London carpenters and joiners began in May 1891.(10) In November 1890 a memorandum was sent by the London United Trades Committee of Carpenters and Joiners to the Central Association of Master Builders asking for improved conditions of labour. They drew attention to the facts that

London Carpenters' and Joiners' strike, 1891.

(9) Digest, Vol. III., p. 135. Livesey, 26,913. (10) Report of the London United Trades Committee of Carpenters and Joiners upon the Eight Hours' Movement.

[§ 500.] nearly eighteen years had elapsed since the present rate of wages came into operation; that the men personally had derived no advantage from the improvements in machinery; and that in most cases they had to travel long distances to their work, and thus the working day frequently amounted to 13 or 14 hours. They demanded therefore that the hours should be reduced to 47 per week, that the minimum rate of wages should be 10*d.* an hour instead of 9*d.*, and that over time should be paid for at a stipulated rate. These new rules were to come into force on May 2nd, 1891. A request that the employers should receive a deputation to discuss these points was granted; but at the conference objection was made to the composition of the deputation, whose members were all unionists. "We said we would not let that stand "in the way," said Mr. Dew, "and we reformed our "deputation and waited upon them again accompanied "by non-unionist representatives."(1) A conference was then held, at which the question was fairly discussed by both sides; but the reply of the employers which was sent by letter stated that "the building trade "of London generally has been carried on for several "years frequently at a loss, and during the whole time "with a very small margin of profit," and that therefore they could not accede to the men's demands.(2) They would, however, allow them to begin work at 6.30 a.m. instead of 6, provided the time so lost were made up later in the day. At a meeting of the trade held in Exeter Hall on April 17th it was decided that this reply was unsatisfactory, and that steps should be taken to enforce the demands made "by striking firms in detail" as the committee should deem necessary on May 2nd. The committee, however, thought that "no "stone should be left unturned to try and come to a "settlement if possible,"(3) and another conference was therefore held with the employers on May 1st. No understanding was arrived at, and in consequence the men working in the firms of Messrs. Mowlem, Simpson, and Patman and Fotheringham were called out on strike on May 2nd. From the employers' point of view it appeared that the larger number of carpenters went out on strike against their will. "The strike among "our men," said one employer, "was caused by actual "intimidation and threats of violence."(4) Efforts were made by these firms to get men to take the place of the strikers, but failed. The Builders' Association then passed a resolution on May 11th that "unless the "firms struck against are able to obtain sufficient men "to meet their requirements by the 23rd of May the "only course open will be to close all shops and works "against carpenters and joiners."(5) The lock-out commenced on May 23rd, and the renewed negotiations made by the trades committee with a view to the settlement of the dispute were unsuccessful. On June 26th, therefore, a resolution was passed by the shop and job delegates that "unless the Master Builders' Association "enter into negotiations with the committee before "July 1st steps should be taken to strike more firms.(6) This was forwarded to the Master Builders' Association with a suggestion for another conference; but the association considered the tone of the resolution so unconciliatory, if not threatening, that further correspondence was thereby precluded. On July 11th "30 firms were struck," and the employers were prevented by vigilant picketing from procuring blacklegs. In consequence, however, of a proposal of the United Trades Committee, a conference was held on July 28th, at which the employers professed themselves ready to grant certain concessions. They would allow that for the forty summer weeks 52 hours, and for the twelve winter weeks 47 hours should constitute a week's work, and would pay overtime at a slightly lower rate than that demanded by the men in their first memorandum. The present rate of wages, 9*d.* an hour, was to be maintained. These terms were declined by the men, and on August 1st the men at 30 firms, and on August 15th at another 30 struck. The employers' offer was withdrawn on August 6th. Meanwhile the Conciliation Board of the London Chamber of Commerce had been endeavouring to bring about a settlement, and on July 17th had placed its rooms at the disposal of the United Trades Committee for the purpose of a meeting with the employers. This offer had to be declined, as negotiations were then pending which brought about the conference of July 28th. Renewed efforts were made by the board on August 21st, but its proposals, though accepted by the men, were declined by the employers, on the ground that no good could result from another meeting. This refusal led to a meeting of representatives of the whole of the building trade, at which resolutions of sympathy and promise of support were adopted; and in one case, where blacklegs were employed, the plasterers and other labourers actually struck out of sympathy with the carpenters. Steps were taken by the committee to prevent the employment of provincial or foreign workmen, and were in most cases successful. The London Building Trade Committee began, however, in September to view with apprehension the consequences of the strike to the other branches of the building trade. They therefore wrote to the Royal Institute of British Architects asking them to use their influence in bringing about a settlement of the strike which but for external intervention seemed likely to continue through the winter. This request was forwarded by the Institute to the Central Association of Master Builders, who were asked to suggest means of settlement. They proposed in reply that the questions in dispute should be referred to the arbitration of the President of the Royal Institute, and stipulated that with the object of avoiding future disturbances all other trades working the same hours and at the same rate of wages represented by the London Building Trades Committee should be included and concur in the reference; and further, that pending the award, the carpenters and joiners should resume work on the old terms. These terms were accepted by the United Trades Committee of Carpenters and Joiners, and the award of the arbitrator was published on November 19th, 1891. It was decided that "the carpenters and joiners have estab- "lished a claim for consideration in respect to the "present code of working hours. The abnormal size "of London, and the great distances which workmen "consequently have to travel in order to reach their "work and their homes render the conditions of "London work exceptional," (1) and therefore the working time was to be 51¼ hours for 36 weeks in summer, and 47 hours for 16 weeks in winter, equal to an average of 50 hours all the year round. With regard to wages, the arbitrator considered that "to "increase the cost of building beyond its present pro- "hibitive price would be to restrict still further an "already restricted trade, and bring disaster on work- "men and all concerned." (2) No increase was therefore made in the rate of wages. Overtime was to be paid for at the rate of 1*s.* per hour from 5.15 (or in the winter 5 p.m.) to 8 p.m., 1*s.* 3*d.* from 8 p.m. to 10 p.m., and 1*s.* 6*d.* from 10 p.m. to the time of starting next morning. The minor demands of the workmen were conceded. This award was accepted, but Mr. Dew stated that the men "feel that they were terribly sold "by the arbitration. Arbitration is a very sore point "in the London trade. . . . The arbitrator . . . "admitted that he held opinions then that no man "taking the position ought to have held." (3) He added that the carpenters and joiners have since got what they struck for, 48 hours a week, and an advance of ½*d.* an hour for all the branches of the building trade; but that they "consider this only a step towards "the full realisation of the memorial,"(4) and "will "have to meet the employers again."

[§ 500.]

Potters' strikes 1891, at Bovey Tracey and Hanley.

501. Two strikes occurred among pottery workers in 1891. The first of these took place at the pottery works at Bovey Tracey, Devonshire,(5) in May. Mr. Gardner, district secretary of the Gasworkers' Union for the Plymouth district, stated that the pottery belonged to Miss Devitt, but was managed by Mr. Clay. On May 8th Mr. Clay gave notice to the "slip and press makers" of an increase of 20 per cent. work with a reduction of 25 per cent. in wages. The majority of the men belonged to the Plymouth branch of the Gas Workers' Union. They replied that they were prepared to accept the increase of work, but must retain the old standard pay. He refused, and they gave a month's notice. On June 9th when the month was up "he "told them deliberately that if they did not accept "the wage they could leave the work, and they did so ". . . . . ."(6) They sent to Mr. Gardner at Plymouth, and on his arrival "the whole of the people "at the pottery were out at the station ready to meet "me."(7) He discovered that Clay had got three men from Staffordshire to come down and take the slip-makers' places at 5*s.* a day. When appealed to, however, these men said that they did not know that any dispute was going on, and were willing to return if

[§ 501.] their fares were paid. This was done, and they were given an additional 9*s.* each "to get food and that to "go back with." Mr. Gardner then called the men together and reminded them that, with the exception of the four men who had given notice a month previously, they had all struck work without giving notice at all. He asked them if this was "consistent to "themselves or their employers," and advised them to return to work while he tried to obtain an interview with Mr. Clay. The manager refused to have anything to do with the Union, and Mr. Gardner therefore wrote to inquire if Miss Devitt would interview himself or three of her oldest workmen. She declined to see the Union official, but agreed to meet her own men. The men, advised by Mr. Gardner, suggested, and Miss Devitt, against the wishes of the manager, agreed that she should write to all the non-trade societies in Staffordshire while they wrote to all the trade societies to get the list of prices. The men were meanwhile to "work on wages" for a fortnight. A settlement was thus effected, and "the consequence was that the "men retained their position of work at the same "prices as they had been before without the added in- "crease of work or reduction of wages . . . . the "case was settled peaceably and amicably,"(1) but the manager a short time after "took advantage of his "position and discharged the man who was then secre- "tary."(2) In spite of Mr. Gardner's efforts he was not reinstated, but the Union compensated him until he obtained another situation. With regard to the strike among the pottery workers at Hanley in 1891,(3) contradictory evidence was given by employers and employed. Mr. Edwards, representing the employed, stated that "the cause of the strike was through the "manager at one factory stopping the men's wages "after they had worked for them." At this manufactory they had a system of "counting their "ovens when the ovens had wrought so much" . . . The men were paid "so much extra for all over and "above a certain quantity. These men had drawn their "six ovens through the week; the manager had taken "their account to them . . . and gave them a paper "of what they were entitled to receive from the office "at wage-time . . . When they went to the office to "receive this money they found 1*l.* 12*s.* 8*d.* had been "stopped out of the amount due to them." "The "thing had been going on for some time previous to "this, so much so that we called the Arbitration Board "together upon it." The result was that the employer promised the deputation that had been before the Arbitration Board that the men should have the count given to them the morning following the drawing of an oven and that that count should be met.(4) But on the plea of a mistake the money was withheld and the men gave a month's notice. As they gave notice on their own responsibility the Union at first took no action, but before the expiration of the month "the "employers thought fit to discharge a man at a "moment's notice" (who had disobeyed orders), and as this was "contrary to a compact made and to the cus- "tom of the district,"(5) the Union interfered. The stipendiary magistrate before whom the action was brought ruled that the extra work demanded of the man "was not an unreasonable thing for an employer "to ask, and that it was unreasonable of the man to "refuse to comply."(6) The result was that the men struck work for 18 weeks. Mr. Young, who represented the employers in describing the origin of the strike, stated that "these men handed in a notice on "December 5th, without giving the slightest reason "why they did it." The alleged reason was not stated for nearly six weeks after the men left. Before that they had for weeks on every possible pretext been saying "if we cannot have this or that we shall send "in our notices." . . . "For months before we had "been suffering great losses. The men threw the stuff "about. We even engaged a trade unionist to supervise "the men and get them into some kind of order. He "said they were the worst lot of men he had ever seen "in his life, and he could do nothing with them."(7) The places of the men who had struck were filled with non-unionists when the month's notice had expired, and the society then withdrew its men from the other factory belonging to the same employers, and a general lock-out resulted. When this had lasted 14 days the employers issued a manifesto "saying that the men "could resume work at the same prices and conditions "as they left off until 25th March next."(1) The two firms agreed to take the men back as speedily as possible; and Mr. Edwards admitted that the employers "acted very honourably. They have taken back "almost the whole of those men when they have seen "a chance to do so."(2) He contended, however, that if the employers had "been honourable and acted in "accordance with the rules of the Conciliation and "Arbitration Board . . . the strike never would "have taken place."(3) Mr. Young, on the other hand, stated that "the Conciliation and Arbitration Board "had been broken up by the workmen before this strike "took place"; (4) and added moreover that he "wished "to make it public that they should not be held up "before the public as defrauding men of their wages "when they have actually got the defendant's own "retractation of all the statements made, and his "apology for having made them."(5) [§ 501.]

3. PICKETING AND INTIMIDATION AND LEGISLATION RELATING THERETO.

Attitude of employers and employed towards picketing and intimidation.

502. With regard to picketing and intimidation, the views taken by employers and employed respectively were very different. The employed were largely of opinion that the police were "over-zealous" in the discharge of their duty, and in many cases their conduct was bitterly complained of.(8) One witness stated that he regretted that he had advised the men to avoid violence when he saw how they were intimidated by the police, and looked upon their behaviour as "an invitation to enter into it."(7) It was stated that "peaceful picketing" had been interfered with, and it was maintained that employers should not seek the aid of the police in any case until such time as violence is used.(8) A complaint was made that the Glasgow men had been threatened that the Police Act, which was "unusually severe," would, as it was a special Act, override the Conspiracy and Protection of Property Act, which was general; and that "the very fact of this statement "being made placed the men in fear."(9) In one instance it was proposed that the law bearing upon intimidation should be so amended as to cover the case of an employer who tells his men that they must either leave his service or leave the Union;(10) but beyond this no definite remedies were suggested by the employed for the evils complained of. The employers, on the other hand, took an opposite view, and had generally clear ideas as to the improvements they wished to see carried out. Their contention was that the law is not strong enough in the case of picketing.(11) Numerous cases of intimidation were quoted, especially in connexion with the South Metropolitan Gas strike. It was stated that "the system of terrorism" is such that it is impossible for the men who wish to work to do so; and that though a penalty is imposed under the Conspiracy and Protection of Property Act, there is often difficulty in getting it applied, particularly in the case of corporation works where undue influence may be brought to bear by workmen. It was suggested therefore that the Act should be so amended as to extend it to the total prohibition of strikes "during "the very heavy months of winter."(9) During this period arbitration should be employed. Picketing, it was advised, should be prohibited, or the law as it stands should be more strictly carried out; because intimidation goes on notwithstanding the law.(9) Further suggestions were made that the law of conspiracy which at present protects the gas industry with regard to the individual members of a particular Union should be "extended to the linking together of the whole of the "Unions for the same purpose"; and that the funds of any Union should be made liable to compensation for the loss inflicted by any strike of members of that Union against an employer, where there was no direct dispute between the members of such Union and such employer.(12)

APPENDIX.

APPENDIX I.

SOUTH METROPOLITAN GAS COMPANY.

Provision for Accidents to Workmen.

In 1842 the late Thomas Livesey, then secretary and manager of the Company, formed, in agreement with the men, a sick and burial fund, to which each man contributes 3*d.* a week, and the Company pays whatever is necessary each half year, usually about 2*d.* to each 3*d.* by the men, to keep the fund going.

The sick pay is 12*s.* a week for three months, and 6*s.* for another three months in a year, and men meeting with accidents receive the usual sick pay; and in addition they are paid a further 6*s.* a week provided the accident is not the result of their own carelessness. In fatal accidents the widow is paid not less than 15*s.* a week for a year or more, according to circumstances, reduced after a time to 10*s.* for life, or during widowhood. The men are not asked to contract out of the Act, but no proceedings are ever taken by them. Seeing, however, that the entire charge for accidents is borne by the Company, for the 3*d.* a week paid by the men is not nearly sufficient to meet the cost of simple sickness, this arrangement will not be continued if the Employers' Liability Bill is passed in its present form, as, with the abolition of the doctrine of common employment and the repeal of the limitation of the amount that can be claimed, the Company will be subject to litigation. It must, in fact, then, be one thing or the other; the Company will not make provision for all accidents and be at the same time subject to litigation under the Act; it will cost much less if provision for all accidents is abolished.

GEORGE LIVESEY.

September 9, 1893.

APPENDIX II.

ORGANISATIONS OF THE EMPLOYED.

Organisations of the employed.

Copies of the rules of the London and Provincial Domestic Servants' Union, the United Trade Committee of Carpenters and Joiners in London, the Glass Bottle Makers of Yorkshire United Trade Protection Society, and the International Union of Glassworkers have been laid before the Commission, but were received or dealt with too late to be included in the foregoing summary.

Constitution and government.

The government of the Domestic Servants' Union is in the hands of an executive committee, consisting of a president, chairman, treasurer, secretary, two trustees, and nine other members, who must be *bonâ fide* domestic servants. These officers are elected annually by ballot. There is also an annual general meeting, or committee of management, consisting of one delegate for every 100 members. Alterations in the rules may be made only with the consent of a majority of a meeting of members specially called for the purpose. The London United Trade Committee of Carpenters and Joiners consists of representatives from all societies of carpenters and joiners in the London district, in the following proportions: Societies with not more than 100 members send one delegate; those with from 100 to 200 members, two delegates; those with from 200 to 400 members, three delegates; and an additional delegate is sent for every additional 200 members. The officers of the committee are a president, treasurer, and secretary, elected half-yearly; and a sub-committee of five members is appointed quarterly to act in cases of emergency and to settle minor questions. The committee meets every month, or when specially summoned. The Glass Bottle Makers of Yorkshire Trade Protection Society is divided into districts, each of which is governed by a district committee and officers. The supreme government of the society is in the hands of the delegate meeting, which also elects a central secretary; and all disputed or difficult questions arising in any district must be referred to the delegate meeting for its decision. The government of the International Union of Glassworkers is conducted by a council of seven members, elected annually by the society which is chosen as the seat of government. This council meets whenever necessary, appoints the officers from its own members, and carries out the resolutions passed at the annual or special general congresses, to which the supreme control of the society is confided. Delegates to the general congresses are elected by the various societies in the proportion of one delegate for 100 members, and an additional delegate for every additional 200 members. Societies with less than 100 members may combine to send a delegate. The members of the union must be societies of glassworkers, except in the case of such foreign glassworkers as are prevented by law from forming combinations, who may join as individual members.

Contributions and benefits.

TABLE of Entrance Fees and Contributions.

Payments.	London and Provincial Domestic Servants' Union.	London United Trade Committee of Carpenters and Joiners.	Glass Bottle Makers of Yorkshire United Trade Protection Society.	International Union of Glassworkers.
Entrance fee - -	1*s.*	—	Apprentices under the age of 21 admitted free. Journeymen or apprentices over 21, 5*l.* Glass bottle makers from other districts, 1*l.*	—
Contributions - -	1*d.* a week. A levy of not more than 2*d.* a week may be imposed by the committee.	A levy of 1*d.* a member may be made to meet incidental expenses when necessary.	1*s.* a week for journeymen. Apprentices under the age of 20, who are employed as gatherers, pay 6*d.* a week, others 1*s.* a week. Levies may be imposed by the delegate meeting.	6*d.* a member a year.

The Domestic Servants' Union declares its intention of assisting its members when out of employment, but does not specify the amount or nature of the benefit. The benefits given by the Glass Bottle Makers of Yorkshire Trade Protection Society, are as follows:—

1. Dispute benefit.

Victimised members receive the amount of their wages before dismissal.

2. Funeral benefit.

On the death of a member, 8*l.*

On the death of member's wife, 5*l.*

In addition to the funeral benefit on a member's death, a grant of 12*l.* is made to his widow, on condition that she remains unmarried for at least one year.

3. Out-of-work benefit.
   The amount of this benefit is fixed from time to time by the delegate meeting.
4. Superannuation benefit.
   Members over 45 years of age, who are incapacitated from following their occupation, receive—
   After 15 years' membership, 3*s.* a week.
   „ 20 „ „ 4*s.* „
   „ 25 „ „ 5*s.* „

Dispute regulations.

It is the special duty of the London United Trade Committee of Carpenters and Joiners to investigate all disputes between workmen and employers in these trades, and to endeavour to settle them by conciliatory means, and it may sanction a strike only if determined upon by a majority of at least two-thirds of the members at specially summoned meetings of not less than five branches in the district. The rules of the Glass Bottle Makers of Yorkshire United Trade Protection Society require that any trade dispute must be referred to the whole trade before a strike may be allowed in any district. No support will be given to members who molest or intimidate men who are working during a strike. The International Union of Glassworkers requires that information of any lock-out or strike in the trade which takes place in any country should be sent to all the societies through the council, but all pecuniary assistance which may be rendered must be voluntary, and left to the discretion of each separate society.

Minor regulations.

No member of the London United Trade Committee of Carpenters and Joiners may receive less than the standard rate of wages of the district, and it is recommended that no managing foreman, or member in business for himself, should be elected on the committee. Members of the Glass Bottle Makers of Yorkshire United Trade Protection Society are also forbidden to work for less than the regular rate of wages, or to leave their place of work without giving or receiving one week's notice. The weekly hours of work are fixed by the rules of this society. No member of the International Union of Glassworkers may migrate from one country to another without the sanction of the members in the respective countries.

Objects.

In addition to the promotion of the general interests of the members, the Domestic Servants' Union aims especially at procuring higher wages and more leisure for its members, and wishes to improve the present unsatisfactory character system, to establish and support registry offices, free for members, and to give legal advice and assistance when necessary. The object of the London United Trade Committee of Carpenters and Joiners is to secure the combined action of all the organisations in London in maintaining and supporting the rules and privileges of the trade. The Glass Bottle Makers of Yorkshire United Trade Protection Society is said to be "established for the advocacy of peaceful "combinations amongst glass bottle makers, for the "purpose of improving their social, intellectual, and "moral condition, and to protect their masters' pro-"perty by every means in their power;" and the preamble to the rules further states that the object of the members is through united effort to defend the rights of labour against the encroaching power of capital, and to raise themselves "to a just and legiti-"mate level in the social scale." The International Union of Glassworkers desires to unite the different national and local organisations in the trade, and "to "afford a medium of information and assistance for "their common interests."(1)

A. CONDITIONS OF LABOUR.

I. WAGES.

(i.) *Statements of Wages.*

[§ 503.] Subjects included under.

503. Evidence was given concerning the proportion of the national income devoted to the remuneration of manual labour and the effect upon wages of trades unionism, co-operation, profit-sharing, and thrift; as to State policy with regard to wages, as to the disadvantages of piece payment, and as to the advantages and nature of profit-sharing and co-operation as methods of industrial remuneration.

Proportion of national income going to wages.

504. It appeared from the figures furnished by Mr. R. Giffen(1) that, of a total national income of 1,500,000,000*l.*, 633,000,000*l.*, or 48*l.* per wage earner, is appropriated to manual labourers, as against 867,000,000*l.* appropriated to the rest of the community, and the figures quoted by Mr. Gerald Balfour in the course of his cross-examination of Mr. Tom Mann(2), as having been prepared by the same authority in 1886, show nearly the same proportion. It was contended by Mr. Tom Mann that the proportionate distribution of the rewards of industry was unfair to the manual labourers, and that, though the rate of interest had fallen, yet, owing to re-investment and other causes, a larger proportion of the national income was devoted to the payment of that charge than ever. Mr. Hyndman,(3) moreover, while not disputing Mr. Giffen's statement to the effect that during the past 50 years falling prices had been accompanied by rising wages, denied that the rise was proportionate to the increase in the property of the non-productive classes and in the productive power of human labour, and alleged that, deducting the sums paid to non-productive wage earners, such as domestic servants, the aggregate annual wages of those manual labourers whom he classed as productive was considerably less than 500,000,000*l.*, and that between one fifth and one third of this sum was paid back to the non-productive classes in the form of rent. Mr. Giffen,(4) however, pointed out that it was useless to attempt to extract from the statistics information as to the relation between wages and profits which they did not contain. Such information, he added, cannot be completely ascertained, because, in the case of a great deal of income, it is impossible to determine what portion of it is of the nature of wages and what is of the nature of interest or profit. In fact, before drawing deductions from the statistics given above, four matters must be duly considered:—First, that a comparison of the aggregate income of the manual labourers with that of the rest of the community is not a comparison of the income of labour with the income of capital, for a very large portion of the 867,000,000*l.* is derived from labour, though not from manual labour. Secondly, that the above figures of income are not equivalent to figures of production, for they do not include the value of work performed but not made the subject of exchange. Thirdly, that the said figures are not equivalent to figures of consumption, for a large portion of the income is not consumed, but re-invested. Fourthly, that a very large portion, amounting to about 80,000,000*l.* or 100,000,000*l.*, of the national income is derived from investments outside the country, and so could not be transferred to the pockets of British labourers in the form of wages in the event of an absorption by the community of the means of production at home. As to working class budgets—one of which was published by Mr. Hyndman(5)—Mr. Giffen(6) considered that their compilation and collection must be made on a larger scale and on more systematic lines than has hitherto been attempted before they will be of the slightest use for statistical purposes. Mr. Giffen's figures may be tabulated as follows:—

(1) Digest, p. 42 and Appendix CXXIII., CXXIV. (2) Digest, p. 18. (3) Digest, p. 23 and Appendix CXLIV. (4) Digest, p. 42. (5) Digest, p. 23. (6) Digest, p. 43.

* In round numbers.

Effect of trades unionism on wages.

505. Mr. J. T. W. Mitchell,(1) representing the Co-operative Union, stated that to raise wages was the function of trades unionism, whereas co-operation sought only to increase the purchasing power of the wages received. Mr. S. Webb(2) attributed the progress of the Lancashire operatives during the past 50 years to trades unionism, and looked forward to the time when the workers in industries of a necessarily fluctuating character like ship-building would have become so well organised, and so far seeing, as to manage to procure for themselves sufficient wages during good times to enable them to save enough for their support during periods of depression. Sir Thomas Farrer(3) pointed out that, in their policy with regard to wages, the trades unions manifested a tendency towards protection, not only nationally but locally. The action of their party on the London County Council, he said, furnishes instances in point. Thus, the Bridges Committee recommended the Council to accept a London tender for a ferryboat in preference to a tender, financially more worthy of acceptance, made by a Glasgow firm, on the ground that it was "the first duty of the Council, having "regard to the depressed condition of labour in London "at the present time, to give to London firms what work "can reasonably be so given, in preference to sending it "to be done outside." In this instance, however, the Council disregarded the recommendation of its committee, and the order went to the Clyde. Again, he added, on the 13th of December, 1892, Mr. Burns moved the following resolution, amending a former resolution passed in 1889,

(1) Digest, p. 8. (2) Digest, p. 19. (3) Digest, p. 24.

[§ 505.] "That all contractors be compelled to sign a declaration "that they pay the London Trades Union rates of wages, "and observe the hours and conditions of labour "recognised by the London Trades Unions." As was pointed out at the time, the effect of this resolution would be to exclude all country contractors from competition, and an amendment was carried omitting the word "London," and substituting, for the words after the word "recognised," the words "and in practice obtained by the trades "Unions in the place or places where the contract is "executed." Even in its amended form, the resolution has the effect of obliging the ratepayers of London to pay a larger price for their work than they need. Mr. C. Booth (1) stated that in the East London "sweating" trades, where the influence of trade unionism was but little felt, wages varied from good wages down to no wages except in the form of mere "keep." Mr. Fenwick(2) said that it was partly with a view to removing an instrument for reducing wages that the Trades Union Congress had condemned the system of domestic workshops.

ffect co-operation on ages.

506. Although co-operation purports only to increase the purchasing power of wages, its leaders do claim to have exercised a beneficial effect upon the wages themselves. Mr. Maxwell (3) said that the Scottish Wholesale Society, aiming, as it did, not so much at increasing its profits as at placing its workpeople in good conditions of labour, in all cases paid the full trade union rates, and where no such rates existed, higher wages than were given in private firms, the average per employé, including apprentices and unskilled labourers, being 17*s.* 3*d.* a week. In cases of sickness, moreover, employés of the said Society in receipt of "upstanding wages," *i.e.*, those that are paid for holidays, but are liable to be called upon to work overtime upon occasion for nothing, receive full wages for the four first, and half wages for the four succeeding weeks of illness. These sick allowances are charged as expenses to the department in which the recipients are employed. Most Scotch, and some English co-operative societies, moreover, give their workmen a share in the profits, and, in Mr. Maxwell's opinion, the proper realisation of the co-operative ideal would involve giving them also a share in the management. Mr. Hardern (4) contended that the fact that the industrial population of Oldham was specially well fed, well paid, well clothed, and well housed, was mainly to be attributed to the vitality of the co-operative movement in their midst.

ffect f profit-haring on vages.

507. It appeared from the evidence given by Mr. T. W. Bushill,(5) that Mr. Schloss, the author of a book called "Methods of Industrial Remuneration," had met the allegation that profit-sharing firms underpaid their men in respect of their ordinary wages by quoting extracts from trades union reports, proving that every firm that had adopted the system was paying the ordinary wages at or above the trade union minimum. There was one exception, but in that case the bonus on the wages amounted to 26 per cent. At Mr. Bushill's own firm, the wages of the letterpress printers are 28*s.* a week and upwards, with 7*d.* per hour overtime. Mr Giffen,(6) however, considered that it was because employers, whose profits were small were obliged to raise the ordinary wages of their men up to the level of the total earnings of the men employed by competing firms that had larger profits to share, that profit-sharing would not solve the whole problem of industrial remuneration.

ffect f thrift on wages.

508. A sensible increase in the rate of saving by the labouring classes, said Mr. Giffen, (7) would have an enormous effect in improving their condition, for it would bring down the rate of interest on home securities, in which their investments would chiefly be made, and so would cause a larger portion of the reward of British industries to be appropriated to labour in the form of wages. Improvement, he contended, is to be looked for in the progress of invention and education, and, above all, in the virtue of thrift. Mr. Hyndman,(8) on the other hand, was of opinion that, so far from being of value to the workers, thrift was positively injurious to them, inasmuch as it could be practised only at the expense of a self-denial impairing either their own or their children's vitality. To put money into savings banks, he added, is merely to accumulate orders on other men's labour, and is no benefit to the workers as a class, and, in any case, it is objectionable to convert the workers into small capitalists, and so to fortify the class it is desirable to eliminate. Mr. Tom Mann,(9) moreover, considered that our efforts should be directed, not towards eliminating the wants of the workers, but towards extending them and directing them into higher and nobler channels, inasmuch as the economic wants of the workers fix the minimum of their wages at the sum needed to supply them, and that it was to the development of the latent purchasing power of British workmen that employers should look for compensation for the possible loss of foreign custom, in the event of a general reduction of hours. [§ 508.]

(1) Digest, p. 26. (2) Digest, p. 27. (3) Digest, p. 11, and Answers to Schedules of Questions, Group C., No. 792. (4) Digest, p. 14. (5) Digest, p. 34. (6) Digest, p. 43. (7) Digest, p. 43. (8) Digest, p. 23. (9) Digest, p 17.

State policy with regard to wages.

509. Wages should not be fixed by Parliament. The establishment of a legal minimum might enable employers to meet the immediate effects of a legal day by reducing their rates of payment, and the arbitrary fixing of the actual rates of wages, even at a high figure, and with the direct intention of transferring a portion of the employers' profits to the pockets of the workers, is not desired by the large, though diminishing majority of workers that think it unfair to deprive employers of their profits altogether. Such was the statement of Mr. Tom Mann,(1) although he also said that he considered a complete elimination of profit and interest would not have a bad effect upon the prosperity of national industry generally, except in so far as capital might find other markets where it would be better paid. Mr. S. Webb,(2) moreover, while considering that the proposed regulation of the working day ought to be accompanied by a recognition of a standard minimum wage, said that such a minimum should not be fixed by law, for the workers did not seem to desire it. He pointed out, however, that the value of the relief given under the Poor Law practically did fix a legal minimum at the present time, inasmuch as a man will not long continue to work at a smaller wage than the State would give him without working at all; and Mr. Mann,(3) Mr. Webb,(4) and Mr. Hyndman (5) all considered that, in regard to their own employés, Government and municipal bodies should endeavour to lead rather than follow the market in raising the wages of their servants—a policy already carried out by by the County Council, and adversely criticised by Sir T. Farrer.(6)

Piece-work: its disadvantages.

510. The method of paying wages by the piece was strongly objected to by Mr. Allan,(7), of the firm of Messrs. Allan and Company, marine engine builders, Sunderland. He said: It is true that on purely economic grounds the system is quite justifiable, for it secures a fixed ratio betweeen the wages and the work. But in practice it operates very injuriously. Like overtime, it is unfavourable to that steady and regular employment which is so essential to the general well-being of the workers, and is a copious source of friction where, as is often found necessary, it obtains side by side with the time system. The comparatively large earnings of the piece-workers cannot but produce discontent in the minds of those, who, from the nature of their employment, are debarred from working on the same system, while the operations of the two sections of workers, being in many cases interdependent, the arbitrary and intermittent time-keeping on the part of those working at piece-work wages constitutes a real grievance and hardship to the time-workers. In slack times, moreover, a few of the piece-workers are enabled to monopolise whatever work is going, and so to continue to earn as good wages as before, while their fellows are left entirely without employment. It is plain, therefore, so Mr. Allan concluded, that all trade unions should forbid their members to work at piece wages, and should do all they can to discourage a system fraught with so much possible injury to themselves.

(1) Digest, p. 19. (2) Digest, p. 21. (3) Digest, p. 17. (4) Digest, p. 21. (5) Digest, p. 23. (6) Digest, p. 25. (7) Digest, p. 33.

(ii.) *Profit-sharing and Co-operation.*

Profit-sharing and co-operation.

511. In the evidence taken before the Committees, co-operation was dealt with as a method of industrial remuneration parallel to profit-sharing; but, in the evidence taken before the Commission Sitting as a Whole, it appears as a form of association parallel to friendly societies, building societies, and trade unions. It has appeared expedient, therefore, to summarise the evidence on this subject in immediate connexion with that on the other forms of association referred to, under the general heading "Organisations of Employed." Inasmuch, however, as the full and exhaustive account of the co-operative movement, which it has proved possible to give in that place, throws considerable light on the nature of the connexion between co-operation and profit-sharing as methods of industrial remuneration, it may be useful to call attention in advance to some of the points which will be more fully drawn out hereafter.

Co-operation its forms.

512. Briefly stated, then, the general result of the evidence on co-operation is as follows:—The co-operative movement, as it exists at present, dates from the establishment of the Rochdale Pioneer Society, in 1846. The societies formed on the Rochdale plan are consumers' societies, that is to say, associations of consumers to employ producers, but not of associations of producers to

[§ 512.] employ themselves. Their distinguishing feature is the appropriation of the profits to the purchasers in proportion to the value of their purchases. In course of time, however, associations of producers to employ themselves have been formed; but, being for the most part too weak to stand alone, they have either collapsed altogether, or fallen into the hands of the consumers' societies, or else, and this is the point most important for the present purpose, they have become amalgamated with the consumers' societies, either on the industrial partnership principle, whereby the workers share with the purchasers in both profits and management, or on the profit-sharing principle, whereby the workers share with the purchasers in profits but not in management.

Co-operative production and profit-sharing compared.

513. It would appear, therefore, that co-operative production in the only two forms in which it can be said to flourish is distinguishable from profit-sharing and industrial partnership only by the fact that the employer with whom the workers share the profits, or the profits and management, is an association of other workmen, instead of an individual or company of the capitalist class. Mr. Bushill,(1) of the firm of Messrs. Bushill and Sons, printers and bookbinders, Coventry, said that profit-sharing under a private firm had the advantage of retaining the services of the *entrepreneur* class, with all its traditional knowledge of business management, which class co-operative productive societies supplanted. And this view of the case seems to find a certain degree or confirmation in Mr. Hardern's account of the Oldham Joint Stock Companies,(2) companies chiefly controlled by the co-operative societies, in the course of which reckless speculation and bad management are mentioned as part of the cause of their comparative want of success in recent years. The representatives of the Co-operative Union, on the other hand, while praising non-co-operative profit-sharing, seemed to take the superiority of the co-operative system for granted. Thus, Mr. Maxwell(3) said: Profit-sharing under individual employers is a policy of mere justice. Indeed, it would be a great advantage to entirely supersede the wages system by the system of profit-sharing, which should always be encouraged in circumstances that preclude the substitution of the higher form of co-operation where workers and capitalists are identical. And Mr. Greenwood(4): Profit-sharing under private employers is to be encouraged, as being closely related to co-operation. It would be a great advantage to the workers. Mr. Vivian(5), moreover, stated: Partnership in profits, and eventually in management, by the workers, whether as wage earners or shareholders, might fairly be insisted upon in all cases where Government or a municipality grants monopolies or exclusive privileges to Joint Stock Companies, *e.g.*, to gas, railway, canal or tramway companies, or to dock trusts.

Attitude of the workers towards profit-sharing.

514. But, intelligible as is the attitude of co-operators towards profit-sharing, it is not quite so easy to understand the attitude of the workers themselves. According to Mr. Fenwick,(6) their attitude varies with the varying circumstances of trade and district, and, from the general tenour of the evidence given in regard to this subject, it would appear that the reason why profit-sharing is less popular than perhaps might be expected, is that it is found rather difficult to reconcile approval of it with the general policy of the trade unions. Since the primary object of the latter is to raise wages to the highest possible level, trades unionists are inclined to distrust a system which seeks to enlist the interest of the workmen in maintaining the rate of profits rather than that of wages, and which they believe to be sometimes introduced with the ulterior objects of restricting liberty of action upon the part of the men and undermining the influence of their unions. That this is actually the case would appear from the following extract from a document put in evidence by Mr. Bushill,(7) in which it is stated: — "The recent "spread of the profit-sharing system in England has "not been effected in an altogether peaceful manner. "About two years ago, the South Metropolitan Gas "Company of London put forward a scheme containing "originally a clause which entailed the forfeiture of part "of the workmen's benefit in the event of his striking (a "clause which was soon afterwards withdrawn). The "Company's scheme was accepted with cordiality by the "non-unionist workers, but it was met by the gas-stokers, "at the instance of the leaders of their Union, by a demand "for its immediate withdrawal. This demand not being "entertained, the gas stokers, almost to a man, struck "work. The places of the strikers were filled without "much delay, and the scheme is now reported to be giving "satisfaction to the present staff and to the management. "The subsequent rejection of a profit-sharing scheme "proposed by the Thames Ironworks, Co. Limited, [§ 514.] "(which was free from any penal or hampering conditions) "may be in part attributed to the prejudice existing in the "minds of London Trade Unionists against the system."

In view of this prejudice, Mr. Bushill went on to say, "it "may be well to state that in several recent schemes it is "expressly provided that 'profit-sharers will be free to "'become or remain members of any trade or friendly "'society'"; while Mr. R. Martin, of West Hartlepool, gave still stronger evidence that all profit-sharing employers are not hostile to trade unionism, by prescribing as one of the qualifications for participation, the condition: "Profit-"sharers *must* be members of their trade society."

The existence of this prejudice is still more strongly attested by the following extract from a pamphlet(1) drawn up by the London United Building Trades' Committee. It runs thus:—"Fellow workmen, we beg to draw your "attention more closely to the scheme of profit-sharing "now introduced by Messrs. Peto, Brothers. Their pro-"posal to give one quarter of the whole net profits on the "contract for the Cane Hill Asylum (Extension) is of such "importance as affecting the relations between employers "and employed that we consider it our duty to submit a "few objections, more particularly to the conditions and "restrictions contained therein. Profit-sharing is neither "a philanthropic nor a charitable project, but a business "arrangement for mutual advantage, the success of which "will entirely depend on the hearty co-operation of the "workmen, which Messrs. Peto, Brothers have made im-"possible by the unreasonable and humiliating restrictions "accompanying their proposal.

"(a) *All right to participate in the profit will be forfeited "by any who earn less than a total amount of 5l. in "wages on the contract.*

"(b) *All share of profit will be forfeited by any who may "individually or in combination do anything tending "to diminish the profits on the contract by neglecting "their duties, misconducting themselves, wasting their "time, or by joining any strike for shorter hours, or "for wages above the existing recognised rate of "wages, on which the tender for the above mentioned "contract was based, whether the strike be general "or otherwise.*

"(c) *All profit will be forfeited by any one who may do "anything tending to damage the character of the "firm for good and honest work. The shares of any "men so forfeiting their claims to be added to the "shares of the others.*"

Mr. Tom Mann, moreover, pointed out that the process of the introduction of profit-sharing and industrial partnership involved a distinct drawback in a tendency to lift the section of men to which they are being applied out of the ranks of the army of labour, and so hinder the process of the general movement which he desired to accelerate. It would further appear that the men themselves are to some extent influenced by the same idea. Thus, Mr. Fenwick(2) said that in fluctuating trades the men were generally hostile to profit-sharing, because they think that by allowing a higher rate of interest to capital in order to cover the loss during times of depression, which they themselves are not prepared to share, they are causing a proportionate reduction in wages. They may also, he added, be influenced by the idea that they would be able, during good times, to make a better bargain in securing advances of wages than they are able to do under a profit-sharing scheme. Mr. Hardern,(3) moreover, stated that the recent abandonment by the Oldham Joint Stock Companies of the profit-sharing principle, on which they were originally conducted, was due quite as much to the dislike of the workers to the fluctuations in their earnings which the scheme entailed and to their idea that their ordinary wages were being adversely affected, as to a feeling among the shareholders that profits ought to be shared only by those that shared losses. In these circumstances, therefore, it might be expected that the workmen and their unions would definitely decide against profit-sharing. But such is by no means the case. Thus, Mr. Mann,(4) while complaining that profit-sharing had the effect of taking workmen out of the ranks of the army of labour, declared, almost in the same breath, that he nevertheless heartily approved of it, and of industrial partnership more heartily still. This can only be accounted for by the fact that profit-sharing is felt by the workers to be an advantage in cases where its benefits are not obscured by such unfavourable circumstances as fluctuating trade, &c., and that their unions are compelled to modify their natural policy in correspondence with this feeling. Indeed, Mr. Fenwick's statement(5) to the effect that the men's attitude towards

(1) Digest, p. 35. (2) Digest, p. 15. (3) Digest p. 12. (4) Digest, p. 18. (5) Digest, p. 15. (6) Digest, p. 27. (7) Appendix CII., and *cf.* Summary, Group C., Part II., paragraph 428.

(1) Appendix CIV. (2) Digest, p. 27. (3) Digest, p. 15. (4) Digest, p. 19. (5) Digest, p. 27.

[§ 514.] profit-sharing varied, proves that it is sometimes favourable. And from the following extract from Mr. Bushill's evidence it would appear that it was sometimes very favourable indeed. Mr. Bushill(1) said:—With a view to testing the men's real opinion as to the working of the profit-sharing scheme established by the firm, the manager suggested to the men's committee that they should pass the resolution which they afterwards did pass, and which read as follows:—

"The Employees Consulting Committee hears with "satisfaction that the Royal Commission now sitting is "seeking evidence as to the success or non-success of the "profit-sharing system, and, with a view to securing a free "and independent expression of opinion from each adult "employee, they propose that a paper be given out on "Saturday, November 12th, to each employee above the "age of 21, on which he may write briefly (in ink) his "opinion from his own point of view: 1st, of the prin-"ciple of profit-sharing; 2nd, of the results here (no "figures to be mentioned); 3rd, of the details of our "system. Own handwriting not necessary, and no "name to be signed. A free expression is invited. If "anyone wishes to express an opinion on the shortened "hours, the space on the back of the paper should be "used."

Nearly all the men to whom circulars were sent furnished replies, of which the following are representative specimens:—

"Principle of profit-sharing is a form of co-operation "between employer and employed, the latter partaking of "a certain part of the profits gained year by year, if "successful, after interest has been deducted for use of "capital. Results: After working under the system of "profit-sharing for some years, I find it has been the "means of making me work more economically, trying to "get out the most possible work in the least possible time. "It has also been an incentive to save, fostering in me "ideas of things which, perhaps, I never should have had. "The details: According to profits made and bonuses "declared, depending upon my weekly wage, part of "which is paid in cash, the rest detained at interest "till I am 65 years of age, or 25 years' continual service. "A proviso is made that an earlier payment can be made "in case of leaving earlier than this. In case of death "the balance would be paid to my representatives."

Another reply reads as follows:—

"I cordially approve of the principle of profit-sharing, "and I consider the results of the first four years' working "in this establishment to have been most satisfactory. "The results have good, not only financially, but also for "creating a feeling of brotherhood and mutual helpfulness "throughout nearly the whole of the staff, and for adding "a new and pleasant zest to all our duties. We under-"stand better now than we did at first the meaning of the "scheme, how and where we can economise and where we "can suggest. I like to think that my provident fund "cannot be drawn upon for immediate use, but is safely "locked up for the future. It is a great stimulus to see "the balance steadily growing, and at the same time to "know that it is a perfectly safe investment, under the "security given by the firm. Severe personal losses in "the late building societies smashes have rudely shaken "any thriftiness of character I ever possessed, and con-"sequently increased my appreciation of this provident "fund. I trust the firm will be willing to assist me to "find an equally secure investment when it comes to my "turn to withdraw it. I consider the annual audit and "general details to be thoroughly satisfactory."

And another states:—

"The principle is very good, and undoubtedly more "beneficial to the workman than the employer. I look "upon it as a free gift, for I should have had to work had "nothing of the kind ever been started. I wish it had "been started 20 years ago. Results have been simply "grand, and might be kept up and made even better if "all the foremen would take the lead and set the example. "The details are all right."

Profit-sharing viewed from the employers' standpoint.

515. Viewed from the employers' standpoint, said Mr. Bushill,(2) it must be admitted that, in spite of the men's greater industry, &c., the profit system has not, in the case of our own firm, effected a saving equal to the sums expended in bonuses. Still it has proved to possess certain economic advantages. First, there has been less need of supervision, in other words, profit-sharing has introduced a system of mutual foremanship. Secondly, the men have become more economical both in time and in material, and have shown a greater readiness to devise cheaper methods of production. Thirdly, the existence of the system has tended to secure and to retain in the service of the firm the best workers, and, though it has involved a certain increase in clerical work, it has had a very beneficial effect upon the *morale* of the workers, and has resulted in an almost complete absence of loss of time through intemperance and of applications for charity recommendations. Mr. Bushill's remarks, however, were based solely upon the experience of a successful firm. In the application of the profit-sharing principle to less successful businesses, a weak point was pointed out by Mr. Giffen,(1) who said that employers whose profits were small or non-existent could only work the system by raising their ordinary wages up to the level of the total earnings of the men employed by competing profit-sharing firms that had large profits to share. And, for this reason, he thought that profit-sharing, which was as yet in a very early stage of experiment, would never solve the whole problem of industrial remuneration. [§ 515.]

(1) Digest, p. 34. (2) Digest, p. 34.

Profit-sharing: its theory and practice.

516. As to the theory and practice of profit-sharing, Mr. Bushill(2) gave full and detailed information, which may be arranged as follows:—Profit-sharing, its definition, it forms, its extent, its so-called failures, and the various methods of effecting the division of profits; profit-sharing as practised in the firm of Messrs. T. Bushill and Sons; and profit-sharing as compared with gain-sharing and industrial partnership. The definition of profit-sharing by the Paris Congress, that met in 1889 to consider the subject, as "a voluntary agreement under which the employees "receive a share, fixed beforehand, in the profits of the "business," is not—so Mr. Bushill thought—sufficiently comprehensive. The previous settlement of a basis, he said, is not an essential feature of the system. The main point is rather the payment of bonuses bearing a ratio to profits that has been determined, or is capable of being determined, independently of the volition of the employer. Mr. Schloss, in his book on "Methods of Industrial Remuneration," has divided profit sharing schemes under five heads. First, what he calls surrender participation; secondly, stimulus participation; thirdly, non-practical participation; fourthly, deferred participation; and, fifthly, bribe participation. The first is where a firm surrenders such a portion of its present profits as it cannot reasonably expect the increased zeal of its employés to make good. The second is where a firm surrenders only such a portion as it can reasonably expect to be so made good. The third is where the system is introduced by a firm that does not understand how to work it properly. The fourth prevails where a firm, desiring to prevent its servants leaving its service, joining rival firms, or starting opposition businesses, allots to them, year by year, a certain amount, withdrawable only after a certain lapse of time, and then only if they have not left its service. The term "bribe participation" is applicable where the system is introduced with the object of detaching men from their trade unions. The last three classes are, in varying degrees, open to censure, but against the first two no objection can reasonably be urged. To these classes two may be added. First, minus participation, or a scheme whereby a firm pays low ordinary wages in consideration of the bonuses. Secondly, stock-broking or advertising participation, or a scheme of profit-sharing introduced for the purpose of rigging the market. A firm, for example, is converting its business, and, perhaps, watering its stock very considerably, and, accordingly, it advertises that all its profits above 10 per cent. are to be distributed among the workers, knowing that the profits will never reach the specified per-centage. Profit-sharing is being worked successfully at the present time in the following trades, amongst others:—Chemical, confectionery, gas, grocery, oil-cake, printing, and woollen manufacturing. The present total of profit-sharing firms is 77, with over 16,000 employees. Of these firms, four are colonial, including the firm of Messrs. W. Walker, of Ceylon and Glasgow, which admits natives as well as Europeans to the benefits of the scheme. The largest profit-sharing concern is the South Metropolitan Gas Company. In Mr. Schloss' book. 15 cases of failure to work the system are recorded, but of these three belong to the "impractical" class, three to the "bribe" class, and two to the "stockbroking" or "advertising" class, and of the remaining six none have given the scheme a sufficiently long trial. Under a profit-sharing scheme there are two alternative methods of calculating the division of profits. First, the method of the reserved limit, and secondly, the method of per-centage. The former is where a firm divides with its employees all the profits over and above a certain fixed sum which it reserves to itself, and the latter is where the employees receive a certain fixed per-centage on the entire net profits. This latter is generally found more workable in fluctuating trades.

(1) Digest, p. 48. (2) Digest, p. 33, and Appendix XCIX.-CV.

[§ 517.] Profit sharing as practised in the firm of Messrs. T. Bushill and Sons.

517. In the firm of Messrs. Thomas Bushill and Sons, the reserved limit methodis the one adopted. In this instance, the profit-sharing system has prevailed since 1888. 185 persons are employed, 79 of whom are paid by time, 47 at progressive wages, and 59 by the piece. In order to qualify for participation in the scheme, every employee is required, first, to definitely express a desire to participate, and secondly, to belong to the provident fund established in connexion with the works. The men are given neither the rights nor the liabilities of partnership. They have a committee, but its duties are purely consultative. The basis of the division of profits is *pro ratâ* to the normal weekly wage. Of each man's share, one third is paid in cash, and two thirds are paid into the man's credit account on the books of the provident fund. This fund is invested in the business, but is secured by a mortgage on the premises, and thus made independent of the vicissitudes of the trade. The firm pays 4 per cent. interest on the sums so invested. A workman leaving the service of the firm gets his bonus credited for the portion of the year he has worked, not reckoning fractions of a month, and retains his full claim on the provident fund. Under ordinary circumstances, such claims are payable on the man attaining the age of 65, or on completing 25 years continuous service, whichever date first transpires, and in the event of death, or, in the case of a female employee, of marriage, payment is made immediately. An employee guilty of embezzlement or felony forfeits the whole of his claim on the fund, such claim reverting, in the first instance, to the firm as indemnity for loss sustained, and the balance to the men's committee, to dispose of as they think best in the interests of the other workers. The rules contain no clause depriving persons going out on strike of their claims on the fund. With a view to the encouragement of thrift, the cash portion of the men's share in the profits is paid into their individual accounts at the savings bank. At present, the post office regulations forbid a man having more than one account in his own name. He should be enabled to have a second account in respect of the money for which his employer is trustee. There seems to be a doubt as to whether the bonuses under a definite profit-sharing scheme are legally recoverable. It is important that this point should be settled, and perhaps the further point should be weighed as to the expediency of giving such bonuses the same priority of claim as ordinary wages.

Profit-sharing compared with gain-sharing and industrial partnership.

518. Gain-sharing, said Mr. Busbill,(1) is distinguished from profit-sharing proper, in that in the case of the former, the employer puts down in the estimate on which he bases his tender so much money as the probable cost of the labour involved in the work, and then offers the men a certain proportion of the sum saved if they do it in less time, and, therefore, at a smaller cost. The drawbacks to this system are: 1st, that the payments must be made at very short intervals, thereby entailing a great deal of clerical work; 2nd, that it occasions frequent disputes as to the basis of participation; 3rd, it sectionalises the men too much into separate departments. The time does not seem to be ripe for the introduction of a system of industrial partnership, such as prevails in the firm of Mr. G. Thomson,* woollen manufacturers, Huddersfield, nor do the advantages of the system seem to be proportionate to the loss resulting from the hampering of the management which the scheme entails.

Profit-sharing: under what conditions successful.

519. Mr. Ludlow,(2) referring to the profit-sharing principle, pointed out that its successful operation demanded perfect mutual confidence. If introduced by an employer on the morrow of a strike in order to get more out of his men, it is bound to fail. A very remarkable example of profit-sharing, he added, is furnished in the case of Brownfield's Guild Pottery, Staffordshire, where a record of 70 years free from strikes proves the existence of the essential condition of mutual confidence; 350 men, women, and children, he said, share profits, and have subscribed 2,000*l.* towards the capital.

2. HOURS.

(i.) *Statements of Hours.*

Overtime: its disadvantages.

520. Overtime was to be very sternly forbidden under the schemes for State regulation of hours proposed by Messrs. Webb(3) and Hyndman(4), the former of whom characterised it as a costly and inefficient expedient. But it was from Mr. Allan(5), of the firm of Messrs. Allan and Co., Sunderland, that there came the severest strictures on the subject. Overtime, he said, is an economic absurdity, for it is ridiculous to define the number of hours worked per day when that number is being systematically exceeded. The system is responsible for the idleness, or only partial employment, of a large number of workmen; it fosters a spirit of discontent in the breasts of those who do not get the extra work. The overtime system should be discouraged by all trades unions, if only because irregularity of employment is its inevitable result. No man can work overtime without physical degeneration, physical degeneration produces discontent, and discontent causes strikes. [§ 520.]

Sunday work.

521. Dr. Gritton, who is the vice-president of the Lord's Day Observance Society of London, put in certain tables,(1) which he had prepared specially for the information of the Commission, exhibiting the variations in the amount of Sunday labour performed in 17 different branches of industry. The general result of those tables is given by the following specimen:—

TABLE showing the STATISTICS of SUNDAY WORK in 17 INDUSTRIES.

Character of Factory.	1. No. of factories.	2. Limits of size. Employing.	3. Whole number of men employed.	4. Employed on Sunday.	5. Percentage of Sunday work.
Brewing	198	2 to 1,400	7,653	617	8·07
Brickmaking	17	5 to 850	2,337	21	0·89
Building	5	35 to 850	1,715	4	0·23
Chemicals	143	2 to 920	10,491	249	0·10
Cotton	492	7 to 1,845	145,329	249	0·10
Engineering—					
Electrical	18	12 to 1,200	2,830	58	2·05
Mechanical	84	5 to 5,297	24,168	164	0·71
Municipal	43	7 to 800	5,756	460	7·99
Gas	292	2 to 8,840	30,477	5,506	18·00
Glass	45	6 to 1,800	5,951	99	1·66
Hardware	55	2 to 600	7,324	30	0·41
Iron and Steel	112	5 to 4,500	34,242	3,127	9·13
Linen	22	6 to 3,000	8,891	7	0·08
Mining	283	5 to 6,249	77,057	1,549	2·01
Pottery	48	3 to 1,130	9,360	79	0·84
Shipbuilding	75	4 to 7,272	59,999	86	0·14
Woollen	268	5 to 1,150	55,803	113	0·20
Total	2,200	—	489,383	12,705	2·59

The amount of Sunday labour to ordinary days (columns 3 and 4) is 2·59 per cent.
Extremes of Sunday work (column 5) are: linen, 0·08, and gas, 18·00 per cent.

It appears from these tables that the variations are considerable. In some cases, the number of the workers employed on Sunday is only 1 per cent., while in others it is as large as 18 per cent. The prevalence of Sunday work is due, sometimes to the men's desire to get the higher wages paid for it, sometimes to their preference to take their holiday on a day when public-houses are more freely accessible, and sometimes to want of energy on the part of employers in adopting the best means to diminish it. In the case of gasworks, it is pleaded that Sunday work enables the public to be supplied at a lower rate than would otherwise be the case; but the economy effected in this way is infinitesimal, amounting, according to Mr. Livesey, to less than three farthings per 1,000 feet on the whole of the gas. Of the 10,000 forms of inquiry issued by the witness, 7,000 failed to elicit replies, and as these probably represent the worst cases, the average number of workmen, given in 2,200 returns as amounting to 2.59 per cent., is probably considerably below the actual average for the whole country. The large firm of Messrs. Hawthorne, shipbuilders and engineers, Newcastle, employing more than 3,000 men, has managed to abolish Sunday work altogether. The witness considered all Sunday work above the minimum arrived at by the best firms to be unnecessary, and he desired the Commission to express the same opinion. He had, however, no hope that further legislation in regard to the observance of Sunday would be more effective than the legislation which already existed, but was broken and despised.(2)

(1) Appendix LXXXIII. (2) Digest, p. 32.

(ii.) *Limitation of Hours by Law.*

[§ 522.] The movement for shorter hours: its objects.

522. It appears from the evidence given by Messrs. Tom Mann,(1) S. Webb,(2) and H. M. Hyndman,(3) that the movement for shorter hours has two main objects:—1st, employment of the unemployed; 2nd, less work for those employed already. In opposition, it is contended that the first would not be attained by the proposed means, and that the attainment of the second would involve economic loss. Messrs. Mann, Webb and Hyndman, accordingly, argue: 1st, that neither contention is proved; and, 2nd, that, even if true, they do not affect the desirability of the proposed reform, which rests on non-economic as well as on economic grounds.

Shorter hours, and the absorption of the unemployed.

523. The economic arguments affect two issues:—First, the employment of the unemployed; and, secondly, the effect of shorter hours on the cost of production. With regard to the first, Mr. Webb (4) stated positively that the result of a shortening and regulation of the hours of labour would be to create vacancies in permanent and well-organised industries for persons now employed in casual and irregular ones. Mr. Hyndman,(5) however, confessed to a doubt as to whether a permanent absorption of the unemployed would take place, in view of the improved machinery which the proposed reform would induce manufacturers to adopt. Mr. Mann's (6) evidence on this point was to the following effect:—In trades where the reduction of hours diminished the daily production per man, the desired absorption would take place, provided that prices were not raised and the public demand checked in consequence. Prices, however, would so rise unless the reduction of hours was supplemented by a re-organisation of industry in the hands of the State, for unless the wages for the additional hands required came out of the pocket of the public in the form of higher prices, they must be provided out of the fund appropriated to interest and profits, and private employers would rather leave a demand unsupplied than supply it on those terms. At the same time, if employers were to voluntarily raise their wage bills by employing more hands to produce the same output at the same price, the stimulus given to industry by the increase in the workers' purchasing powers would cause an improvement in the mechanical arts of production which would be more than sufficient to recoup them for their loss. Again, in trades where the reduction of hours so far improved the efficiency of the workers as to positively increase the daily output per man, an absorption of the unemployed would take effect, provided that organised effort proved sufficiently powerful to raise the wages and increase the purchasing power of the workers, thereby creating a new demand, which additional hands would be wanted to supply. The assumption on which the argument here given is based in both cases, is that a transfer of purchasing power from capitalists to workers would result in an increased total consumption, for it is unlikely that the former would reduce their expenditure to the same extent as the latter would increase theirs. In answer to these arguments, however, it was pointed out by Mr. R. Giffen (7) that the experience of strikes has shown that a diminution of the output per worker has not only not caused an absorption of the unemployed, but has had the effect of throwing out of work members of other trades that are dependent for their employment upon the work of the trade whose members have struck. Mr. T. W. Bushill,(8) also, stated that the recent reduction of the hours of labour at his own works from 54 to 50 per week had caused no diminution of the production, and that no such diminution would result from a general reduction of hours throughout the manufacturing trades. He concluded, therefore, that such a general reduction would not be accompanied by an absorption of the unemployed.

Shorter hours and the cost of production.

524. As to the effect of shortening of hours upon the cost of production, Mr. Webb(9) said that, even if it were admitted that the cost would be raised, such an increase of cost would not necessarily be followed by either a fall in wages or a reduction in the public demand, causing a diminution in the amount of commodities produced. Unless the price were raised, he contended, demand, production and wages would remain the same, and the loss would fall exclusively upon interest and profits. And that prices would not necessarily be raised is proved by the fact that the increased cost of working railways, caused by a shortening of hours, has not been followed by a rise of fares. A reduction of profits and interest, moreover, would not necessarily either check the accumulation, or cause the emigration of capital. The rate of interest is only one of the many potent influences that cause capital to be accumulated, and there is no danger of a larger proportion of English capital going abroad so long as the gap between the rates of interest paid in foreign countries and those paid at home continues to become narrower instead of wider. And, as a guarantee that it will not become wider, there is the fact that other countries are rapidly following in our footsteps along the path of labour legislation. Mr. Webb pointed out, however, that the admission which he had made at the outset to the effect that a shortening of hours would cause a rise in the cost of production was merely hypothetical,(1) and that economists had hitherto been loth to commit themselves to any definite expression of opinion with regard to what is popularly known as the eight hours' movement, doubtless owing to the extreme difficulty of prophesying its economic effect. Mr. Tom Mann(2) contended that it was unlikely that a reduction of hours would injure us even in respect of our trade with other nations, inasmuch as our competitors are moving along the same course of social legislation as ourselves, and it is not in spite, but because of the relatively shorter hours worked by British labourers, that British commerce has occupied for so long a time its leading position. The textile operatives of Yorkshire, for example, do not fear, and have no cause to fear, a reduction of their hours to 48 per week while their French competitors are working 66. Again, even if the proposed reduction did result in a loss of foreign trade, Mr. Mann contended that British employers would find ample compensation in the development of the latent purchasing power of British workmen. Important as our foreign trade is, he urged, it is the fact that it absorbs a disproportionately large amount of the products of our industry. Too much both of our goods and of our capital goes abroad, when there are plenty of persons at home to be supplied with the former and employed by the latter. The depression of English trade is due to the failing credit of the foreign countries for which we cater. The trade we might do at home would not be liable to depression from causes external to ourselves, and it would, therefore, be desirable to be rather more self-supporting. Messrs. Mann(3) and Hyndman(4) agreed with Mr. Webb(5) in considering that, whatever increase in the cost of production there might be, it would not fall upon wages, the latter pointing to the fact that rises in wages and reductions in hours have always been concomitant. On the other hand, Sir T. Farrer(6) contended that, for certain classes of the community, an eight hours' day would be simply out of the question, and that Mr. Mann had failed to show how his proposed reform could be effected without trenching either on the wages of those employed already or on the profits of employers to an extent sufficient to drive capital out of the country. Mr. Giffen,(7) moreover, explained that, though reductions in hours and rises in wages might have gone together hitherto, it was only because such reductions had been made in consequence—not in defiance—of economic conditions, and were really only another form that rises in wages had assumed. In fact, he added, a legislative interference with the hours of labour must, on purely economic grounds, be pronounced either unnecessary or injurious. It is unnecessary in trades where additional leisure is an economic advantage, for in such cases the hours are being reduced spontaneously, and in trades where additional leisure would involve economic loss, it is a mere tautology to say that it would be economically injurious. To throw the burden of such loss upon profits and interest would be impossible, for an attempt to do so could only result in the withdrawal of the capital, which it is only just worth while to utilise for the purpose of employing labour at the present rates of interest and in the consequent increase of competition in the labour market of workers thrown out of employment.

[§ 524.]

Non-economic arguments concerning shorter hours.

525. Putting economical considerations aside, however, Mr. Giffen(8) himself thought that, on social and humanitarian grounds, it might possibly be expedient to invite the legislature to consider the advisability of limiting the hours of labour in certain specified trades. Mr. Hyndman(9) went so far as to say that no trade was worth retaining at the cost of the physical deterioration of the workers, and Messrs. Webb(10) and Mann(11) both insisted on the raising of the workers' standard of life being an end desirable for its own sake, apart from economic considerations. It is noticeable that Mr. C. Booth (12) did not view the possible extinction of the so-called "sweating" trades with complacency. According to him, the problem was to get rid of the surplus workers, and to improve their efficiency, without boycotting "sweated" goods in such a

(1) Digest, p. 16, and Appendix LXXI. and LXXII. (2) Digest, p. 22, and Appendix LXXIII. (3) Digest, p. 23. (4) Digest, p. 22. (5) Digest, p. 23. (6) Digest, p. 16. (7) Digest, p. 43. (8) Digest, p. 35. (9) Digest, p. 22.

[§ 525.] way as to immediately extinguish the industries that produce them. In fact, he considered that a legal limitation of the hours of labour could not be expected to solve the problem by itself, and, although, like Messrs. Webb, Mann, and Hyndman, he did desire it, he desired it only as part of a general scheme of reform. The objection to a policy of suppression as applied to "sweating" was put more forcibly by Sir T. Farrer,(1) an opponent of the eight hours' movement. Nobody, he said, would defend the "sweating" system, *i.e.*, the principle of squeezing the utmost pennyworth of work out of the poor and helpless. But it is very difficult to state a formula for suppressing it. To refuse to buy "sweated" goods would oblige us to precisely define what "sweated" goods are, and, while raising our own expenses, would leave the personse engaged in their production to starve altogether. Suppose, for example, we were to refuse to purchase Indian corn because the Indian ryot was insufficiently paid, the only result would be to starve the ryot as well as ourselves. Mr. Webb,(2) however, thought that the effect of a reduction of hours on the "sweating" trades would cut both ways. It might make them unprofitable, but it would certainly create vacancies in permanent and well organised industries for persons now employed in casual and irregular ones, and so would raise the standard of life among the workers generally, to the great improvement both in their industrial efficiency and in their character as citizens.

State regulation: its expediency.

526. Granting the expediency of reducing the hours, whether on economic grounds or on humanitarian grounds, or on both, the next question considered was whether it was necessary for the State to interfere. If it was economically advantageous to all concerned, Mr. Giffen(3) thought it would come of itself, and that legislative action was, therefore, unnecessary. But Mr. Webb(4) pointed out that the economic effect was so far from obvious that theorists did not venture to offer any prediction on the matter, and that, owing to this uncertainty, the proposed reform would not come of itself without a struggle. The trades unions, it is true, might conduct such a struggle, but that the matter should be left to them is undesirable on three important grounds: First, because trades union action is more effective among well organised workers than among the less fortunate ones, that need help the most. Secondly, because it generally involves an expensive strike which, even if successful, leaves no guarantee that the advantages gained in good times will not be taken away in succeeding periods of depression. And, thirdly, because it excludes an important party to the transaction, viz., the public, from a voice in the matter. It is quite possible for the trades unions and the employers to mutually agree upon a shortening of hours for the express purpose of taxing the public, and an Act for Parliament is the only medium through which the consent of the public to be so taxed can be expressed. The superior efficacy of Parliamentary to trade union action was also pleaded by Mr. Mann,(5) who added that the use of trade union power would not be a means of preserving the liberty of the individual in respect of his hours of labour, for the simple reason that such liberty was irrevocably lost already.

State regulation: methods of applying.

527. Assuming, therefore, the expediency of State interference, the witnesses made the following suggestions as to how the desired Act of Parliament should be drafted.

(i.) Mr. Hyndman's scheme.

Mr. Hyndman(6) proposed to provide for a strict limitation of the hours of labour to eight per day, or 48 per week, in every trade and every profession, overtime being in no case permitted and the principles of trade and local option being on no account entertained. No other witness, however, was in favour of so extreme a measure.

(ii.) The Trades Union Congress scheme.

Thus, Mr. Fenwick, M.P.,(7) representing the Parliamentary Committee of the Trades Union Congress, said that the present instructions to the said Committee were: "to promote a bill regulating the hours of labour to eight "per day, or 48 per week, in all trades and occupations "except mining,* which Bill shall contain a clause "enabling the organised members of any trade or occupa- "tion protesting by ballot against the same to be "exempted from its provisions."

(iii.) Mr. Tom Mann's scheme.

Mr. Tom Mann's scheme(8) was to pass an Act compelling municipal and county authorities to limit the hours to 48 per week, or less, in any trade within their jurisdiction where a three-fourths majority of the adult workers of either sex demanded it. To meet the case of breakdowns and periods of pressure, local councils, composed of representatives of employers and employed, should be appointed to grant exemptions from the rule. The definition of the limits of each trade should be made in the Act of Parliament. It should include all workers, whether skilled or unskilled, whose services are essential to the prosecution of the trade in question. Labourers employed in more industries than one should have a vote in connexion with each. Provision should also be made for the registration of those entitled to vote for each trade. But the determination of the districts should be left to the workers themselves. That is to say, if the workers employed within the jurisdiction of one local authority considered that it would not be safe for them to reduce their hours of labour until their fellows in a neighbouring jurisdiction did the same, they should wait until concerted action could be arranged. In the application of the Act to agriculture, an exception should be made for harvest time. Mr. Mann characterised a universal eight hours' day on the lines laid down by Mr. Hyndman as inexpedient, and considered that no scheme of State Regulation should extend to persons working as their own employers and not for wages, although, for the more effective administration of a law regulating the hours of labour, he would like the legislature to compel employers to provide factories for their workpeople instead of giving out work to be done in domestic workshops. [§ 527.]

(iv.) Mr. Webb's scheme.

Mr. Webb's evidence(1) on the point was as follows:— The desired Act of Parliament should not take the form of an enactment limiting the hours of labour throughout the country to eight, or to any specific number indiscriminately, and without regarding the peculiar circumstances of trade and district. Such a law would not be workable. But it should take the form of an amendment to the Factory Acts, empowering the Secretary of State responsible for the administration of those Acts to make an order regulating the hours of any trade that seemed to require it. Before making such an order, he should ascertain the views of the majority of those concerned in the trade in question, and, in order to ascertain these views, he might adopt the same machinery as is now constantly employed by the Local Government Board for similar purposes. The order once made, however, should be rigidly enforced. While making due provision for cases of emergency, overtime, a costly and inefficient expedient, should be absolutely forbidden, and no district or portion of a trade should be suffered to claim exemption. If a particular district were to be exempted from the rule to which the rest of the trade was subject, a minority would be given an unfair advantage in competing with the majority, and trade would consequently be driven to the district exempted from the rule and working long hours, that is to say, the interests of the best and largest would be sacrificed to the interest of the worst and smallest portion of the trade. The objection to district option applies only to trades where the several districts serve the same market. The case of local industries which do not come into competition with the same industries elsewhere is different, and demands different treatment. Such industries are tramways, shops, &c. In their case, the proposed amendment to the Factory Acts might empower the municipalities and other local authorities, instead of the Secretary of State, to make the order regulating the hours of labour. This order would thus take the form of a corporation bye-law, and would be subject, like other bye-laws, to the veto of the Home Secretary. Mr. Webb concluded by intimating that it would be a grave error to limit the power of the Secretary of State or of local authorities in regulating hours to the case of day workmen, leaving piece-workers exempt, and called attention to the fact that the miners, who were almost all piece-workers, were also the most ardent supporters of the eight hours' movement.

(v.) Scheme approved by Messrs. Giffen, Harford, and Hardern.

Mr. Giffen(2) stated that a legal eight hours' day, generally enforced, would be injurious to the workers, and that trade and local option would be unworkable, owing to the extreme difficulty both of defining the limits of each trade and of effecting the necessary registration of members. The only practicable method, in his opinion, would be to limit the hours of labour in certain specified trades by direct enactment. A proposal based on this principle was made by Mr. Harford,(3) representing the Parliamentary Committee of the Trades Union Congress, who desired an Act to be passed limiting the hours of railway servants to eight per day for signalmen and other specially busy classes, and to ten for the rest, and Mr. Hardern,(4) representing the Co-operative Union, declared that co-operative managers would be opposed to any Eight Hours' Act except one applying to the cotton trade universally, and accompanied by similar enactments on the part of foreign legislatures in respect of the same industry.

* The Witness explained that the exception as to miners was introduced because they did not want the provisions of the separate Bill that they were promoting on their own account to be tacked on to a Bill relating to other industries.

[§ 528.] State regulation: progress of trade union opinion concerning.

528. Mr. Fenwick(1) traced the growth of trade union opinion on the subject of State interference with the hours of adult male labour as follows:—The question was first discussed at the Trade Union Congress at Bradford, in 1888, where the meeting instructed its Parliamentary Committee to take a vote of the members of the various unions on the following questions:—

(*a.*) Are you in favour of an eight hours' working day?

(*b.*) Are you in favour of it being obtained by Act of Parliament?

Only those that voted "Aye" in the first case were supposed to be entitled to vote in the second. In answer to the first question, the number of persons sending replies was 107,046. The total membership of societies taking part in the ballot was 178,376. voting as follows:—"Ayes," 39,656; "Noes," 67,390. In answer to the second, 40,794 replies were returned, of which 28,511 were "Ayes," and 12,283 were "Noes." At the Congress held at Dundee, however, in 1889, a motion to reject the result of the plebescite on account of the unsatisfactory nature of the returns was carried, after a protracted debate, by a large majority of the delegates; but in the following year the delegates assembled at Liverpool were induced for the first time to pass a resolution in favour of a legal eight hours' day. The number of delegates was 457. There were 193 "Ayes," 155 "Noes," and 109 abstentions. At Newcastle, in the following year, the same motion was put, and there was a proportional gain of 52 for the "Ayes"; but at Glasgow, in 1892, the motion was modified by the introduction of the principle of trade exemption, and was carried with a proportional loss for the "Ayes" of 50. The different results of the voting by delegates and by plebescite respectively, is due partly to the different sizes of the constituencies, but chiefly to the different majorities by which the delegates are elected. The present instructions to the Parliamentary Committee are to promote a Bill. regulating the hours of labour, but admitting the principle of trade exemption.

A 48 hours' week: an experiment in working.

529. An experiment in working a 48 hours week has been made by Mr. Allan,(2) a marine engine builder, Sunderland, who explained that the 48 hours rule had been in operation in his firm for 12 months. The daily hours are eight and three-quarters on five days of the week, and four and a quarter on Saturday. No overtime is worked, except in cases of emergency. Between 300 and 400 men are employed. They are all paid by the day. When the shorter hours were introduced, Mr. Allan made an arrangement with the men whereby they should accept a 5 per cent. reduction in wages, to be restored if no loss of production proved to be the result. At the end of six months, the 5 per cent. was restored, there being no loss of production, so that the men now receive as much for the 48 hours as they did formerly for the 53 hours per week. In fact, the men did not really do more than 48 hours' work per week under the old system. They are now much more punctual, and the improvement in this and other respects, visible at the time of the change, is being steadily maintained.

3. STATE AND MUNICIPAL EMPLOYMENT.*

Division of the subject.

530. State and municipal employment was regarded by Messrs. Mann,(3) Webb,(4), and Hyndman,(5) representing the "collectivist" school, from two distinct points of view. They regarded it, first as a political principle, and afterwards as a political programme, and though from both points of view they advocated its extension, they did so from each point of view in a different degree. The principle was defined by Mr. Webb, as being "the subjection of all industrial relations to the "deliberate and conscious control of the State." And, as a step towards the ultimate realisation of that principle, it was desired to organise all local industries under local political authorities, both municipal and county. But complete municipalisation and complete nationalisation of industry were alike excluded by the witnesses from their immediate political programme.

The collectivist programme.

531. Now, though that programme consists entirely of a series of attempts to apply the collectivist principle defined above to existing industrial conditions, it contains certain items which future programmes, based on a more complete application of the same principle, would contradict. Thus, Mr. Mann declared his present policy to be to assist the existing tendency towards the formation of syndicates, trusts, and rings. While admitting that these combinations had often been productive of great evil, where unaccompanied by "proper combinations on the part of the workers,' he contended that they were worthy of approval both in themselves and as a possible approximation to the collectivist system. So, too, in regard to the relations between the collectivists and the co-operative movement. Both Mr. Mann(1) and Mr. Hyndman(2) declared it to be their present policy to support co-operative societies. The latter, however, used the term co-operation in a sense apparently synonymous with collectivism itself. While objecting to anything likely to convert the workers into small capitalists, he declared that both strikes and periodical depressions of trade must continue to recur until the community adopts co-operation instead of competition as the basis of production. Whatever be the meaning attached by Mr. Hyndman to "co-operation" in this passage, he definitely declared himself to be a supporter of co-operation in the true sense when he was explaining his immediate practical proposals. The State, he said, should at once proceed to establish a connexion between all its industrial enterprises and the co-operative societies. Mr. Mann(3) expressed a wish that productive co-operative societies would rise up in sufficient strength and number to compete with firms that act unfairly towards their workmen and the public. This witness was, however, an advocate of common as opposed to sectional control rather than of any particular collectivist system, and he stated in the course of his evidence that this common control could be brought about equally by State and municipal organisation of industry, and by the extension of co-operative or trade union effort regulating industry in the common interest. Mr. Maxwell,(4) representing the Co-operative Union, was quite ready to welcome an alliance between the co-operative and the collectivist movements, but, as he was careful to point out, only up to the point where their interests became mutually antagonistic. Municipalities, he said, should be encouraged to undertake the direction of productive industry, but only in those spheres in which co-operation has failed or cannot hope to succeed. He did not know, he added, of any industries as applied to which co-operation was certain to fail. If there were any, he would support the claim of municipal or mutual organisations to undertake them as against the claim of individuals or companies, since municipalities and Government partake of the nature of co-operative organisations in so far as they are representative of the people. But no municipality or Government ought to compete against, or to supplant, voluntary co-operative effort. It would seem to be essential, therefore, in summarising the evidence given under this head, to keep the portions relating to the collectivist principle and the portions relating to the collectivist programme as far as possible distinct, although it is, perhaps, equally important to bear in mind that the distinction is based upon the fact that the programme is provisional whereas the principle is permanent.

[§ 531.]

State ownership and administration of railways.

532. The programme, as sketched by the witnesses, is as follows:—State ownership and administration of railways and canals; municipal ownership and administration of land, water and gas supplies, tramways, artisans' dwellings, hospitals, and docks, and the establishment by municipalities of factories and workshops. State ownership and administration of railways was advocated by Messrs. Mann, Webb, and Hyndman. In reference to this point, Mr. Mann(5) said: It is expedient, in the interests of the workers and the public, who control the Government, for negotiations to be opened without delay by the Board of Trade or some other Department of State with the view of taking over the management of railways. Instead of consulting the interests of a body of shareholders, the public authority should aim both at making travelling as cheap as possible, and also at releasing railway employés from the long hours and other hardships which they are at present called upon to endure. The fact that the State railways in foreign countries compare, in some respects, unfavourably with those managed by private companies in this country does not weaken the case in favour of public control, because in those countries public opinion is not sufficiently powerful to keep the industrial policy of the various Governments on the right lines. Mr. Webb's(6) evidence was to a similar effect. He said: A desirable extension of the States' industrial functions would be the acquisition of railways, which are already subjected to a good deal of State regulation. They should be taken over by purchase under the Lands Clauses Consolidation Act. Considerable portions of the German railway system have lately been taken over by the State, and both Government and nation are satisfied with the result. One great

* A schedule of questions with regard to State and municipal employed labour has been issued by the Commission. A memorandum on the information obtained is printed as an Appendix on pp. 457-471 of this volume.—G. D.

(1) Digest, p. 26. (2) Digest, p. 33. (3) Digest, p. 16, and Appendix LXVIII. and LXIX. (4) Digest, p. 19, and Appendix LXXIII. (5) Digest, p. 23.

(1) Digest, p. 17. (2) Digest, p. 23. (3) Digest, p. 17. (4) Digest p. 12. (5) Digest, p. 17. (6) Digest, p. 20.

[§ 532.] advantage of such a change being adopted in this country would be the opportunity of reducing the excessive and criminal hours now worked by railway employés. Where such hours are now worked the State might fairly demand an abatement in the purchase price, just as if it were taking over a house in a bad sanitary condition. No harm would result from the substitution of a single public monopoly for a number of competing companies. A monopoly in private hands is, no doubt, not so efficiently conducted as an undertaking that has competitors to face, as is proved by the comparative inferiority of the southern railways, where competition is slight, to the northern railways, where it is severe, but the case of a monopoly in the hands of the public authority is different. Mr. Hyndman[1] also expressed himself as follows: The first industry that the State should take over is the railways. They are the great highways of the country, but they have been converted by capitalist Houses of Commons in the past from being worked in the interests of the community to being worked in those of shareholders and directors. The cost of the acquisition by the State of this vast property would probably amount to about 1,100,000,000*l.*, but the money would be well spent. On becoming possessed of the means of transport, the State should at once proceed to reduce its cost. At present the English railways are managed far less economically than those of other countries. The New York Central Railway,[2] for example, compares very favourably in this respect with the London and North Western. During 1891, the average train loads on the former line were 250 tons, and the working expenses ·285*d.* per ton per mile; whereas on the latter the average train loads were only 65 tons, while the working expenses amounted to ·658*d.* per ton per mile. Yet, on the English line, 77 per cent. of the goods traffic is in minerals, whereas on the American line only 30 per cent. is so composed. The New York Central Railway, moreover, pays higher wages than the London and North Western, and at the same time charges less than one third as much for its fares.

State ownership and administration of canals.

533. State acquisition of canals was mentioned only by Mr. Hyndman[3], and he contented himself with the bare proposal, unsupported by any special facts or arguments.

Municipalisation, proposals concerning.

534. The proposals as to municipalisation were less specific. While including them in their political programme, the witnesses who made them recognised that the expediency of their adoption depended upon the particular circumstances of each municipality. In some cases, the proposals have already been adopted; in others, perhaps, they would be premature. Mr. Webb[4] considered that no industrial enterprise should ever be taken over by a municipality until it could be so taken over with advantage, although, he added, the advantage need not necessarily be pecuniary; and Mr. Mann[5] stated that no municipality should be compelled to assume more industrial functions than it desired, but that they should all adopt a general policy of extension, and that, when they applied to Parliament for powers in furtherance of such a policy, Parliament should show no reluctance to grant them. The following programme was, however, prepared as a sort of working model to guide the action of the municipalities in the immediate future.

Municipal ownership and administration of land.

535. Municipal ownership and administration of land was the first subject considered. In this connexion, Mr. Mann[6] held that Parliament should show a readiness to grant the petitions of county and town councils for power to obtain land from owners at a fair price, to be let out at fair terms, as small holdings to labourers. Mr. Webb,[7] moreover, said that it was, generally speaking, desirable for a municipality to purchase land wherever it was practicable. Whether it should farm its land through a bailiff or let it out to tenants was a mere question of policy and business capacity, to be decided according to the circumstances of each individual case. With reference to London, Mr. Webb considered that, though it would probably pay to purchase the site of the metropolis at present prices in view of a probable rise in its value, it would be better to tax the grounds landlords before buying them out and, by raising the rates, perhaps eventually to 20*s.* in the £, to reduce rents, and so depreciate the property. He also approved of a proposal made by Mr. Haldane, Q.C., to the effect that the land in question should be valued, and the London County Council empowered to take it over at any future time at its value to-day, plus compensation to the owners for improvement. This proposal, he contended, was just, for, inasmuch as any rise in the unearned increment would be caused by the community, the community would have perfect right to intercept it. In opposition to Mr. Webb, Sir Thomas Farrer,[1] a member of the London County Council, quoted the expressed opinion of Lord Hobhouse, who is the chairman of the committee entrusted with the administration of such landed property as the Council already possesses, to the effect that the less of that kind of property the Council had to manage the better. [§ 535.]

Municipal ownership and administration of water supplies.

536. Municipal ownership and administration of the water supply was advocated by Messrs. Mann[2] and Webb[3] as being a practicable immediate reform in many cases. The latter further expressed his opinion that the municipalities should supply the water without charge to the consumers, and pointed out that, even at the present time, there was communism with regard to this commodity, inasmuch as every man used water according to his pleasure, and paid for it according to his means.

Municipal ownership and administration of gas supplies.

537. Municipal ownership and administration of the gas supply also was advocated by the same witnesses.[4] In this case, however, Mr. Webb[5] doubted whether it would be expedient to allow consumers to consume as much as they pleased, irrespective of their payments, although the gain resulting from the abolition of the present costly system of measuring would certainly be great. He pointed out, moreover, that in no single case where gasworks had passed under the management of municipalities in England, had it ever been seriously proposed to follow the example of Philadelphia, U.S.A., and hand them over again to a private company.

Municipal ownership and administration of tramways.

538. Municipal ownership and administration of tramways was also advocated by Mr. Webb.[6] Under certain circumstances, he thought, they ought to run free of charge. Indeed, he considered it probable that the difficult problem of housing the poor of our cities would never be solved without a very liberal service of free public tramways between the centre and the suburbs.

Municipal ownership and administration of artisans' dwellings.

539. Municipal ownership and administration of artisans' dwellings was desired by the same witness.[7] They should, he thought, be provided at an improved quality rather than at reduced rents, inasmuch as the benefit of any such reduction would probably be intercepted in the form of reduced wages by the tenants' employers.

Municipal ownership and administration of hospitals.

540. Municipal ownership and administration of hospitals[8] ought, in the opinion of Mr. Webb, to be extended. They are already, he urged, supported mainly out of the rates, and, inasmuch as private subscription is a very objectionable mode of maintaining public services, they should be supported out of the public funds entirely. Mr. Giffen,[9] moreover, so far supported Mr. Webb on this point as to say that the application of State action and expenditure to the control and endowment of public hospitals would be more beneficial than the application of the same forces to insurance against accidents and old age.

Municipal ownership and administration of docks.

541. Municipal ownership and administration of docks was advocated by Mr. Tom Mann,[10] with special reference to the docks of London. On this point, however, Mr. Webb[11] was not quite in agreement with his fellow witness, for, while approving of the municipalisation of docks as a matter of general principle, in the particular case of London he thought it would be better to entrust the management to a body like the Mersey Docks and Harbour Trust than to a committee of the London County Council, because bodies outside the county of London, such as the municipality of West Ham, are concerned. The Mersey Docks and Harbour Trust, he explained, is elected by the payers of 10*l.* a year in dock dues. This, he admitted, was certainly a very restricted electorate, but the body elected was, at all events, a responsible public authority, formed for the purpose of carrying on its work with a view to the interests of the public rather than of a body of shareholders. Even Sir Thomas Farrer,[12] who, as will appear hereafter, regarded Mr. Mann's scheme of municipalisation, and all similar schemes, with unqualified disapproval, appeared to be supporting Mr. Webb's proposal with reference to the docks of London, when he admitted the necessity of re-organisation under one control, but contended that it should be a control by a body representing the trade, perhaps including the workers, and not by a municipal council. Mr. Mann[13] prefaced the exposition of his own scheme by giving an account of the present organisation of the London Docks, and by pointing out that the Bristol Corporation had formed a precedent for this departure in municipalisation, by purchasing the Portishead and Avonmouth Docks—a circum-

[§ 541.] stance also referred to by Mr. Webb,(1) who stated that although the said Corporation had been obliged to make the purchase at a sum that has caused an annual deficit to occur in the actual dock accounts, they had, in so doing, saved the trade of the Port of Bristol. At present, said Mr. Mann,(2) the Port of London is in the hands of several companies, of whom the most important are the London and St. Katherine's, the East and West India, the Surrey Commercial, and the Millwall, Dock Companies; but, for ordinary business purposes, the London and St. Katherine's and the East and West India Companies are amalgamated under one administrative body, called the London and India Docks Joint Committee. This committee controls the St. Katherine's, the London, the West India, the East India, the Victoria, the Albert, and the Tilbury Docks. The Surrey Commercial Company controls the Surrey Commercial Docks at Rotherhithe; and the Millwall Company, the Millwall Docks at the Isle of Dogs, Poplar. In addition to these docks, there is a small one at Limehouse, under the control of the Regent's Canal and Dock Company; the Poplar Dock at Blackwall, which is the property of the North London Railway Company; and another, small in itself, but with large warehouses, belonging to the Midland Railway Company. Now, the average weekly wage of the 25,000 dock labourers for the whole year is 17*s*, and the difference in the average weekly earnings as between one man and another is determined, not by different rates of payment for different degrees of skill, but by different degrees of regularity in their employment. Thus, 8,000 men earn an average weekly wage of 34*s*.; 5,000, 22*s*.; 5,000, 14*s*.; 5,000, 10*s*.; and 5,000, only 5*s*. Yet, in spite of the irregularity proved by these figures, the disorganisation of the docks is such that it is found impossible to carry on the work of the port unless each separate dock is surrounded by sufficient men to meet its maximum individual requirements. Mr. Booth's proposal that information as to vacancies and facility of transit from dock to dock, should be afforded, is of doubtful practicability, for it requires: First, an agreement to be made on the point among the various employers, of whom some are individuals, some are companies, some sub-contractors, and some gangs of men, but no one of whom poses as a philanthropic body, or is likely to countenance concerted action. Secondly, it requires a fund for the payment of the cost of transit. And, thirdly, it requires an obliteration of the feelings of resentment with which a workman from a strange dock is regarded by both employers and employed. Regularity of employment, therefore, can be guaranteed, so Mr. Mann concluded, only by substituting a common authority for the present sectional control, and by making the dock area more compact. The employers(3) themselves, he added, are favourable to the settlement of of some common control, but they want it to take the form of a dock trust, such as has been formed in the cases of the Clyde, the Tyne, the Wear, and the Mersey, whereas, under the scheme about to be proposed, the management is given to the London County Council, as more representative of the workers. The scheme(4) is as follows:—First, for the Government to hold a public inquiry into the present administration of the Port of London and the relations of that Port with its competitors both at home and abroad. Secondly, for the London County Council, furnished with the knowledge afforded by the said inquiry, to apply to Parliament for power to take over the docks by compulsory purchase, and to borrow the necessary funds. Thirdly, for the Council, on entering into possession of the property, to put into execution the engineering scheme drawn up and put in evidence by Mr. Mann himself, and approved of by Mr. Cheesewright, an engineer well known in connexion with dock work, who estimated the cost at 6,684,000*l*., excluding the purchase of land. The effect of the execution of this vast work was explained by Mr. Mann to be to bring the docks nearer together and nearer to the centre of distribution, thereby obviating $\frac{1}{20}$ of the work of reloading into trucks and lighters, and so enabling the work of the port to be performed with 7,000 fewer men than are at present required, and 11,000 fewer than are at present hanging about the docks. As to the expediency of effecting this saving of labour, Mr. Mann contended that the employment at present furnished in connexion with work that the adoption of the scheme would make unnecessary was very irregular, and, therefore, had better not be furnished at all, inasmuch as it calls into existence a class of workers whom it cannot enable to live decent lives. Fourthly, for the Council to cause all its dock employés to be registered, and to give all the men on the register permanent employment and a complete monopoly of the work. "Casual" labour would thus be entirely abolished. The construction of the new docks, however, would furnish seven years' employment to the "casuals" displaced, and at the end of that time they would be absorbed into other industries, where a regulation of the working hours would create vacancies for them, unless, as is hoped, the trade of the Port of London increased sufficiently to provide them with places on the regular staff of the docks. In any case, the difficulty of dealing with the "casuals" would only be temporary, for men would no longer crowd to the docks from other parts of the country on the chance of work when there was no longer any chance at all. Sir Thomas Farrer's criticism(1) on this scheme was as follows:—Mr. Mann's proposal, he said, is open to many grave objections. Apart from the engineering and financial difficulties of the scheme, which appear to be very great, its adoption would, according to Mr. Mann's own admission, involve the discharge of about 12,000 men. Furthermore, whether compensation be paid for the displacement of the existing docks or not, the capital invested in them would in either case be wasted. Again, the scheme would increase the local congestion of traffic, and would necessitate the making of new thoroughfares to relieve it. The dangers of navigation, moreover, would be intensified by bringing the large steamers up so high. And, finally, it is very doubtful whether the County Council would manage the docks so well as the existing authorities. For years, there has been a constant struggle to transfer docks, harbours, &c., from the hands of municipalities to those of dock and harbour trusts or other bodies representing the trade, because the former used to make use of their control of the highways of commerce to tax the trade of the country for the benefit of their own ratepayers.

[§ 541 7]

Municipal ownership and administration of factories and workshops.

542. The last item in the collectivist programme, as presented to the Commission in the division of the evidence at present under review, was the establishment by municipal bodies of factories and workshops, &c., for the performance of their own productive work, instead of giving it out to contractors. According to Messrs. Mann (2) and Webb,(3) the first step in this direction should be for municipalities to manufacture clothes for the use of their own servants, the latter pointing out that this reform stood on a different footing to the rest, in that it involved the principle of opening new businesses instead of merely acquiring businesses started by others. This proposal was criticised by Sir Thomas Farrer(4) at some length. He said: While there is no doubt that a public body is placed at a disadvantage as compared with a private individual in dealing with its contractors, inasmuch as any subsequent modification of the contract is made the subject of criticism and suspicion, yet the dangers and difficulties surrounding the alternative plan of the public body undertaking the direct conduct of its work are far greater and more numerous. In cases where machine work is a large element of the cost, all the conditions that make the intervention of a contractor beneficial are present. There must be an adequate superintending staff and a sufficient body of permanent foremen, and on their efficiency the success of the application of the machine labour and the satisfactory execution of the work must depend. There must be an adequate plant and suitable buildings suitably situated. That plant must be adequately and regularly employed, so as to be up to date and in the highest efficiency, and it must be renewed and replaced so as to be in line with every improvement and every fresh substitution of machine for hand labour which is the chief characteristic of modern production. Now, if we assume that a public body excludes the contractor and takes his place, then it must adopt these special conditions. There will be small room for saving the contractors' profits, for adequate industrial prizes in the shape of high reward and remuneration must be given to the staff if the best men are to be secured in competition with analogous private enterprise. Again, regular employment must be provided. A public body cannot undertake private work as a stop-gap, and workshops that stand still are quickly out of gear. If work does not come naturally, work must be made, and whatever objection may be urged against the performance by public bodies of their necessary work, applies with still greater force to their performance of work for which there is no demand. Sir Thomas Farrer's argument on this point was repeated by Mr. C. S. Loch,(5) the Secretary of the Charity Organisation Society, who deprecated the establishment of municipal workshops on this very ground, that the employment they would provide would be outside the market demand, and would therefore involve a large cost to the ratepayers. Members of trades

[§ 542.] unions, he added, naturally desire to see the unemployed provided for at the public expense, but to comply with this desire would be to increase the pauperised class which it is sought to eliminate, and to enable the worst class of labourers to compete at an advantage with the class immediately above them. Sir Thomas Farrer,[1] proceeded to point out the evils resulting from the non-competitive character of municipal enterprise. Public and municipal production, he said, means the reduction and extinction of all the conditions that make for competition, and there is scarcely an industry which does not depend upon competition for life and progress. In a few, the stages of rest may be of some duration, but the general tendency of all is to recast the methods of production, more or less radically, from year to year. A varied demand and a vigorous competition can alone create and maintain that wholesome state of progress, which, in a purely industrial community, struggling with rivals in all quarters of the globe, is the sole condition of existence. Probably in 10 years, the most modern and costly plant, and the most advanced and enthusiastic staff, would have dropped hopelessly behind in the industrial struggle, if limited to employment by public bodies and upon public work. Yet again, in cases where hand labour is the leading element of cost, the system of contracting is especially advantageous because of the extra need of the master's supervision. Hand labour, unlike machine labour, furnishes wide room for misapplication and waste of labour, and for variations in the quality of labour. It is, therefore, universally found to require exceptional care in organisation and control, and such care cannot be reasonably looked for where no adequate interest in its exercise is involved. The contractor stands to lose as well as to win. The workman knows this to be the case, and he knows further that the contractor is his unfettered employer, and is resolved to get full work for full wages under penalty of discharge. If the case were one of a public body, employing directly a more or less permanent body of workmen, supervised by salaried officials, the conditions would rather favour "nursing the job" than its prompt and economical execution, and the stimulants and checks of the contract system would be wanting. The public body cannot lose. The officials and the workman know this also, and regulate their conduct accordingly. For all these reasons, the direct conduct by municipalities of productive industrial enterprises is undesirable.

Municipal policy in the conduct of industrial undertakings.

543. No further immediate proposal was made by any of the witnesses. Evidence was given, however, as to the policy which the municipalities ought to pursue with reference to the management of these industrial undertakings. In order to obtain the necessary funds, they should, according to Mr. Webb,[2] both increase the burden of rates on the owners of real property and raise loans on the security which the rates afford. And, in regard to their employés, both Mr. Webb and Mr. Mann agreed in thinking[3] that they should set a good example to private employers by keeping their wages, if possible, slightly in advance of those paid by the best paying firm in the same line of business in the town—a policy which should be easy for them, because they would be relieved from the necessity of making profits. They should also endeavour always to arrange their work in such a way as to dovetail with the experienced irregularity of employment under private firms, and even go so far as to anticipate future work in order to provide employment for those out of work at present, Mr. Webb adding that the predicament where the municipalities would no longer have any work to give the unemployed was very remote, because their sphere of industrial action could be extended indefinitely. Boards of guardians,[4] moreover, should no longer confine themselves to granting charitable relief, but should make some kind of reasonable and honourable provision for exceptional cases of temporary distress, inasmuch as public charity is only one degree less demoralising than private, and should be resorted to only in the very last extremity. Private employers, Mr. Webb went on to say, might, and in some cases do, do much good in the direction here indicated. But, even if they did as much as could be desired, the municipalisation of industry would still be advisable, for whatever reforms are effected by a municipality in the condition of its employés are really effected by the employés themselves, inasmuch as they form the majority of the electorate constituting the municipal authority. The workers are thus virtually their own employers, and, as such, have responsibilities which tend greatly to elevate their character. As their own employers, moreover, they can guarantee that the advantages in the matter of wages and hours, &c., which they have gained in good times, will not be taken away from them in bad without their consent. Such, at any rate, is the experience of municipalities at the present time. Mr. Tom Mann[1] further stated that, while conducting their industrial enterprises on the lines here laid down, the municipalities should at the same time endeavour to save enough in their corporate capacities to provide funds for still further extensions in the future, with a view to ultimately becoming both proprietors and managers of all industrial undertakings within their jurisdiction. Many of the arguments urged against this policy are to be found in Sir Thomas Farrer's evidence on municipal workshops summarised above. Additional arguments are given in the course of his criticism of the industrial policy of the London County Council,[2] which is, in many respects, modelled on the principles laid down in the preceding paragraph. That policy, he contended, was not only unjust to the ratepayers, but would involve a private firm in bankruptcy. It consists in an attempt to raise wages artifically in defiance of the fact that both wages and profits must ultimately be paid out of the produce, and that it is only by increasing production that wages can be permanently and universally raised. It is impossible to divide a shilling amongst 12 men in such a way as to give 2*d.* to each. Not being able to make its high wages universal, the council must necessarily pursue a policy of favouritism in taking workmen into its service. In order to restore the balance, moreover, the council associates with its policy of overpayment as applied to manual labour, a scarcely less pernicious policy of underpaying mental labour. On these grounds, therefore, the policy must be condemned. [§ 543.]

The collectivist principle.

544. It is now necessary to turn from the collectivist programme to the collectivist principle—the principle of subjecting all the industry of the country to the conscious and deliberate control of the political authority. Three witnesses, Messrs. Mann, Webb, and Hyndman, defended the principle, and one, viz., Sir Thomas Farrer, attacked it. The three collectivist witnesses, however, while supporting the same general conclusion, arrived at it by somewhat different, through not mutually inconsistent, arguments, and, for this reason, it seems advisable to treat the evidence of each of them separately.

Mr. Hyndman's theory.

545. Mr. Hyndman's evidence,[3] being not so much a defence of the collectivist system he advocated as an attack upon the individualist* system he desired to supersede, may most conveniently be summarised first. It is to the following effect:—The whole system of relations between the various parties in the industrial world is based upon a series of antagonisms, a state of affairs which is little short of anarchical. First, there is an antagonism between the wage earners and the owners of the instruments of production, the former desiring to increase wages and the latter to keep them down. Secondly, there is an antagonism among employers competing for profit. Thirdly, there is an antagonism between the over-organisation of the armies of production and the entire absence of regulation in regard to distribution. Fourthly, there is an antagonism between the commodities themselves and the money which forms the medium of exchange, the means of payment and the standard of value. Fifthly, there is an antagonism between producers and middlemen. And, lastly, there is an antagonism between town and country. Strikes are the unconscious manifestations of the revolt of the wage earners against their conditions of life. So, too, the periodical depressions of trade—we are now suffering from the ninth that has set in during the present century—are the unconscious manifestations of the incapacity of the capitalist and employing class to handle the vast machinery of modern production to the advantage of the community. Both strikes and periodical depressions of trade must, therefore, continue to recur until the community adopts co-operation instead of competition as the basis of production.

Mr. Mann's theory.

546. Mr. Mann[4] expressed a similar view somewhat more fully. He said: Most of the evils at present discernible in the industrial world, the waste and misdirection of the forces of production, and the disproportionate distribution of its rewards among its various agents, are attributable to the survival of an over-sectionalised system of control. A public authority would be able to organise the various sections of every trade in such a manner as to remove the anomaly whereby the overworked and the unemployed are existing side by side, and, by so doing, to

(1) Digest, p. 25. (2) Digest, p. 20. (3) Digest, pp. 17 and 21. (4) Digest, p. 21.

* That the term "individualist" as applied to the present industrial system is to a large extent a misnomer, will appear from what follows especially in the evidence given by Mr. Webb.—G. D.

(1) Digest, p. 17. (2) Digest, p. 25. (3) Digest, p. 23. (4) Digest p. 16.

[§ 546.] make effective the latent demand for goods among those who now cannot afford to purchase what they need. Of the two possible alternative methods of dealing with this cardinal difficulty, the system of paying high enough wages during good times to enable the workers to maintain themselves in idleness during bad, involves a frightful waste of human energy, while the remedy of emigration would do nothing to prevent the fluctuations of trade that throw men out of work, deprive their demand for goods of its effectiveness and so intensify the evils out of which they arose. The present tendency(1) in the direction of substituting centralised for sectional control is, therefore, to be encouraged, although it must be remembered that a limit is placed upon the expediency of extending the functions of any public body by the mental and moral make-up of its constituents. The only kind of public authority, in fact, that can be trusted to realise the collectivist ideal in its completeness is one that is properly representative of a perfectly educated and enlightened community, and the true essence of that ideal is the development of the perfected individualism which is its necessary environment. But, granted these conditions, the full realisation of collectivism would not involve any of the evils usually predicted to result, and would enable much good to be done in preventing fluctuations of trade, irregularity of employment, and other attendant evils. The elimination of mercenary motives would not check the progress of science and the performance of good work. Public spirit has always been at least as powerful a stimulant as self interest to the production of the best work. Mr. J. H. Mill wrote:—"Education, habit, and the cultivation of the sentiments "will make a common man dig or weave for his country "as readily as fight for his country." No harm is likely to result from the undue exercise of their political power on the part of employés of public bodies, for difficulties of this sort are not increasing, but decreasing concomitantly with the extension of municipal and State management of industries. The disappearance of the personal relationship between employers and employed, which is the inevitable result of the substitution of corporate for individual management, is, no doubt, a distinct loss, but it is a means of transition towards something which is much better, and the same may be said of the existing tendency towards the formation of syndicates, trusts, and rings. The concentration of industrial functions in the State would cause the forces of production not only to be applied economically, but also to be applied to the right objects. Some industries are at present devoted to the production of articles that are useless, and, in some cases, positively mischievous. Under a reformed organisation of trade, the more enlightened portion of the community would be able to use the State machinery to give effect to its opinions in the industrial as it already does in the political sphere, and so to prevent the worst portion of the community being catered for. Pernicious literature is a conspicuous example of the misdirected enterprise which State control could prohibit. Yet Mr. Mann at the same time stated that "so long as the public demand" was "apparent," the State should not interfere in this direction, except indirectly "by educating the public taste." Again, the State(2) would turn into more profitable channels the energy now expended in fighting against nature and bolstering up decaying industries. The present condition of agriculture affords a conspicuous object lesson of the failure of sectional control. As foreign nations increase their own production of the goods we sell, our labour and capital should be gradually transferred to the production of the food we buy. At present too much both of our goods and of our capital goes abroad, when there are plenty of persons at home to be supplied with the former and employed by the latter. The periodical depressions of English trade are due to the falling credit of the foreign countries for which we cater. The trade we might do at home would not be liable to depression from causes external to ourselves, and it would, therefore, be desirable to be rather more self-supporting. While new methods of agriculture are improving the absolute productivity of English soil, the action of the public authority in facilitating the acquisition of small holdings by the labourers may be trusted to improve its relative productivity with reference to the land of other countries. A further result to be expected from a more extended application of the collectivist principle, is a better proportionate distribution of the rewards of industry among its several agents in favour of labour, as opposed to land and capital.

Mr. Webb's theory.

547. Mr. Webb,(3) instead of dwelling on the distinction between the collectivist and the present system, endeavoured rather to show how consistent had been the progress made in the desired direction during the present century. For the last 70 or 80 years, he contended, the course of legislation has been guided by the principle of subjecting industrial relations to the deliberate and conscious control of the community, as is proved by the observed tendency towards a stricter regulation of private enterprise, towards shifting the burden of taxation upon rent and interest, towards the assumption of industrial functions on the part of the State and municipal bodies, and towards collective philanthropy, *i.e.*, the deliberate use of the resources of the community for the benefit of its less fortunate members. Legislation having for its object the regulation of private enterprise is best exemplified by the Factory Acts. Although nominally enacted with sole reference to female workers and to youths under 18 years of age, this code has also had a practical bearing upon the condition of adult males. The shifting of the burden of taxation more and more upon rent and interest has followed as the natural result of a more accurate translation into practice of the principle of basing the incidence of taxation upon equality of sacrifice, which has been universally admitted since the days of Adam Smith. Nowadays, indeed, almost every tax on land is a tax on rent. Schedule A. of the Income Tax, for example, is really a tax on rent. The assumption of increased industrial functions on the part of public bodies is very strongly marked. The London County Council employs about twice as many persons as the Metropolitan Board of Works did only four years ago, and London is only following in the wake of other large municipalities. It is computed by Mr. Giffen that the provincial municipalities control an aggregate capital of about three or four hundred millions sterling. Many of them have undertaken their own water and gas supply, and the construction, and, in some cases, also the working of their own tramways, although it may be true that much of the plant of these enterprises which passes as municipal property has been obtained by capital borrowed from individuals. They are also rapidly acquiring land, not only by purchase, but also by using their power of imposing rates to tax rents and so to reduce them, and the rates thus swollen are being largely devoted to meeting the increased expenditure now demanded in the direction of collective philanthropy. Concomitantly with the growth of collectivism, there has been observable a marked improvement in the condition of the labouring classes. The marvellous progress of the Lancashire operatives during the past 50 years is to be attributed primarily to the Factory Acts, next to the rise of municipal socialism and trade unionism, then to the co-operative enterprises made possible under such conditions, and, finally, to the action and reaction of all these forms of collectivism upon one another. The great increase in the efficiency of production is to be accounted for in the same way. The pressure brought to bear upon the managers of industries by the Factory Acts, by municipal bye-laws, and by trade union demands, have had in the past a very stimulating effect, and will cause still greater improvement in the future. The application of the collectivist principle is being daily extended. Were it not so, the present condition of a large portion of the workers of this country would appear as hopeless as was that of the Lancashire operatives before the beneficent tendency set in. That the movement towards collective socialism will continue indefinitely, is guaranteed by its association with democracy. At the beginning of the century, the Government was not really in the hands of the people, and economists had some reason in opposing the extension of the sphere of State action on the ground that such action was likely to be directed in favour of a class and against the community as a whole. Collectivism unaccompanied by democracy cannot be regarded as superior to individualism, as is proved by comparing the unprogressive communism of the Bengalese and Russian peasants with the enterprising individualism of the New Englanders, who are ethnologically of the same race. Combined with democracy, however, collectivism has a highly stimulating effect upon the health of the body politic, and generates a better type of character than an individualistic and competitive organisation. Collectivism, indeed, may be described as the "economic obverse" of democracy. That is to say, the advent of the industrial classes to political power naturally results in directing the action of the State to the solution of industrial problems. A more complete application of the collectivist principle will be marked by the management or direction of all industrial undertakings passing into the hands of governmental establishments, both national and local, and by the absorption by the community of rent and interest. In the first event every position of authority in the industrial world would be a political appointment, but this would involve no great extension of the sphere of

[§ 547.]

(1) Digest, p. 17. (2) Digest, p. 18. (3) Digest, p. 19 *et seq.*

[§ 547.] political patronage, already reduced to a minimum in the case of the Civil Service. The appointments would be made just as other Civil Service appointments are made now; they would not, and ought not, to depend upon popular election. Bureaucracy under a democratic *régime* would be a very different thing from bureaucracy uncontrolled, and there is reason to expect very great intelligence to be developed among the members of the industrial hierarchy of the future. The absorption by the community of all rent and interest would not deprive enterprise of its reward and stimulus. Enterprise and claim to rent and interest do not necessarily go together. The best work has never been done for money, and the profits of so many inventions have been gathered by persons other than the inventors, that self interest cannot be said to have had a greater stimulative effect in this direction than the mere desire to invent. Whilst the standard of life among some classes of wage earners is higher than it was 50 years ago, it is not so among others, and, on the whole, the working classes have not absorbed a fair proportion of the increased products of the national industry. Too much has gone to rent and interest. Although the collectivist principle is not applicable in the same degree to every stage in a nation's progress, it is a sound guide for political action, and we may look forward without anxiety to the continued extension of the State's industrial action, and fearlessly discard the old-fashioned notions of which Mr. Cobden was the exponent when he wrote against the Government providing even its army and navy supplies. The speech delivered at the Eighty Club by Mr. Morley, in December 1889, is a remarkable example of the changed attitude of politicians towards socialistic developments, for the speaker, while opposing an Eight Hours Bill, expressed himself very emphatically as to the duty of the State to find honourable work for the workless. One great practical advantage of placing industrial establishments under Government is that public criticism can secure the remedy of evils in their administration. It is much easier to urge the Government to pay proper wages than to urge a private contractor to do so. The importance of maintaining this greater power of criticism is proved by the very existence of defects. Such a defect is the disregard displayed by the Admiralty to the resolution of the House of Commons, in 1891, to the effect that all Government employés should be paid the wages current in the district, and the non-recognition by Government officials of the men's trade unions. The labourers employed in the Deptford victualling yard are paid only from 17*s.* to 19*s.* a week, that is to say, exactly the same as the same class of labourers at Gosport and Devonport, where the cost of living is much less. Mr. Charles Booth classed all Londoners receiving less than 21*s.* per week, with families dependent on them, as being in poverty, and all those receiving less than 18*s.* regularly, as being in chronic want, and the London County Council has fixed 24*s.* as the minimum wage for its adult workers, on the ground that it would be adding to the destitution and and poverty of London by paying less. The House of Commons ought to emphatically prohibit any Government Department from paying less than the wages authorised by the local trade unions, and, in London, less than 24*s.* Political pressure, however, is even now constantly being brought to bear upon the Government by civil servants. This is not by any means to be deplored, but rather encouraged. If that pressure were to be increased, no longer would dockyard labourers be underpaid and post office servants ill-treated. The fullest possible recognition of the right of public servants to combine to secure their common advantage ought to be accepted as an essential principle, at any rate of Liberalism. The present refusal of the Admiralty to recognise any person not employed in the yard as the representative of the Deptford labourers is a reversion to the policy which trade unions have been so long occupied in breaking down among private employers. Another great practical advantage of the Government employment of labour is that it can be made much more regular than with private firms. Government ought to deliberately aim at getting as much of its work as possible done during slack seasons, with a view to securing regularity. There is an excellent economic reason for this policy, inasmuch as, in slack seasons, the work can be done much cheaper. In point of efficiency, moreover, Government work compares not unfavourably with that of private firms. Exactly the same class of work is being done for the Government by Messrs. Armstrong, Mitchell, & Co. at Elswick, and by the Government itself at Woolwich, and the result of all inquiries shows that the latter is the more efficient.

Sir Thomas Farrer's criticism.

548. Sir Thomas Farrer[1] commented on these exhaustive statements in defence of the collectivist principle as follows:—In the first place, he said, Mr. Mann is wrong in [§ 548.] attributing the fluctuations in employment to the disorganising influence of individualism. As a matter of fact, individualism has caused to grow up unconsciously an organisation more complete than could ever be created by a system of conscious control. No commissariat department could hope to bear comparison with the wonderfully perfect mechanism that has grown up under individualism for providing London with its daily bread. The prevailing fluctuations of employment, and it cannot be denied that they are a great evil, are mainly due to unsound speculation, and no punishment would be too severe for the fraudulent bankrupts and prospectus managers that tempt small capitalists to part with their savings under false pretences. Anybody allowing his name to appear in a lying prospectus without taking proper means to verify the statements contained therein should be liable to prosecution. Again, Mr. Mann looks to the public authority to re-adjust the distribution of the rewards of production amongst its various agents in such a way as to increase the earnings of wages at the expense of capital.[1] But anything that tends to raise the wages of artisans must accelerate the speed of migration from country to town, and so intensify the evil resulting from the presence of unemployed labourers, which Mr. Mann feels so keenly. There is a desire among trades unions to acquire complete control of production, so as to enable them to dictate the rates of wages. But the only effect of such dictation would be to raise the price of British manufactures, and cause consumers to transfer their custom to foreign markets. The wider, therefore, our foreign trade extends, the more difficult is it for trades unions to make their control of the rates of wages effective. This is the reason why they are disposed to underrate the value of our foreign trade, and Mr. Mann himself, though not desiring to check that trade, yet seems to regard its possible future extinction with equanimity, and urges us to produce a larger proportion of our own food instead of fighting to preserve our foreign markets. But, considering that we are importing two thirds of our food from abroad, and that other countries can produce that food more easily than we can, to suppose that we can ever become self-supporting is an idle dream. We should rather determine to repair the loss of old industries by inventing new ones to supply the new foreign demands. It is not expedient that labour should have less than its share of the product of industry, but the amount of that share is limited, first, by the danger of killing the goose with the golden eggs; and secondly, by the equally grave danger of allowing one industry to impoverish others. Too high wages for coal miners, for example, causes the impoverishment of the workers in industries that use coal. In fact, the struggle between labour and capital is often a struggle between producers and consumers. Members of trade unions have hitherto looked upon themselves too much in the light of producers, but there are signs, such as the repudiation by the men of the action of their leaders in approving of the Sugar Convention, that they are learning from the co-operative societies to look upon themselves as consumers as well. All Mr. Mann's aims are directed at a regulation of the supply of labour. But it is impossible to control supply until you can control demand, and no public authority could ever undertake the colossal task of perpetually and rapidly shifting capital and labour towards the supply of each demand that successively arises. A public authority, moreover, can never afford to speculate with the funds entrusted to it by the nation, and so is less likely, despite all assurances to the contrary, to promote new inventions than an individual. Mr. Webb's evidence is open to similar criticism. On one point, indeed, he is more in the right than his fellow collectivist, and that is where he points to the prevalence, and looks forward to the further extension, of the use by Government servants of their political power against their employer, whereas Mr. Mann had said that difficulties of this sort were decreasing as collectivism grew. But in going on to argue that such a state of things is an advantage, he will not find many to agree with him. In short, the collectivist ideal is a dream, and a bad dream. To attempt to eliminate individualism, whether in politics or in other relations of life, is to ignore one of the deepest and most important factors of human nature, and it is futile to compare an industrial system, marred, though it be, by the imperfections which realisation has revealed, with a utopia which appears perfect only because it is an untried and an impracticable ideal.

(1) Digest, p. 23.

(1) Digest, p. 24.

4. INSPECTION AND REGULATION OF FACTORIES, AND WORKSHOPS, AND LEGISLATION RELATING THERETO.

[§ 549.] omestic orkshops.

549. The object of the evidence given under this heading may be summed up in the words of Mr. Webb(1) as being "to provide East London with a Factory Act as well "adapted to its own peculiar circumstances as the Factory "Acts of the first period were to the peculiar circum-"stances of Lancashire." And the peculiarity of East London work was proved before the House of Lords' Committee on "Sweating "(2) to consist chiefly in the prevalence of domestic workshops. As to the general policy to be pursued with reference to these establishments, the witnesses did not agree. Messrs. Tom Mann,(3) F. Hardern,(4) and C. Fenwick,(5) the two latter representing the Co-operative Union and the Trades Union Congress respectively, desired to abolish them altogether, by compelling employers to provide accommodation for all their hands, Mr. Fenwick saying: "The Trade Union Congress has "condemned the system of domestic workshops because "these places are often unhealthy, and cause the rate of "wages to fall." Mr. Webb,(6) however, while sympathising with this aim, considered that a sudden abolition of domestic workshops would be inexpedient, and that it would be better to merely assist the present tendency towards a universal factory system by means of an enactment making every foreman or giver-out of work responsible for the observance of the Factory Acts in whatever place he allowed his work to be done. Mr. Booth,(7) moreover, not sharing the views of either of the preceding witnesses as to the desirability of a total abolition, whether immediate or ultimate, of domestic workshops, objected even to Mr. Webb's proposal as likely to be, in its effects, identical with that of Mr. Mann, and preferred a law making the landlord, or person to whom the worker pays rent, share a portion of the responsibility for the observance of the Acts which is at present divided among the employer, the employed, and the State. The landlord should, for example, be responsible for the registration of all his houses that are used for industrial purposes, and, if he does not desire them to be so used, he should put a special clause into the leases to that effect. He should also be responsible for the payment of fines imposed upon his tenants for breaches of the Factory Acts, and should add the amount of such fines to his rent. Although Mr. Booth was not prepared to endorse the proposal of Mr. Webb with regard to the responsibility of the giver-out of work, Mr. Webb(8) so far agreed with the proposal of Mr. Booth as to desire to make the owner of houses used for industrial purposes responsible for their sanitary condition under the Factory Acts, as he is already, to a less degree, under the Public Health Acts.

he other ubjects ncluded in he section.

550. Other subjects dealt with in this connexion were the employment of married women, the employment of children, the extension of the legal definition of "workshop," the statutory requirement of returns as to wages, and the administration of the Acts, including proposals as to registration, inspection, and the transfer of the control of the Acts to the new Labour Department.

Employ-ment of narried vomen.

551. Employment of married women should not be prohibited, so Mr. Webb thought,(9) although he also considered that it was in many respects an evil, and nearly always had a very prejudicial effect upon the wages of adult male workers. The proper aim, he said, is to hasten the advent of a social development in which mothers of families should be released from their present necessity of working for their living.

Employ-ment of children.

552. Employment of children for wages under the age of 14 was condemned by Mr. H. M. Hyndman,(10) who pointed out that there was plenty of evidence, especially in the famous report of 1875, to show that the half-time system had a very bad effect upon the physique of the future generation. Mr. Webb(11) also considered that it was highly expedient to raise the age at which children are allowed to enter the factories, and to extend the period of their school career, whether by means of the half-time system or otherwise.

Extension of the legal definition of "work-shop."

553. Extension of the legal definition of "workshop" was desired by Mr. Booth,(12) who proposed that any room or place in which any person employs any other person or persons in manufacture should be placed within the legal definition of a workshop under the Factory Acts, and that the relation of employer and employed should be deemed to exist between any persons working in company or in partnership, except between a man and his wife.

(1) Digest, pp. 21 and 22. (2) Appendix LXXXV. (3) Digest, p. 17. (4) Digest, p. 14. (5) Digest, p. 27. (6) Digest, pp. 21 and 22. (7) Digest, p. 25. (8) Digest, pp. 21 and 22. (9) Digest, pp. 21 and 22. (10) Digest, p. 23. (11) Digest, pp. 21 and 22. (12) Digest, p. 25.

[§ 553.]

554. A requirement to furnish returns as to wages should, so Mr. Webb(1) considered, be made in the case of every person employing more than three wage servants.

Proposed requirement to furnish returns as to wages.

555. The administration of the Factory Acts should be made easier by an absolutely complete registration of all workshops and all industrial establishments. As to the desirability and practicability of this proposal, both Mr. Webb(2) and Mr. Booth(3) were agreed. The registration, said Mr. Booth, should be simple and without charge, and should not necessarily be preceded by an inspection. The certificate should set forth, on the landlord's authority, the amount of space occupied, the number of persons employed, the nature of their occupation, and such other particulars as the Act required. It should be in triplicate, one copy being for the landlord, one for the occupier, and one for the Factory Department of the Home Office, and it should be periodically renewed, and the landlord should be held responsible for the registration being duly performed.

Registration of workshops.

556. Besides making the work of the inspectors easier, Messrs. Webb(4) and Booth(5) desired to increase their number, and improve their organisation. Owing to the paucity of the present staff, said Mr. Webb,(6) domestic workshops in London are not inspected, and generally not even registered. What is wanted, he considered, is not so much a very large increase in the present highly-trained and fairly well paid staff as the appointment of additional officials of a subordinate class, who could be, as it were, "the eyes of the inspectors." Mr. Booth(7) desired every inspector to be provided with an office, and with assistants to take all his clerical work off his hands.

Inspection: proposed additions to staff.

557. The transfer of the Factory and Mining Departments of the Home Office to the new Labour Department was desired by Mr. Webb.(8)

Proposed transfer of factory and mining departments of the Home Office to the new Labour Department.

5. ACCIDENT FUNDS AND EMPLOYERS' LIABILITY, AND LEGISLATION RELATING THERETO.

558. Very little addition was made by the witnesses examined before the Commission Sitting as a Whole, to the body of evidence taken on this subject before the three Committees. Mr. Fenwick, M.P.,(9) representing the Parliamentary Committee of the Trades Union Congress, indeed, stated that the said committee had received instructions to endeavour to secure the abolition of the doctrine of common employment and of contracting out of the Act, and the extension of the Act to seamen, while Mr. Ludlow,(10) ex-Chief Registrar of Friendly Societies, declared himself to be personally opposed to the contracting out that usually accompanied the establishment of sick, accident, and other benefit funds in connexion with particular employments.

Employers' Liability Act, proposed amendments

559. With regard to the effect of the existence of such funds upon the relations between employers and employed, moreover, Mr. Ludlow(11) pointed out that, judging from the condition of the mining industry, they did not appear to prevent trade disputes. Many railway companies, he said, have obtained special Acts of Parliament compelling the men to subscribe to the sick and other benefit funds established by their employers. The men object to such enactments, because they are obliged thereby to choose both between giving up their own benefit societies and supporting two, and also between continuing in the company's service longer than they may perhaps desire to do, and forfeiting the benefits towards which they have been subscribing. The Court of Appeal, however, has decided in Hewlett *v.* Allen and Sons that deductions from wages for the purposes of benefit funds are illegal unless expressly sanctioned by Act of Parliament. Except where absolute confidence already exists between employers and employed, the establishment of funds supported by both parties tends not to improve, but to injure, the relations between them. Mr. Ludlow went on to say that such funds were in many cases actuarially unsound, because they depend upon the employers' contributions, which in their turn depend upon the vote of a body of shareholders, and because the employers' contributions remain fixed irrespective of fluctuations in the membership. Where, however, the employers' contributions vary with the membership, the witness admitted that the funds were financially less unsound. The only other witness who referred to the subject was Mr. E. W. Brabrook,(12) the present Chief Registrar of Friendly Societies, who gave the

Mutual insurance funds: their effect on industrial peace, and legal position.

(1) Digest, pp. 21 and 22. (2) Digest, p. 22. (3) Digest, p 25, (4) Digest, p. 22. (5) Digest, p. 25. (6) Digest, p. 22. (7) Digest. p. 25. (8) Digest, p. 22. (9) Digest, p. 6. (10) Digest, p 37. (11) Digest, p. 37. (12) Digest, pp. 35 and 36.

[§ 559.] following evidence with regard to the legal position of societies formed for the purpose of mutual insurance by employers and employed conjointly:—A large number of these societies are debarred from registration under the Friendly Societies Act because they have among their rules one providing that "a member ceasing to be employed at " — works shall cease to be a member of the society." By means of such a rule, an employer can enforce restrictive conditions on his workmen. A rule, however, to the effect that "a member ceasing to be employed at — works " shall cease to participate in the funds arising from the " contributions of employers as honorary members" does not prevent registration, although a practical difficulty arises in cases where the funds derived from the contributions of employers and employed respectively cannot be distinguished. Another arrangement inconsistent with registration is one whereby the funds of the society are deposited with the employer, inasmuch as the Friendly Societies Act requires them to be invested only in concerns giving such security as trustees may accept. The policy of the Act in this respect is a sound one, for the prohibited arrangement has the mischievous effect of putting all the workmen's eggs into one basket, so that, if their employer fails, they lose not only their employment but their savings as well, and it places them, in addition, into a position of undue dependence upon their employer. At the same time, the societies often prefer to forfeit registration by investing their funds with an employer, whether because they get an exceptionally high rate of interest, or because they get, and like to have, a stake in the employer's business, or else because much trouble is saved in the matter of buying and selling stock and in the keeping of accounts. Where the employer in question is a public company, and, as such, able to give, by debenture or otherwise, security of the type which trustees are authorised by statute to accept, the difficulty as to registration is removed. A third bar to registration is where membership of the society is made a condition of employment. But registration has not hitherto been refused to societies having among their rules one to the effect that members may direct the amount of their subscriptions to be deducted from their wages, provided always that the sum deducted be actually handed over to the society's treasurer, and paid by him to the credit of the trustees. The general result of the legal requirements as to registration has been to cause many societies to forego its benefits.

6. OTHER CONDITIONS OF LABOUR.

Subjects included under.

560. The portions of the evidence that may most conveniently be treated under this section are three in number. First, the evidence of Mr. Giffen relating to foreign competition in the labour market; secondly, the evidence of Dr. W. Ogle, relating to vital statistics; and, lastly, the evidence of Mr. Ludlow, relating to the progress of the working class during the past 50 years.

Alien immigration.

561. Mr. Giffen[1] said that it was a proved fact that the maximum number of foreigners that could possibly have settled in England in 1891 was 12,000, and that it was probable that the figure for 1892 would be proved not to have exceeded 8,000, partly, no doubt, owing to the quarantine regulations. It would, he thought, be dangerous for this country to place restrictions on immigration, for it would furnish our colonies and foreign countries with an excuse, of which they would be only too ready to take advantage, for placing similar restrictions upon the admission into their territories of the emigrants that leave this country in such large numbers.

Vital statistics.

562. Dr. W. Ogle,[2] Superintendent of Statistics in the General Register Office, gave the following evidence on the vital statistics of the industrial classes in England and Wales. The marriage statistics, he said, are as follows:—Of 1,000 miners who marry 704 are under the age of 25, and 169 under the age of 21; and of their wives 439 are under 21. The ages at marriage of textile hands, shoemakers, and tailors are very much the same; those of artisans and labourers are a little older; those of clerks are still more advanced; those of shopkeepers and shopmen are more advanced than those of the clerks; and those of farmers and their sons are more advanced than those of the shopkeepers and shopmen, while most advanced of all are those of the professional and independent classes, of whom only 151 per 1,000 marry under the age of 25, and only seven, but of their wives 127, under the age of 21, there being a difference of 7 years among males and 4 years among females between the average ages at marriage of the miners and the professional and independent classes respectively. The proportion of persons that remain permanently unmarried is smallest in the case of shopkeepers, larger in the case of artisans and labourers, and largest in the case of the professional class. For England and Wales the proportion of unmarried males is 266 per 1,000, but for the working men in several selected districts of London it is only 107. In these same districts every married man has, on an average, 2·97 children living at home. This implies very large families, since there are excluded all children that have died, or have set up establishments of their own, and no regard is taken of the prospects of future additions to the families. The average number of children living or dead per marriage in England and Wales is only just a fraction over four. The marriage rate is affected very considerably by fluctuations in wages. It varies concomitantly (*a*) with the value of exports per head of the population, and (*b*) with the relative proportion of persons in and out of employment as shown by the returns furnished by the Trades Unions to the Labour Department of the Board of Trade. In those areas and counties where the proportion of the industrial to the other classes is highest, the infantile mortality is far above the average, and in some places, *e.g.*, in Preston, it is so high that insurance societies refuse to take infants lives at all. This is specially the case in the towns. It is to be attributed, partly to overcrowding in unhealthy quarters, partly to the ignorance and carelessness of young parents, partly to the employment of mothers in factories, which often causes premature confinement, and partly to the alcoholic habits of a certain proportion of the artisans. In 1890 there were 2,020 inquest cases held in various parts of the country; in 767 of which cases the cause of death was returned as suffocation in bed. Of these deaths from suffocation, 283 per 1,000 took place on Saturday nights, whereas the figures for the other nights are: Sunday 124, Monday 137, Tuesday 116, Wednesday 115, Thursday 107, and Friday 118. On passing, however, beyond the period of childhood, members of the artisan class have about as good prospects of surviving to the age of 35 as members of the classes above them, but after that age the relative proportion of their mortality increases. The witness put in five tabulated statements showing the comparative mortality of males between the ages of 25 and 65 engaged in different occupations. The figures in Tables I., II., III., and V., he explained, give the number of deaths that occurred annually in 1880–1–2, among 116,261 males in each occupation, of whom 75,396 were between 25 and 45, and 40,865 between 45 and 65 years of age. This population was selected as being that in which 1,000 deaths of clergymen occurred annually. The figures can be converted into death rates per 1,000 by multiplying them by ·008601. The tables in question might, the witness admitted, be to a certain extent vitiated by the fact that, in occupations requiring large expenditure of strength, the weaklings would pass into other trades, and thus cause the death rate in those occupations to be somewhat too favourably estimated. The comparative liability of miners to accidents is counter-balanced by their superior natural physique, and healthfulness. Another difficulty, Dr. Ogle pointed out, in regard to the statistics, is the inaccurate nature of the data from which they are compiled. No improved machinery for dealing with industrial statistics, he considered, could guarantee a really successful result until householders learn to fill up their census returns more accurately.

[§ 562.]

General progress of the industrial class.

563. Mr. Ludlow[1] stated that, during the past 50 years, the condition of the working class had improved very fast, though not so fast as public opinion as to the proper standard of that condition. In former times, the artisan was opposed to both employers and unskilled labourers alike, but now members of what may be called the aristocracy of industry, represented by such men as Mr. John Burns and Mr. Tom Mann, are manfully fighting the battle of unskilled labour. Petty jealousies are dying out. Thus, whereas Mr. Applegarth, the first working man ever appointed to sit on a Royal Commission, was worried into resigning his position as Secretary to the Amalgamated Society of Carpenters and Joiners through sheer jealousy, the composition of the present Commission is a mark of the total disappearance of that feeling. The improvement of the condition of the working class, both intellectual, material, and moral, has been very marked. The Staffordshire potteries and the Cradley Heath chainmaking district are examples of the few black spots that still exist.

7. THE UNEMPLOYED.

Division of the subject.

564. The problem of the unemployed involves four main issues: First, how can vacancies be more easily discovered? Secondly, how can vacancies be multiplied? Thirdly, how can work be provided in default of vacancies

(1) Digest, p. 43. (2) Digest, pp. 38, 39, 40, and 41.

(1) Digest p. 38.

[§ 564.] in established businesses? And, fourthly, how can provision be made for the unemployable?

565. (i.) In answer to the first question, various regulations (1) have been adopted by the trade unions with a view to affording information to their members as to where work may be obtained. In many, a register is kept of the names and addresses of members who are out of work. This is called the "vacant," "out of work," "call" or "job," book or slate, and it must be signed every day, or, in some cases, once or twice in each week, by members who are in want of employment. By means of such registers employers can obtain information with regard to the number of men at their disposal, and the trade union officials are enabled to exercise some supervision over the unemployed members, and to satisfy themselves that the recipients of benefit are honestly endeavouring to find work. When a vacancy comes to the knowledge of the secretary, he offers it to the member whose name stands first on the list, and if this member refuses it without sufficient cause he is often suspended from benefit for a time, or obliged to place his name last on the list. Employers are, however, as a rule allowed to ask for any particular man by name, and if the man thus called for is not the first upon the list he has the option of refusing to take the work. When members obtain work they are required to cross off their names in the "vacant" book within a stated period, or are subject to a fine. In several societies, a list of shops where men are wanted is kept at the office for the use of unemployed members, and the secretary of each branch is required to give all the information in his power with regard to vacancies to unemployed members of his own branch, or those of other branches who are travelling in search of work. All members are urged to give information at once to the secretary of their branch of any vacant situation of which they may have knowledge; and in some societies, *e.g.*, the Dundee Branch of the United Journeymen Brassfounders' Association of Great Britain and Ireland, a fine is imposed upon members who neglect to do so within 24 hours. A few societies, such as the Durham County Colliery Engineers' Mutual Aid Association, forbid their unemployed members to apply for any situation without first informing the branch secretary of their intention. In the larger societies, *e.g.*, the Amalgamated Society of Engineers, the secretary of each branch is required to send a report of the number of unemployed members and of vacant situations in the neighbourhood to the central office once in every month or quarter, and upon these returns the general secretary bases a report of the condition of trade in the various districts, which is published periodically. When it appears from such reports that there is an opening for more labour in any district, the secretary can generally direct the removal there of unemployed members from other districts, and part or the whole of their fares are in such cases paid by the society. In some cases, moreover, the societies pay the fares of members who have obtained work at a distance, although in some instances repayment is necessary within a fixed period.

(ii.) Apart from the trades unions, who, as Mr. Loch(2) and Mr. J. Burns(3)* pointed out, are naturally anxious to get their unemployed members off their hands, agencies for finding employment have been established under the name of Labour Bureaux or Free Labour Registries. They are conducted on philanthropic rather than commercial principles, that is to say, the object of their promoters is not so much to make a profit as to bring employers and workmen together, and, though in some cases a fee is charged, they are barely and rarely self-supporting. Mr. W. H. Gardener and the Rev. W. Tozer furnished full particulars of the bureaux established at Egham and Ipswich respectively.

(iii.) With regard to the Egham Bureau, the following information was given by Mr. Gardener.(4) Quoting from the opening paragraphs of its first report, he said: This registry was opened in February, 1885, to afford easy means of communication between unemployed labourers and artisans residing in the parish of Egham, and employers requiring workmen, with the hope of avoiding or diminishing the waste of time and energy and the hardships involved in "tramping for work." The need for such a registry was suggested by the case of a local workman who found work by chance near his home after walking vainly some 50 miles through incorrect hearsay reports of available work. By means of this organisation, 2,041 out of 2,465 applicants have been furnished with employment between February 1885 and December 1892.(1) The classes of workpeople so provided for are as follows:—Boys, bricklayers, carpenters, charwomen, cooks, draughtsmen, gardeners, gasfitters, general labourers, grooms, laundresses, married couples, painters, plumbers, and stonemasons. The working expenses for 1892 were 12*l.* 18*s.* 10*d.*, when employment was obtained for 268 adults and 21 boys, out of 382 applicants. The practical management is vested with the registrar, subject to the general inspectorial powers of honorary supervisors.(2) Some employers of labour pay small contributions to the funds. Applicants for employment are charged no fee, but, after they get places, they are requested to subscribe 3*d.* a week during the first few weeks of their engagement. One of the honorary supervisors, Mr. N. L. Cohen, provides a loan fund, out of which money is advanced to men travelling to distant places of employment, or desiring to redeem the tools placed in pawn during the winter, when work cannot be obtained. Mr. Gardener was not aware of the existence of any jealousy on the part of trades unions towards the registry. But the greatest care is exercised not to send labourers to a district where there is a trade dispute, lest such jealousy should arise. [§ 565 (iii.)]

(iv.) The Rev. W. Tozer(3) gave evidence with regard to the working of the Ipswich Bureau, established by himself at Ipswich, in 1885. The lowest number of persons, he said, for whom employment has been found per annum is 250, the highest 531, and the average between 300 and 400. The operations of the bureau extend all over the country. Applicants for work are required to fill up a form, a specimen of which the witness handed in. Documents are also forwarded to employers, together with descriptions of the men wanting places whose names are registered. During the present year, the bureau has received 138 applications for men which it was unable to satisfy, but it has managed to find places for all the men on its books capable of performing marketable work. The demand for agricultural labourers has been markedly persistent up to the last six months, but now it falls short of the supply. Unless an applicant can produce a written character of not less than six months from his last employer, the bureau does not undertake the responsibility of recommending him, but, short of this, it does all it can for him. It has telephonic communication with all the large firms in Ipswich, and by this means it is constantly enabled to put such men on to odd jobs. No fees are charged. The expenses, amounting to about 100*l.* a year, are met by friends of the witness and by the witness himself. The proportion of the different classes of men that applied to the bureau during one representative year is as follows:—36 coachmen and carmen, 36 errand boys, 34 gardeners, 429 unskilled labourers (including agriculturists), 54 porters and warehousemen, and six engine-drivers. Men are never sent by the witness's bureau to firms where a strike is proceeding, except by accident. The witness sometimes advances the railway fares to men going to the places found for them through the medium of the bureau, and gets the foreman in charge of their department to stop the necessary sum out of their wages, at the rate of 2*s.* 6*d.* per week, till the whole is repaid. The Ipswich Bureau.

(v.) Information concerning other labour bureaux was furnished by Mr. E. T. Scammell (4), the honorary secretary of the Exeter and District Chamber of Commerce. From documents put in evidence by this witness, it appeared that the labour bureau conducted by the Young Men's Christian Association found places for 352 of the 369 candidates for employment whom it allowed to enter their names on its register between January 1st and July 21st, 1892; that the bureau established by the Regent Street Polytechnic has 60 or 70 applicants per month, and finds places for 35 out of every 170, charging a fee of 1*s.* to each successful applicant; and that the bureau worked by the Salvation Army has 10 branches in London, in addition to the head office in Queen Victoria Street, and also branches at Bristol, Leeds, and Bradford, and out of 6,557 male and 577 female applicants between December 31st, 1891, and August 31st, 1892, it found employment for 1,648 in the Army workshops, or "elevators," and permanent posts for 725, and temporary posts for 2,399 elsewhere. Unlike the Young Men's Christian Associations and the Regent Street Polytechnic Bureaux, that of the Salvation Army charges no fee to applicants, but requests their future employers to pay a small voluntary subscription. Other bureaux.

(vi.) All three witnesses (5) were of opinion that all these, and other similar bureaux, ought to be taken over by the Municipalisation of labour bureaux.

* Mr. Burns was repeatedly urged to give evidence before the Commission, but, owing to want of time, was unable to do so. He was subsequently asked whether, in lieu of giving evidence, he could furnish the Commission with a written statement of his opinions. In a postcard received from him on September 26th, 1892, he states: "I "am too busy to do the thing well, so must ask you to excuse me "sending in my views." However, on October 30th 1893, Mr. Burns forwarded two pamphlets enumerated in the Extra List of Documents received, Appendix Volume p. 317, and dealt with in paragraphs 565. viii., 566, 567. ii., &c. of the present Summary.

(1) Memorandum on the Rules of Associations, p. xx. (2) Digest, p. 29. (3) "Nineteenth Century," December, 1892. (4) Digest, p. 27.

(1) Appendix LIX. (2) Digest, p. 28. (3) Digest, p. 28, and Appendix CVI.–CX. (4) Appendix CXIII.–CXVI. (5) Digest, pp. 28 and 29.

municipalities, and their expenses defrayed out of the rates. [§ 565 (vi.)] Otherwise, there is always a risk of offending the trades unions. Working men, said Mr. Tozer, will not put confidence in institutions governed by capitalists or employers, and employers will not put confidence in institutions governed by trade unions. The bureaux ought, therefore, to be entirely removed from the area of both influences, and to be placed upon a public basis.

An example at Chelsea.

(vii.) An object lesson in the form of municipal action here suggested is furnished in the case of the bureau which was established by the Chelsea Vestry in September 1891. Its operations were fully explained by Mr. T. Smyth,(1) its superintendent, who stated that, of a grand total of 1,987 adult males registered there between the 5th of October, 1891, and the 31st of August, 1892, 547 obtained employment; of 388 artisans who registered, 126 got work; of 489 boys, 178 secured posts; of 182 carmen, coachmen, &c., 24 were successful; of 76 clerks, 12 were provided for; of 68 handy men, 49 obtained employment; of 362 labourers, 127 were given situations; of 337 porters, 19 received engagements; of 16 shop assistants, 19* procured places; while, of 13 waiters, 7; and of 56 watchmen, 6 found a market for their services. The class for which it is most difficult to find work are ex-servants and soldiers, who have no special aptitude for any special trade, and, not being accustomed to hard work, usually apply for light employment as porters, &c. Sailors, on the other hand, being handy and used to hard work, find it exceptionally easy to get situations. The number of women that obtain places through the bureau is larger than that of the men, and the vestry feels that the establishment of similar agencies in other parts of London would help many to get work whom private persons would not otherwise care to employ. The Chelsea Bureau is appreciated and utilised by both employers and employed. That the trades unions are not hostile to it is proved by the fact that it was they that secured the appointment of the witness to the office of superintendent. On one occasion since the office has been opened, the witness was asked to supply men to a certain stoneworks during a strike, but he refused to do so. Up to the end of August, 1892, the expenditure on account of the bureau amounted to 162*l.* 15*s.* 7*d.*, *i.e.*, less than 1*s.* per applicant, and little more than 2*s.* per successful applicant. This sum, however, being the amount for the first year, includes several items that are not likely to appear again, and it is estimated that in future years the cost per head will be reduced.

Affiliation of bureaux under a national Labour Department

(viii.) With a view to making the work of the labour bureau more effective, all their representatives concurred in advocating the adoption of some scheme of affiliation. An attempt at reciprocity, indeed, was made between the Egham and the Chelsea Bureaux, but it failed because of the dissimilarity of their respective districts. The Egham Bureau did not want Chelsea artisans, and the Chelsea, Bureau did not want Egham agricultural labourers.(2) Mr. Smyth considered that the London Bureaux must always stand apart, and desired to affiliate all the metropolitan registries under a central bureau, to be controlled by the London County Council. He was quite willing, however to accept a national scheme of affiliation under a Government Department. Such a scheme was supported by Messrs. Tozer and Scammell. The former desired to subordinate all the labour bureaux to a Department of Labour, which, he thought, should be placed under the control of a permanent secretary, independent of the changes of ministry, but subject to the general supervision of a ministerial chief.(3) The department, he added, would act as a sort of clearing house of labour. Mr. Scammell(4) expressed similar views in greater detail. In fact, he had reduced his proposals to a definite practical scheme, for the general principle of which he had secured the sanction of Associated Chambers of Commerce. The scheme is as follows:—That a National Central Labour Bureau be created by extending the functions of the Labour Department of the Board of Trade, and affiliating it with the Emigrants' Information Department, and with the Factory Inspectors' Department. This central bureau should obtain and disseminate information on labour questions, and should register unemployed labour, dealing for this purpose with local registries established in connexion with every county and borough. It should also issue periodically an official journal, containing current information on labour questions and general statistics of employment. And it should act as a clearing house, or means of mutual exchange, between the various district registries. These latter should endeavour to bring persons wanting work into touch with persons wanting workmen. They should be supported by the rates, and should take no fee from the applicants, whether they be employers or employed. They should not interfere in any way with wage questions, but should leave the parties to make their own bargains and fight their own battle, and they should never accept the registration, whether of employers wanting men or of men wanting employment, if the want is occasioned by a strike, save and except when such registration is accompanied by a notification of the fact. Furthermore, they should never require applicants for registration to produce credentials of character, although they should receive such credentials if voluntarily offered. And, finally, they should perform the same functions in regard to their several districts as the central bureau in regard to the whole country, by collecting and publishing information. Messrs Mann(1) and Webb(2) considered that the Labour Department should undertake the functions here laid down, among others. They also were of opinion that the said department should deduce from the information it collected forecasts of future fluctuations in trade, but it was pointed out by Mr. Giffen(3) that this would be impossible, inasmuch as any man capable of preparing even tolerably accurate forecasts of the kind would be found, not applying for employment in a Government office, but on the Stock Exchange, making a large fortune for himself. A similar suggestion was made by Mr. John Burns in an article that appeared in the "Nineteenth Century" magazine for December 1892, in words to the following effect:—"A "central labour exchange should be established in con- "junction with an imperial labour bureau for Great Britain, "utilising the 18,000 post offices for ascertaining and "exchanging the varying local industrial needs. The "whole of these arrangements should form part of a "Ministry of Labour and Fine Arts, dealing in a method- "ical and systematic manner with the industrial, technical, "and artistic sides of the production of wealth that are "now forgotten in the vulgar scramble for personal gain."

[§ 565 (viii.)]

Labour bureaux criticised.

(ix.) Mr. Loch,(4) the secretary of the Charity Organisation Society, did not approve of the labour bureaux system in any form. The experience of the society, he said, had not been in their favour, and there was a strong body of opinion among the witnesses examined by a special committee of the said Society that sat to inquire into homeless cases, to the effect that they have tended to demoralise the men, by causing them to relax their efforts both in seeking work for themselves and in sticking to the work found for them, a fact which Mr. Tozer disputed.(5) The criticisms made by the chairman of the Finance Committee of the Chelsea Vestry, Mr. Loch continued, upon the working of the bureau opened by that borough, are very much to the point. He said that it had, in his opinion, failed to perform the services expected of it, and that it was too costly in proportion to the number of persons for whom it found employment. He pointed out that the largest class of engagements was that of charwomen and domestic servants, who could obtain free registration at the ordinary servants' registry offices, and he contended that the bureau offered no proof that the larger proportion of persons whom it sent to places really engaged themselves, or that their engagements were permanent, while the number of *bonâ fide* male workers for whom employment of any kind had been found was only 2·5 *per diem*. He also criticised the various figures, with the object of showing that every person sent after a place had cost the vestry over 2*s.* Of course, Mr. Loch concluded, if the trades unions and the employers were to come to some understanding as to the use of labour bureaux, there would be a new element in the case, which it would be worth while to consider; but, at present, such institutions are generally formed when employment is scarce, and it is precisely during such times that they are useless, for employment cannot be organised by a bureau when there is no employment to be had.

How can vacancies multiplied

State regulation of the hours of labour.

566. (i.) How, then, are vacancies to be multiplied? The answer given to this question by Messrs. Mann(6), Burns, and Webb(7) is, by State regulation of the hours of labour. To these witnesses, it was objected that this would increase the cost of production, raise prices, and check demand, and so prevent the desired absorption of the unemployed. But this the witnesses would not admit. Owing to the greater efficiency of more leisured workers, they considered, the cost of production would not be increased. In that case, it was objected, how would the absorption take place? By associating reduced hours with

* The Witness explained the apparent inconsistency by saying that some of the persons who obtained places as shop assistants had registered under other headings.

(1) Digest, p. 28, and Appendix LXVI. and LXVII. (2) Digest, p. 28. (3) Digest, p. 28. (4) Digest, p. 29, and Appendix CXI., CXII., and CXVII.

[§ 566 (i.)] increased wages, Mr. Mann replied, thereby augmenting the purchasing power of the workers, and creating a new demand, which additional hands would be wanted to supply. It is true, he added, that the rise in wages would be at the expense of profits and interest; but, as it is unlikely that employers and capitalists would reduce their personal expenditure to the same extent as the wage-earners would increase theirs, an increased total consumption would be the net result. But, admitting that a reduction of hours increased the cost of production, Mr. Webb contended that prices would not necessarily tend to rise, for demand is relative to a certain price, a fact proved in the case of railways, where the increased cost which has certainly resulted from a shortening of the hours in this particular industry, has not been followed by a rise in fares. And, admitting even further that an increased cost of production were accompanied by an upward tendency in prices, Mr. Mann contended that by supplementing the reduction of hours by State management of industry, that tendency might be forcibly counteracted.

Emigration. (ii.) Emigration was mentioned by Mr. Mann(1) as a possible method of increasing the number of vacancies relatively to the number of those seeking work. But he did not expect its extension to produce any very useful result, inasmuch as it would not have any effect on the fluctuations of trade, which must always throw men out of work in bad times, so long as they continued to exist. It would be far better, he thought, to check the emigration of capital and develop our unused resources at home. Too much, he said, both of our goods and of our capital goes abroad, when there are plenty of persons at home to be supplied with the former and employed by the latter. The depressions of English trade are due to the falling credit of the foreign countries for which we cater. The trade we might do at home would not be liable to depression from causes external to ourselves, and it would, therefore, be desirable to be rather more self-supporting. Mr. Loch,(2) on the other hand, thought that emigration was a satisfactory method as far as it went, and if properly carried out, although he considered that very careful selection was necessary in order to secure good results. The subject, however, is fully dealt with in an Appendix to Vol. II., Foreign Reports, on the Migration of Labour.

Resuscitation of agriculture. (iii.) A third method of creating vacancies, advocated by Messrs. Mann and Burns, was the resuscitation of agriculture. This point was clearly drawn out by the latter in the course of the article already referred to, where he wrote:—"Whatever may be done of a gradual and tentative "character in the towns or cities by public works or by "reduction of the hours of labour, will be permanently "useless till the influx from the countryside is stopped. "Nothing but the justifiable appropriation by the rural "authorities of the uncultivated land will do it. In the "general interests of the country something must be "attempted to prevent the land lying idle. Year by year "the community looks on as field after field is added to "sporting estates, and men give way to deer. The creation of parish and district councils must stop this, and, "let us hope, will furnish the labourer and farmer with "the means not only of cultivation where now desolation "reigns, but will provide the means for more attractive "life on the soil, higher wages, and that steadiness of "work that will stem the exodus to the towns."

How can work be provided in default of vacancies in established businesses.

(a) *By direct employment by public bodies for the performance of their work.*

567. (i.) Whatever the advantages of State regulation of hours or emigration might be, their respective advocates did not trust to them exclusively for solving the whole problem, but made several suggestions for providing employment in default of vacancies in established businesses. The public authority, said Mr. Mann,(3) should not only make better provision for the regulation of the industrial operations of private firms, but should extend its own functions as an employer of labour in fulfilment of its obligation to provide the workless not only with food but also with a fair outlet for their energies. The first step that State and municipal authorities ought, according to Messrs. Mann(4) and Webb,(5) to take, was to start factories and workshops for the performance of the work which would otherwise be let out to contractors. But it was pointed out by Sir Thomas Farrer(6) that less employment would be furnished in this way relatively to the funds which the public authority had at its disposal than through the contractors, whose management would be much more economical. Mr. Webb,(7) however, defended the remedy he proposed by saying that the predicament where the municipalities would no longer have any work to give the unemployed was very remote, because they could always raise funds and extend their sphere of industrial action indefinitely.

(1) Digest, p. 16. (2) Appendix, XCVII. (3) Digest, p. 16. (4) Digest, p. 17. (5) Digest, p. 22. (6) Digest, p. 24. (7) Digest, p. 22.

[§ 567 (ii.)] (b) *Artificial employment.*

(ii.) In fact, it was proposed to deal with the unemployed not merely by utilising them for doing the work which the public authorities required, but by undertaking work that was not required in order to provide them with employment. Sir Thomas Farrer, indeed, pointed out that, in regard to municipal and State employment, such a policy is, in slack seasons, a matter not of choice but of necessity. A public body, he said, cannot undertake private work as a stop-gap, and, as workshops that stand still are quickly out of gear, work must be made if it does not come naturally. And he proceeded to argue that whatever objection can be urged against the policy of setting up by the public authority of workshops to do its necessary work, would apply still more strongly to the policy of setting up workshops for the performance of work for which there is no demand. The case against artificial employment, however, was most forcibly presented by Mr. Loch,(1) who pointed out that it inevitably had the effect of forcing into pauperism the class immediately above the class it rescued, and by merely substituting the labour of the worse class for the labour of the better, it raised the cost of production and intensified the evil it sought to remove. This indictment he proceeded to prove by specific instances. The Salvation Army, he said,(2) has established workshops for the employment of the unemployed, and brings the products of their labour into competition, not only with those of the labour of persons that have found places independently, but also with those of the labour of persons for whom work has been provided by other charitable institutions. Thus, the London School Board has accepted the tender of the Salvation Army for the supply of firewood to the schools for the next 12 months, in preference to the competing tenders of the Church Army, Dr. Barnardo's Home, and the Boys' Home of Regent's Park.

On the other hand, Mr. J. Burns in his article in the "Nineteenth Century" for December 1892, wrote:—"A committee should be formed in each county council "area, consisting of representatives of trade unions, the "Charity Organisation Society, friendly societies, and, if "possible, also the guardians of the poor and members of "the vestries, which should differentiate the men willing "and able to work from the mere loafers. All money "subscribed for the relief of the former class should be "handed over to the authorities responsible for the cleansing, sanitation, and making of such public works as "roads, streets, parks, and sewers. The surveyor or "engineer should be the responsible authority for the "expenditure of this money, and, so far as possible, the "conditions of hours and wages current at the time should "be observed. The men (marked out as fit for employment) could be employed at fewer hours per day, or "fewer days per week than ordinarily, so that the aggregate wage earned should be no inducement either to "malinger or refuse work elsewhere under ordinary conditions. If the amount of money is sufficient, then the "work should proceed as if in that district no exceptional "distress existed. The poor law guardians should act in "conjunction with this committee, and should hand over "to the local authority that amount of money to be spent "in useful work or non-pauperising relief that would "have been spent in other directions if no such public "works had been instituted. At Paddington in 1887 a "public committee co-operated and jointly subscribed "money for work for 350 men, and gave employment to "133 women on needlework. The advantage of this "course is that you distribute over all the men employed, "without pauperising them, that amount of money which "all people in the parish subscribe through the rates, and "you make the support of the unemployed a collective "compulsory charge on the district that profits by the "work they perform. The application for work should "be restricted to local men with at least three months' "residence. Work should be of public utility, not necessarily of immediate demand, but prospectively required. "The work should be such as would give simple employment to the class which is mainly influenced by depression—the unskilled. Ground work on roads, sewers, "and recreation grounds is the best, as the bulk of the "cost of these works goes in wages for manual labour. "Each locality to be responsible for its own unemployed, "unless the extent of the works permit otherwise, and "equitable arrangements are made with other districts. "As in the case of the common poor law fund, the richer "districts with no unemployed ought to contribute *pro "ratâ* for work that poorer districts do in relief of metropolitan distress. The equalisation of rates would remove "many objections now urged on the score of cost by poor "districts. The Government could also lend money on easy

(1) Digest, p. 29. (2) Digest, p. 30.

[§ 567 (ii.)] "terms, and in many cases make a contribution, but should "leave the carrying out of work entirely to local authority. "The character of the work to be done is of course difficult "to decide upon, as in many districts there are staple "trades the skill and delicacy of which prevent hard and "laborious work being undertaken easily by the men. "But generally, as was found on the 2,000,000*l.* of work "undertaken by local authorities in Lancashire in 1862 "and 1863, as told by Mr. Arthur Arnold in his excellent "'History of the Cotton Famine,' and by Mr. Torrens "and Sir Robert Rawlinson in their reports, the men "soon adapted themselves to the work, which, when "finished, was of lasting benefit to the community. Public "works in India, Ireland, and the colonies, even though "some of the works in the latter may have been under-"taken for political reasons, go on the whole to prove "that it is better to spend 1,000,000*l.* on useful labour "than 2,000,000*l.* in charity."

Labour colonies.

(iii.) It is in the larger and more important experiments that the effects of artificial employment can be seen most clearly. Such experiments are labour colonies. This method of providing work had been previously mentioned with approval by Mr. Keir Hardie,(1) who was examined before Group A. That witness had suggested that remunerative work should be found for the unemployed in home colonies, constituted after the model sketched by Mr. H. V. Mills, in his book entitled "Poverty and the State," and had intimated that an attempt was being made to obtain a portion of the Scotch Equivalent Grant for the purpose of founding one of these colonies by way of experiment. The persons settled in them, he had contended, should be allowed to send the produce of dairy farms and orchards, but not manufactured goods, to outside markets. The initial cost should be met by doubling the Poor Rate for one year, and the colonies should, in return, be charged with the future maintenance of the poor and aged, in addition to that of the unemployed. A poor rate doubled for two years would yield about 20,000,000*l.*, while, according to the returns published by the Board of Trade, and to deductions drawn from them, there are at the present moment (January, 1892) 400,000 unemployed workmen in Great Britain. Even if the colonies could not pay their way, Mr. Keir Hardie had concluded that it would be better to find these persons employment at a cost to the community than to maintain them, still at the cost of the community, in idleness. Similar colonies, he had added, have been established in Austria and Holland, where they are said to be highly successful. Concerning this last statement, however, different opinions are held. Mr. Loch,(2) who furnished a very full account of the working of the Dutch and other labour colonies, contended that they were all of them failures, because, instead of raising the efficiency of the colonists and enabling them to stand alone, they are constantly invaded by the return of the men that have already passed through them unreformed.

The Dutch Free Labour Colonies.

(iv.) At the same time, Mr. Loch was quite ready to admit that the Dutch Free Labour Colonies were quite the most remarkable experiment that had yet been made in the direction of artificial employment. Their chief originator, he said, was General Van der Bosch,(3) whose idea was that able-bodied indigent persons of good character might be enabled to support themselves by reclaiming waste land, provided that a sufficient amount of capital were devoted to their maintenance during the progress of the work. It was anticipated that, under the training and discipline of a well regulated establishment, the moral character and the habits of that class of persons might be greatly improved, and that they would give employment to industry in supplying their wants, instead of being, as they then were, a burden upon the community. The first colony was established in 1818, amid the greatest enthusiasm throughout the country. A society was organised, with a central committee and allied districts, each of which was entitled to send to the colonies a family for every 140*l.* subscribed. The original site of the colony consisted of more than 1,200 acres, a small part of which had already been brought under cultivation, but, for the most part, it was covered with short heather, growing on flat, sandy soil, and covered with a layer of moss several inches thick. This was at once peopled with 52 households, or 356 souls in all, each $7\frac{7}{16}$ acres of land to each house. A school, a warehouse, and spinning house were built, and the little river that came by was made navigable. Six other colonies were formed soon afterwards on the same plan, each being divided into districts consisting of 25 farms, and each district being divided into two sections, each of which was placed in charge of a supervisor, who should give instruction in agriculture. The whole seven colonies were governed by a director and assistant-directors. For the first three years the colonists cultivated the land in common, and stored up the produce in a common granary for the common benefit, but, as the various farms were brought under cultivation, this system died out. When a fresh farm was brought under cultivation, the head of the household to whom it was allotted was debited 5*l.* as interest on the remainder of his capital (cost of furniture deducted), and had to pay rent. So long as a family could not provide its own sustenance, it received food daily from the common store to which it was also obliged to contribute; but when it could provide for itself (as it was supposed to be able to do when it began to earn 6*s.* 8*d.* a week) it forfeited its claim to a dole, and was allowed to prepare its own produce for home consumption instead of sending it to the common granary. Incompetent persons were not entrusted with farms, but had to be content with the position of labourers, and, in course of time, the majority of the new arrivals proved to be awkward, town bred men, and quite unsuitable for agricultural work at all. To meet their requirements, other industries, such as mat-making, rope-making, spinning and weaving were started.

[§ 567 (iv.)]

Their condition in 1827.

(v.) In 1827, there were as many as 2,233 persons in these colonies.(1). Mr. Nassau Senior, writing about that date, said:—"The land occupied by the Dutch Labour Colonies "is of little value, and the employing of persons taken indis-"criminately from other occupations and trades, almost all "of them are the victims of idleness or misconduct, and little "urged by the stimulus of individual interest in farming "the worst land of the country—land so worthless that the "fee simple is only worth 24*s.* an acre—at an expense of "outfit, exclusive of the value of the land, of more than "130*l.* per family, and under the management of a joint "stock company of more than 20,000 members, cannot but "be a ruinous speculation. Nor does the institution "appear to have repressed pauperism by the disagreeable-"ness of the terms on which it offers relief. We have seen, "on the contrary, that it has not prevented its steady "increase."

Their condition in 1853.

(vi.) In 1883(2), the number of free farmers, or occupiers of land, as opposed to labourers, in these colonies, was only 16, as against 25 in 1848. At that date, Sir John McNeill reported on their condition, and quoted the following observations that had been made to him by one of the officials:—"Considered as an attempt to make these "families maintain themselves, the free colonies have "proved, after an extensive period of 34 years, not only "a complete failure, but there is reason to believe that "the scheme could not possibly have succeeded, and this "even if the colonists selected were from classes well "suited for the occupation. The condition of the colonist "is little affected by the greater or less amount of work "he performs, and, however small it may be, he is assured "of a comfortable habitation, clothing, and fuel, with food "enough to keep himself and his family in health. There "is, in consequence, a great desire among the able-bodied "indigent persons in the *communes* to come to the colony. "There are always more applications than can be "accepted, and the children, though carefully educated, "are accustomed to see their parents and everyone "about them rely upon outside aid for their means of "subsistence, and so have not learned to trust to their "own exertions for a livelihood, and therefore few of "them are able to maintain themselves."

Their reconstitution under the State in 1859.

(vii.) By 1859(3), the debt owed by the society to the State and other creditors amounted to 461,000*l.*, in spite of the Government purchasing the produce of the colonies at special rates. Whereupon the Government remitted the debt, and took over the whole concern. At the time of the reconstruction, the number of free farmers was 176, and, of the labourers, 2,471. The Government policy, however, was to increase the number of the former, and that policy was so far successful that, by 1870, the number of free farmers had increased to 1,313, while that of the labourers had fallen to 530. Under the new *régime*, six model farms were established, and a forestry department was opened. The colonists were allowed to keep all they earned, coinage took the place of the token currency, and piece-work was substituted for time-work. There was more judicious management, and something of an improvement was observable in the character of the colonists, who were now selected with great care. Rents were low, and no interest was charged on arrears; outfit, cattle, manure, &c., were furnished in the colony workshops during bad times; medical attendance and education were granted cheap; and instruction and superintendence were given gratis; while the whole concern was administered in a kindly and a

(1) Digest, p. 29. (2) Digest, p. 30. (3) Digest, p. 30.

[§ 567 (vii.)] friendly spirit. Yet the only result was that the colonists still failed to maintain themselves, could not pay their rents in full, and did not save a penny. In 1889, about 40 farms were vacant, and were not filled up owing to the dearth of suitable applicants, some of those who applied being totally incapable of managing them, while most of those for whom the Government was most anxious to provide objected to exchanging town for country life.

The Dutch Beggar Colonies.

(viii.) Soon after the first labour colony(1) was established (1818), there were added certain beggar colonies on the same plan. Their history is very similar. They were instituted in 1820, at Ommerschans, where the land (1,900 acres) was given by the Government, and at Veenhuizen, where the land was bought by the society. Their object was to provide every mendicant who showed his willingness to work with healthy outdoor labour, good food, and moral surroundings. They were open to the following classes:—First, to ablebodied persons convicted of mendicancy, vagrancy, and other petty offences, whose sentence was commuted from imprisonment to residence for a certain number of years in one of these colonies; secondly, to voluntary inmates, paid for by the *communes*; thirdly, to old soldiers and their families; and, lastly, to orphans, foundlings and deserted children. In 1827, their population, including officials, was 4,518. In 1853 (2), Sir John McNeill reported that the evils noticeable in the case of the labour colonies were in the case of the beggar colonies intensified. It took 15 colonists to do the field work of one good day labourer. Supervision was impossible; a low standard of work was accepted, and ex-colonists were constantly returning. In 1859, the beggar colonies were reconstructed like the rest, and are now better managed than they used to be, but, even at the present time, they are not a financial success, and utterly fail to elevate the paupers into self-support. Of their 3,353 inhabitants, only 425 are there for the first time. All the rest have been there more than once, very many are there for the fifth, sixth, or seventh time, and some have been there much oftener.

The Arbeiter Colonies.

(ix.) The history of the Arbeiter Colonies(), which were founded at Wilhelmsdorff, Germany, in March 1882, is very similar. A detailed account of their working is given on page 90, Vol. V., Foreign Reports.(3)

The Belgian Agricultural Beneficent Colonies.

(x.) Mr. Loch also put in a document containing the following information with regard to the agricultural beneficent colonies in Belgium(4):—For the six provincial Depôts de Mendicité that existed in 1830–1, and two colonies, a forced one at Merxplas and a free one at Workl, there have been substituted a non-able-bodied colony at Hoogstraeten of about 270 acres, and two able-bodied colonies, one of 1,300 acres at Merxplas, and the other of 1,425 acres at Workl. In December, 1890, the able-bodied colonies contained 2,928, and the non-able-bodied, 1,285 persons. The former have quite failed to make their colonists self-supporting. Of the 2,928, no fewer than 2,507 have been there before.

The Irish Labour Colonies and Labour Colonies generally.

(xi.) Coming nearer home, Mr. Loch cited the case of the Irish Labour Colonies,(5) which were started on similar lines to the Dutch Free Labour Colonies in 1852. The men were carefully selected for them, he said, and, for a short time, they seemed to be succeeding. But latterly the cost was found to be 90*l.* 13*s.* 5*d.* per head per annum, less 27*l.*, which proved to be the average value of the produce of a colonist's labour, so that they can hardly be said to be other than a failure. In short, Mr. Loch considered that no colony system had ever been or could ever be permanently successful. On this point he was in striking agreement with Mr. J. Burns, who expressed his disapproval of artificial employment in this particular form in the course of the article before referred to, in the following terms:—"Of the fiscal, charitable, or economic rostrums "that are hourly preached for the redemption of mankind, "labour colonies are the least scientific. A labour colony "presupposes male labour. What have the unemployed "working women done to be thus ignored? It also means "manual unskilled labour being mainly employed. From "whence to be drawn? Not from the skilled trades that in "the main are engaged on foreign work and most liable "to fluctuation and depression, but from the labourers in "the building trades, gasworks, agricultural labour, and "other internal occupations of the manual labour class. "The labour colony has no room for the spinner, weaver, "lace-maker, jeweller, engineer, and others, the bulk of "whose work goes abroad. It is intended rather for the "relief of men whom I would rather see repairing roads, "cleansing streets, reclaiming foreshores, purifying rivers "and canals, pulling down unsanitary areas and rebuilding, emptying dustbins, general sanitary work, and "other useful and reproductive employment on which they "could use their labour to greater advantage to themselves and the community than on farm work, that is, "supposing they would stay, which in ninety cases out a "hundred they would not. This is proved by the experience of all labour colonies, which shows that they can "only be conducted by earnest, intelligent, unselfish men, "enthused by the highest spiritual or social ideals, or by "the most absolute discipline, on a prison labour basis, "to which your out-of-work, who would leave his home "and the town, would not voluntarily submit, and which, "for different reasons, the honest unemployed would not "tolerate. The fact is, labour colony advocates assume "the absence of home ties, associations, and the strong "and laudable desire in genuine unemployed men to be "so situated in their temporary work in depressed times "as would permit of them seizing the first opportunity to "leave and return to their proper industries, conditions "impossible in labour colonies. Men destitute of these "qualities lack the essentials for continuous work, and "generally would be a source of demoralisation. The "labour colony, as a remedy for the unemployed, is, I "maintain, foredoomed to failure, and is nothing but the "revival in another form of the hated casual ward with all "its physical moral and iniquities. If municipalisation of "agriculture is intended, that is something I can understand but that for years is not likely to prove a remedy for "the workless. Rather will it come after easier things have "been undertaken and accomplished—the abolition of "overwork, the reduction of the hours of labour, and the "reorganisation of labour in every trade, that is now "going on—too slowly I admit—in the right direction by "trade union, municipal, and parliamentary action. And "should the municipalisation of agriculture be undertaken on Socialist lines, its initial stage must be conducted not by the unskilled unemployed plus an in-and-out army of loafers, casuals, and wastrels, but by the "best of labour attracted by those better conditions "which would accompany such an undertaking started by "people with brains along the lines followed by the L.C.C. "in doing its own work. A pious wish to get the townsman into the country will not help us. The fact is, "sentiment and personal repugnance to country labour is "often the cause of rural depopulation, assisted, of course, "by increased use of machinery, cheaper foreign food "stuffs, and other causes. The argument that the produce of labour colonies should be used and consumed "inside and should not be sold to people outside is absurd "and presupposes that the colony is sufficiently large to "include the numerous trades that are required to supply "the wants of a working class population, and that the "organisation should be such as could only be arrived at "after years of experiment. It therefore fails to touch the "problem of providing employment at once for those who "are without. The labour colony products must be sold "and exchanged outside if the colony is to succeed. If "this is done, what will be the effect on the displacement "of agricultural labour is shown by Mr. W. E. Bear, an "agricultural authority, who says, in the course of one of "his reports to the Royal Commission on Labour (The "Agricultural Labourer, Vol. I., part 1, Page 113.):—

"'Around Nottingham, where there is an excellent "'market for vegetables and fruit, small and large "'market gardens are numerous. The evidence of those "'engaged in the industry, many of whom I visited in "'their homes or in the market, was generally depressing. "'They said that the market had become glutted in recent "'years, so that prices had become barely remunerative, "'and that rail rates were so high that the bulky produce "'of their gardens could not profitably be sent to distant "'markets. One reason of the depression given was that "'thousands of the working men of Nottingham had "'acquired allotments, on which they not only grew al "'the vegetables they required, and so ceased to be customers to the market gardeners, but also frequently "'had a surplus to sell, thus becoming competitors.'

"This being so, the establishment of labour colonies "outside every town would only accentuate the unemployed difficulty, and lead to the permanent degradation "of agriculture and its labour. Agricultural labourers "now at work will be displaced by the labour of the "colonists, unless protection is adopted with its greater "train of evils, just as Salvation Army brickmakers are "displacing honest brickmakers at the present moment, "and prison, pauper, reformatory and industrial school "labour is displacing and destroying several trades. "Besides this objection, the cost of labour colonies must "come from some source. The only one available is the "consumer and producer. Is it not better that the cost of "keeping the unemployed should be borne, not by spending money in creating superfluous farms and municipal "workshops, but by slightly adding to the cost of production if necessary in all trades by absorbing the unem-

[§ 567 (xi.)]

(1) Digest, p. 29. (2) Digest, p. 30. (3) Appendix XCIII., and see Foreign Reports, Vol. V., Germany, p. 90. (4) Appendix XCII. (5) Digest, p. 30.

[§ 567 (xi.)] Other schemes of artificial employment.

" ployed through the reduction of hours of all and the " employment at all trades of their now surplus workers?"

(xii.) Mr. Loch thought that the principle of artificial employment, apart from any of its particular applications, was essentially unsound. He handed in various documents, moreover, containing information as to certain cases where artificial employment had resulted in but doubtful advantage, even when adopted for a purely temporary object. In 1887–8, for example (1), a committee of the Mansion House managed the work in connection with some gardens opened and put in order by the Public Gardens Association. It was a mixed committee, on which were poor law guardians, working men, &c. 456 men received the offer of employment, 406 were married, 50 single; of this number 62, or about 14 per cent., to whom tickets were given, did not present themselves at the works, but assigned no reason: 134, or about 30 per cent., were dismissed at various times for misconduct, continued absence, or incapacity; 164, or about 36 per cent., after careful, in some cases prolonged, investigation, the committee found themselves powerless to raise from their present position; 17, or about 4 per cent., left the work of their own accord for better employment; 54, or about 12 per cent., were assisted by being made members of trade or benefit societies, by migration, by obtaining or taking out of pawn tools or clothes when there was definite prospect of work; and in other ways 26, or about 6 per cent., were emigrated to colonies at their own request. The ages of the men were as follows:— 15, or about 4 per cent, were under 20 years; 111, or about 28 per cent., between 20 and 30; 148, or about 36 per cent., between 30 and 40; 78, or about 20 per cent., between 40 and 50; 28, or about 7 per cent., between 50 and 60; 14, or about 3 per cent., over 60 years. Again, Mr. Loch(2) put in an abstract of the evidence given by Mr. Acworth before a Select Committee of the House of Lords that sat on Poor Law relief, in the course of which he criticised the results of the policy of the Wandsworth Board of Guardians in providing artificial employment during 1886, in words to the following effect:—"In this case," he said, "men were set to dig out foundations, " which foundations were not wanted at the time, and " were not actually built on for, I think, nine months " afterwards, and they had then been very much damaged " by wet, and they were found not to be in the place " entirely where they were wanted for subsequent building " . . . We sifted very large quantities of sand. We " charged no royalty, it was our own freehold, we credited " ourselves at the full value that it would be to sell, but " we have not hitherto sold it. The men worked at 3¾*d.* " per hour. They had a very short day's work, only about " seven or seven and a half hours. Labourers would have " been paid paid 5*d.* on an average. In this instance, " they could hardly be considered deprived of their work, " because it had to be done twice over, otherwise they " would have been deprived of it. In the following win- " ter there was a general expectation that employment " should be again provided. The board had deputations " every week for some period, requesting them to give " work at wages, and they had to explain that they had " not work at wages to offer. They did not attempt to do " any other work again otherwise than by contract, and " subsequently the Guardians opened a labour yard. This, " too, succeeded in attracting new paupers, or was of assis- " tance to those who had in previous years applied. Of " 24 under one relieving officer, four had relief since; out " of 62 in another district, 17 had relief since; out of 58 " in a third, 10 had had relief; in a fourth, where the " relieving officer had two districts, out of 21, 7 had " applied for relief before or since, and out of 68, 25; in " the remaining district, 19 out of 60 men in 1886 have " either had or applied for pauper relief since."

Tendency towards artificial employment deprecated.

(xiii.) Unsatisfactory as artificial employment may be, Mr. Loch pointed out that expectation and demand for it during bad times was undoubtedly growing, and that the questionable policy of satisfying such expectation and demand was already beginning to be adopted, as was proved by the circular addressed to relieving officers by Messrs. Chamberlain and Fowler,(3) Presidents of the Local Government Board in 1886 and 1893 respectively, ordering them to send applicants for relief to the works provided by various vestries, such as Chelsea and Nottingham, without poor law tests.* Referring to this matter, Mr. J. Burns, in the above-mentioned number of the "Nineteenth Century," wrote, "One of the best instances of the " efficacy of public relief works is the case of Chelsea " in 1886, when 16,000*l.* was spent in paving and " laying out roads and streets. The work was of excel- " lent character, equal, even better, in quality and price " than contract work; and for three months gave " employment to over 200 men of many trades, who " soon adapted themselves to the work, and, with the " parish, derived great benefit. In 1887 similar work on " a smaller scale was undertaken with like success. At " Paddington, also, in 1886 a joint committee of subscribers " and vestrymen carried out road work and the improve- " ment of public gardens in that district. At Wandsworth " many men were engaged in digging sand, foundations, " and other ground work. Battersea, St. Pancras, and " many other parishes, also the Metropolitan Gardens " Association, carried out many useful improvements and " in the best way relieved distress, discouraged loafing, " and benefited the community by the works carried out. " At Oxford, Norwich, Ipswich, Yarmouth, Eastbourne, " and at Brighton similar work was done: 1,000 men " were employed for some weeks on necessary roads; at " Yarmouth and King's Lynn general relief works were " also undertaken, also at Southampton, Dudley, Walsall, " and Stourbridge, in cleansing roads and similar work. " Tynemouth employed some hundreds of men upon a " public park, sea road, and sea banks. South Shields " gave work to 400 men three days per week; and Sunder- " land to 1,300 men of all trades on foreshore works, of " which the Local Government Board official states:—'It " ' is impossible to contemplate without a feeling of satis- " ' faction the great improvement to the district that has " ' resulted from the judicious employment of these men " ' at a critical time.' And of Wales, where street im- " provements, parks, gardens, and foreshore works were " undertaken, Mr. Murray Bourne, of the Local Govern- " ment Board, says:—'Relief was no doubt considerable. " ' The carrying out of such works at such a time possesses " ' obvious advantages. The work is possibly done some- " ' what more cheaply than when labour is in demand.' " For the less skilled men who are willing to work, " London and all other towns can always find work for " many who have strength enough to use a broom or shovel. " The condition of our streets in summer is bad enough, " and it is more than the insufficient permanent staff " can do to keep them clean; whilst in winter the staff " could be easily doubled, and if this were done when " mud, snow, and dirt are much in evidence, from six to " ten thousand men could find employment. If to this was " added a crusade against dirt and filth in all the side " streets, slums, and alleys with broom, whitewash, and " disinfectant, in fact a vigorous enforcement of the new " Public Health Act, work would be justified and secured " for a still larger number. The recent disclosures of Dr. " Dudfield as to the filthy condition of cisterns provides, " until they are removed, a source of employment for " many; as also does the removal of dust and other " refuse. The man with the muck rake, the scavenger of " to-day, is not the dejected, semi-pauperised automaton " that he used to be, working for less than the current " wage, and one step from the workhouse. He had been " enthused and organised, and as Mr. Giffen testifies, has " reduced his hours of labour 30 per cent. and raised his " wages from 10 to 25 per cent. His calling is no longer " what it was, and men who used to look upon road- " sweeping as derogatory now cheerfully look for it as an " alternative to the other work that through age, and for " many other reasons, fails them. The Battersea Vestry, " beyond establishing 25*s.* as a minimum wage for their " scavengers, have decided that no man under 40 years of " age will be eligible for this class of work. This is a " good step, as it throws the burden of the industrial fight, " as it should, on the young and the unmarried, and gives " to the older more municipal protection from the " increasing intensity of competition, and, through the " rates, throws upon the employer his share of the public " duty towards the veterans of industry. I have gone " fairly into the matter, and believe if Mr. Fowler's cir- " cular is loyally adopted by the 14,000 local authorities " throughout the country, as it has been anticipated by " the London County Council, that there are many useful " works that could be carried out in each district of general " sanitary character, which, combined with repairs of " roads, streets, and sewers, on the standard of Chelsea in " 1886, would give a total of 24,000 to 30,000 men " employment in London alone, or about 200,000 through- " out the country. And why should not this be done? " When a busy man has an hour to spare, how does he " occupy it? He tidies up, set his rooms and papers in " order; when a thrifty housewife has an opportunity of

[§ 567 (xiii.)]

* The circular addressed by the Local Government Board to the clerks to Sanitary Authorities on the 30th September, 1893, to the effect that they should forthwith proceed with the execution of works which, in the interest of their district as regards its sanitary condition or local improvement, or otherwise, it is desirable should be carried out at the time when other employment is difficult to obtain, and that they should "make arrangements for the employment in connexion with the works " of those who are recommended by the guardians of the poor as persons " who, owing to their previous condition and circumstances, it is desir- " able should not become subjects of Poor Law relief," marks a still further step in the direction indicated.

(1) Appendix XCVI. (2) Appendix LXXXVIII. (3) Appendix XC.

567 (xiii.)] "an additional cleaning it is undertaken. Why, then, "should not each community utilise its surplus labour "that must be kept somehow, and give to its cities and "towns, its roads and buildings, that winter and spring "cleaning they require?" Mr. Webb (4), moreover, expressed the following opinion:—Boards of guardians, he said, should no longer confine themselves to granting charitable relief, but should make some kind of reasonable and honourable provision for exceptional cases of temporary distress, inasmuch as public charity is only one degree less demoralising than private, and should be resorted to only in the very last extremity. Mr. Loch's contention, on the other hand, was the direct opposite. According to him,(2) artificial employment, never being remunerative except at the expense of other labourers, in which case it is a positive evil, is at least only charity in a veiled form, and without the advantages which charity open and avowed possesses. Charity, for example, can adapt its mode of relief to the peculiarities of individual cases, which artificial employment cannot.(3) The charity fund, moreover, evaporates with the wants it supplies, whereas the funds of artificial employment remain, to form a permanent temptation to the recipients to remain idle. A strict administration of the present Poor Law and a rigid application of the workhouse test, supplemented by an equally wise administration of independent systems of charitable relief, seemed to Mr. Loch to be the best policy to pursue.

neficial ect of proved or Law inistra-n.

(xiv.) That the improved administration of the Poor Law during recent years has been accompanied by a very marked reduction in the number of persons dependent upon it for relief, appears, so Mr. Loch contended,(4) from the following figures:—In England and Wales, the able-bodied indoor pauper is 0·9 per 1,000 of the population, and so he has remained, varying only between ·7 and ·8 since 1872, when he stood at 1 per 1,000. The outdoor able-bodied pauper stood at 6·7 in 1870, 5·6 in 1872, 4·6 in 1873, and he is now at 2·3 per 1,000. Taking both classes, the indoor and the outdoor together, the figure is 3·2, as against 7·8 and 7·9 in 1869 and 1870. The metropolis shows similar results. Able-bodied indoor paupers are now 1·7 per 1,000, able-bodied outdoor paupers 1·4, and both classes combined, 3·1. In 1880 and 1888, two exceptionally bad years, the figure was 3·3. In the provinces, moreover, it was 4·6 in 1880, and 3·7 in 1886–7–8. Mr. Loch further contended that the Poor Law returns furnished a much truer indication of actual distress than was frequently admitted to be the case. Distress, he said, which puts skilled labourers out of work, affects the unskilled, who are dependent in a measure upon the skilled labourer. The skilled labourer, by his trade union and in other ways, may be able to tide over the difficulty, or at least, would require help from without only in the last resort, but the unskilled, and particularly the older labourer, who depends on him as soon as his credit with the tradesman comes to an end, or pawning is no longer possible, comes on the rates. To a certain extent charitable relief may be a help, but, unless under unusual circumstances, or worked on a plan of division of labour with the Poor Law authorities, it would not prevent any large mass of the people of the labouring class falling upon the rates should they not be able to avoid doing so by their own efforts, and though the figures vary less than they used to do in times of distress, owing partly to better administration, the Poor Law returns have been proved to be in the last 20 years a very fair meter. Thus, in London, the mean numbers in 1880 were 98,916, or 26·7, as against 94,565 in the previous year; in 1888, 108,638, or 26·8; in 1889, 108,788 or 26·5 per 1,000; with similar figures since. It should be remembered also that a year of distress leaves behind it, as a rule, an increase of pauperism for two or three subsequent years.

mmary preceding ragraphs.

568. This closes the review which it has proved possible to extract from the evidence of the possible solutions to three out of the four questions that make up the problem of the unemployed, the questions, namely, how can vacancies be more easily discovered, how can vacancies be multiplied, and how can work be provided in default of vacancies in established businesses. In regard to the first, the solutions attempted by the trades unions and labour bureaux have been examined, and the arguments for and against the extension to the latter of Government support, have been enumerated. In regard to the second, the mutually conflicting views of the witnesses as to the effect of State regulation of hours upon the absorption of the unemployed and their opinions with reference to the efficacy of emigration, have been set forth. And, in regard to the third, the merits of municipal and State employment generally, and of particular schemes, such as labour colonies and temporary relief works, have been examined and discussed. It now only remains to deal with the evidence relating to the solution of the fourth, and last, question, namely, how can provision be made for the unemployable. [§ 568.]

(1) Digest, p. 27. (2) Appendix LXXXVII. and Digest, p. 29. (3) Appendix LXXXVII. (4) Appendix LXXXIX.

569. (i.) By the unemployable is meant all persons obviously incapable of doing sufficient work to earn their living, persons to whom, owing to age or infirmity, employment would not bring livelihood. For such, provision is made already under the Poor Law, but it was the opinion of all the witness that referred to the subject that such provision was not altogether satisfactory or sufficient. Even Mr. Loch,(1) who considered the present Poor Law system to be superior to all the schemes hitherto suggested, thought that it might with advantage be reformed, though not remodelled, in both substance and administration. It was, in fact, admitted on all hands, that under the present system the number of persons that depended upon the rates for their support during old age was far too large, since, for some unexplained reason, the members of the industrial classes are far less ready to save money for insurance against old age than against sickness or accident, and it was pointed out(2) that 8,500,000*l.* were now being spent in poor relief, that the aged poor were a third of the whole number, and that their maintenance cost more than one third of the sum expended. It was contended, therefore, that, if by any means an adequate old age insurance fund could be created, the ratepayers would be relieved of a very heavy burden, while the old people would at the same time be made more comfortable. How can provision be made for the unemployable. Old age pensions.

(ii.) With this object in view, several schemes were propounded, but they all appeared to be open to more or less serious objection. Mr. Booth, in his book entitled "Pauperism, a Picture; and the Endowment of Old Age, an Argument,"(2) explained and criticised four such schemes, and then proceeded to detail and defend a scheme of his own, which was, in its turn, criticised by Mr. Loch. Schemes enumerated.

(iii.) The first is the scheme prepared by the National Providence League, of which Mr. Booth's account was to the following effect:—The main suggestion, he said, is that everyone shall be encouraged to provide for their old age a pension of 6*l.* 10*s.* per annum, by the promise that then an equal sum shall be added by the State (out of Imperial and local taxation jointly), so as to secure in all 13*l.*, or 5*s.* a week, to each old person. According to Mr. Booth, the great objection to this proposal is that it might not, to any extent, reach the classes that now come upon the rates in their old age. Again, it is not clear whether the league expects the State to provide at once for the supplementary pensions which would be provided under this scheme. This liability, as it seems, would have to be met as it arose, but the present generation cannot afford to bear both its own burdens and also those of the generation to follow. Under any voluntary scheme, indeed, so Mr. Booth continued, it is impossible to know to what extent, if at all, future burdens would be lightened, for the comparatively well to do would be the most sure to avail themselves of cheapened thrift, and little good would be obtained if the poor still came on the rates. If, however, the scheme were made compulsory, and *every* young person were compelled to provide him or herself, before 21, with an annuity of 6*l.* 10*s.* at 65, and if to this the State promised to add a further sum of 6*l.* 10*s.*, then Mr. Booth considered that the bargain might be a good one for the State. But, even so, he added, not for more than 40 years would the results of the scheme begin to operate. In fact, he concluded, if anything is undertaken for the future, something must also be done for those still in active life, but beyond the scope of any scheme of early thrift. (a) *Scheme of the National Providence League.*

(iv.) Next there is the scheme propounded by Mr. J. Chamberlain.(2) Its details were described by Mr. Booth as follows:—To the account of every man who, when he is 25, shall have paid 5*l.* into the pension fund, there will be added from State funds the sum of 15*l.* This account must then be supplemented by a payment of 1*l.* each year for 40 years. These payments must at no time be more than 5*l.* in arrear, or all claim to benefit will be lost. All arrears must be paid up, together with 5 per cent. per annum interest before benefit can be claimed. The whole fund and its accumulations will entitle depositors to receive:— (b) *Scheme of Mr. J. Chamberlain.*

(1.) If they live to 65 a pension of 5*s.* a week for their remaining years;

(2.) If they die before 65:—

(*a.*) Five shillings a week for the widow for 26 weeks;

(1) Appendix XCVII. (2) Appendix LXXXVI.

[§ 569 (iv.)]

(*b.*) Two shillings a week for each child till 12 years old (but not to exceed 12*s.* in all for the first 26 weeks, and 8*s.* a week afterwards);

(*c.*) If neither widow nor children are left, the original 5*l.* to be returned to the depositor's representative at his death.
